Erhard [Erhardi], **Laurentius** (*b* Haguenau, Alsace [then in Germany], 5 April 1598; *d* Frankfurt, 6 Nov 1669). German composer. He took his master's degree at Strasbourg, where he was probably a pupil of C.T. Walliser. From 1619 he taught in Saarbrücken, Strasbourg and Haguenau. On 27 January 1625 he became Kantor of the Gymnasium at Frankfurt and became responsible for the music at the choir school at the Katharinenkirche with J.A. Herbst, who exerted a decisive influence on his activities as a music teacher. His duties included the performance of choral music with his school choir at the two leading Frankfurt churches, the Katharinenkirche and the Barfüsserkirche (where Herbst was Kapellmeister). His portrait is reproduced in Valentin. Apart from two funeral pieces (published in 1645 and 1664) only six chorale settings by Erhard have survived. They were included in his *Harmonisches Chor- und Figural Gesang-Buch, Augsburgischer Confession* (Frankfurt, 1659). This collective volume contains settings by 16 other composers too, of whom Schein (with 65) and Herbst (29) are the most frequently represented. As an appendix, Erhard published his *Compendium musices latino-germanicum* in 1660. It is one of the many musical textbooks for school use dating from this period in Germany and includes an index of musical terms. According to Walther it had already been published separately in 1640 (Fétis mistakenly mentioned another edition of 1669).

ADAM ADRIO/DOROTHEA SCHRÖDER

Erheben (Ger.). A term used by Leopold Mozart (*Versuch*, 1756) to imply a lifted off-the-string bowstroke. *See* BOW, §II, 2(vii) and AUFHEBEN.

Erhu [Erh-hu]. *See* CHINA, §III, 3(vii).

Erić, Zoran (*b* Belgrade, 6 Oct 1950). Serbian composer. A graduate of the Belgrade University of the Arts, he took the master's degree in composition there under Rajičić in 1980. He also studied at the Orff Institute in Salzburg and with Lutosławski in Grožnjan. He has taught at the Mokanjac School of Music and, from 1977, at the music faculty of the University of the Arts. His early works were influenced by contemporary Polish composers, though in works such as *Mirage* (1982) and the ballets *Jelisaveta* and *Medeja* he developed his own personal expression and sound palette using synthesizer and electronic piano. His later, postmodernist works use rock rhythms (e.g. in *Off*, 1982) and repetitive melodic structures, and suggest jazz improvisation in addition to the Polish influence. *Cartoon* for strings and harpsichord and the choral work *Subito* are a play on emotional responses, while *Talea Konzertstück* makes use of paraphrase and irony. His works have received several awards, including the prize of the Association of Serbian Composers (1982) and the Stevan Hristić, BEMUS and Petar Konjović prizes of the City of Belgrade.

WORKS
(selective list)

Stage: Banović Strahinja [Elizabeth] (ballet), 1981; Jelisaveta (ballet), 1982–3; Medeja [Medea] (ballet), 1991; incid music

ROKSANDA PEJOVIĆ

Ericchelli, Pasquale. *See* ERRICHELLI, PASQUALE.

Erich, Daniel (*b c*1649; *d* 30 Oct 1712). German organist and composer. His family probably came from Lübeck, where his father, also Daniel, was a lutenist and maker of stringed instruments. In 1677 St Mary's Church bought a tenor *viola da braccio* from his father for Buxtehude's use in concerted works from the choir loft. In these, the son played continuo on the positive organ from 1675 to 1679, strengthening Gerber's assertion that he was a pupil of the Lübeck master. Erich became organist of the parish church in Güstow, south of Rostock, where he was unsuccessful in persuading the church to have Arp Schnitger rebuild the organ. However, he gave the opening recital on the new organ Schnitger had built for the castle church at Dargun in 1700 and was celebrated in a poem written for the occasion: 'So come then, Master Erich, thou son of Buxtehude in the fair art he has entrusted to you, come and display your fruit from this head of the muses on this organ which here has been built'.

Only a few of his chorale settings survive, each one adopting a different technique. *Allein zu dir* follows Buxtehude's practice of *Vorimitation* while *Christum wir sollen loben schon*, presumably a *pleno* setting, employs the chorale as a bass. *Es ist das Heil* is a three-part *manualiter* setting which dissolves the chorale melody in a much more abstract manner. The six verses to *Von Gott will ich nicht lassen* give ample proof that Erich was not only fluent in the keyboard idioms of his time, but also aware of the variation technique of his northern predecessors such as Scheidt.

HUGH J. McLEAN

Erich [Erichius], **Nicolaus** (*b* Andisleben, nr Erfurt, 26 Feb 1588; *d* Jena, 31 Aug 1631). German composer. He was educated at Leipzig University and became a musician at the Weimar court about 1612. In 1614 he succeeded Georg Quitschreiber as Kantor of the town church at Jena and probably held the post until his death. The organist at this church was Caspar Trost, and both the nature and style of the two composers' works are similar. Most of Erich's few surviving pieces are occasional motets for weddings and other celebrations. He also contributed to Burckhard Grossmann's anthology *Angst der Hellen* (RISM 1623[14]), which consists of settings of Psalm cxvi by 16 different composers, among whom were Michael Praetorius and Schütz; the central section of Erich's setting reappeared in another collection (1637[3]). Erich's musical roots lay in the 16th century, though he was not unaffected by later developments. Several of his works are explicitly based on one of the modes; another feature typical of the 16th century is that he saw the treatment of a musical phrase as more important than a faithful rendering of the words, which led to some awkward accentuation. On the other hand he made definite attempts at word-painting in pieces for few voices, made increasingly frequent use of sequences and short contrasting motifs and adopted the basso continuo.

WORKS

Brautlied Petri Leopoldi, 6vv (Jena, 1615)
3 funeral pieces (Jena, 1616–19); mentioned in Werner (1936)

A. LINDSEY KIRWAN

Erickson, Raymond (*b* Minneapolis, 2 Aug 1941). American harpsichordist and musicologist. He graduated from Whittier College, California in 1963 and took the PhD in history of music in 1970 at Yale University, where he worked with Claude Palisca, William G. Waite and Lawrence Gushee. He studied the piano with Nadia Reisenberg and the harpsichord with Ralph Kirkpatrick and Albert Fuller. He also did post-doctoral research at the IBM Systems Research Institute, New York. In 1971 Erickson joined the faculty of Queens College, CUNY. From 1978 to 1981 he was music department chair and oversaw the transformation of the department into the Aaron Copland School of Music, of which he was the first director. In 1993 he was named dean of faculty for the Division of Arts and Humanities; he was also made a member of the doctoral faculty of the Graduate Centre, CUNY, in 1976. His work with Albert Fuller, with whom he studied for three years as a special student without fee, led to association with the Aston Magna Foundation beginning in 1973; he has been instrumental in the development of the Foundation and in organizing its summer programmes.

Erickson's professional work has ranged from writing on computer applications in musicology (particularly on DARMS, an encoding system for programming musical scores) to translating medieval treatises. He has presented concert and radio performances, has helped revive the practice of improvising when performing Baroque and Classical works and has made a number of commercial recordings.

PAULA MORGAN

Erickson, Robert (*b* Marquette, MI, 7 March 1917; *d* San Diego, 24 April 1997). American composer. He studied at Michigan State University and Hamline College [now University] (BA 1943, MA 1947). His composition teachers included May Strong, Wesley La Violette, Ernst Krenek and Roger Sessions. After service in the Army (1943–6), he taught at the College of St Catherine, St Paul (1947–53), San Francisco State College (1953–4), the University of California, Berkeley (1956–8), San Francisco Conservatory (1957–66) and the University of California, San Diego (1967–87), whose music department he co-founded with Wilbur Ogden in 1967. He received a Ford Foundation Fellowship (1951) and a Guggenheim Fellowship (1966) in addition to awards from the NEA (1977), the American Academy and Institute of Arts and Letters (1981), the AMC (1984) and the Kennedy Center (1985).

Erickson's early music (until 1957), while rooted in the contrapuntal style of Bach and the Flemish masters, reflects a modernist sensibility influenced by Berg and Schoenberg. Later his compositions became more experimental, making use of technical virtuosity (on both traditional and handmade instruments), taped sound-collages, graphic notation and (limited) improvisation. From 1968 to 1978 natural sounds, including speech-sounds, appeared frequently in his works, often involving or responding to environmental factors. As he became increasingly immobilized by serious illness, his music turned inward, either towards the folk music of his Swedish-American forebears, or towards a simplified musical language characterized by drones, consonance and extended, slow-moving forms. In all four periods clearly articulated structures, colourful instrumental writing, wit and expressivity are common stylistic features. Both his music and his influential writings (on such topics as ancient Greek and Chinese tunings, phonetic influences on music, teaching Mahlerian orchestration and contrapuntal composition) are marked by a directness of address and a frank engagement with performers and audience.

CHARLES SHERE

Ericourt, Daniel (*b* Jossigny, Seine-et-Marne, 12 Dec 1903; *d* Greensboro, NC, 21 June 1998). American pianist and teacher of French birth. A child prodigy, he became a pupil of Roger-Ducasse and at the age of nine entered the Paris Conservatoire, where his teachers were Santiago Riera for piano and Nadia Boulanger for harmony and counterpoint. A fellow-pupil was Copland, whose music Ericourt was the first to play in public. After graduation he decided to pursue studies with Roger-Ducasse and Riera for a further four years. In 1926 Ericourt went to the USA and taught at the Cincinnati Conservatory while continuing to pursue an active career on both sides of the Atlantic. He appeared with conductors such as Monteux, Reiner, Fritz Busch, Celibidache and Markevitch. For many years on the staff of the Peabody Conservatory, Baltimore, he subsequently taught at the University of North Carolina, Greensboro.

Ericourt's childhood contact with Debussy had a strong influence on his development, and he was a Debussy interpreter of striking individuality and power, as is borne out in three recordings from the late 1950s. He composed a few piano pieces and made some arrangements of songs by Ravel and Debussy.

Erier, Thomas. *See* HERIER, THOMAS.

Erigena, John Scotus. *See* JOHANNES SCOTTUS ERIUGENA.

Eritrea. Country in East Africa. With an area of 93,679 km² and a population of 3·81 million (2000 estimate), it borders the Red Sea to the north and east, Ethiopia to the south and Sudan to the West. There are nine major ethnic groups: Tigrinya-speaking Tigré, Tigré, Saho, Afar, Hadareb (Hedareb), Bilen, Kunama, Nara and Rashaida. The majority are Christian and Muslim and the official language is Tigrinya, but Arabic, Afar and Somali are also spoken. Approximately one million Eritrean refugees live in the Sudan, Ethiopia, Canada, the USA, Sweden, Italy and Saudi Arabia. Eritrea achieved independence from Ethiopia in 1993. Both countries retain close cultural ties, sharing similar musical traditions.

1. The Rashaida. 2. The Tigrinya and Tigré. 3. Recent developments. 4. Research.

1. THE RASHAIDA. The Rashaida people are Muslims who live a nomadic life in the Sahel desert. Men and women celebrate life-cycle events separately and privately. However, some celebrations marking the end of Ramadan and Eritrea's independence are performed in the public domain. These songs and dances, accompanied by a one-sided bowl-shaped drum, are performed in a group. Songs are responsorial and antiphonal, and dances are arranged in a large semicircle where women alternate two at a time dancing in the centre while men and other women clap and sing in parallel 4ths and 5ths, interspersed with women's ululation. J. Jenkins recorded brief examples of Rashaida, Bedawi (Beni Amer), Nara (Baria), Tigré, Afar (Danakil), Asa'orta (Assaorta), Bilen and Kunama music (*Ethiopia III*, 1974).

2. THE TIGRINYA AND TIGRÉ. The Tigrinya and Tigre peoples live primarily in Seraye, Akele Guzai and Hamasien regions. Their secular songs are influenced partly by Amhara (Ethiopia), Sudanese and Italian musics, and they share *tezetā* and *bāti qeñet* (interval sets of six pitches, including the referent pitch and its octave equivalent) with the Amhara, but they also employ other *qeñet* (or *qəñət*). The form is strophic in responsorial or antiphonal style, with an introduction, postlude or coda section and a refrain. Each verse uses a different text, but melodic phrase groupings are repeated in sequence, i.e. *AABA*, *ABACA* or *AABBCA*. A new song is defined by a different text, not by a new melody. Topics of texts can be personal, but they also often reflect the overall political climate. Melodic phrases are in litanic form, such as that of meditative songs. Skilled performers can modulate to different octaves or *qeñet*. Variations in style may include vocal slides, glissandos, interjections, ornaments, melodic variation and overlapping melodic lines between vocal and/or instrumental accompanying parts. The elements that give the music its special character include improvisation (most prevalent in the text) and rhythmic and metrical interplay. Vocal and instrumental parts often exhibit different metres and melodic variants that are linked by an obvious or implied timeline.

Traditional Tigrinya songs of the early 1960s still popular today include: *Yafreki* ('I love you'), *Fikiri* ('Knowledge'), *Ghize* ('Time'), *Tehagosei Nebsei* ('My Soul rejoices'), *Misganan miftanin* ('Thanks and Encouragement'), *Gruman* ('It is wonderful'), *Adeie* ('My country'), *Asmara*, *Negusse* ('King') and *Kadem modieyo* ('My sorrow is gone'). Songs are accompanied by the *krar*, a six-string lyre plucked with or without a plectrum, or *masēnqo* or *cherawata*, a single-string, bowed spike lute with a diamond-shaped resonating box, and/or *kabaro* or *korobo*, a double-barrelled cylindrical drum. Individuals who pray, meditate and sing praises to God often accompany themselves on the *beganna* (or *bägänna)* 10-string plucked lyre. Among Muslims, males and females perform songs and dances separately, often accompanied by tambourine, *dube* (one-sided, bowl-shaped drum) and *kabaro*.

Morphological, stylistic and distribution variances occur. For example, *krars* found in Eritrea and performed by Tigré- and Tigrinya-speaking peoples have six metal strings rather than five gut, plastic or metal strings used in *krars* among the Amhara in Ethiopia. Eritreans prefer a resonating box consisting of a round metal bowl covered with stretched hide rather than the rectangular wooden box found in northern and central Ethiopia. The diamond-shaped *masēnqo* resonating box of the Tigré and Tigrinya in Eritrea are larger than those of the Amhara and Oromo found in Ethiopia. The *wāshint*, a hollow, end-blown flute with four finger holes, and *embiltā* (or *əmbilta*), a set of three and five end-blown flutes made of bamboo or thin-walled metal tubing, sometimes accompany dances of which the most notable is the *eskestā* whose trademark is the great variation of shoulder movements that correspond to the accompanying foot movement patterns. Overblowing allows the player to extend the range up to two octaves. More versatile and talented *wāshint* players own between six and twelve *wāshint* of varying lengths and diameters to accommodate various *qeñet* and pitch ranges. *Embiltā* are made of metal in the north due to proximity to industrial resource, but further south they are made of wood or bamboo. One set is usually played in triple metre using a hocket technique. *Embiltā* are played for social gatherings and wedding celebrations and traditionally not accompanied by other instruments.

3. RECENT DEVELOPMENTS. Before 1974 there was a plethora of solo vocalist-composers who accompanied themselves on the *krar* or *masēnqo*. After 1991, due to changes in government policy and social restructuring, musical groups and bands with their own soloists appeared with greater frequency and were often affiliated with local and/or regional cultural centres that lent their support to the government. Also, increased recognition of individual ethnic groups was the impetus for documenting and compiling musical traditions of all ethnic groups. Music was understood to influence and change peoples' attitudes, and was believed to be necessary for a community's well-being, as a teaching tool, and as a socially sanctioned form of expression. Political education and cultural presentations, such as performing music for purposes of mobilization for war and maintaining the peoples' morale, were the objectives of the *Keyahti' Embaba* (Red Flowers) cultural troupes during the late

1970s. These troupes consisted of thousand of children recruited by the Eritrean People's Liberation Front (EPLF). Teachers of one group from Dekemhare composed songs and music for the Red Flowers. They participated in public festivities, conferences, mass associations and workers' unions. As they gained public acceptance, they began to correspond with Red Flowers living abroad. During a 16-month period in 1983–4, they toured the front lines in the Sudan and in Eritrea in towns such as Karora, Marafit and Toker.

In the future, traditional music for life-cycle events will no doubt continue alongside burgeoning popular and traditional music groups, plus the growing recognition of the need for repositories of music and other art forms for which the National Museum of Eritrea in Asmara is a major advocate.

4. RESEARCH. Few publications focus specifically on Eritrean musics; those that do include 19th- and early 20th-century Italian sources and occasional remarks in works published by the Red Sea Press. There are also numerous indigenous oral and written chronicles and recordings in local languages available in varying formats, such as orally transmitted stories and song texts, radio and television broadcasts, electronic media, government documents and private educational, political and religious archives. These sources form the core of Eritrean music and are often the only extant references. Harold Courlander commented briefly on Tigrinya music (1944) and Cynthia Tse Kimberlin has written about aspects of Tigrinya and Tigré music (1976; 1980; 1986). Indigenous descriptive information on aspects of music that focus on secular and religious events of various ethnic groups were compiled during the 1980s by the Research Branch of the former EPLF, the Department of Politicization, Education and Culture, and later serialized and published electronically in *Eritrea Profile* (beginning in 1995).

CYNTHIA TSE KIMBERLIN

Erk, Ludwig Christian (*b* Wetzlar, 6 Jan 1807; *d* Berlin, 25 Nov 1883). German editor of folksongs, teacher, choral director and composer. He received his first musical training from his father, Adam Wilhelm Erk, who was Kantor, cathedral organist and teacher at Wetzlar. In 1813 the family moved to Dreieichenhain in Hesse-Darmstadt where Erk took piano, organ and violin lessons. After his father's death in 1820, he went to Offenbach, where he entered J.B. Spiess's educational institute (at which he taught from 1824). His music teachers at Offenbach were the composer Johann Anton André, the violinist C. Reinwald and the organist J.C.H. Rinck. In 1826 he was offered a temporary appointment at the teachers' seminary at Moers on the lower Rhine; he founded and directed many music festivals in this area (including the Remscheid, Ruhrort and Duisburg festivals), and also performed as a piano soloist and in ensembles. He accepted a teaching appointment at the Royal Seminary in Berlin in 1835 and in 1836 became director of the royal cathedral choir. Soon after his arrival in Berlin, he joined the Singakademie (1836–47); he also taught music to the children of Prince Carl of Prussia (1836–8). In 1843 he founded a men's choral union in Berlin for the purpose of singing folksongs and established a similar organization for mixed chorus in 1852. He became royal musical director in 1857 and professor in 1876.

Erk's major contribution was as an editor of German folksongs, of which he amassed a large private collection. He was inspired by the ideals of the Swiss educationist J.H. Pestalozzi concerning the importance of a sense of folk culture, and the preservation and revival of folksong in schools and choral societies became his main goal, vigorously promoted through numerous publications. Although he never realized his aim of publishing a comprehensive German folksong book, he came near with *Deutscher Liederhort* (Berlin, 1856), which J. Grimm (see Ledebur) called 'the richest and most careful collection of our German folksongs'; after Erk's death F.M. Böhme reorganized and enlarged this work into three volumes (Leipzig, 1893–4). He did not, however, distinguish between authentic folksongs and folklike or popular national songs written by identified composers, and, among others, Brahms bitterly criticized the 1893–4 completion as too all-inclusive and lacking in artistic discrimination. In contrast to Zuccalmaglio, whose collections he attached in 1848, he viewed folksong less from the standpoint of aesthetic value than of type. His model was that of straightforward syllabic melody in the major key to a text of analogous, homely content and he composed many melodies of his own in this 'volkstümlich' idiom. This unpretentious tone determined the character of German school song for much of the 19th century and he published many collections with such titles as 'Liederkranz', 'Singvöglein', 'Deutsche Liedergarten', 'Jugendfreund', 'Frische Lieder'. In addition to more than 100 editions of folksongs and school song collections, Erk compiled over 20,000 song entries in 41 manuscript volumes, which are now in the Deutsche Staatsbibliothek, Berlin. His most widely disseminated collection was the three-volume *Deutscher Liederschatz* (1859–72), which went through many editions into the 20th century, was revised by Max Friedlaender, and is still widely known. He divided its contents into four categories: Volks- und Geschäftslieder, Vaterlandslieder, Soldaten- und Jägerlieder, Studentenlieder.

In addition to his folksong collections, Erk edited sacred and secular choral works and Bach's chorales and arias, made piano transcriptions (including one of Mozart's Requiem), and contributed to music dictionaries and periodicals. As well as composing melodies he also furnished folksongs with simple harmonizations. Influential as both teacher and choral director, Erk contributed frequently to journals and also produced works of theory in the attempt to raise the standard of school singing and promote his ideas during his years in Berlin, notably

Methodischen Leitfaden für den Gesangunterricht in Volksschulen (1834) and *Allgemeine Musiklehre*, with O. Tiersch (1885); he also edited the work of others (E.O. Lindner: *Geschichte des deutschen Liedes im XVIII Jahrhundert*, 1871). His own chronological list of his works and writings appeared in 1867. A full list of his collections is given by Salmen in *MGG1* with an example of one of his melodies in his hand.

GAYNOR G. JONES, MICHAEL MUSGRAVE

Erke. Onomatopoeic word in the Amerindian language Quechua for an infant or weeping child, used to refer to two forms of instrument. Firstly, it describes an idioglot clarinet formed by inserting a cane (length 10–30 cm), slit to create a reed, into a cow- or goat-horn bell. It is played in many parts of the southern Andes (Bolivia, Argentina and Chile), and is usually confined to the rainy growing season. In Taríja, Bolivia, and northern Argentina the *erke* or *erkenchu* player typically accompanies himself with a small double-skin drum or CAJA. During Carnival the Jalqas, from near Sucre, Bolivia, combine paired 'male' and 'female' *erkes* (without drums) to perform melodies, which are sometimes pentatonic. Exceptionally, the smaller 'female' size is played by a woman.

Secondly, the *erke* exists as a side-blown trumpet, 2 to 6 metres long, made of cane, with a bell made from the dried skin of a cow's tail, animal horn or metal. It plays impressive fanfare-like figures, rarely moving outside a four-note compass (the major triad and its lower dominant). Performance is usually confined to the dry winter months as its sound is sometimes said to attract frosts. The *erke* or *corneta* trumpet is played in parts of northern Argentina (Jujuy and Salta provinces) and, more usually termed *caña*, in southern Bolivia (Taríja department). It is similar in construction to the *clarín* of Peru and Ecuador (*see* CLARÍN (3)).

HENRY STOBART

Erkel. Hungarian family of musicians. They played a leading role in the country's musical life in the 19th century.

(1) Ferenc Erkel (*b* Gyula, county of Békés, 7 Nov 1810; *d* Budapest, 15 June 1893). Composer, conductor and pianist.

1. 1810–44. Erkel's ancestors lived in Pozsony (now Bratislava), where the name Erkel was recorded as early as the 16th century. His father and grandfather were both accomplished musicians; it was probably this that led to their move in 1806 to Gyula, where the grandfather became steward to the music-loving Count Ferenc Wenckheim and the father held the post of schoolmaster and conductor of the church choir. Erkel's father married Klára Ruttkay, daughter of a farm bailiff also in Count Wenckheim's service, and Ferenc was the second of their ten children. The head of the Gyula county administration, notary public and deputy sheriff, Albert Rosty, had studied in Vienna and developed a love of chamber music, especially Beethoven's. Chamber music evenings were frequently held at Rosty's house, in which Erkel's father and József Wagner, an outstanding cellist also in Count Wenckheim's service, took part; the young Ferenc would often turn the pages for the performers. 20 years later his first compositions were published by József Wagner in Pest, and it was on Rosty's recommendation that he was engaged by the Hungarian Theatre as an opera conductor.

From 1822 to 1825 Erkel attended the Benedictine Gymnasium in Pozsony, and at the same time studied with Heinrich Klein, a well-known music teacher whose activities as composer of church music for the school services presumably inspired Erkel's own first composition, of which only the name, *Litánia* ('Litany'), has survived. At this time Pozsony, not far from Vienna and mainly German in culture, was one of the few Hungarian towns outside Pest with a relatively high standard of musical life. Erkel heard Liszt play in 1823, and also heard the popular Hungarian dance tunes of János Bihari, who gave performances with his orchestra in Pozsony on the occasion of Queen Carolina Augusta's coronation in 1825. Three years later, in Gyula, Erkel had the opportunity for renewed contact with specifically Hungarian music, when a travelling company performed József Ruzitska's *Béla' Escape*, first produced (1822) in Kolozsvár (now Cluj-Napoca, Romania) and the most popular indigenous Singspiel before the appearance of Erkel's own works. It was at about this time that he moved to Kolozsvár, centre of the thoroughly Hungarian cultural and intellectual life of a large area of the country. The move largely determined the direction of his career, for Kolozsvár was the cradle of Hungarian theatre and, to some extent, of Hungarian opera as well. He taught the piano and became an excellent pianist; there he gave his first concerts, composed his earliest piano pieces and probably in November 1834 began his long career as an opera conductor. In February 1835 the theatre and opera company moved to Nagyvárad (now Oradea, Romania) and soon from there to the capital, where partly from this ensemble was formed the Hungarian theatre company of Buda (forerunner of the Hungarian Theatre in Pest). The Buda company's first performance took place on 2 April 1835, and Erkel, acting as its opera conductor, settled in the capital at about that time. When the company was

Ferenc Erkel: lithograph by J. Pataki

beset by financial difficulties, he was temporarily employed (from November 1836) by the (German) Municipal Theatre of Pest, but in January 1838 he was engaged by the six-month-old Hungarian Theatre and from then on his name was inseparably bound up with the history of Hungarian opera.

Within a short time of his arrival, Erkel had become the capital's most highly regarded pianist, with a repertory including concertos and other works by Moscheles, Hummel, Herz, Thalberg and Field. Although he was the first to perform a work by Chopin in Pest (the E minor Concerto, in 1835), in his tastes and style at the piano he did not join ranks with the Romantics. As he became older, he turned increasingly to the Viennese Classics, in particular to Mozart. As a composer Erkel also felt the effects of Pest's exceptionally lively musical life, although only some 20 works, in both larger and smaller genres, date from before his 30th year. Most of these are now lost, but from the surviving works (and known titles) it is clear that from the outset of his career he was attempting to create his style from a Hungarian musical language. This led him to produce successive arrangements of the well-known Rákóczi song and Rákóczi march and to use Hungarian dances (*verbunkos*) as themes for sets of variations. Although in his maturity he increasingly incorporated folklike elements in his music, he never, owing to his time's less sophisticated understanding of the folk idiom, absorbed it as intensively as did Bartók and Kodály in the 20th century. Thus in his first published work, the *Duo brillant* for violin and piano (?1838), composed for Vieuxtemps, Erkel was satisfied that its use of 'airs hongrois' was sufficient to constitute a Hungarian national style, and through this duo, it was indeed the Adagio for horn and piano (1838) and theVariations for cello and piano (1839) that Hungarian themes in concert works were heard outside Hungary slightly before Liszt's arrival on the scene. It was after Liszt's brilliant triumph in Pest during the 1839–40 season that Erkel decided not to compete with the great virtuoso on the concert platform; his last notable piano piece is a Capriccio (*Erinnerungen an H.W. Ernst*) composed in 1840, which consists of variations on a Paganini theme performed by the violinist Ernst at a Pest concert.

Erkel composed his first opera, *Bátori Mária*, remarkably quickly considering its advance over earlier experiments in Hungarian opera. From its first performance (8 August 1840), he was acknowledged as a leading composer. Erkel's style in *Bátori Mária* consisted largely of the forms and character types of contemporary Italian and French opera infused with the melodic patterns of the instrumental *verbunkos*, and an attempt to build up the finales as large, coherent concluding scenes. He used a large contemporary orchestra, with some effective choruses. The overture was first performed much later (11 November 1841); Erkel subsequently added new arias, and in 1858 he rewrote the opera. It was revived in 1860 but did not remain in the repertory.

With the success of his first opera, Erkel devoted his composing efforts exclusively to the stage, and two months after the première a new libretto was in preparation, again by Egressy and based on a play. The new work, *Hunyadi László*, first performed in 1844, became the most successful of his operas in Hungary. From the early 1850s provincial companies began to include it in their repertories; one of them performed a shortened version of it in Vienna in 1856, two others in Zagreb and Bucharest in 1860. However, Thalberg's attempt in 1846 to introduce the opera to Paris failed, as did Liszt's endeavours to have it performed in Weimar in 1856–7. The only parts to find acceptance outside Hungary during the 19th century were the march, written about 1847, a coloratura aria composed in 1850 for Mme La Grange and the overture, composed in 1845 and Erkel's finest orchestral work, which Liszt conducted in Vienna a year after its composition. Liszt found it convincing proof of the feasibility of treating Hungarian instrumental dance music symphonically. The opera joins Italian and Viennese Classical influences to indigenous ones, evident in the highly developed recitative and the incorporation of features from popular dances. From the *verbunkos* Erkel made use of the 'Hungarian scale' with its two augmented

Ex.1 'Hungarian scale' (cf Liszt: Sonata in B minor, beginning)

2nds (ex.1), of certain rhythmic patterns, especially the choriamb (ex.2), of the *bokázó*, a characteristically

Ex.2 The choriamb (cf Kodály: *Háry János*, Intermezzo)

Hungarian cadential figure which Liszt termed the *cadence magyare* (ex.3), and of the dance's expression, both heroic

Ex.3 Bokázó cadence (cf Liszt: *Coronation Mass*, Benedictus, vn solo)

and (in the slow, minor mode first section) deeply mournful, even tragic. He also made dramatic use of the *verbunkos* tripartite form, each section faster in tempo and having new thematic material, as exemplified in the

aria added for Mme La Grange. From the *csárdás* Erkel drew upon the dramatic sectional climaxes and the dance element itself. These features, the use of recurring thematic material and the large, unified finales create *Hunyadi László*'s sense of overall dramatic coherence.

In his perpetual and enthusiastic search for fresh librettos, Erkel was also aiming at a new and native genre, the *népszínmű*, popular plays with musical insertions resembling the English ballad opera. His close imitation of Hungarian melodies of the time, even to the point of taking over some of them unaltered, gave his interpolations of popular songs and original songs composed in the same style an immediate and lasting success. The founder of this new genre was Ede Szigligeti (1814–78), a friend of Erkel's who was a stage manager and a dramatist at the National Theatre. Some of the *népszínmű* became known in the provinces and outside Hungary more quickly than his operas; *Két pisztoly* ('Two Pistols') and *A rab* ('The Prisoner') were performed in German translation in Vienna with great success. It is regrettable that, from this basis in popular song, Erkel was not to evolve a more ambitious lied style, but without a theatrical stimulus his music lacked lyric inspiration. The Hungarian national anthem (1844), which he composed during the same period as the *népszínmű*, has achieved popularity for its hymn-like qualities, not its lyrical ones.

2. 1845–93. Although he continued to produce shorter works, it seemed as if Erkel's creative powers had been extinguished or at least temporarily exhausted; after *Hunyadi László* he wrote almost nothing of significance for some time. His composing activities must have suffered partly on account of his numerous other commitments, including his demanding position as conductor at the National Theatre, where he moulded a permanent ensemble and a good orchestra from the opera company. The need to provide for his nine children meant giving private lessons in addition to his work in the theatre, and the censorship introduced after Hungary's defeat in the 1848 wars of liberation and the resulting oppression also caused difficulties for him and for the theatre. Further demands on his energy were made by the Philharmonic Concerts which he founded and, from 1853 to 1874, also conducted and occasionally took part in as piano soloist. In this relatively fallow period, he composed a pantomime *Sakkjáték* ('A Game of Chess') in 1853 for the National Theatre's masked ball (the music of which is unknown), and then an impressive funeral chorus for male voices, *A halálnak éjszakája* ('The Night of Death'), which was sung at the obsequies of the statesmen Széchenyi (1860) and Kossuth (1894), as well as at the burial of the German composer F.R. Volkmann (1883) and of Erkel himself. An orchestral composition from this period, the *Csárdás* (1853), is probably identical with the ballet interlude from the later opera *Bánk bán* (1861), into which Erkel also incorporated the even earlier *Keserű bordal* ('Bitter Drinking-Song', ?1845). In much the same way he used the *Magyar induló* ('Hungarian March') of 1850 in an opera *Erzsébet* (1857), which was hastily assembled in collaboration with the Doppler brothers on the occasion of a visit by the imperial couple; Erkel was responsible for the opera's striking second act.

After the defeat suffered by Austria in the campaign against the Italians, the heavy oppression of Hungary was relaxed, reviving in Erkel the hope he had been fostering ever since the completion of *Hunyadi László* of composing an opera on the censored play *Bánk bán*. Before 1859 there had been no purpose in settling down to serious work on the score, but in order to complete it as quickly as possible he called upon the help of his two most talented sons, (2) Gyula Erkel and (5) Sándor Erkel. From this time on, his opera scores reveal the increasingly important collaboration of these two, especially Gyula. The première in 1861 of *Bánk bán* was enormously successful, and Erkel was at the summit of his career. The story of the 13th-century revolt against the queen's hated foreign court seemed to have set free repressed passions in the composer. He filled his opera with broad, immediately striking melodies whose new flexibility is a direct result of the influence of folksong. *Bánk bán* is the culmination of Erkel's stylistic procedures in *Bátori Mária* and *Hunyadi László*; in it he succeeded not only in constructing the various numbers in accordance with the formal principles of the *verbunkos*, but also achieved a newly vivid dramatic characterization in the big scenes (especially in the third act) through his handling of recitative and thematic transformation. In the concentration of both plot and music, there is a tendency towards chamber opera; the instrumental writing is chamber-like, both in solos and in ensembles. Erkel was particularly adept at evoking a pastoral nostalgia in instrumental passages composed in folk style; the cimbalom was used for the first time in composed music.

Bánk bán was the fruit of long years of organic growth, and Erkel never again managed in any of his later operas to write with such fire and spontaneity. His subsequent stylistic development followed two different paths. The first involved a simplification of his musical language and an increased realism comparable to that of *Carmen* (which was first performed in Hungary in 1876, conducted by Gyula Erkel), turned not to dramatic opera, but to comic opera peopled with peasants and ordinary townsfolk. In *Sarolta* (composed 1861–2) and still more in *Névtelen hősök* ('Unknown Heroes'; 1875–9) there are popular revels, the bride's farewell, drum signals, recruiting dances and the billeting of troops; this employment of folk customs and rustic life is more familiar from Rimsky-Korsakov's operas (though these were unknown in Hungary during Erkel's lifetime) and later from Kodály's *The Transylvanian Spinning Room*; Erkel found appropriate musical expression for it in the transpositions of old Hungarian folksongs, where the third and fourth lines drop by the interval of a 5th from the first two, in the development of vocal polyphony in ensembles and in a further individuation of instruments in the scoring.

Erkel's second path of later development was in nationalistic music drama, represented by *Dózsa György* (1864–6) and *Brankovics György* (1868–72), where he and his two sons pursued their stylistic experiments. Both operas were written on existing historical dramas, each with a tragic hero of strong character whose personal fate culminates in that of his people. In *Brankovics György*, composed to a prose libretto, Serbian and Turkish musical influences appear alongside Hungarian ones. The scale system employed is the major–minor one, although there are also derivations of the Hungarian scale and amalgamations of the different church modes (as in Liszt's late works), offering Erkel an opportunity for fresh melodic and harmonic patterns. The music is mostly continuous in a Wagnerian sense, but with organically inserted set numbers and large finales; the orchestra's role approaches

a Wagnerian level of relative importance. The chromaticism and such harmonic elements as the use of 13th chords and chords constructed of superposed 5ths show a marked similarity to the style of Liszt; the treatment of folk music foreshadows that of Bartók.

These later operas had no precedents in Hungarian opera and disconcerted audiences still under the spell of the more accessible *Hunyadi László* and *Bánk bán*. Thus the comic opera *Sarolta*, first performed in 1862, was dropped from the repertory after only six months, and the two ambitious music dramas disappeared within two years of their first performances in 1867 and 1874, partly too because their content was politically unacceptable to official circles. But Erkel's second comic opera, *Névtelen hősök*, first performed in 1880, owed its lack of success mainly to its uninteresting plot. As the participation of his two sons increased, Erkel's involvement in his compositions diminished, and, perhaps because Gyula and Sándor did not inherit their father's gift for creating an individual style, brilliant new ideas alternate in the later operas with unsolved musical problems. The last opera, *István király* ('King István'; 1874–84), mainly in Gyula's hand, shows no trace of Erkel's own musical personality, and is almost wholly under the shadow of Wagnerism. The enthusiasm which the public demonstrated at the première of *István király* (1885), reminiscent of the rapturous reception of *Bánk bán* nearly a quarter of a century before, is an indication of the changing times; but Erkel had not changed with them. After his death, however, the opera was staged only a few times.

Erkel's development had been something more than, and different from, an exchange of Italian number opera for Wagnerian continuity; the musical influences to which his style was exposed should not be discounted, but they were not its prime cause and merely gave it support or some particular nuance. His growth was determined partly by an inner organic evolution whose musical expression became more and more imbued with Hungarian melodic and formal elements, and partly by the requirements of the new spirit of the librettos he chose to suit his changing style. Except for the two comic operas, all his librettos were versions of Hungarian historical dramas which themselves show a development from the tragedy of individuals towards a popular theatre whose characters, often heroic, represent human fate within the framework of a great national drama or everyday village life. With *Hunyadi László* and *Bánk bán* in particular, Erkel created a native operatic style; they have never left the repertory of the Budapest Opera and have always been successful there. In the mid-20th century they have been taken into the repertories of several foreign opera houses, from Belgium to Finland and Moscow. *Brankovics György*, considered Erkel's masterpiece during his lifetime, was added to the repertory of the Budapest State Opera in the version by Rezső Kókai (1962).

As he approached old age, Erkel turned away from opera and once more to the needs of the provincial society in which he had been brought up, and especially, from the 1850s, to the increasingly active choral singing movement. From 1868 to 1881 he was principal conductor of the National Hungarian Choral Association (founded in 1867), and he directed festival concerts in Pest and in the provinces. Occasional works like the *Dalár-induló* ('Choral Society March') from 1872, a chorus to words by the poet and national hero Petőfi, 1892, and the Tattoo from *Névtelen hősök*, established Erkel as the leading early Hungarian composer for male choir. When he left the National Theatre in 1874, with the title of general music director, he was succeeded by Hans Richter. After this time, Erkel conducted only his own operas. He retained the title of general music director at the new Magyar Királyi Operaház (Royal Hungarian Opera House), whose company was formed from members of the National Theatre's opera division, but he seldom appeared there as conductor. When he finally gave up his regular appearances on the podium, he accepted the directorship of the Academy of Music, founded in 1875 with Liszt at its head, and remained there, also teaching the piano, until his retirement in 1887. He appeared as a pianist in public for the last time in 1890, playing Mozart's D minor Concerto with one of his own cadenzas, at a concert celebrating his 80th birthday. In 1892 he led a performance of his *Magyar király-himnusz* ('Second Royal Anthem') for men's choir and orchestra at a concert marking the 25th anniversary of the founding of the National Association of Choral Societies; it was his conducting farewell. His long and productive career ensured him a secure place in Hungarian music history, and his name is still linked to all his country's important musical institutions.

WORKS

unless otherwise stated, all printed works published in Budapest (before 1873, Pest) and all MSS for extant unpublished works in H-Bn

Editions: *Erkel Ferenc áriák* [Arias, with pf acc.], ed. J. Kenessey (1954–5)
Erkel-kórusok [Choral works, in vocal scores, some retexted], ed. M. Forrai (1960) [E]

OPERAS AND BALLET

unless otherwise stated, all are operas, performed at [Buda]Pest, National Theatre

Bátori Mária (2, B. Egressy, after A. Dugonics, after L.V. de Camoëns: *Os Lusíadas*), 8 Aug 1840, ov., 1841; rev. version, 1 Feb 1858; march arr. pf (1846), ov. (1860)
Hunyadi László (4, Egressy, after L. Tóth), 27 Jan 1844, vs (1896), ov., 1845 (1846), arr. pf (1846)
Sakk-játék [A Game of Chess], ballet, J. Szén and Erkel, 2 Feb 1853; lost
Erzsébet [Elizabeth] (3, J. Czanyuga), 6 May 1857; collab. F. and K. Doppler
Bánk bán (3, Egressy, after J. Katona), 9 March 1861, vs (1957); orchd with G. and S. Erkel
Sarolta (comic op, 3, Czanyuga), 26 June 1862, ov. and excerpts arr. pf (1862); mainly orchd G. Erkel
Dózsa György (folk music drama, 5, later 4, E. Szigligeti, after M. Jókai), 6 April 1867, Hymnusz [Hymn] vs (1865), Rózsa végbúcsuja [Rózsa's Farewell] arr. pf (1867); collab. G. and S. Erkel
Brankovics György (folk music drama, 4, L. Odry and F. Ormai, after K. Obernyik), 20 May 1874; collab. G. and S. Erkel
Névtelen hősök [Unknown Heroes] (comic op, 4, E. Tóth), 30 Nov 1880, Takarodó [Tattoo] vs (1882); collab. G., S., E. and L. Erkel
István király [King István] (4, A. Váradi, after L. Dobsa), Budapest, Royal Hungarian Opera, 14 March 1885, Budapest, Opera; mainly G. Erkel

INCIDENTAL MUSIC

Velencei csajkás [Boatman of Venice], 7 insts, ?1834–6; lost
Alpenunschuld (J.N. Vogl), 1836, copy *H-Bami*; song
Kegyenc [Minion] (L. Teleki), 1841; lost
A kalandor [The Adventurer] (F. Ney), 1844
Két pisztoly [Two Pistols] (Szigligeti), 1844, vs (1844); collab. F. Doppler
A zsidó [The Jew] (Szigligeti), 1844
Nemesek hadnagya [The Squire's Lieutenant] (P. Kovács), 1844
Debreczeni rüpők [A Bounder from Debrecen] (Szigligeti), 1845; lost
A rab [The Prisoner] (Szigligeti), 1845, copy only *Bn*
Egy szekrény rejtelmei [The Secrets of a Wardrobe] (Szigligeti), 1846

Székely leány Pesten [A Székely Girl in Pest] (N. Pajor), 1855; collab. K. Huber, lost
Salvator Rosa, melodrama (A. Degré), 1855; collab. F. and K. Doppler
Késő ősznek hideg szele [Cold Wind in Late Autumn], song (E. Tóth), 1876 (1876); ? by G. Erkel

CHORAL

Litánia, chorus, orch, ?1825; lost
Hymnusz [National Anthem] (F. Kölcsey), chorus, orch, 1844 (1953); arrs. by Erkel: chorus, pf/org (1844); male vv (?1884)

Erinnerungen an H.W. Ernst: Introduction (Elegie von H.W. Ernst) und Capriccio, 1840 (?1840)
Der Ungar (1845)

ARRANGEMENTS FOR ORCHESTRA

Eskü (Il giuramento) (S. Mercadante), 1838 (1839)
Nemzeti dal (National Song) (Egressy), Budapest, Opera

(2) **Gyula Erkel** (*b* Pest, 4 July 1842, *d* Újpest, 22 March 1909). Composer, conductor and pianist, son of (1) Ferenc Erkel. From 1863 to 1889 he was third (later second) conductor of the National Theatre and of the Royal Hungarian Opera House, which opened in 1884; he appeared as a pianist in chamber concerts. He also taught the piano (and later singing) at the Academy of Music (1878–1908). From 1860 he was his father's main collaborator in composition. The opera *István király* and the much praised *Ünnepi nyitány* (Festival Overture) at least were their common work, or perhaps predominantly Gyula's. He also composed many *népszínmű*, a genre similar to the English ballad operas, incidental music, a ballet suite for orchestra, piano music, choruses and songs.

(3) **Elek Erkel** (*b* Pest, 2 Nov 1843; *d* Budapest, 10 June 1893). Composer and conductor, son of (1) Ferenc Erkel. From 1860 he was the bass-drum player of the National Theatre, and from 1875 to 1893 conductor of the People's Theatre, where he compiled and composed many *népszínmű* and some successful operettas.

(4) **László Erkel** (*b* Pest, 9 April 1844; *d* Pozsony [now Bratislava], 3 Dec 1896). Choral conductor and piano teacher, son of (1) Ferenc Erkel. Bartók was his piano pupil as a child in Pozsony (1892–3, 1894–6).

(5) **Sándor Erkel** (*b* Pest, 2 Jan 1846; *d* Békéscsaba, 14 Oct 1900). Conductor and composer, son of (1) Ferenc Erkel. He was timpanist at the National Theatre from 1861 but also began to conduct operas there in 1868. When Richter succeeded Ferenc Erkel as musical director of the National Theatre in 1874, Sándor became his excellent first conductor and later, after Richter's departure, musical director (1876–86). At the same time, under his directorship (1875–90), the concerts of the Philharmonic Society achieved a high artistic standard. As a composer he was only moderately gifted, but he helped his father in completing his opera scores.

DEZSŐ LEGÁNY

Erkin, Ulvi Cemal (*b* Istanbul, 14 March 1906; *d* Ankara, 15 Sept 1972). Turkish composer, pianist and conductor. In 1925 he won a competition enabling him to study at the Paris Conservatoire and at the Ecole Normale de Musique, where he took composition and piano classes with Jean and Noël Gallon and Nadia Boulanger. Returning to Turkey in 1930, he became a lecturer at the Ankara School for Music Teachers. In 1949 he was appointed director at the Ankara State Conservatory, where he had taught the piano for some time. In 1951 he became head of the piano department of Ankara State Conservatory, but continued to compose and conduct concerts in Turkey and elsewhere. One of the Turkish Five, Erkin made skilful use of traditional Turkish music, particularly its rhythm. His compositions at first reflected the influence of Impressionism, but as he matured Erkin displayed a colourful, more individual expression coupled with rich and varied orchestration. (*KdG*, M. Greve)

FARUK YENER

Erkomaishvili. Georgian family of folksingers. They came from the region of Guria (western Georgia).

(1) **Gigo Erkomaishvili** (*b* Makvaneti, nr Ozurgeti, 1839; *d* Makvaneti, 7 May 1947). Son of Ivane Erkomaishvili, the brilliant *krimanchuli* (yodeller) and singer. Gigo became the leader of the famous Ensemble of Gigo Erkomaishvili which also included the excellent yodeller Giorgi Babilodze. In Tbilisi in 1907 this ensemble made one of the first recordings in Georgia of 42 songs, organized by the English company Gramophone. The ensemble made appearances throughout Georgia and in Leningrad (now St Petersburg), with recording sessions in 1929 in Leningrad. Gigo had ten children, three of whom, Artem, Anania and Vladimer, became famous folksingers.

(2) **Artem Erkomaishvili** (*b* Makvaneti, 22 Oct 1887; *d* Ozurgeti, 2 Feb 1967). Son of (1) Gigo Erkomaishvili. He was an expert in church-singing tradition and a songwriter. He sang a traditional repertory acquired from his family. From 1904 he studied a repertory of approximately 2000 church songs of western Georgia (Guria) with Melkisedek Nakashidze, himself a student of Anton Dumbadze. From 1909 he taught church singing in the town of Senaki in Samegrelo (western Georgia). After the establishment of the communist regime in Georgia in 1921 he taught only folksinging, leading choirs in Batumi (Achara) and Ozurgeti (Guria). During the milder political period of the early 1960s he recorded all three parts of several hundred church songs at Tbilisi Conservatory, material which remains mostly unpublished. He made appearances throughout Georgia, and also in Moscow and Leningrad in 1929, in addition to recording sessions. The trio formed by the Erkomaishvili brothers (Artem, Anania and Vladimer) was one of the most outstanding ensembles in Georgia during the 1940s–50s. Some of their versions of songs, particularly *Shavi shashvi* (Blackbird) remain very popular. Artem mostly sang the bass part, his singing style based on a deep knowledge of traditional singing and a feeling for its peculiar dissonant harmonies.

(3) **Anzor Erkomaishvili** (*b* Batumi, 10 Aug 1940). Ethnomusicologist, writer, publisher, the grandson of (2) Artem Erkomaishvili, he acquired his traditional repertory from his family. He graduated from the Tbilisi Conservatory as a choir conductor in 1969 and was a member of the Gordela ensemble which started performing church songs in the milder political climate of the early 1960s. In 1969 he became the leader of the Rustavi choir, the best-known Georgian folk ensemble, with numerous appearances in most Western countries, extensive recordings, international radio and TV appearances and awards (in Bulgaria, 1968; France, 1970; USSR, 1971; Georgia, 1982). During the 1970s and 80s he restored and republished early recordings of Georgian folksongs. He is the author of various articles and a book *Shavi shashvi chioda* (The Blackbird) about Georgian (Gurian) traditional singing.

JOSEPH JORDANIA

Erlanger, Camille (*b* Paris, 25 May 1863; *d* Paris, 24 April 1919). French composer. His family, originally from Alsace, had settled in Paris where his father kept a milliner's shop. Although he showed talent for music quite early, he complied with his father's wishes and entered an industrial firm as a trainee accountant. However, several people who had noticed his musical gifts eventually persuaded his father to let him study at the Paris Conservatoire, which he entered in 1879, attending the classes of Georges Mathias (piano), Emile Durand and Antoine Taudou (harmony) and most notably Léo Delibes (composition). After winning second prize in the Prix de Rome competition in 1887, he won first prize the following year with his cantata *Velleda*, and stayed at the Villa Medici until 1891. The most important work he composed there was his *Saint Julien l'hospitalier*.

Erlanger was attracted to the stage rather than the concert hall, and his first dramatic work, *Kermaria*, was produced in 1897. It was coolly received by both the public and the critics, but he was more fortunate with *Le juif polonais* (1900), a great success which remained in the repertory of French opera houses until the 1930s. His only other opera to make its mark was *Aphrodite* (1906), from the novel by Pierre Louÿs. This work, tinged with an eroticism that was rather daring for its time, had a huge success at its première (with Mary Garden), and was performed 182 times in Paris up to 1926. Erlanger died suddenly from an attack of angina, leaving three works finished or almost completed: *Hannele Mattern*, *Forfaiture* and *Faublas*.

Erlanger was one of a generation of French operatic composers including such musicians as Bruneau, Hüe and Leroux on whom the influence of Wagner and Massenet weighed heavily. He had a solid technique, and his works bear witness to an assured sense of musical scene-setting and remarkable qualities of orchestration, most obvious in the large crowd scenes in *Le fils de l'étoile* and *Aphrodite*. However, despite these virtues and a harmonic language that did not shrink from surprisingly bold effects, he was handicapped by a lack of melodic inspiration which made it impossible for him to provide a wholly satisfying musical depiction of emotion or of his characters' psychology and state of mind. To compensate for this failing he devoted himself to working on complex thematic structures based on leitmotifs, which he called 'sujets musicaux'. They often produce no conspicuous musical outline but are indefinitely repeated, transposed and varied, thereby pointing up the often laboured quality of his music and emphasizing its lack of spontaneity.

Erlanger always chose librettos of a dramatic or tragic character, and tried his hand at subjects deriving from naturalism (*Le juif polonais*, *L'aube rouge*), symbolism (*Hannele Mattern*), themes of classical antiquity (*Le fils de l'étoile*, *Aphrodite*) and extreme *verismo* (*Forfaiture*, adapted from a film script), although he never truly succeeded in any of these genres. His best work is undoubtedly his 'légende lyrique', *Saint Julien l'hospitalier*, which deserves revival.

WORKS
(*selective list*)

STAGE

Kermaria (idylle d'Armorique, 3, P.-B. Gheusi), Paris, OC (Lyrique), 8 Feb 1897
Le Juif polonais (conte populaire d'Alsace, 3, H. Cain and Gheusi, after Erckmann-Chatrian), Paris, OC (Favart), 11 April 1900

JACQUES TCHAMKERTEN

Erlanger, Baron **François Rodolphe d'** (*b* Boulogne-sur-Seine, 7 June 1872; *d* Sidi bou Said, Tunisia, 29 Oct 1932). French ethnomusicologist and composer. He settled in Tunis in 1910 and from 1924, assisted by Carra de Vaux and the Arab scholars 'Abd al-'Azīz Bakkush and Muḥammad al-Mannubi, he made an intensive study of Arabian music history, translating many major theoretical tracts. The Arab Congress (Cairo 1932) was convened at his suggestion. His major work, the source collection *La musique arabe*, was intended to serve as a renaissance of Arab music and its study rather than exist as an end in itself; the first four volumes contain French translations of writings from the 10th century to the 16th including treatises by al-Fārābī, Ibn Sīnā and Ṣafī al-Dīn, while the last two are essays codifying contemporary theory. The book was prepared with the help of leading oriental musicians and d'Erlanger provided many transcriptions of melodies. His own compositions were written according to Arab principles.

JEAN GRIBENSKI

Erlanger, Baron **Frédéric d'** (*b* Paris, 29 May 1868; *d* London, 23 April 1943). British composer and banker of German-American parentage. Taking British nationality in his early 20s, he studied music in Paris with Ehmant and first came to attention with an opera, *Jehan de Saintré*, produced at Aix-les-Bains in 1893. *Ines Mendo*, composed under the pseudonym Frédéric Régnal, appeared at Covent Garden in 1897, and later as *Das Erbe* in Hamburg, Frankfurt and Moscow. These show the influence of Massenet, but the verismo *Tess*, after Thomas Hardy, is very much Italian in its vocal style. First seen in Naples in 1906, where two recordings appeared of Angel Clare's aria, London saw it in 1909 with Zenatello and Destinn. Repeated there in 1910 it was subsequently given in Chemnitz and Budapest, and revived by the BBC in 1929.

D'Erlanger was not prolific, but new works appeared regularly throughout his life, almost always with leading performers of the day, a *Suite symphonique* at the Proms in 1895, the Violin Concerto with Kreisler in 1903. There are two striking choral works, the *Messe de Requiem* which Sir Adrian Boult thought had 'great beauty' and an eight-part setting of The Lord's Prayer recorded by the BBC Chorus. In the 1930s d'Erlanger returned to the stage with two ballets *Les cent baisers* and *Cendrillon*, the former recorded by the LSO and Dorati.

LEWIS FOREMAN

Erlebach, Philipp Heinrich (*b* Esens, East Friesland, bap. 25 July 1657; *d* Rudolstadt, Thuringia, 17 April 1714). German composer. He was one of the leading composers of his time in central Germany, especially of church music and more particularly of cantatas, of which he wrote several hundred.

1. LIFE. Erlebach probably received his earliest musical training at the East Friesian court. Through the family connections of the ruling house he was sent with a recommendation to Thuringia, where he was employed from 1678 to 1679, first as musician and valet and then, from 1681, as Kapellmeister, at the court of Count Albert Anton von Schwarzburg-Rudolstadt. At Rudolstadt he entered a lively musical environment. During his 33 years as Kapellmeister he not only succeeded in making this small establishment into a main centre of musical activity in Thuringia but also made a considerable name for himself in central Germany as a composer. He enjoyed both musical and personal relations with J.P. Krieger, Kapellmeister of the court at Weissenfels, and he paid visits to the ducal court of Brunswick-Wolfenbüttel and to Nuremberg, where several of his works were printed. In 1705 he took part, as a member of Albert Anton's retinue, in a ceremony of homage to the Emperor Joseph I at Mühlhausen, where, with the Rudolstadt court orchestra, he directed a large-scale ceremonial work, which he had composed for the occasion and which is his only music to survive in an autograph copy. He wrote several pieces for the funerals of Albert Anton (1710) and of his consort (1707). When Albert Anton's son Ludwig Friedrich came to the throne in 1711, the event was celebrated with a number of festival cantatas, all of which Erlebach also composed. In his last years he was revered and sought out above all as a teacher; Johann Caspar Vogler, who also studied with Bach, was one of the many musicians who learnt the rudiments of their craft from him. After his death the Rudolstadt court bought his collection of music from his widow; it included many sacred and secular works that were destroyed by fire in 1735 and are known now only from two extensive catalogues.

2. WORKS. Erlebach composed in nearly all the forms common at the time and was equally successful in instrumental and vocal works. Of his 120 or so instrumental works there survive only six suites, six trio sonatas and a march. The suites show the influence of French orchestral suites, and the trio sonatas that of the Italian *sonata da camera*; in all these works Erlebach succeeded in uniting foreign formal elements with German features, which can be seen above all in the distinctly folklike

nature of some of the melodic material and which also produces sonorities reminiscent of those of vocal music.

Several arias from Erlebach's two principal operas – the otherwise lost *Die Plejades* and *Die siegende Unschuld* – were printed in the two volumes of *Harmonische Freude*, but of his other dramatic music only librettos survive. In his operatic output a preference for comic mythological subjects (e.g. *Die Plejades*) gave way to a deliberate choice of national, historical subjects, with an emphasis on local colour. This trend is found not only in *Die siegende Unschuld* and *Der wahrsagende Wunderbrunnen* but also in smaller-scale ballets and pastorals: in contrast, therefore, to the italianate *opera seria* of the more important German courts, these works contained a pronounced element of popular realism. The da capo aria appears as a mature form, and Erlebach adopted many other devices and techniques customary in operas at the time – for example ostinatos and quasi-ostinatos, contrasting tempos and textures for structural purposes and the through-composition of individual scenes – in order to avoid the danger of too repetitive and stereotyped a structure. He also involved the orchestra in the interpretation of the text, taking advantage of the specific tone-colours of individual instruments. It is important to stress that the two parts of *Harmonische Freude* are essentially collections of operatic arias (some to parodied texts): many writers have treated them simply as collections of songs and have mistakenly referred to Erlebach as the last important German songwriter of the 17th century.

Erlebach was most prolific as a composer of church music, which was the field in which he began his career as a composer about 1680. His sacred music embraces *a cappella* motets for four or more voices, concertato psalms and hymns, masses, oratorios (the Christmas, Easter, Resurrection and Whitsuntide stories and pieces for the New Year) and various kinds of cantata. All the oratorios are lost, and only some of their texts are extant. But his best works in the other genres bear witness to his mastery as a composer of church music. His psalm settings, which adhere to the style of the sacred concerto for large forces, are interesting particularly for their colourful harmonies, precisely indicated contrasts of tempo and dynamics and free use of madrigalian motifs: such features, following in the wake of Schütz's achievements, helped to enhance the importance of works of this type, at least in central Germany. Erlebach soon began to specialize as a composer of cantatas. Most of them are lost, but their texts show a logical development from those closely adhering to Gospel passages, through those containing arias and concerto-like textures conceived on soloistic lines, to cantatas based on free texts with recitative and da capo arias, and to solo cantatas with an obbligato instrument. Besides several hundred separate pieces, he wrote, in accordance with Lutheran tradition, six cycles of cantatas for the church's year: one of these cycles was to words by Count Albert Anton's wife, Aemilie Juliane; another, the so-called 'Epistle Cycle' (*Geistlicher Chor- und Kirchen-Schmuck*, 1707), was to texts by the court Kantor, Christoph Helm; and the cycle of 1708, *Das Wort Christi in Psalmen*, had words by Erdmann Neumeister. The 12 pieces of the *Gott geheiligte Sing-Stunde* (Rudolstadt, 1704) are cantatas to texts by Helm for one or two solo voices with instruments consisting of an introductory symphony, two arias for each voice and a final four-part chorus. In the Neumeister cycle Erlebach introduced the structural techniques that he used in his operas to further the transition to a new expressive kind of cantata, in which the music was as closely integrated with the text as it had been in madrigals and in the development of which he played a leading role among composers of liturgical music. He himself regarded the innovation of the 'oratorio cantata' – a term already in use in Rudolstadt from about 1706 to 1710 as a result of his influence – as his most important achievement as a cantata composer and it does indeed represent the final stage in the evolution of the form.

WORKS

SACRED VOCAL

cantatas, S, A, T, B, unless otherwise stated

Ach, dass ich Wassers genug hätte, 4vv, 2 ob, 2 vn, 2 va, bn, bc, 1699, *D-Bsb*, *Dl*

BERND BASELT/DOROTHEA SCHRÖDER

Erler, Hermann. German publisher. *See under* RIES & ERLER.

Ermler, Mark (*b* Leningrad [now St Petersburg], 5 May 1932). Russian conductor. At the Leningrad Conservatory he studied conducting with Boris Khaikin. He made his conducting début, with the Leningrad PO, in 1952, and the following year, also in Leningrad, he conducted his first opera, Mozart's *Die Entführung*. In 1955 he joined the staff at the Bol'shoy Opera and in 1964 he conducted his first ballets, *The Firebird* and *Petrushka*. He toured extensively with the Bol'shoy, making his British début in 1974 with the Bol'shoy Ballet at the London Coliseum. Ermler made his Covent Garden opera début in 1986, conducting *Carmen*, and has appeared as a guest conductor throughout Europe, North America and Japan. He has recorded over 20 operas and orchestral works by Liszt, Prokofiev, Shostakovich and others. Although his repertory is eclectic, Ermler's interpretations of Russian operas and ballets, as exemplified by his Bol'shoy recordings and his outstanding series of Tchaikovsky ballets with the Covent Garden Orchestra, are especially esteemed.

DAVID MERMELSTEIN

Ernesaks, Gustav (*b* Perila, Harjumaa, 12 Dec 1908; *d* Tallinn, 24 Jan 1993). Estonian choral conductor and composer. He studied music pedagogy and composition at the Tallinn Conservatory, where his teachers included Juhan Aavik (1884–1982) and Artur Kapp. In 1944 he formed the State Academic Men's Choir (now the Estonian National Men's Choir), the first professional concert choir in Estonia. Under his direction (until his retirement in 1975), the ensemble became one of the best Soviet choral groups and a true representative of Estonian music. As reviver of the Estonian choral movement under the Soviet regime and as a long-time leader in Estonian music, Ernesaks also served as chief conductor at the Song Festival in Tallinn, an event held every five years. Several of his own songs, such as *Mu isamaa on minu arm* ('My

Fatherland, My Love'), have become popular and his more complex choral works are often performed. His operatic compositions take the form of realistic number operas featuring simple music, often based on folk elements. During the last decades of his life, when failing health forced him to give up conducting, he remained active as an authority on Estonian musical life.

WORKS

(*selective list*)

Dramatic: Pühajärv [The Sacred Lake] (op, 3, J. Sütiste), Tallinn, 19 July 1946; Tormide rand [The Coast of Storms] (op, 3, J. Smuul), Tallinn, 29 Sept 1949; Käsikäes [Hand in Hand] (comic op, 3, P. Rummo and K. Merilaas), Tallinn, 14 March 1955 [rev. as Mari ja Mihkel [Mari and Mihkel] (Merilaas, A. Sang, and A. Liives), Tartu, 1965]; Tuleristsed [The Baptism of Fire] (op, 3, epilogue, K. Ird and Merilaas), Tallinn, 31 Oct 1957; Kosilased Mulgimaalt [The Suitors from Mulgimaa] (comic op, Merilaas, after E. Vilde: *Vigased pruudid* [The Handicapped Brides]), 1959, Tartu, 16 May 1960; incid music and film scores

Vocal: Sõjasarv [The Military Horn] (cant.), male chorus, orch, 1943; Laula, vaba rahvas [Sing, the Free Nation] (cant., D. Vaarandi), chorus, 1948; Kuidas kalamehed elavad [How the Fishermen Live] (J. Smuul), suite, male chorus, 1953; Tuhandeist südameist [From Thousands of Hearts] (cant., P. Rummo), chorus, 1955; Jaanipäeva laulud [The Songs of St Johannes' Day] (K. Merilaas), suite, chorus, 1957; Rannapääsuke [The Coastal Swallow] (Merilaas), female chorus, 1961; Tütarlaps ja surm [The Maiden and the Death] (M. Gorki), male chorus, 1961; Kanneldaja müüridel [The Psaltrist on the Walls] (Merilaas), male chorus, 1963; Laul, ava tiivad [The Song, Open the Wings] (cant., E. Vetemaa), chorus, 1963; Salapärane pasunapuhuja [The Mysterious Trumpeter] (W. Whitman), male chorus, 1963; Puhuge, sarved [Blow ye, the Horns] (cant., Merilaas, K.J. Peterson), chorus, 1965; Laululavalt lahkuvatele kooridele [For the Choirs Leaving the Song Festival Stage] (cant., M. Raud), chorus, 1967; Tuhandeaastane Lenin [The Millennial Lenin] (J. Becher), male chorus, 1969; many other choral works, solo vocal songs and songs for children

Principal publishers: Eesti Raamat, Musfond

URVE LIPPUS

Ernoul [Ernous] **le vielle de Gastinois** (*fl* late 13th century). French trouvère. He was perhaps from the Gâtinais. It is unclear whether the 'vielle' in his name means 'old' or 'vielle-player'. His lais appear uniquely in the Noailles Chansonnier (*F-Pn* fr.12615) and his pastourelles uniquely in the Chansonnier du Roi (*Pn* fr.844). Even though only three of the surviving works are ascribed to Ernoul, the others on the list have been convincingly attributed to him on the basis of their appearance together with the authentic pieces. Only *En avril, au tens novel* raises questions, for it is attributed on the basis only of two concording text lines found also in *Pensis, chief enclin*, and its melodic style is slightly more expansive than the severely economical lines otherwise associated with Ernoul's poetry. The language of the poems is *francien* with a trace of Picard dialect. His two lais are among the most unusual in the entire monophonic repertory, astonishingly long with complex repetition schemes and elaborate motivic structure.

WORKS

DAVID FALLOWS

Ernst II, Duke of Saxe-Coburg-Gotha (*b* Coburg, 21 June 1818; *d* Schloss Reinhardsbrunn, nr Friedrichroda, 22 Aug 1893). German composer. He studied with H.C. Breidenstein in Bonn and Reissiger in Dresden. His music includes vocal, chamber and piano works and five operas, the last all composed between 1846 and 1858. *Zaire* (1846), on Voltaire's tragedy, was followed by *Tony, oder Die Vergeltung* (1848) and *Casilda* (1851), which were all given in Coburg. The most successful of his operas was *Santa Chiara*, of which the première was conducted by Liszt at the Hoftheater in Gotha on 2 April 1854. Within five years it had been staged in most large German theatres as well as abroad; more than 60 performances were given at the Paris Opéra. Essentially a grand opera, though through-composed, *Santa Chiara* shows the influence of Bellini and Donizetti on the one hand and of the German lied tradition on the other. Ernst's last opera was the five-act *Diana von Solange* (1858).

BARRY MILLINGTON

Ernst, Alfred (*b* Périgueux, 9 April 1860; *d* Paris, 15 May 1898). French music critic and translator, son of HEINRICH WILHELM ERNST. He studied the violin with Böhm in Vienna, and with Joseph Joachim, but enrolled as a science student at the Ecole Polytechnique before turning to a musical career. Fascinated by the work of Richard Wagner, he made eight jouneys to Bayreuth between 1886 and 1897 (Lavignac), hearing the *Ring* cycle twice, in 1894 and 1897. He translated the *Ring*, *Die Meistersinger*, *Parsifal* (for Schott) and *Tristan* (for Peters) and his versions were performed in Paris and Monte Carlo. According to E. Eugène, his translation principle was to 'submit the French version to all the demands of duration and accent imposed by the score' (Eugène, p.122). The

result was a French text far removed from the original. After writing a work on Berlioz (*L'oeuvre dramatique de Berlioz*, 1884) he devoted himself to several works on his hero: *Richard Wagner et le drame contemporain* (1884–7), *L'oeuvre poétique de Wagner* (1893) and a study of *Tannhäuser* (1895) in collaboration with F.E. Poirée. He contributed articles to various music journals, and was the first music critic for *La revue blanche*, founded in 1891.

BRIGITTE MASSIN

Ernst, Heinrich Wilhelm (*b* Brno, 6 May 1814; *d* Nice, 8 Oct 1865). Moravian violinist and composer. He played in public when he was nine, and in October 1825 entered the Vienna Conservatory, where he studied the violin with Joseph Boehm and composition with Seyfried. Paganini's appearance in Vienna in 1828 made a profound impression on him, and in 1829 he began following Paganini on tour, playing several of his unpublished works by ear with a degree of fidelity that amazed the composer. After a début in Paris (1831) he withdrew from concert life for three years of further study. In 1837 he and Paganini appeared together in Marseilles, after which Ernst wrote in a letter, 'The consensus of opinion was that I play with more sentiment, while he conquers more difficulties'. Travels through Europe and Russia followed, bringing him acclaim as one of the outstanding violinists of his time. His most enduring success came in London, where he was first heard on 18 July 1843 in the Hanover Square Rooms; the *Musical World* described him as the most accomplished living violinist (his immediate rivals were Sivori and Vieuxtemps). He became a regular visitor to London and settled there in 1855. In 1859 he appeared as leader of the Beethoven Society string quartet with Joachim, Wieniawski and Piatti. During his last years illness prevented him from giving performances in public.

Among Paganini's successors, Ernst alone reached (and occasionally even surpassed) his technical wizardry; despite his moodiness and unevenness as a performer, he was also a master of the French classical style of playing. Contemporary critics stressed his soulful, touching cantilena: Berlioz, under whose baton he played *Harold en Italie* in Brussels (1842), Vienna (1846), Moscow, St Petersburg and Riga (1847) and London (1855), called him a great musician as well as a great violinist. Joachim declared that 'Ernst was the greatest violinist I have ever heard; he towered above all others', and Mendelssohn showed his admiration by accompanying him on several occasions. As a composer Ernst had true Romantic élan, exemplified in his *Concerto pathétique* op.23 or the famous *Elégie* op.10; his compositions represent the pinnacle of violin technique, and such works for unaccompanied violin as the Six Polyphonic Studies and the arrangement of Schubert's *Erlkönig* show his imagination and ingenuity. He maintained good taste even in his most virtuoso pieces (e.g. the *Airs hongrois variés* op.22 and the fantasia on Rossini's *Otello* op.11); his *Carnaval de Venise* op.18 is not so much an imitation of Paganini as a clever set of original variations based on the same tune.

WORKS

(*selective list*)

opus number 18 used twice

For vn, orch: Elégie (sur la mort d'un objet cheri), op.10 (Vienna, 1840) [also for vn, pf and other insts]; Fantaisie brillante ... sur Otello de Rossini, op.11 (Mainz, 1839); Concertino, D, op.12 (Brunswick, 1839); Adagio sentimental, Rondino, op.13 nos.1 and 2 (Brunswick, 1841); Boléro, op.16 (Hamburg, 1843); Polonaise, D, op.17 (Hamburg, 1842); Variations sur l'air national hollandais, op.18 (Vienna, *c*1842); Le carnaval de Venise (Variations burlesques sur la canzonetta 'Cara mia mamma'), op.18 (Leipzig, 1844); Introduction, caprice et finale sur ... BORIS SCHWARZ

Ernst, Siegrid (*b* Ludwigshafen, 3 March 1929). German composer. She studied the piano, followed by the violin and music theory. Upon leaving school she studied music pedagogy in Heidelberg and Mannheim, composition with Gerhard Frommel in Heidelberg and the piano with August Leopolder in Frankfurt and Richard Hauser in Vienna. In 1978 she joined the newly formed 'working group' Frau und Musik, which she chaired for many years. She has also served on the governing boards of the Deutscher Musikrat, where she was concerned with promoting women composers. In 1981 she won a fellowship to visit the Cité Internationale des Arts in Paris.

Chamber music, orchestral and vocal works are predominant in her output; there are also song cycles, cantatas, a children's opera, and improvisational and performance art compositions. Although she adopted contemporary techniques, her stylistic development always remained independent. In the 1950s she began with polytonal motivic work and also included 12-note techniques. Later she used graphic notation, aleatory principles and cluster techniques together with a combination of free-tonal motivic, improvisatory and experimental elements, including percussive effects and avant-garde instrumental techniques. She has not shirked from writing for amateur players and for children and is convinced that many women are generally more communicative in the way they compose than men.

EVA RIEGER

Ernst Ludwig, Landgrave of Hesse-Darmstadt (*b* Schloss Friedenstein, Gotha, 15 Dec 1667; *d* Jägersburg, 12 Nov 1739). German composer. He was the son of Landgrave Ludwig VI by his second marriage, to Elisabeth Dorothea, daughter of the Prince of Saxe-Gotha. After the death of his father and two elder brothers, Ernst Ludwig was named Landgrave in 1678, his mother acting as regent until 15 February 1688. His musical education and that of his younger brother Georg was supervised by W.C. Briegel, his mother's former teacher, whom she had called to Darmstadt as Kapellmeister in 1671; in addition to composition Ernst Ludwig also studied the lute with J.V. Strobel. A journey in 1685–6 took both princes to southern France by way of Basle. They spent half a year in Paris, attending performances at the Opéra and the Comédie-Française, as well as private performances at court; in January 1686 they heard the first performance of Lully's *Acis et Galatée*, which was performed the following year at Darmstadt to celebrate Ernst Ludwig's wedding with Dorothea Charlotte of Brandenburg-Ansbach.

Because of the destruction of the Rhineland Palatinate in the wars with France, the court fled to Giessen from 1688 to 1694; on his return Ernst Ludwig undertook an extensive rebuilding programme and Darmstadt became a haven for Huguenot and Waldensian refugees. From 1707 until 1709 he travelled extensively among European courts, especially those which showed an interest in Italian and German opera; he even took a house in Hamburg for a year in order to visit the opera, becoming acquainted with Mattheson, Keiser, Handel and J.C. Graupner. With his return in 1709 began the most brilliant period for music in Darmstadt. Graupner became Kapellmeister, the opera house was rebuilt and the performance of elaborate church music was reintroduced; this latter continued even after the opera was closed for economic reasons in 1719. The Hofkapelle performed on Sundays and feast days, and presented chamber music on Sunday afternoons and during the week. The repertory consisted primarily of compositions by Graupner and his vice-Kapellmeister from after 1713, Gottfried Grünewald. Other musicians at Darmstadt during this period included the gamba virtuoso Ernst Christian Hesse and the singers Johanna Elizabeth Hesse (née Döbricht) and Anna Maria Schober.

Ernst Ludwig's one extant printed work, *Partition de douze suites et symphonies* (Darmstadt, 1718), contains 12 orchestral suites, each beginning with an *ouverture* followed by 11 or 12 dance movements. The music, apparently written in the second decade of the 18th century, shows the predominant influence of Lully, but also a knowledge of the works of Keiser, Telemann and Graupner. Ernst Ludwig also wrote an overture to Graupner's opera *La costanza vince l'inganno* of 1715, and another overture and ballet music for a revival of the opera in 1719.

ELISABETH NOACK/DOROTHEA SCHRÖDER

Eröd, Iván (*b* Budapest, 2 Jan 1936). Austrian composer and pianist of Hungarian birth. He studied with Pál Kadosa (piano) and Ferenc Szabó (composition) at the Liszt Academy of Music. After emigrating to Austria in 1956, he resumed his studies at the Vienna Music Academy with Richard Hauser (piano) and Karl Schiske (composition), and attended several summer courses at Darmstadt. He began a career as a pianist in 1960, also working as a répétiteur at the Vienna Staatsoper and as director of studies at the Vienna Festival (1962–8). He taught composition and theory at the Graz Musikhochschule (1967–89) before becoming professor of harmony and counterpoint at the Vienna Musikhochschule. His numerous honours include the Bartók-Pásztory Foundation award (1993).

As a youth, Eröd was strongly influenced by Bartók, Kodály and Hungarian folk music. On his arrival in Vienna, he began to employ serial techniques in chamber works and the short opera *La doncella, el marinero y el estudiante* (1959–60). His full-length opera *Die Seidenraupen* (1964–8), marks a stylistic turning-point. While starting from a dodecaphonic basis, the opera also exhibits tonal relationships. The compositions that followed return even more strongly to tonality and reassert Hungarian influences. References to American music are also present, most clearly in the *Minnesota Sinfonietta* (1985–6). The song cycle *Über der Asche zu singen* (1994) contains some autobiographical elements concerning his persecution during World War II.

WORKS
(*selective list*)

DRAMATIC

La doncella, el marinero y el estudiante (op, 1, F.G. Lorca), op.9, 1959–60; Die Seidenraupen (op, 3, R. Bletschacher), op.10, 1964–8, unpubd; Orpheus ex Machina (op, 2, P.D. Wolfkind), op.25, 1977–8; Der Füssener Totentanz (op, 1, Bletschacher), op.60, 1991–2

CHRISTIAN HEINDL

Erpf, Hermann (Robert) (*b* Pforzheim, 23 April 1891; *d* Stuttgart, 17 Oct 1969). German musicologist, teacher and composer. He studied under Philipp Wolfrum at Heidelberg (1909–11) and under Riemann at Leipzig (1911–13), where he took the doctorate in 1913 with a dissertation on musical form. In 1914 he studied composition with Bodanzki in Mannheim, and after war service he taught at the Röhmeyer Conservatory, Pforzheim (1919–23). He was lecturer in music theory at Gurlitt's musicology institute at Freiburg University (1923–5), deputy director of the Academy for Speech and Music, Münster (1925–7), director of the music department of the Folkwang-Schule at Essen (1927–35) and director of the Folkwangschulen for Speech, Dance and Music (1935–43). His final post was as director of the Staatliche Hochschule für Musik, Stuttgart (1943–5, 1952–6), where he taught composition. His works include several large-scale choral pieces, folksong cantatas, string quartets, violin sonatas, songs and choruses. His writings, mostly designed for teaching purposes, have had a more lasting influence and show, in his dissertation as in his final book, a penetrating understanding of form. His practical gifts, which he was able to develop in Münster, are reflected in his textbooks on harmony and orchestration.

FRIEDRICH BASER

Errichelli [Ericchelli, Enrichelli], **Pasquale** (*b* ? Naples, 1730; *d* after 1775). Italian composer. According to de Rosa he studied at the Pietà dei Turchini conservatory. In 1747 he was an organist at the Cappella del Tesoro in S Gennaro, Naples and in 1763 he became organist of the first choir there. He composed several operas for Naples and Rome in 1753–8; his first *opera seria*, *Issipile* (1754), was described by the architect Luigi Vanvitelli as 'most beautiful in the style of the Saxon [Hasse]'. In 1771, when Gianfrancesco di Majo died after having composed only Act 1 of *Eumene*, Errichelli and Insanguine completed the opera. In 1775 he was *maestro di cappella* at Sulmona in the Abruzzi.

Erskine, Thomas Alexander. *See* KELLY.

Ertl [Ertel, Erthel, Ertelius], **Sebastian** (*b* Mariazell, Styria, 1550–60; *d* Garsten, Upper Austria, 13 July 1618). Austrian composer. As a young man he served as a soldier in the war against the Turks. Soon after 1589 he entered the monastery at Garsten, near Steyr. Some sources state that he had lived before this at the monastery of Weihenstephan at Freising, near Munich, and that he was admitted to the Benedictine order there as a composer. In 1598 he took over temporarily the parish of Gaflenz, near Garsten, and in 1599, when his abbot was summoned to St Lambrecht, Styria, he followed him there as instructor in music to the choirboys. He is also heard of briefly in 1601 and 1603 at Mariazell and Admont, where he was a musician and *regens chori*. In 1605 he returned to Garsten and was choirmaster there when he died.

Ertl was admired in his lifetime as an excellent composer. His surviving output consists entirely of vocal works intended for use at the monastery at Garsten; nearly all are for six to ten voices, and the vast majority for eight. Most of those in six and seven parts are in the traditional polyphonic style. Those in eight parts are homophonic works for double choir including a good deal of antiphonal writing. The mainly syllabic treatment of the text and the precise rhythms (the frequent use of dotted crotchets is striking) are typical of such music at the time. Syllabic setting is abandoned only when important words in the text demand melismas, some of which are quite extensive, to emphasize them. These works in particular show Ertl's debt to the music of Giovanni Gabrieli and his school. The *Symphoniae sacrae* are old-fashioned in that they were written for either vocal or instrumental performance. On the other hand, by adding an organ part to his masses published two years later Ertl became one of the first Austrian or south German composers to adopt the continuo. Such contrasting practices show that he was one of the many transitional composers of the early 17th century who, while ready to adopt certain modern elements from a period of great stylistic change, were yet unable to alter their basically conservative attitudes.

WORKS

Symphoniae sacrae, 6–10vv (Munich, 1611)
Missarum, 6–10vv, bc (org) (Munich, 1613)
Sacrosanctum magnae et intimeratae virginis canticum, 8vv, bc (org) (Munich, 1615); Canticum Beata Virgine Mariae, 8vv, insts, bc (org) (Munich, 1615); lost
Hymnus B. Jacoboni Tudertini, 4vv (Munich, 1616); lost
Psalmodiae Vespertinae, 8vv, insts, bc (org) (Munich, 1617)
Falsobordoni, 8vv, Psalmodia, 8vv, *D-Mbs*
Antiphonae Vespertinae, 4vv, *A-KR*
3 masses, 5 Magnificat, 9 motets, formerly in *PL-WRu*

RENATE MUTSCHLECHNER

Ertmann [née Graumann], **(Catharina) Dorothea von** (*b* Frankfurt, 3 May 1781; *d* Vienna, 16 March 1849). German pianist. She was already known as an excellent pianist before her marriage in 1798 to an infantry officer, Stephan von Ertmann, himself an amateur musician. Moving to Vienna with him, in 1804 she came to know Beethoven, who greatly admired her playing and gave her lessons: she closely followed his own style of playing his works. They became warm friends, and Beethoven dedicated his Piano Sonata op.101 to her; he wrote to her as 'Dorothea-Cäcilia', and it has been conjectured that she may have been the addressee of the 'immortal beloved' letters. Though by then she no longer gave public concerts, she played privately among the composer's friends, especially in performances of his chamber music. On the death of her child, Beethoven invited her to his house and without speaking played to her for over an hour. Her husband was posted to Milan in 1820, but she made occasional return visits to Vienna, settling there again after his death in 1835. The sensitivity of her playing was much admired. Schindler described her as 'unequalled', adding, in the course of a detailed appraisal, 'She grasped intuitively even the most hidden subtleties of Beethoven's works with as much certainty as if they had been written out before her eyes'. J.F. Reichardt, who heard her in 1809–10, declared of her performance of op.27 no.2, 'I do not recall ever having heard anything greater or more consummate' (letter of 7 February 1809). She and her husband also made a great impression on Mendelssohn, who visited her in Milan in 1831 and admired her playing, though he found the flexibility of tempo which Schindler had praised somewhat exaggerated (letter of 14 July 1831). The singer Mathilde Marchesi was her niece.

JOHN WARRACK

Erythräus, Gotthart (*b* ?Strasbourg, *c*1560; *d* Altdorf, nr Nuremberg, 1617). German music teacher and composer. He probably lived in Altdorf from 1575, when his father, Valentin, became the first rector of the university. In 1587 he was awarded the master's degree at Altdorf, became Kantor in 1595, and in 1609 or 1610 was appointed rector of the Lateinschule. In 1598 he received recognition from the court of the Elector Palatine at Heidelberg for

some motets. It has not been possible to determine whether these pieces are from his only extant work *Psalmos et cantica varia notas s. tonum musicum adstrictos ... Herrn D. Martini Lutheri und anderer gottesfürchtiger Männer Psalmen und geistliche Lieder, welche man als die fürnehmsten durch das ganze Jahr in der christlichen Gemeine pfleget zu singen ... in vier Stimmen gebracht* (Nuremberg, 1608); in the preface he referred to an earlier edition of psalms and songs which has not survived. The 1608 publication belongs to a type of hymnal (Kantional) established by Lucas Osiander in 1586 in which the pieces are entirely homophonic with the cantus firmus in the top part; the purpose was to encourage congregational participation. Erythräus's compositions are, however, by no means as strictly homophonic as Osiander's originals. Apparently Erythräus's work did attract some attention, because in 1610 Michael Praetorius took a section from it for the seventh part of his *Musae Sioniae*.

Esaulov, Andrey Petrovich (*b c*1800; *d* Ryazan, *c*1850). Russian composer, mainly of songs. During the 1820s he resigned from the army, where he had been military Kapellmeister, and went to live in Moscow. Here he lodged with P.V. Nashchokin, who introduced him to Pushkin. Esaulov played the viola in an orchestra, and also composed several songs, including two to French texts, *Ton regard* and *Chant guerrier, dédié à l'armée russe*, both written in 1828. The following year he published *Utesheniye* ('Consolation'), a song with words by Zhukovsky, and in 1830 *Pevets uslad* ('The Singer of Pleasures') to a text by P.A. Katenin. Esaulov composed two songs to poems by Pushkin, *Proshchaniye* ('Farewell') in 1831 and *Gishpanskaya pesnya* ('Spanish Song') in 1834. Through Nashchokin's friendship with the director of theatres in Moscow, Esaulov was offered a post as répétiteur in 1830, but he seems to have refused this, and left Moscow for St Petersburg in 1833. Still aided by Nashchokin, he obtained a post in a theatre orchestra there, but was again unemployed early in 1834. Hungry and penniless, Esaulov was given financial assistance by Pushkin, and later in the 1830s moved to Ryazhsk, in the Ryazan government, and then to Ryazan itself, giving piano lessons and directing a church choir. About this time he composed his only known work for full orchestra, a powerful Tragic Overture in three principal sections, the first and last in C major, the middle one in C minor. During the final period of his life he composed a number of large-scale sacred works and continued to write miniatures for piano. Esaulov drowned in the river Trubezh.

GEOFFREY NORRIS

Escapement (Fr. *échappement*; Ger. *Auslösung*; It. *scappamento*). The part of a piano action that permits the hammer to become disengaged from the mechanism that carries it towards the string just before the moment of impact (*see* PIANOFORTE, §I,10, figs.32 and 33). The escapement enables the hammer to rebound an appreciable distance from the string after striking it, even though the distance that it travels towards the string under its own momentum is quite small, and even though the key remains held down. Although a number of early piano actions did not include an escapement it has been a feature of all sophisticated and sensitive actions, including that devised by Cristofori by 1709.

Eschenbach, Christoph (*b* Breslau [now Wrocław], 20 Feb 1940). German pianist and conductor. He studied in Cologne and Hamburg with Hans Schmidt-Neuhaus and Eliza Hansen, and in 1962 won a prize in the international competition in Munich. In 1965 he was awarded first prize in the first Concours Clara Haskil in Switzerland, launching him on a successful concert career that has taken him to most parts of the world. As a pianist he plays a wide repertory ranging from the Baroque period to the 20th century; but it is for his carefully worked and poetic performances of Beethoven, Mozart and Schubert that he is most highly regarded. He is a noted lieder accompanist and has performed frequently in a piano duo with Justus Frantz, with whom he has made distinguished recordings of works by Mozart and Schubert. In November 1966 he made his recital and concert débuts in London, and in 1968 he gave the première in Bielefeld of Henze's Second Piano Concerto, written for him. Eschenbach made his conducting début in 1973. He was general music director of the Rheinland-Pflaz State PO from 1979 to 1981; with the Tonhalle Orchestra, Zürich, he was permanent guest conductor (1981–2), then chief conductor (1982–5). He made his Covent Garden début with *Così fan tutte* in 1984. In 1988 he became music director of the Houston SO, with whom he has recorded works by Dvořák, Bruckner, Tchaikovsky and Schoenberg.

DOMINIC GILL/JESSICA DUCHEN

Eschenburg, Johann Joachim (*b* Hamburg, 7 Dec 1743; *d* Brunswick, 29 Feb 1820). German classicist, poet, translator and civil servant. As a professor and lecturer on literature, philosophy, archaeology and mythology he served at the Carolineum in Brunswick from 1767 until his death. He was best known for his *Handbuch der klassischen Literatur*, which saw six editions during his lifetime and several more thereafter, and was translated into English, French and Russian. As an enthusiast of music he organized concerts in Brunswick and corresponded with C.P.E. and W.F. Bach, but his most

important contributions to music were his translations of stage pieces and of scholarly writings. Among the seven operas he translated into German were Monsigny's *Le déserteur* (1772), Grétry's *Silvain* (as *Erast und Lucinde*, 1773) and Gluck's *Orfeo*; he also provided German texts for two oratorios and, with Karsch, the text for C.P.E. Bach's Passion cantata *Die letzten Leiden des Erlösers* and wrote 19 lieder and a motet of his own. He translated books on music and poetry from the English of Avison, Brown, Burney and Webb and wrote articles on musical subjects for German periodicals. He was also Lessing's literary executor.

HOWARD SERWER

Escher, Rudolf (George) (*b* Amsterdam, 8 Jan 1912; *d* De Koog, Texel, 17 Mar 1980). Dutch composer. From 1916 to 1921 he lived with his parents on Java, where his father worked as a geologist and mineralogist. Back in the Netherlands he studied the piano, the violin and harmony privately. At the Rotterdam Conservatory he studied the piano (1931–7) and composition (with Pijper, 1934–7). Until 1940 he lived in Rotterdam, where most of his scores were destroyed during the bombing by the Germans in May of that year.

During World War II Escher composed *Musique pour l'esprit en deuil* (1941–3), which was first performed in 1947 by the Concertgebouw Orchestra under van Beinum and which made him overnight the most important composer in the Netherlands. From 1945 until his death he lived in Amsterdam. After a short study at the Electronic Studio of the Delft Technical University he taught (1960–61) at the Amsterdam Conservatory. From 1964 to 1977 he taught theory of contemporary music at the University of Utrecht. The result of his teaching is to be found in many studies in the field of music theory and audiology. He was also a talented writer and painter, continuing to publish poetry in literary magazines until well into the 1950s. From 1945–6 he wrote on music and art for the *Groene Amsterdammer*.

Escher's music is lyrical, expressive and elegiac, with a great propulsive force, more French then German in its orientation (the main influences being Ravel, Debussy and Mahler). It is always basically tonal, and mostly cast in a strictly contrapuntal frame with chains of variations. Everything he wrote can be clearly discerned by the ear. In 1938 he wrote: 'The miracles of a piece of music will never be revealed, unless in a natural way, through sounding and hearing. That means sounding *well* and hearing *well*. The latter condition is *a priori* impossible if the former one cannot be fulfilled'. (*Toscanini en Debussy*). Apart from this technical aspect of composing, Escher discerned a psychic one: 'The technique of a composer is intimately related to his spiritual and intellectual self, his psyche'. This can be seen in his war compositions, such as *Musique pour l'esprit en deuil*, the *Sonate concertante* (1943) for cello and piano, *Arcana* (1944) for piano (originally called *Arcana Musae Dona*), and the first two movements of the Sonata for cello solo (1945; the third movement was completed in 1948). Each of these compositions is in a way an impressive 'document humain'. The works written immediately after 1945 do not reflect the war in the same way, but Escher's longing for peace is reflected in the 'Arcadian' choral works such as *Songs of Love and Eternity* (1955) and *Ciel, air et vents* (1957).

As a theorist, Escher analysed many 20th-century scores from Debussy to Boulez, explaining the latter on the basis of Escher's own analysis of the former's music. As a composer, however, he preferred to remain true to the music of Debussy and Ravel without denying the technical implications of the music of the serialists, as in his Second Symphony (1958, revised in 1980), Wind Quintet (1967) and *Monologue* for flute solo (1969).

Escher's major orchestral scores are *Musique pour l'esprit en deuil* and *Hymne du grand Meaulnes* (1951). Both show his mastery of orchestration, harmonic detail and melodic and chordal contrapuntal and variation techniques. *Musique pour l'esprit en deuil* gives voice to the composer's grief at the loss of freedom and 'the

destructive violence of a depraved political system and its mechanisms of military terror'. Musically Escher resolves this juxtaposition of cultures by combining a march which swells to apocalyptic intensity with a quasi-Latin American trumpet melody. The technique of variation is mainly based, as with most of Escher's compositions, on a generative process of intervallic manipulation, a constructive means which the composer derived from his analysis of Debussy's music. The melismatic technique of *Musique pour l'esprit en deuil* is brilliantly orchestrated. This vein can be found in most of Escher's works, such as *Arcana*, the Sonata for flute solo (1949), the Violin Sonata (1950), the Sonatina for piano (1951), the *Hymne du grand Meaulnes* (1951), *Le tombeau de Ravel* (1952), the cycles for chamber choir *Le vrai visage de la paix* (1953), *Songs of Love and Eternity* (1955), *Ciel, air et vents . . .* (1957), *Three poems by W.H. Auden* (1975), the Second Symphony (1958, revised 1980), the String Trio (1959), *Univers de Rimbaud* (1970) and the *Sinfonia per dieci strumenti* (1975).

In the early sixties Escher tried to extend his technique towards electronic music and serialism, but after several crises he was unable to find a technique which would allow him at the same time to remain true to his psyche. The results of this search are nevertheless interesting, and the brilliant Wind Quintet (1967) and *Summer Rites at Noon* for two orchestras (1971) are examples of Escher's technical and emotional powers. The sound of the Wind Quintet is dominated by the timbres of alto flute, oboe d'amore and bass clarinet. Only at the end is the alto flute replaced by a normal flute for a brilliant and exciting 'lark solo'. Here Escher combines Debussian intervallic manipulations with Boulezian structural formulae. Kernels of intervals grow into motifs and melodies through rhythmical development. The main structure consists of three movements (A1–B–A2), which are linked by two short bridges (Z1 and Z2). Each movement consists again of three segments (a–x–a), which results in six 'a' segments accelerating from *Largo* to *Prestissimo*, while at the same time the 'x' segments slow down from *Moderato* to *Largo*. The *Prestissimo* combines the flute's 'lark solo' with the other instruments playing *Largo* underneath.

The Flute Sonata (1978) is one of Escher's last compositions (together with the Trio for clarinet, viola and piano of 1979). The three-movement plan of the sonata is again highly effective, with a flute solo (*Lento*) forming a transition from the more 'objective' *Comodo* and the dramatic finale (*In moto ostinato, con violenza*). As in the Wind Quintet and the *Monologue* for flute (1969), the overall plan is determined by continuous variation of various structures, with no exact repeats. Change and variation represent the true inner life of Escher's musical organism, supported by a continuous alternation of chromatic and diatonic harmonies in a curve of increasing tension. Each structure evolves from the previous one, each one beginning afresh like a wave in constant transformation. The *Lento* is a beautiful demonstration of Escher's technique of intervallic variation.

Escher received several prizes for his compositions, including the van der Leeuw Prize (1959) for *Le tombeau de Ravel*, the Visser-Neerlandia Prize (1961 and 1968) for *Nostalgies* and the Wind Quintet, the Willem Pijper prize (1966) for the *Sonata concertante* for cello and piano and the Johan Wagenaar prize for his total output.

LEO SAMAMA

Eschig, Max(imilian) (*b* Troppau [now Opava], 27 May 1872; *d* Paris, 3 Sept 1927). French music publisher of Czech birth. After an association with Schott in Mainz, he founded a music-publishing house in 1907 in Paris and provided a large outlet for foreign works in France. Formerly the representative of several foreign publishers, Eschig is currently the agent solely for the hire catalogue of Carisch, Milan. Eschig's production was many-faceted and included French language versions of much of the Viennese operetta repertory, but he was particularly devoted to 20th-century music. The catalogue contains works of Falla, Koechlin, Martinů, Milhaud, Poulenc, Ravel, Satie, Szymanowski, Tansman, Tournemire and

Villa-Lobos. Other composers represented include Auric, Charpentier, Delannoy, Halffter, Harsányi, Honegger, Inghelbrecht, Mihalovici, Nin and a considerable number of Latin-American composers, including Brouwer and Ricardo Castillo. More recent arrivals include Béchara El-Khoury, Joshua Fineberg, Juan Guinjoán, Sukhi Kang, Antoine Tisné, Ezequiel Viñao and Adrian Williams. Eschig's notable publications for guitar include Emilio Pujol's *Bibliothèque de musique ancienne et moderne* and numerous transcriptions, classics and original 20th-century works. By 1996 the firm had published 9300 titles and had acquired an additional 10,000 by purchasing the catalogues of Demets, Broussan & Cie, Jeanne Vieu, La Sirène Musicale (which included Paul Dupont) and George Sporck.

After Eschig's death, the firm became a 'société anonyme', directed by Eugène Cools (*d* 1936), and then a 'société à responsabilité limitée' (Editions Max Eschig). From 1936 it was directed by Jean Marietti (*b* Bastia, Corsica, 10 Nov 1900; *d* 1977) and his brother, Philippe Marietti (*b* Bastia, 21 Aug 1905; *d* 1993). After the death of Jean Marietti in 1977 his widow Simone became managing director, Philippe Marietti retiring in 1984. Eschig was bought by Durand in 1987, since when the director has been Thierry Mobillion. Under this new management, the international character and autonomy of the catalogue have been maintained and developed. (*DEMF*, ii)

ROBERT S. NICHOLS/JEREMY DRAKE

Eschmann, Johann Carl (*b* Winterthur, 12 April 1826; *d* Zürich, 27 Oct 1882). Swiss composer. He received his first piano lessons in Zürich from Richard Wagner's friend Alexander Müller, then studied at the Leipzig Conservatory with Felix Mendelssohn from 1845 to 1847. From 1847 to 1850 Eschmann was active as a teacher of piano and composition in Zürich, then from 1850 to 1859 in nearby Winterthur. He appeared occasionally as solo pianist in the concerts of Allgemeine Musikgesellschaft in Zürich. In Winterthur, Eschmann's livelihood suffered increasingly from the greater popularity of Theodor Kirchner, so he moved to Schaffhausen in 1859, where he conducted choirs and taught piano and singing. He returned to Zürich in 1866, and continued teaching until his death in 1882. Eschmann's admirers included Brahms, who recommended him successfully to his publisher Simrock.

Eschmann's musical language is perhaps closer to Schumann than to Mendelssohn, though early works such as the *Lebensbilder* display a harmonic inventiveness that is occasionally reminiscent of Wagner's music of the time. As early as the Fantasy Pieces for Clarinet op.9, Eschmann was experimenting with cyclical structures. Later, he wrote many short pedagogical pieces for the piano, and also a guide to the piano literature, *Wegweiser durch die Klavierliteratur* (Zürich, 1871), which enjoyed several editions after his death.

CHRIS WALTON

Eschstruth, Hans Adolph Friedrich von (*b* Homberg, nr Kassel, 28 Jan 1756; *d* Kassel, 30 April 1792). German composer and writer on music. In his youth he studied with the organist J.G. Vierling in Schmalkalden, and later studied law at the universities in Rinteln (1771–5) and Göttingen (1775–6). As a lawyer he held various administrative positions in Marburg (1776–86), where he pursued further musical studies with the university's Konzertmeister Bernhard Hupfeld, and Kassel (from 1786). Although he was not a professional musician, Eschstruth displayed an adequate technical competence in his compositions. Stylistically, his lieder are similar to those of C.P.E. Bach: strophic form predominates and the accompaniment is subordinate to the voice. The *Lieder, Oden und Chöre* (op.3, 1783) and the variations on 'Mein Leipzig ... lebewohl' specify the use of the clavichord. The reviews and essays in his *Musicalische Bibliothek* (i–ii, 1784–5/*R*; iii, ?unpubd, see *GerberL*) reveal him to be an astute music critic; he also contributed reviews to Cramer's *Magazin der Musik* and several other periodicals. Among his unpublished works are a biography of C.P.E. Bach, a few translations of French theoretical works (see Engel, Mendel and Reissmann) and several compositions.

WORKS

published works printed in Kassel, or Marburg and Kassel

Vocal: Liederbuch für die Casseler Cadetten (*c*1780), cited in Engel; Versuch in Sing-Compositionen, kbd acc. [op.1] (1781); Glücklich ist, wer mit Auroren, song, S, T, acc. 2 vn, va, vc, pf, op.2 (1782); Lieder, Oden und Chöre, clvd acc., op.3, i–ii (1783), iii (1789) [ii and iii lost]; Miller's [53] Lieder in Musik gesetzt (1788); Millers Lieder mit Musik und einer Einleitung (Marburg, 1788), mentioned in Miller's [53] Lieder, reviewed in *Musikalische Realzeitung*, ed. H.P.C. Bossler (Speyer, 1789), col.129; Sammlung religiöser Gesänge, *c*1790, cited in *GerberL*

Inst: 12 marches, 2 ob, cl, 2 bn, 2 hn, bc, op.4, 24 Veränderungen ... über Mein Leipzig ... lebewohl, clvd, op.5, both advertised in Cramer's *Magazin der Musik*, i (1783), 811, 1133; 6 sonatas, clvd (1787), cited by Strieder; 6 kbd sonatinas, *c*1790, ?unpubd, cited in *GerberL*

DAVID OSSENKOP

Esclamazione (It.). *See* ORNAMENTS, §§4 and 8.

Escobar, André de (*fl* 1540–80). Portuguese shawm player (*charameleiro*). He went to India as a youth; on his return he served as an instrumentalist in Évora Cathedral, and later became Master of the Shawms at Coimbra Cathedral and the University of Coimbra (according to a document dated 4 February 1579 in the city archives). He wrote a method for his instrument, *Arte musica para tanger o instrumento da charamelinha*, which does not survive.

ALBERT T. LUPER/OWEN REES

Escobar, Cristóbal (*fl* late 15th century). Spanish theorist. He was the author of a treatise, *Introducción muy breve de canto llano* (Salamanca, *c*1496/*R*). It is heavily dependent on earlier sources and is of an elementary nature, like most Iberian chant manuals. Escobar went further than some theorists in allowing accidentals in performance.

F.J. LEÓN TELLO

Escobar, Luis Antonio (*b* Villapinzón, 14 July 1925; *d* Miami, 11 Sept 1993). Colombian composer and writer on music. After two years at the Bogotá Conservatory, in 1947 he became a pupil of Nabokov at the Peabody Conservatory, Baltimore, then attended the Mozarteum in Salzburg and then studied with Blacher at the Hochschule für Musik in Berlin (1951–3). He served the Colombian government as consul in Bonn (1967–70) and was cultural attaché to the Consulate in Miami (1993).

In 1973 he and the poet Andres Holguín co-founded El Muro Blanco, a private cultural institute in Bogotá in which both taught. In 1974 he was awarded the national music prize by the Banco de Colombia. He visited the USA on a Guggenheim grant in 1975. Eight albums of his works were recorded by Colombian companies between 1956 and 1967.

Escobar cited the music of Blacher and Nabokov as influences on his style, and also the traditional rural music of Cundinamarca, his native region. His particular idiom combines a strong rhythmic presence with ingenious counterpoint, chromatic harmonies and traditional melodic patterns. The series of *Bambuquerías* is a clear example of his style.

WORKS

(*selective list: see also catalogue, 1982*)

Stage: Avirama (ballet, Escobar), 1955; La princesa y la arveja (children's op), 1957; Los hampones (op, 3, J. Gaitán Durán), 1961

ROBERT STEVENSON/ELLIE ANNE DUQUE

Escobar, Pedro de [Pedro del Puerto; Pedro do Porto] (*b* Oporto, *c*1465; *d* ?Évora, after 1535). Portuguese composer, active in Spain. He was a singer in the chapel choir at the court of Isabella I from 1489 to 1499, and was the only member described as 'Portuguese'. He composed a Lady Mass in collaboration with Juan de Anchieta, also a member of Isabella's choir, and one with Peñalosa, Hernández and Alva. Escobar returned to Portugal, perhaps among the musicians accompanying the daughter of Ferdinand and Isabella (see Knighton), but on 19 May 1507 he was invited back to Spain as master of the choirboys of Seville Cathedral; the chapter sent a courier to Portugal at the cathedral's expense 'calling Escobar to come and take charge of the choirboys'. Peñalosa, since 1505 a canon at Seville, may have taken part in this decision. As *magister puerorum* Escobar was obliged to teach polyphonic music to the choirboys and also to feed, clothe and board them. Unsuccessful attempts in 1510 to augment his salary through the addition of two cathedral chaplaincies led to his resignation in 1514 (his successor, Pedro Fernández, was appointed on 13 August 1514).

Assuming that Pedro do Porto (mentioned by Sousa Viterbo and Barbosa Machado) and Escobar were the same person, Escobar was *mestre da capela* to Cardinal Dom Affonso, son of Manuel I, in 1521. In August of that year Gil Vicente described Pedro do Porto in his *Côrtes de Jupiter*, performed to celebrate the imminent wedding of King Manuel's daughter, as the leader of a band of 'tiples', 'contras altas', 'tenores' and 'contrabaxas'. Escobar's four-part wedding tribute may well be *Ninha era la infanta*, copied anonymously in *P-Ln* CIC 60 (see Rees, 1994–5). In 1535 Escobar still survived precariously in Évora.

Escobar's masses and motets show him to have been a composer of uncommon contrapuntal skill and sensitivity to text. Vicente's *Auto da Cananea* of 1534 claims Escobar's fine four-voice motet *Clamabat autem mulier Cananea* as its inspiration; the piece was to be sung at the end of the *auto*. It was intabulated by Gonzalo de Baena in his *Arte nouamente inuentada pera aprender a tanger* (Lisbon, 1540), again by Mudarra (ed. in MME, vii, 1949) in 1546 and praised by João de Barros in his *Libro das antiguidades* (*P-Ln* 216). The enormous vogue that it enjoyed is further attested to by its transmission in two

manuscripts copied by indigenous scribes in north-east Guatemala (in *US-BLl*). So individual are its characteristics that the anonymous four-voice *Fatigatus Jesus*, which shares all its individualities, must also be by him (see Rees, 1995). Escobar's 18 secular songs in the Cancionero Musical de Palacio have a marked popular flavour. Three of them are in the Cancionero Musical e Poético da Biblioteca Públia Hôrtensia (*P-Em* 11793), which together with *P-Ln* CIC 60, ranks among Portugal's earliest collections of secular polyphonic music.

ROBERT STEVENSON

Escobar (Budge), Roberto (*b* Santiago, 11 May 1926). Chilean composer. In 1943 he entered the National Conservatory, where he studied conducting with Carvajal and the organ with Eliana O'Scanlan. At the Modern School of Music in Santiago he studied composition with René Amengual and Alfonso Letelier. He helped to establish several artistic bodies in Concepción (1949–70) and was music critic for the newspaper *El Sur*. He was president of Chile's Asociación Nacional de Compositores (1974–8) and founded and directed several musical ensembles. He was appointed a professor at the Institute of Political Sciences of the University of Chile.

His catalogue comprises nearly 90 works in almost all genres. The stylistic evolution of his work can be divided into three stages. The first (1946–59), one of training, embraces a kind of Impressionist nationalism, and its most prominent products are the choral works *Villancicos 1* (1946) and *Ecce sacerdos* (1959). The second period (1960–70) is one of experimentation and impending serialism, for example *Los bisontes* (1964) and the *Cuarteto estructural* (1965). The third period (from 1970) is of consolidation, and its most outstanding products are *Prometheus* (1982) and the *Sinfonía Andrés Bello* (1992).

WORKS
(*selective list*)

DRAMATIC AND VOCAL

Stage: Oda: América el camino no es el camino, 1970; Laberinto (R. Irarrázaval, T.S. Eliot, Petrarch, E. Heine), 1970; Arauco (ballet), 1974
Incid music: Un millón de toneladas (film score, dir. F. Balmaceda), 1967; Crisol (musique concrète for industrial exhibition), 1972
Choral: Villancico I, 1946; La lluvia lenta (G. Mistral), TTBB, 1959; Ecce sacerdos, 1959; Cant. del Laja (R. Cruchaga, Mistral, G. de la Vega, J.R. Jiménez), S, chorus, str orch, timp, org, 1963; Prometheus (J.W. von Goethe), chorus, eng hn, hp, timp, perc, 1982; Sinfonía de Fluminis (P. SANTIAGO VERA-RIVERA

Escobedo, Bartolomé de (*b* diocese of Zamora, *c*1505; *d* between 21 March and 11 Aug 1563). Spanish singer and composer. He studied at Salamanca and was a cathedral singer there until admitted to the papal choir in Rome on 23 August 1536. The French singers resented the admission of yet another Spaniard to the choir, but he quickly won respect for his learning and his compositions.

On 6 November 1538 Antonio Capello, a fellow singer, sent Duke Ercole II of Ferrara a six-voice motet by Escobedo. Although Capello was one of the first to circulate Escobedo's music, the testy Spaniard once called him an ass at Vespers, for which affront he was fined ten julii. His constant suffering from gout perhaps explains his short temper then and on a previous occasion when he had called Leonardo Barré, another singer, a fat pig. He remained in the choir until 5 June 1541 and was again a member from 1 May 1545 to 25 October 1554; throughout his service he was frequently excused because of illness.

Escobedo was chosen along with Ghiselin Danckerts as one of two judges of the debate on the chromatic and enharmonic genera between Vicentino and Lusitano in Rome in 1551. He retired from the papal choir on 25 October 1554 and returned to Spain, enjoying a nonresident benefice at Segovia Cathedral. He did not, as has sometimes been claimed, serve as *maestro de capilla* to Princess Juana. During a stopover in Toledo on 22 March 1555, his opinion on a musical matter was sought in a debate between the Cardinal-Archbishop of Toledo, Martínez Siliceo, and the chapter; on 21 March 1563 he auditioned three Spanish sopranos for the papal choir, one of whom, Juan Figueroa, was admitted at Rome on 17 April 1563. Francisco de Salinas (*De musica libri*

septem, 1577/R) attested to Escobedo's erudition and also described him as a 'very dear personal friend'.

ROBERT STEVENSON

Escorial, El. Spanish monastery near MADRID.

Escorihuela [Escorigüela], **Isidro** (*b* Alicante; *d* Alicante, 8 March 1723). Spanish composer. He was *maestro de capilla* of the collegiate church of S Nicolás, Alicante; in 1691 he held the same post at Tarragona Cathedral, but later returned to Alicante, where in 1716 he was honoured with a sizable pension for his merits and age. During his life he enjoyed a considerable reputation, and his works, in manuscript, are widely distributed among various cathedrals in eastern Spain. There are also several works in the Biblioteca Central, Barcelona, some of them copied in the 19th century. In 1715 he published a pamphlet supporting the musical and theoretical innovations of Francisco Valls.

JOSÉ LÓPEZ-CALO

Escot, Pozzi (*b* New York, 1 Oct 1933). American composer. She studied at the Juilliard School (BM 1956, MS 1957), where her teachers included Bergsma and Persichetti, and at the Staatliche Hochschule für Musik, Hamburg (1957–61) with Jarnach, among others. She joined the composition department at the New England Conservatory in 1964 and accepted a second post at Wheaton College in 1972. She has also served as editor-in-chief of *Sonus* (from its inception in 1980) and president of the International Society of Hildegard von Bingen Studies (from 1992). She is co-author with Robert Cogan of *Sonic Design: The Nature of Sound and Music* (Englewood Cliffs, NJ, 1981) and its accompanying workbook *Sonic Design: Practice and Problems* (Englewood Cliffs, NJ, 1981).

Escot's music exhibits her interest in sonic possibilities, often involving unusual combinations of instruments, with or without voices. She has also explored alternative sounds produced by traditional instruments, such as the layering of live and pre-recorded piano performances in *Interra II* (1980) and the combination of chant-like vocal lines with ostinatos, clusters and sustained pitches in *Missa triste* (1981). Recognized by the *New York Times* in 1975 as one of five remarkable women composers of the 20th century, she has lectured and written on the relationship between mathematics and music.

MITCHELL PATTAN

Escribano [Scrivano], **Juan** [Scribanus, Iohannes] (*b* ?Aldearrubia, nr Salamanca, *c*1478; *d* Spain, Oct 1557). Spanish singer and composer. He served from 1498 as a soprano at Salamanca Cathedral and became a member of the papal choir in 1502. He was elected *abbas* (treasurer) by his fellow singers in 1514, and became dean of the choir in 1527. During his long stay in Rome he was rewarded with numerous honours and preferments; Leo X gave him a Salamanca canonry that did not require residence and made him apostolic notary on 5 July 1513. A year later he was given the income of the archdeaconate of Monleón, and on 1 November 1517 he obtained a second canonry at Oviedo. He resigned his Salamanca canonry on 30 November 1520, and it was given to his brother Alfonso. Pope Adrian VI and Clement VIII bestowed other favours on him and he was a wealthy man when he retired in 1539 and returned to the vicinity of Salamanca, where, at Aldearrubia (possibly his birthplace), 15 km north-east of the city, he built the most imposing house in the village, bequeathing it to the cathedral. The village parish church of S Miguel was the most sumptuous and richly adorned in the diocese; further evidence of Escribano's wealth was his endowment of four weekly masses at another village in the region, Villanueva de Lugo.

Martín de Tapia cited 'El venerado Ioan escribano Arcediano de Monleón' as his authority for always flattening the note B when singing plainchant in modes V

and VI (*Vergel de música spiritual*, Burgo de Osma, 1570, f.76*v*), a practice decried by Bermudo, from whose work Tapia's treatise was otherwise plagiarised.

ROBERT STEVENSON

Escriván, Julio (César) d' (*b* Caripito, 23 Aug 1960). Venezuelan composer and guitarist. In 1984 he obtained the licentiate in guitar at the GSM, and in 1985 he graduated in music from the University of East Anglia. The same year he began his composition studies at Cambridge University, concluding them with the PhD in 1991 in electro-acoustic composition at the City University. Remaining in London, he taught electroacoustic music at the City University (1989–91). During the same period he worked intensively with frequency modulation (Morley College), subtractive synthesis (the City Literary Institute), and as a consultant for the Yamaha Centre for Research and Development in the areas of sampling, sound design and portable keyboards. He twice received honorary mention in the Venezuela national composition prize (1983 and 1984). In 1987 his *Sin ti por el alma adentro* won the first prize in the Bourges Concours International de Musique Electroacoustique. In 1989 his *Salto mortal* won the second prize in the same competition. He also won the Caracas municipal film prize for his soundtrack to the film *Golpes a mi puerta*.

His work involves the use of sampling and digital signal processing. He writes music for television and films, including music for the advertising industry. In 1997 he worked for EMU systems in California as a freelance sound designer and programmer.

JUAN FRANCISCO SANS

Escudero, Bernardo de Peralta. *See* PERALTA ESCUDERO, BERNARDO DE.

Escudero, Francisco (*b* Donostia, San Sebastián, 13 Aug 1913). Basque composer. He studied harmony and composition with Beltrán Pagola in San Sebastián, composition with del Campo in Madrid (1931) and Dukas and Le Flem in Paris (1932), and conducting with Albert Wolf in Munich. He was music director of the Santa Casa de Misericordia in Bilbao (1945–8) and directed the Bilbao Choral Society and the Schola Cantorum of San Sebastián. He founded and directed (1960–69) the municipal band of San Sebastián, and he was conductor of the Guipúzcoa Chamber Orchestra (1960–70). His main activity, however, was teaching on the faculty of harmony and composition of the San Sebastián Conservatory (1948–82; director, 1962–81). He has received several prizes, including the Premio Nacional de Bellas Artes de San Fernando (1937) for his String Quartet in G (1936–7), the Falla prize (1964) and the Medalla de Oro al Mérito en las Bellas Artes from the Ministry of Education and Culture (1997).

Escudero's work with the Santa Casa de Misericordia in Bilbao and the Bilbao Choral Society gave rise to the religious works of the late 1940s and to the children's musical tales; later, his connections with Bilbao also led to the commission of his first opera, *Zigor*. In the 1990s he has concentrated on composing serious symphonic works.

His operas *Zigor* (1963) and *Gernika* (1986), written to a Basque libretto, represent the culmination of his creative efforts. In them he develops a post-nationalist aesthetic in which, without expressly quoting traditional melodic material, he aims to find a Basque voice. Another feature of his music is its marked programmatic character. Without always being pictorial, a large number of his works (e.g. the *Sinfonia sacra*) are subject to a programme which channels their musical development. In its totality, his musical production reflects the limitations to which artistic creation was subjected during Franco's dictatorship. The recovery of his music in the last decade of the 20th century enables us to value him as one of the most significant composers of Basque music in this century.

JON BAGÜÉS

Escudier. French firm of music publishers. Marie-Pierre-Pascal Escudier (*b* Castelnaudary, 29 June 1809; *d* Paris, 7 April 1880) and his brother Léon (*b* Castelnaudary, 15 Sept 1815; *d* Paris, 22 June 1881) founded the firm in Paris in 1840; it developed out of the weekly journal *La France musicale* which they had founded in 1837, and which was the only serious rival in France to Schlesinger's *Revue et gazette musicale* until 1860. Whereas Schlesinger's journal concentrated primarily on French and German music, *La France musicale* redressed the balance by paying particular attention to Italian opera. For its content, its journalistic probing and for the liveliness of its style, *La France musicale* is essential for the study of contemporary music and musical events in Paris and the activity of French musicians abroad. The first number appeared on 31 December 1837, and among the journal's early collaborators were Adolphe Adam, Castil-Blaze, Schumann, Balzac and Théophile Gautier. From 38 rue Laffitte, its publishing address changed on 4 March 1838 to 14 rue de Provence, on 20 November of the same year to 20 rue de la Victoire, and on 15 July 1839 to 6 rue Neuve St Marc. From the first it had been the journal's practice to give its subscribers, about twice a month, editions of other publishers (including Richault and, particularly, Troupenas, who in 1837–42 had been distributors for the musical works issued by the Escudiers). From May 1842 the firm began to publish music on its own account, under the imprint 'Au bureau de La France musicale'. By October 1842 their series of plate numbers had exceeded no.100, and their earliest really important publication, the original piano-vocal score of Donizetti's *Don Pasquale* (March 1843), bears the plate number F.M.260. The firm's name was changed first to Magasin de Musique in May 1843 and then to Bureau Central de Musique on 5 October that year, when a move was made to 29 place de la Bourse; the firm's plate numbers bear the prefix 'B.C.' from this date. In March 1848 a further move was made, to 8 rue Favart, and again, on 27 November 1853, to 21 rue Choiseul. From this date the firm took the name Léon Escudier and its plate numbers were prefixed 'L.E.'. In February and March 1882, some months after Léon Escudier's death, the assets were auctioned and divided among several publishers, with many lots unsold; on 26 March 1889 Ricordi acquired some or all of what remained.

In 1849 Marie Escudier had become sole director of *La France musicale*, with Léon as his co-editor; and by November 1853 at the latest Léon had taken sole responsibility for the music publishing activities of the firm. Apart from a break from April to December 1848 (and a change of title, to *La musique*, in 1849–50), *La France musicale* continued to appear as the house journal until 1860, when Marie split away from the firm. He took *La France musicale* with him, and from 21 October 1860 until its demise (on account of the Franco-Prussian War) on 31 July 1870 it was his sole concern. He then returned to political journalism, contributing to *Le figaro* under a pseudonym. Meanwhile, Léon had started a new weekly journal, *L'art musical*, similar in scope to *La France musicale*. It first appeared on 6 December 1860, at first being edited by Oscar Comettant. It managed to survive the war and was eventually sold to Girod, under whose imprint it appeared from 9 June 1881. From 6 December 1883 it was published by Alphonse Leduc, and its final number was issued on 27 September 1894; it was then merged with *Le guide musical*, edited by Maurice Kufferath.

Among the firm's earliest independent publications in 1842 were full scores of operas by Clapisson and Narcisse Girard. In 1843 followed piano-vocal scores of *Don Pasquale* and *Marie di Rohan* and the full score of Thomas' *Mina*; and in 1844 the performing materials of Donizetti's *Dom Sébastien* and Adam's *Cagliostro*, Kastner's *Traite d'instrumentation*, piano works by Alkan, Liszt and Franck, and the vocal score of *I lombardi*. It was the first Verdi opera published by Escudier, and from this moment both the influence and the activity of the firm greatly increased, predominantly in opera. In all, some 20 operas in full score were actually published, while others (including all Verdi's works) were announced as being available, though not priced for sale; at least 65 operas were put out in vocal score, almost all of them French or Italian works and many published in two editions, one with French and one with Italian text. Non-operatic publications included many piano works by Gottschalk, Krüger, Prudent and Rosellen. In all, more than 3600 works were published by the firm, judging by the chronological series of plate numbers.

The Escudier firm is chiefly important for its journals and as Verdi's French publishers. By 1845, mainly through their journal, they had become influential in Parisian musical circles; through this influence they quickly established Verdi as the Italian successor to Rossini, Bellini and Donizetti, and in so doing they were in a large way responsible for the wide dissemination of his works throughout the opera houses of the world. *Nabucco* (1845), *Ernani* and *I due Foscari* (both 1846) were the first of Verdi's works to be heard in Paris, at the Théâtre Italien, and in 1847 *Jérusalem* (a revision, in French, of *I lombardi*) was his first to be given at the Opéra; all these productions resulted from the Escudiers' initiative, and later, in 1865, it was at Léon's suggestion that Verdi reworked *Macbeth* for Paris. Although it appears that Blanchet were Ricordi's Paris agents until about 1850, the Escudiers were in constant touch with Verdi from the mid-1840s (many of Verdi's letters to Léon have been published) and from *I lombardi* to the string quartet (1876) they published all his works and put out the first editions of *Jérusalem*, *Les vêpres siciliennes* (1855), the revised version of *Macbeth* (1865) and *Don Carlos* (1867). Escudier had close business ties with Ricordi and there seems to have been an arrangement between the

two firms for simultaneous publication of Verdi's works in Italy and France.

After an apparent rift between the brothers in 1860, Marie continued to publish *La France musicale* for another ten years, but in 1870 returned to political journalism, contributing to *Le figaro* under the pseudonym 'Un Diplomate'. Léon, meanwhile, had founded a new weekly journal, *L'art musical*. In 1876 Léon assumed the directorship of the Théâtre Italien at the Salle Ventadour, and on 22 April of that year launched, at a cost of 120,000 francs, the first Paris production of *Aida*, with a lavish décor, first-rate cast and Verdi on hand to supervise the rehearsals. During the run of *Aida*, Léon put on the first Paris performances of Verdi's Requiem and string quartet. His further theatrical enterprises, however, were much less successful, and the Théâtre Italien was forced to close in June 1878. Finally, after the failure of his attempt to produce operas in French (including *Aida*) at the Salle Ventadour, Léon abandoned in August 1878 his brief career as impresario, a diversion that certainly contributed to a severe decline in the activity of his publishing business from 1876 onwards.

The Escudier brothers were also active as journalists and writers on music. They were educated at Toulouse and showed remarkable precocity; by the age of 18, according to Fétis, Marie had qualified as a lawyer, as well as having studied music and learnt to play the violin. In Toulouse the Escudiers founded a literary periodical, *Le gascon*, and *La patrie*, a political journal read throughout the Midi. After moving to Paris, Léon completed his classical education at the Sorbonne and studied music under François Bazin. In Paris they founded a journal, *Le réveil*, and either edited or contributed to *Le bon sens*, *Revue du dix-neuvième siècle*, *Revue du nord* and *Le monde*; later, in the 1850s, they contributed musical articles to *Le pays*.

Between 1840 and 1856 the brothers jointly wrote five books, thereby extending their influence still further. Their comprehensive *Dictionnaire de musique* (Paris, 1844/*R*, 5/1872) filled a distinct need and most usefully complemented the first edition of Fétis's *Biographie universelle* (1835–44). Valuable too are their biography, *Rossini: sa vie et ses oeuvres* (Paris, 1854), their first-hand accounts of contemporary singers, *Etudes biographiques sur les chanteurs contemporains, précédées d'une esquisse sur l'art du chant* (Paris, 1840), and their essay on Paganini, *Vie et aventures des cantatrices célèbres précédées des musiciens de l'empire et suivies de la vie anecdotique de Paganini* (Paris, 1856), projected as a full-scale book of memoirs but aborted because of Paganini's illness. The brothers also translated Verdi's *Ernani* and *I due Foscari* as *Le proscrit, ou Le corsaire de Venise* (Paris, 1845) and *Les deux Foscari* (Paris, 1846) and wrote *La vérité sur l'opéra, réponse au mémoire de M. Léon Pillet* (Paris, 1847). Léon Escudier's two volumes, *Mes souvenirs* (Paris, 1863) and *Mes souvenirs: les virtuoses* (Paris, 1868), are a series of essays mainly on contemporary composers and virtuosos; he also wrote *Les pirates de la littérature et de la musique: Questions de propriété* (Paris, 1862).

Eses (Ger.). E♭♭. *See* PITCH NOMENCLATURE.

Ėshpay, Andrey Yakovlevich (*b* Koz'modem'yansk, 15 May 1925). Russian composer. He studied the piano with Listova at the Gnesin Academy of Music (1935–41), served in the army (1943–6) and attended the Moscow Conservatory (1948–56), where his teachers were Myaskovsky, Golubev, Rakov and Khachaturian for composition, and Sofronitsky for piano. He was secretary to the governing body of the Composers' Union of the USSR and first secretary to the RSFSR Composers' Union, and he holds the title Honoured Art Worker of the Mari ASSR and Honoured Art Worker of the RSFSR. As in the case of his father, Mari folk music plays an important part in shaping his compositions, which show harmonic and orchestral variety. He has written concert works in all genres, variety songs and about 60 film scores, all with equal success.

His father, Yakov Andreyevich Eshpay (*b* Kokshamarï, Kazan govt., 17/29 Oct 1890; *d* Moscow, 20 Feb 1963), was an ethnomusicologist working in the Mari region; he published *Natsionalnïye muzïkalnïye instrumentï mariytsev* (Yoshkar-Ola, 1940) and *Mariyskiye narodnïye pesni* ('Mari Folksongs', Moscow, 1957) as well as several compositions based on the material he had collected (with Palantay he initiated the composition of national art music in the middle Volga region).

GALINA GRIGOR'YEVA

Esipova, Anna Nikolayevna. *See* YESIPOVA, ANNA NIKOLAYEVNA.

Eskdale, George (Salisbury) (*b* Tynemouth, 21 June 1897; *d* London, 20 Jan 1960). English trumpeter. He studied with his father, a well-known bandmaster, and at the Royal Military School of Music, Kneller Hall, where his instruments were the cornet, trumpet and violin. After some years with the Savoy Havana Band and as a freelance player, he became, in 1932, principal trumpet of the LSO, a position he retained until his death. He taught the trumpet at Trinity College of Music from 1937 and at the RAM from 1938.

Eskdale's lyrical, cornet-influenced style of playing was in strong contrast to the straightforward manner of his great contemporary Ernest Hall. As a teacher he was more scientific than Hall, emphasizing head-tones and the importance of vowels for changes of register. Among his recordings are a famous performance of Bach's Brandenburg Concerto no.2 with the Adolf Busch Chamber Players, the first recording of Haydn's Concerto (second and third movements only), and Riisager's Concertino for trumpet and strings, which he recorded at the composer's request.

EDWARD H. TARR

Eslava. Spanish firm of music publishers, absorbed by the UNIÓN MÚSICAL ESPAÑOLA.

Eslava (y Elizondo), (Miguel) Hilarión (*b* Burlada, Navarre, 21 Oct 1807; *d* Madrid, 23 July 1878). Spanish writer on music, editor, teacher and composer. He entered Pamplona Cathedral as a choirboy at the age of nine, and at 17 served as a violinist. He studied the piano, organ and violin with Julián Prieto and composition with Francisco Secanilla. In 1828 he became *maestro de capilla* at Burgo de Osma. In 1829 his appointment as *maestro de capilla* was frustrated at Seville Cathedral apparently by local intrigues, and at the royal chapel in Madrid by his youth. However, he was called to the post at Seville in 1832 and at the royal chapel in 1844. At Seville he took holy orders and soon met with ecclesiastical opposition to his secular operas. These three *opere serie* (all lost) were all written to Italian librettos and in the Italian style. Nevertheless, Eslava founded with Arrieta, Barbieri, Basili, Gaztambide, Salas and Saldoni La España Musical, a group whose aim was to foster Spanish opera. In 1854 he became professor of composition at the Madrid Conservatory and in 1866 its music director. His dominating passion for Italianate styles continued to show in his strikingly operatic religious music (the florid *Miserere grande*, written for the tenor Gayarre, has long been sung annually at Seville Cathedral during Holy Week), in his methods of teaching and in his textbooks; his affection for his own country appears in the monumental *Lira sacro-hispana*, an anthology of sacred Spanish vocal music, which, though unreliable, has never been superseded. His manuals on composition were standard textbooks in Spain for nearly a century. Eslava has been criticized by Spanish writers as retrograde, perhaps unjustly on account of his enthusiasm for non-Spanish music.

WORKS

Edition: *Lira sacro-hispana*, ed. H. Eslava, *Siglo XIX*, 2nd ser., i (Madrid, 1869) [E]
Ops: Il solitario del monte selvaggio (os, 3, C. Bassi), Cádiz, Principal, June 1841; La tregua di Ptolomaide (os, 3, L. Bertocchi), Cádiz, Principal, 24 May 1842; Pedro el cruel (os, 2, after Lope de Vega: Lo cierto por lo dudoso), Seville, sum. 1843
Sacred: over 140 pieces, incl. Requiem, vv, orch, op.143 (Madrid, 1861); Mass, 4vv, orch, op.150 (Madrid, *c*1865); Oficio de difuntos, 2 choruses, orch, E; TeD, solo vv, SATB, 8vv, orch, E; 3 motetes compuestos al Santísimo, unacc., E; Motetes al SS Sacramento, unacc., op.147; Salve regina, 2 choruses, unacc., E; ¡O salutaris!, Bar solo, SATB, orch, E
Other vocal: Paráfrasis de Job, T, orch; Cantiga 14a del rey don Alfonso el Sabio parafraseada, SATB, orch (Madrid, 1865)
Inst: Sinfonía fantástica; Divertimento, fl, pf

JACK SAGE

Esmorsata (Sp.). *See* ORNAMENTS, §2.

Espagne [d'Espagne], **Franz** (*b* Münster, 21 April 1828; *d* Berlin, 24 May 1878). German music librarian and editor. After attending the Paulinum Gymnasium in Münster, he was enrolled at the faculty of philosophy at Münster University but in 1851 took up the study of music theory and notation under Siegfried Dehn in Berlin. For a few months in 1858 he was active as music director in Bielefeld. In the same year he was appointed assistant curator and five years later curator at the royal library in Berlin to succeed Dehn in the task of completing the music catalogue. At the same time, he accepted an appointment as *regens chori* at St Hedwig's Cathedral, Berlin, apparently for financial reasons, as Dehn had done before him. Espagne applied his energies not only to cataloguing but also to expanding the library's collection, and his travels included Vienna (1864) and Rome (1873–4) in order to pursue such personal dealings as could gain valuable privately owned autographs for the royal library. He also possessed considerable diplomatic skill in finding people who, in exchange for the title of *Kommerzienrat* or a similar honorary appellation, were willing to donate money for the acquisition of these treasures. The tricky

negotiations conducted from 1863 over the purchase of the original score of *Die Zauberflöte* from the estate of the bankrupt banker E. Sputh would make rich material for a light comedy. In 1859 the royal library gained possession of J. Fischhof's estate, and in 1861 of the Mendheim collection. Espagne's untiring efforts were responsible for a donation from the manufacturer Landsberg for the acquisition of the large collection of Mozart autographs belonging to August and Gustav André and for the donation of the rich autograph collection of Richard Wagener, the Marburg anatomist. It was also as a consequence of his initiative that the library took possession of the Mendelssohn estate in 1877, this entailing the provision of a scholarship to be granted by the Prussian government for the education of young musicians. Sadly, Espagne did not live to see the eventual acquisition of Cherubini's estate, a project for which he had laboured for several years. His work was honoured by the Prussian Ministry of Culture with several commendations, a rise in salary and, in 1870, the bestowal of a decoration. He did not confine himself to collecting and sorting manuscripts, but also published a catalogue of Loewe's works and collaborated in the editing of a number of important Gesamtausgaben. He was responsible for the original Bach-Gesellschaft issue of the English and French Suites (vol.xiii/2), which the committee later found necessary to replace by a new edition (vol.xlv/1).

España (Sp.). *See* SPAIN.

Españoleta. *See* SPAGNOLETTA.

Espelt, Francisco (*fl* 1685–96). Spanish composer, organist and oboist. He was oboist and interim organist of S María del Mar, Barcelona, in 1686–7 but failed to win a competition for the position of organist in the latter year. According to Saldoni he served as *maestro de capilla* from 1690 to 1696, resigning to enter a monastic order. Organ works by him are found in two manuscripts. One contains one setting of the traditional Spanish *Pange lingua* and two of *Sacris solemniis* (*E-Bc* M.729), while the other (*Bc* M.751.21) contains three sets of psalm versets (*salmodias*) for the eight tones, dated 1685–7, and five organ masses with versets for the Kyrie, Gloria, Sanctus and Agnus Dei. Most of the versets are brief fugues; some are characterized by animated chordal movement or running passages against sustained harmonies. Despite their brevity they display a wide variety of rhythmic figures, and dense imitative textures are skilfully handled.

ALMONTE HOWELL

Esperança, Pedro da (*d* Coimbra, 24 June 1660). Portuguese composer and organist. His birthplace is unknown, but his mother was apparently living in Coimbra in 1620. From at least 1617 he was a member of the Augustinian monastery of S Vicente de Fora in Lisbon, and by 1627 he had been transferred to the priory of S Cruz in Coimbra. Although it seems that he was valued principally as an organist, the eight surviving works attributed to him are all vocal. They employ simple homophonic textures with the exception of the verses of the Christmas responsories, where a single vocal line is accompanied by more elaborate independent parts for *fagotillo*, violin and *bayxão*, as well as continuo. The settings of the second and third psalms for None – possibly composed as companion pieces for an existing setting of the first psalm by a certain Dom Gaspar – were apparently intended for the feast of the Ascension, to judge by the context in which they appear in the source.

Espigueta (Sp.). *See under* ORGAN STOP (*Chimney Flute*).

Espinal, Gautier d'. *See* GAUTIER D'ESPINAL.

Espinel, Vicente (*b* Ronda, Andalusia, bap. Dec 1550; *d* Madrid, 4 Feb 1624). Spanish poet, composer, singer and guitarist. After a year of study at the University of Salamanca he spent several years touring Spain as a performer. In 1578 he travelled to Italy and Flanders with the military, but returned to Ronda to complete his studies in theology. He was in high demand as a performer, and

divided his career between travel, writing and entertaining. In 1599 he became *maestro de capilla* in Madrid, a position he held until his death.

Espinel was eulogized as an innovator, although in reality he was merely a purveyor of new formats and media of the Spanish Golden Age. He adopted and standardized the existing *décima* (ten-line) verse form to the extent that it became known as the *espinela*. Although his fame today rests on his literary achievements (none of his music has survived), his contemporaries knew him more as a performer of his own *sonadas*, when he would accompany himself on the guitar.

Although Espinel could not have invented the five-course guitar, he probably did as much to popularize it as anyone. Yet Lope de Vega (*Caballero de Illescas*, 1602; *Laurel de Apolo*, 1630; *La Dorotea*, 1632), Cervantes (*La galatea*, 1585; *Viage del Parnaso*, 1614) and guitarists such as Doizi de Velasco and Gaspar Sanz wrote of him as the inventor, and Espinel never contradicted their assumption. Sanz stated that Espinel added the fifth course to the bass, not the treble, of the instrument. Espinel's semi-autobiographical novel *Relaciones de la vida del escudero Marcos de Obregón* (1618) contains commentaries on his poetical and musical practices.

RICHARD PINNELL

Espinosa, Juan de (*d* ?1528). Spanish theorist and composer. In his *Tractado de principios* (Toledo, 1520) Espinosa claims to have been in the service of Cardinal Pedro González de Mendoza, Archbishop of Toledo (1483–95), and later that of Cardinal Diego Hurtado de Mendoza, Archbishop of Seville (*d* 1502). No other record of him has been found until December 1507, when he took over the position of 'maestro de la música' at Toledo from Pedro Lagarto. Espinosa is described as a 'contrabajo' (bass), and was one of the eight prebendary singers at the cathedral in September 1508, although he may have been a singer there for some years previously. His name appears in the Toledo records only intermittently: he was apparently replaced in his teaching duties by Francisco de Lugones (1509–12), and after an unspecified dispute with the cathedral chapter in the summer of 1513 retained only his position as a singer. He took a leave of absence in the winter of 1514–15, and his name does not reappear until 1528, perhaps because in his latter years his duties as archpriest of S Eulalia occupied more of his time than singing. It is presumed that he had died by the time his post was advertised in 1528; one of the candidates for his position was the royal singer Cristóbal de Espinosa, but it is not known whether he (or Pedro de Espinosa, singer in the Aragonese royal chapel, 1511–16), was related to Juan. The prebend at Toledo was eventually granted to Pedro de Montemayor. Thus, Espinosa's career as a singer and teacher was largely based in and around Toledo; at least two of his theoretical works, if not all three, were published there. The *Tractado breve* (*c*1520) reveals that he remained in contact with the Mendoza family: it is dedicated to Don Martín de Mendoza, archdeacon of Talavera and Guadalajara. It is unlikely that he was the minstrel of the same name in the Aragonese household in 1479–80, and Martín de Tapia (*Vergel de música*, 1570) was surely mistaken in claiming that he was a canon from Burgos, a position held by Pedro de Espinosa. There is no reason to think that Espinosa was not the composer of two songs copied into the Cancionero Musical de Palacio, especially given his close contact with other members of the royal chapels through his position at Toledo.

He became particularly well known because of his long and heated controversy with GONZALO MARTÍNEZ DE BIZCARGUI, *maestro de capilla* of Burgos Cathedral and a disciple of Ramis de Pareia. Martínez's *Arte de canto llano et de contrapunto et canto de órgano con proporciones et modos* (Zaragoza, 1508, and later editions), shows an innovative approach, particularly concerning the question of temperament. In his pamphlet *Retractaciones de los errores et falsedades* (1514), Espinosa defended the traditional doctrines of Boethius, Podio and Gaffurius, accusing Martínez of 'teaching and writing formal heresies in music'.

This led to bitter polemics between the two theorists. To answer Espinosa, Martínez added an appendix to the 1515 edition of the *Arte de canto llano* (also published separately) with such success that in two years the edition was sold out. In the 1517 edition he made some emendations, but reaffirmed his theoretical principles. Espinosa countered with the pamphlet *Tractado de principios* (1520). In the sixth edition of the *Arte de canto llano* (Burgos, 1528) Martínez praised the musical practice of Burgos and issued the following invitation to its detractors:

> If any in a superfluity of knowledge concerning practice and theory would contest these things ... let them visit us in this most noble city of Burgos and they shall hear according to what they have read; here they will find theorists and players, men of great experience and capacity in singing, as well as string and all other instruments.

An extant copy of the *Ars musicorum Guillermi de Podio* (Valencia, 1495) in *E-Mn* (I.1564/1) contains many marginal notes on music, possibly made by Espinosa. This copy was presented in 1579 to the Toledo Cathedral chapter by Alonso de Villegas, who said it had been owned by his uncle Jerónimo Gutiérrez, a chaplain in the Mozarabic chapel and a close friend of Espinosa.

The two songs attributed to Juan de Espinosa in the Cancionero de Palacio are contrasted in subject matter and musical style. The three-voice *Enemiga le soy, madre* (ed. in MME, v, 1947, no.4), is based on a well-known popular refrain and is in the straightforward, largely syllabic and homophonic style cultivated by Juan del Encina. *De vosotros é mansilla* (ed. in MME, v, no.202) is for four voices, and is more sophisticated in its elaboration of the theme of the loved one's eyes and in a texture made more intricate by a rhythmically independent 'contra altus' part (possibly it was added to an original three-voice version).

JOSÉ M. LLORENS/TESS KNIGHTON

Esplá (y Triay), Óscar (*b* Alicante, 5 Aug 1886; *d* Madrid, 6 Jan 1976). Spanish composer. In 1902 he began courses on engineering, philosophy and literature at the University of Barcelona. On the advice of the writer Gabriel Miró he switched to studying music, learning sol-fa from his father Don Trino Esplá, piano from Fernando Lloret and harmony from Juan Latorre. He then studied composition with Francisco Sánchez Gavagnac, counterpoint and fugue with Reger in Munich and Meiningen (1911) and composition with Saint-Saëns in Paris (1912–13). In 1911 his *Suite levantina* for orchestra won the Vienna Prize, awarded by the International Music Society. The jury, which included Richard Strauss and Saint-Saëns, described it as 'one of the greatest and definitive works to be written since César Franck'.

During his years in Barcelona (1902–09) Esplá also composed his first works for piano, *Romanza antigua*, *Impresiones musicales* op.2 and the Scherzo op.5. These works are neo-Classical in style, and were performed by Esplá himself. Esplá was not only an outstanding pianist, giving recitals in the Alicante Ateneo and in Madrid, but he was also a music critic and gave lectures, for example at the conference 'Art and Musicality' held in 1919 at the Alicante Círculo de Bellas Artes. During this period he imbibed the refined literary and artistic atmosphere of his native city, whose residents included his friend the poet Gabriel Miró, the sculptor Vicente Bañuls and the painter Emilio Varela, to whom he was to dedicate his works *Crepúsculum* and *Canciones playeras*. He was in contact with the 'Generación del 27', the group founded on the tercentenary of the death of the poet Luis de Góngora in 1627 and whose members included García Lorca and three figures whose poetry Esplá set to music, Gerardo Diego, Manuel Machado and Rafael Alberti. Esplá was also active in the Generation of the Composers of the Republic, whose members included Remacha, Rodolfo and Ernesto Halffter, Bacarisse, Bautista and the group's spokesperson, the critic Adolfo Salazar. In 1932 he was appointed a professor at the Madrid Conservatory (which he directed, 1936–9).

In his voluntary exile in Belgium as a result of the Spanish Civil War, he worked as composer and as a music critic on *Le soir*. In 1946 he was made director of the Laboratoire Musical Scientifique in Brussels, researching in the field of acoustics and the psychology of music. He was invited by UNESCO in Paris to establish an international conference on the adoption of a single tuning standard (1948), was a member of the International Music Council of UNESCO (1952) and was president of the Spanish section of the ISCM (1956). From 1960 until his death he taught at the Óscar Esplá Conservatory in Alicante.

Esplá was one of the chief exponents, together with Albéniz, Granados, Falla, Turina, Guridi and del Campo, of the widely influential Spanish School. With a solid humanistic, scientific and philosophical background, he was among the most intellectual and versatile composers of his generation. He not only represents a Spanish school of music but also a school of the Spanish Levantine. However, his first compositions, for example *El sueño de Eros* (first performed in 1913), recall the harmonies of Grieg and of his teacher Saint-Saëns, and they reveal the influence of German post-Romanticism and the world of Wagner. After receiving adverse criticism he embraced a Spanish manner, basing his compositions on folk music and popular songs transmuted according to a scale of his own invention, C–D♭–E♭–F♭–G♭–G♯–A♭–B♭, inspired by the scales, rhythms, idioms and cadences of Spanish Levantine folk music. Florent Schmitt, a critic and composer attached to 'les Six', maintained that 'the Spanish Levantine song is a personal creation of Óscar Esplá'. Esplá's first work in this style was the cantata *Nochebuena del diablo*, first performed in 1924. Some of his remarkably delicate and concise piano pieces express this character very well, such as *Evocaciones*, *Cantos de antaño*, *La sierra*, the *Suite levantina* and *Lirica española*. In other works for piano and voice, *La pajara pinta* and *Canciones playeras*, with texts by Alberti, Esplá achieves subtle harmonies. He also proved a master of elegant symphonic orchestration. His symphonic poem *Don Quijote velando las armas*, written at Falla's request and first performed in 1924, represents a refined, post-Romantic nationalist style and marks the beginning of a symphonic trend. He leaves the nationalist phase behind in his *Sonata del sur* for piano and orchestra, first performed in 1945. It is a mature work, as is the *Sonata española* (1949), a piano work to commemorate the centenary of Chopin's death, written under the auspices of UNESCO.

At the same time, Esplá's output is to a considerable extent suffused with French Impressionism. In his last works he shows his predilection for large forms, in the eloquent *Sinfonía aitana*, which he subtitled 'A la musica tonal in memoriam', and in the religious cantatas, *De profundis* and *Llama de amor viva* based on the mystical writings of St John of the Cross, and in his more humanistic composition *Cantata para el XX aniversario de la Proclamación de los Derechos Humanos por la ONU* to words by Gerardo Diego. In these works he is seeking a new harmonic and contrapuntal language, 'neo-symphonist' and polyphonic, with a rich variety of timbres within a highly developed tonal system. Although he carried tonality to the point of dissolution, Esplá never accepted Schoenberg's 12-note system as the only way. Esplá made a performing edition of the 13th-century Assumption drama *El Misterio de Elche* (performed in Elche in 1924), and also wrote dramatic works himself, such as his operas *El pirata cautivo*, *Plumes au vent*, and *Calixto y Melibea*. These last two have not been performed.

Esplá was creative in many fields, as a composer, performer, musicologist, teacher, theorist and scholar.

The wide range of subjects covered in his writings (criticism, musicology, aesthetics, the teaching and psychology of music, the philosophy of art, literature, musical drama, acoustics and physics) reveal his deep wisdom as a humanist and as a thinker about music. He believed that it was the affective energy, tonal relations and harmonic tensions of music that could produce spiritual and emotional effects, as opposed to the cold technical and acoustic experimentation of the avant garde. He composed with a sense of formal rigour, and with a clear aesthetic, scientific and intellectual conception which, in its attempt to elucidate harmonic and acoustical problems, tended towards abstraction and was somewhat removed from the creative musical act itself. His work shows a demand for perfection and re-elaboration, and reveals a sense of art as both universal and having a markedly Spanish, especially Spanish Mediterranean, character. For Esplá 'music is a way of understanding consciousness. And by its profoundly subjective nature, not only is it the freest of the arts but it also takes its place in the highest class of human endeavour'.

EMILIANO GARCÍA ALCÁZAR

Esposito, Michele (*b* Castellammare di Stabia, 29 Sept 1855; *d* Florence, 19 Nov 1929). Italian pianist, composer, conductor and teacher. After studying the piano under B. Cesi and composition under P. Serrao at the conservatory of S Pietro a Majella, Naples, Esposito went to Paris in 1878. Four years later he began his long association with

Dublin, the development of whose concert life owed much to his enthusiasm and initiative. As professor of the piano at the Royal Irish Academy of Music, his influence extended throughout the country, and he was awarded an honorary doctorate in 1905 by Trinity College, Dublin. He gave frequent chamber music and piano recitals under the auspices of the Royal Dublin Society and founded a small symphony orchestra which gave Sunday afternoon concerts at a low admission price in the Antient Concert Rooms. In 1899, by means of public subscription, he founded the Dublin Orchestral Society, which he conducted with much success until 1914; an attempt to revive the orchestra in 1927 failed. In the following year Esposito returned to Italy, where in 1922 he had been given the title Commendatore.

Many of Esposito's compositions incorporate Irish melodies, including the Irish Suite, an Irish operetta *The Post-Bag* produced in London in 1902, an opera *The Tinker and the Fairy*, the *Roseen Dhu* songs and others. He edited music of Domenico Scarlatti, Geminiani and Bach for string orchestra (London, 1925–7) and 19 sonatas by Scarlatti in the series *Early Italian Piano Music* (London, 1906). His most famous pupil was Hamilton Harty. Michele's brother, Eugene Esposito (*b* Castellammare di Stabia, 9 Sept 1863; *d* Milan, 12 Oct 1950), was also a composer. He wrote three operas on Russian librettos which have often been attributed wrongly to Michele.

KEITH HORNER/R

Espressivo (It.: 'expressive'). A mark of expression, found also in the form *con espressione* ('with expression') and particularly common in the first half of the 19th century. *See also* TEMPO AND EXPRESSION MARKS.

Espringale (Old Fr.). A jumping-dance. The two examples of its use listed in A. Tobler and E. Lommatzsch, *Altfranzösisches Wörterbuch* (Berlin, 1920–), from the *Roman de la violette* and the *Songe du vieil pelerin*, both place it together with *carole*: the jumping-dance and the round-dance are, by implication, complementary. *See also* DANCE, §3(i).

Esquila (Sp.). *See* HANDBELL. *See also* CENCERRO.

Esquisse (Fr.). *See* SKETCH.

Esquivel (Navarro), Juan de (*fl c*1637–1642). Spanish dancer. His *Discursos sobre el arte del dançado* (Seville, 1642) reveals that he was a citizen and native of Seville who went to Madrid to study with Antonio de Almenda, dancing master to Felipe IV. In about 1637 he returned to Seville, where he appears to have been regarded nearly as a newcomer, based on his own reports of his arrival and reactions to his dancing and the 'doctrine' it demonstrated. By the time he was writing his treatise he was no youngster; he regularly referred to and praised the younger generation of dancers. His treatise, in which he claimed to be expounding the doctrine of his teacher, includes a rumination on the history and values of dancing, descriptions of 27 dance steps as well as explanations of posture and stance, indications of ideals in body types and performance aesthetics, and lists of expert dancers, esteemed dancing masters and their most accomplished disciples, primarily in Madrid and Seville. There are no dance notations or musical examples, but there are brief choreographic descriptions for the pavan and galliard, and a lengthier description for the *villano*.

LYNN MATLUCK BROOKS

Esquivel Barahona, Juan (de) (*b* Ciudad Rodrigo, *c*1563; *d* ?Ciudad Rodrigo, after 1612). Spanish composer. He was a pupil of Juan Navarro (i), *maestro de capilla* of Ciudad Rodrigo Cathedral (1574–8). Esquivel was *maestro de capilla* at Oviedo Cathedral from 15 November 1581 to 4 October 1585, at Calahorra Cathedral from 29 November 1585 to some time between 1 January 1591 and 6 July 1595 and thereafter at Ciudad Rodrigo Cathedral from before 1608 to at least 1613. The Dominican Pedro Ponce de León, Bishop of Ciudad Rodrigo from 1605 to 1609, was his patron, and paid the printing costs of his three collections of Latin church music.

Esquivel was one of the most prolific, and also one of the finest Spanish composers of his time; his motets stand comparison with those of Victoria on the same texts. The first of his publications, *Missarum ... liber primus* (1608), includes three masses based on Guerrero motets and a six-voice *batalla* based on Janequin's *La bataille*. Two of the four-voice masses in his 1613 *Liber secundus* are parodies: one on Guerrero's motet *Quasi cedrus* and the other on Rodrigo de Ceballos's widely circulated motet *Hortus conclusus*. In masses from both collections as well as his motets Esquivel combines old techniques such as cantus firmus ostinatos and canonic construction with the newer procedures characteristic of the generation of Alonso Lobo: harmony coloured by the use of accidentals, paired imitation in direct or contrary motion, climaxes in a high register for particularly poignant texts, dramatic pauses and contrasts of texture. His works were used extensively in Spain and Portugal throughout the 17th century and reached Mexico before 1610.

WORKS

Missarum ... liber primus, 4–6, 8vv (Salamanca, 1608)
Motecta festorum et dominicarum, 4–6, 8vv (Salamanca, 1608)
Liber secundus psalmorum, hymnorum, magnificarum, 4–6, 8vv (Salamanca, 1613) [description in Pedrell], Ronda, S María la Mayor
62 motets, 4–6, 8vv, *E-P* (copied from 1608 prints); 7 ed. S. Rubio, *Antología polifónica sacra* (Madrid, 1954–6)

ROBERT STEVENSON

Essek (Ger.). *See* OSIJEK.

Essen. German city in the Ruhr district. It grew up around two religious communities: the Benedictine monastery founded in Essen-Werden in about 800 by the Frisian missionary Liudger, and the convent founded by Altfried (*b c*800), who became Bishop of Hildesheim in 851. The convent's greatest period was the late 10th century, when princesses of the Ottonian royal family of Saxony were members; the abbey in Essen-Werden and the minster in Essen date from this period. Although records of musical practice there in the Middle Ages are still largely unexplored, it is clear that these foundations had considerable musical importance. The *Liber ordinarius*, a mid-14th-century manuscript, probably draws on material of the 10th and 11th centuries, and sheds light on the music of the nuns (*canonissae*), monks (*clerici*) and scholars (*scholares*), each of whom had specific roles in church music. Other manuscripts contain neumatic notation. There is evidence that the earliest churches had organs (10th century) and instrumentalists.

The Reformation further stimulated sacred music. In 1560 German Christmas songs were sung for the first time in the Marktkirche. The *Essendische Gesangbuch*, of which ten editions appeared between 1614 and 1748, was used until 1810. The scale of musical performances increased during this period; court and military trumpeters were active, and travelling virtuosos visited the city. As elsewhere in Germany, it was from the collegia musica, evening musical gatherings, that public concerts evolved. By the end of the 18th century, however, Essen's importance had waned to that of a minor provincial town.

Its stature increased in the 19th century when the most important figure in Essen's musical life was J.W.G. Nedelmann, who initiated several important musical institutions. The city orchestra (now the Essen PO), which he founded in 1899, took over 21 musicians from the Essener Kapelle (originally the Bergkapelle when founded in 1816, later the Helfersche Kapelle and, after 1863, the Essener Kapelle). Brahms conducted a concert in 1884 and Richard Strauss conducted the second performance of his *Sinfonia domestica* in 1904. The orchestra gave the first performances of Reger's Sinfonietta under Felix Mottl (1905), Mahler's Sixth Symphony (1906) and of the *Böcklin-Suite* under Reger (1913). The orchestra has also been the basis of numerous festivals: a Brahms week and a Schreker week (1922), a Strauss festival (1924), the 13th German Bach festival (1925), and Reger (1926), Beethoven (1927), Schubert (1928) and Brahms (1933) festivals, and one for the centenary of the municipal musical society (1938). Concert series and festivals have continued since the war.

The Gesang-Musikverein was directed by Nedelmann (1838–55) and survives as the Städtischer Musikverein, the city's most notable choir; it has performed a wide range of choral works and provides a chorus for the opera. There are many other choirs, mostly male-voice, many owing their existence to Nedelmann. Essen has been the scene of numerous choral festivals, such as the Deutsches Sängerbundesfest of 1962. The Folkwang-Schule (Folkwang Hochschule since 1963), founded in 1927 by Rudolf Schulz-Dornburg, is renowned as both a music academy and as a school of drama and modern dance.

Since the opening of the Theater und Philharmonie Essen in 1892 the civic opera has performed most of the standard repertory. The tradition of enterprising productions of contemporary works initiated by Schulz-Dornburg, who between 1927 and 1932 directed Berg's *Wozzeck*, Honegger's *Antigone*, Stravinsky's *Petrushka* and *Oedipus rex* and Hindemith's *Hin und zurück*, continued after the war. A new opera house, the Aalto-Theater, was opened in September 1988.

FRANZ FELDENS/DOROTHEA SCHRÖDER

Essenga [Essengha], **Salvatore** [Salvadore] (*b* Modena; *d* Siena, 1575). Italian composer. He was a Servite priest. Gherardini's claim (in his first madrigal book) that Essenga taught Orazio Vecchi is supported by the appearance of Vecchi's earliest known composition, *Volgi cor lassi*, in Essenga's *Primo libro di madrigali a quatro voci* (RISM 1566[8]). Arcangelo da Reggio, who succeeded Essenga as *maestro di cappella* at Siena Cathedral, implied that Fontanelli was also Essenga's pupil. According to the Servite historian Arcangelo Giani, who recorded the year of Essenga's death, he was successively *maestro di cappella* at the cathedrals of Tortona, Modena and finally Siena, where Roncaglia believed he spent the last five years of his life. His earliest known composition, *Deh cosi fussio sol* (1559[16]) shows a rather uncomfortable alliance of traditional polyphony with madrigalian writing, often comically naive in its representational devices and generally melodically awkward. *Il secondo libro de madrigali a cinque voci* (Venice, 1561), mostly in the *misura da*

Quinta & vltima Parte. A 8 27 CANTO

pace Per testimon della gia fatta pace della gia fat ta pace De la gia fatta pa ce.

Opening of the cantus part of the final section, for eight voices, of Essenga's madrigal cycle 'Amor se mai' from 'Il secondo libro de madrigali a cinque voci' (Venice, 1561)

breve, consists almost entirely of five large-scale madrigal cycles, each of which increases in number of voices as it progresses (see illustration). Two more five-voice madrigals and a villanella for three voices were printed in contemporary collections (1570[19], 1575[12]). The superius part of a *Missa Essenga*, which Crawford believed to be Salvatore's work, is in manuscript (in *I-MOe*) and a third book of five-voice madrigals, now lost, was advertised in the 1604 Giunta catalogue (*MischiatiI*).

IAIN FENLON

Esser, Heinrich (*b* Mannheim, 15 July 1818; *d* Salzburg, 3 June 1872). German conductor and composer. While still at school, he studied the violin with Jakob Heinefetter and harmony with Carl Eschborn, both of whom played in the Mannheim orchestra. He also studied with Franz Lachner, who had become Kapellmeister at Mannheim in 1834 and whom he followed to Munich in 1837, and briefly with Simon Sechter in Vienna (1839–40). In 1838 he became Konzertmeister at the Mannheim Nationaltheater, in 1840 he was appointed conductor of the Liedertafel in Mainz, probably only beginning work the following year, and in 1845 he became Kapellmeister there. Two years later he succeeded Otto Nicolai as Kapellmeister of the court opera in Vienna, where he remained until November 1869 when he was compelled by ill-health to resign; he retired to Salzburg.

Esser was an adviser to Franz Schott, at whose request he brought Wagner into contact with the publisher. Wagner entrusted to Esser the task of arranging *Die Meistersinger von Nürnberg* for piano. Esser also recommended Hans Richter as a copyist to Wagner. Three of his operas were produced, *Sitas* (Mannheim, 26 December 1840), *Thomas Riquiqui oder Die politische Heirath* op.10 (1842; Frankfurt, 8 March 1843) and *Die zwei Prinzen* op.15 (1844; Munich, 10 April 1845). The latter two, both comic operas, were published by Schott; the music of the first is lost. Esser's numerous other compositions include 40 books of songs, two of duets, four of male choruses and two for mixed chorus. Four of his five orchestral works (the symphonies opp.44 and 79 and the suites opp.70 and 75) received performances by the Vienna PO and were also published by Schott. His chamber music includes a woodwind quintet and septet, and two string quartets. He was admired in his day especially for his contrapuntal mastery; but Hanslick thought him over-ambitious to hope for a major career as an opera composer on the strength of his two successful

comedies. He made many arrangements of popular operas.

K.-J. MÜLLER

Esser, (?Karl) Michael, Ritter von (*b* Aachen, ? April 1737; *d* ?*c*1795). German violinist and composer. He is probably identifiable with Michael Nikolaus Esser, baptized in Aachen on 3 April 1737. He began his artistic career at the court orchestra in Kassel and was appointed Konzertmeister there in 1761. But since his activities in the orchestra hindered his ambitions as a soloist, he secretly left Kassel after his request for his release had been refused. Extensive concert tours through Europe took him to Amsterdam (1764), Rome (1772), where he was awarded the Order of the Golden Spur, Paris (1774), London (1775–6), Berne (1777), Basle (1779), Munich (1780) and finally Spain (*c*1786).

Esser was an early travelling virtuoso whose brilliant violin (and apparently viola d'amore) playing won him fame and wealth in spite of his capricious and conceited behaviour. Mozart met and heard him in Mainz in 1763 and met him again in Munich in 1780; there is veiled irony in Mozart's praise of Esser's 'clever and foolish solos', and he criticized his extravagant manner of ornamentation ('he played well, but he did too much and he should better play as it was written'). Esser took technical virtuosity to extremes when – like Paganini later – he played 'a whole concerto of his own composition on an overspun G string only'. On the other hand, his contemporaries spoke highly of the extraordinary elegance and expressiveness of his playing in both adagios and allegros. The few surviving works by Esser, which are pre-Classical in style, give little evidence of the importance of his technique as a violinist.

WILFRIED GRUHN

Essex, Margaret (bap. London, 30 July 1775; *d* after 1807). English composer. She came from a musical family: her father Timothy Essex was probably a musician and her brother Timothy Essex (?1765–1847) became a composer and teacher. Active in London between 1795 and 1807, she published and copyrighted 13 compositions at her own expense. Her dedications, all to women, indicate that she was a teacher of singing and the piano or harp; she may have been a governess. She seems to have retired to domestic life after her marriage on 2 January 1807 to John Campbell. Her compositions are all designed for domestic music-making, and her editions take account of the amateur skills of her performers. Her music is conventionally Classical in style, with restrained but gracefully ornamented melodies, diatonic harmony enlivened by appoggiaturas, and simple, mainly strophic forms.

WORKS

published in London unless otherwise stated

JANE GIRDHAM

Essl, Karlheinz (*b* Vienna, 15 Aug 1960). Austrian composer and double bass player. He attended the Vienna Musikhochschule (1979–87), where he studied with Friedrich Cerha and Dieter Kaufmann, among others. He also studied musicology and art history at the University of Vienna (doctorate 1989; thesis published as *Das Synthese-Denken bei Anton Webern: Studien zur Musik auffassung des späten Webern unter besonderer Berücksichtigung seiner eigenen Analysen von op.28 und op.30*, Tutzing, 1991). Active as a double bassist until 1984, he played in chamber and experimental jazz ensembles. As a composer he has contributed to the Projekt 3 programme at Utrecht and Arnheim (1988–9), served as composer-in-residence at the Darmstadt summer courses (1990–4) and completed a commission for IRCAM. In 1995 he accepted a position in computer-aided composition at the Studio for Advanced Music & Media Technology at the Bruckner Conservatory, Linz.

Essl's compositions result from confrontations between ordered, abstract models and original tonal, expressive structures. He has frequently sought to combine music with other genres and has collaborated with the graffiti artist Harald Naegeli (*Partikel-Bewegungen*, 1991), the writer Andreas Okopenko and the artists' group Libraries

of the Mind (*Lexikon-Sonate*, 1992–8), the architect Carmen Widederin (*Klanglabyrinth*, 1992–5) and the video artist Vibeke Sørensen (*MindShipMind*, 1996, a multimedia installation for the Internet). During the 1990s he carried out numerous additional projects for the Internet and he also became increasingly involved with improvisation.

BERNHARD GÜNTHER

Esswood, Paul (Lawrence Vincent) (*b* West Bridgford, Notts., 6 June 1942). English countertenor. He studied at the RCM, London, under Gordon Clinton, 1961–4. From 1964 to 1971 he was a lay vicar at Westminster Abbey. His début was in a broadcast performance of *Messiah* under Charles Mackerras in 1965; from that time he quickly established a reputation as a leading countertenor, in Britain and elsewhere, particularly Germany and the Netherlands, in both sacred and secular repertories. In 1968 he first appeared in opera, in Cavalli's *Erismena* at Berkeley, California, singing soon thereafter in operas by Scarlatti, Handel and others, including Monteverdi, in whose *Il ritorno d'Ulisse in patria* (Vienna), *Orfeo* (Salzburg) and *L'incoronazione di Poppea* (Amsterdam) he appeared in 1971. Esswood took part in recordings of several works by Monteverdi (notably the Vespers), Handel, Purcell and Bach (notably the complete cantatas with Harnoncourt and Leonhardt). He sang with various specialist early music ensembles and was a founder of the *a cappella* male group Pro Cantione Antiqua. Esswood's singing was distinguished by his cool and pure tone, unusually even across his entire compass, his clear articulation and his keen sense of line.

STANLEY SADIE

Est, Michael. *See* EAST, MICHAEL.

Estampie (Fr.; Provençal *estampida*; It. *istanpitta*; Lat. *stantipes*). A dance and poetic form known in France and Italy during the 13th and 14th centuries. It is the only medieval dance for which both descriptions and a clearly named repertory survive. Two meanings of the word have been proposed: 'stamping dance', after the French and Provençal *estampir*, 'to resound' (Hibberd); and 'low dance', after the Latin *stanti pedes*, 'standing feet' (Moser, Sachs).

Our knowledge of the *estampie* is derived from both theoretical and practical sources, most of which date from the end of the 13th century and the beginning of the 14th, although some sources record material that may be as much as a century earlier. Two poetry treatises describe the *estampie* as a poetic and musical form, and a music treatise provides details about it as both a vocal form and an instrumental dance. The texted repertory consists of 26 poems without music (transcr. in Streng-Renkonen, Pillet and Carstens, and Riquer) and two poems with music (*Kalenda maya* and *Souvent souspire*, transcr. in McPeek; McGee, *Medieval Instrumental Dances*, 1989), all surviving in Old French and Old Provençal sources from the early 14th century. There are also 16 textless musical compositions identified as *estampies* in their sources.

1. The texted *estampie*. 2. The instrumental *estampie*.

1. THE TEXTED 'ESTAMPIE'. In the anonymous poetry treatise *Doctrina de compondre dictatz* (*c*1300), the *estampie* is described in terms of both its poetic and its musical characteristics: it is a poem having 'four *coblas*, a refrain and one or two envoys set to a new melody'. The *Leys d'amors*, a treatise compiled by Guillaume Molinier during the first half of the 14th century, acknowledges the existence of a musical form and goes on to state 'but sometimes [*estampie*] refers not only to the music but also to the text, which is based on love and homage . . .. Such minor forms may have an envoy or not, or one may, in place of an envoy, repeat the opening or closing *coblas*'. Johannes de Grocheio's treatise *De musica*, written about 1300, discusses both vocal and instrumental *estampies* (his word is 'stantipes') in the section on secular music (*musica vulgaris*), as part of a discussion that includes other dance forms – round (*rotundellus*), carole (*ductia*) and *nota* – as well as the non-dance secular vocal forms *cantus gestualis* and *cantus coronatus*. According to Grocheio, the vocal *estampie* begins and ends with a refrain, varies both the text rhyme and the melodic phrases, uses a text and melody for the refrain that is different from those for the verse, and can have as many verses as the composer wishes. The elements presented in these three treatises are exemplified in the text and music of *Kalenda maya* (ex.1); the text is by the troubadour Raimbaut de Vaqeiras (*c*1155–1205).

The text of *Kalenda maya* conforms to the statement in the *Leys d'amors* that it be on love and homage; the poet pledges his love throughout the verses, and the homage is clearly spelt out in verse 5. The text is structured in verses of 14 lines of irregular length which can be separated into the four couplets (*coblas*) required by the *Doctrina*. *Kalenda maya* has six verses. The only other *estampie* to

survive with both text and music, *Souvent souspire* (built on a variation of the *Kalenda maya* melody), has five, and the number of verses in the 26 *estampie* texts without music ranges from three to five.

All three theorists mention a refrain as part of the construction of an *estampie*, but none of the 28 texts identifies a separate set of lines as such. It is possible, however, that certain lines of an *estampie* were used in that capacity, and in *Kalenda maya* the last couplet of the first verse may have been the refrain. According to Grocheio, the *estampie* begins with the refrain, which is repeated at the end of each verse.

Kalenda maya also illustrates the variety of phrase-length and melody called for by Grocheio; the pairs of phrases are not all the same length, and the endings for each line of the third couplet are not exactly the same (they are 'open' and 'closed' endings; *see* OUVERT). The text and melody of the refrain also differ from those of the verse. In this last detail Grocheio contrasts the *estampie* and the carole with several other secular dance forms (ballade, rondeau and virelai), in which the refrain consists of a portion of the text and melody of the verse.

2. THE INSTRUMENTAL 'ESTAMPIE'. The instrumental *estampie* differs from the vocal type in some details. Grocheio, the only writer to describe it, identified it as composed of several double versicles (*puncta*, or 'repeated sections'), each of which concludes with a common refrain that has 'open' and 'closed' endings. As in the texted *estampie*, these versicle pairs can vary in length. Whereas in the texted *estampie* a single verse melody made up of several pairs of versicles is repeated for each new stanza and followed by the refrain, in the untexted *estampie* there are many verses, each made up of a single pair of versicles with its own melody, with the common refrain repeated at the end of each versicle (compare the structure of exx.1 and 2).

The 16 textless compositions identified in their sources as *estampies* represent both the French and the Italian

Third estampie, with the end of the second and the beginning of the fourth, from the Manuscrit du Roi, late 13th century, estampies added in the early 14th century (F-Pn fr.844, f.104r)

traditions: eight are in the late 13th-century Manuscrit du Roi (*F-Pn* fr.844, see illustration), each labelled '*estampie*', and eight in an Italian manuscript from about 1400 (*GB-Lbl* Add.29987), following the heading 'Istanpitta' (facs. in Aubry and Reaney; ed. in Aubry, Wolf, Bokum and McGee, *Medieval Instrumental Dances*, 1989). All textless *estampies* match Grocheio's general description, but the two sets are quite different in terms of length, metre, internal formal design and melodic style. The French *estampies* have relatively short versicles of eight to 20 units and are in simple triple metre. Ex.2 shows a typical complete French *estampie*. The dances in the Italian source vary in length from 20 to over 100 units, and are in a basic duple division, either simple or compound. Ex.3 shows a single versicle from one of the longer Italian *istanpitte*.

The two sets of dances also differ in terms of formal structure and tonal orientation. Each verse pair in a French *estampie* has completely new material, and ends with a short refrain (sometimes only a few notes) and common 'open' and 'closed' endings. The formal scheme of all French *estampies* is as follows (A, B, C etc. = verse, R = refrain, x = first or 'open' ending, y = second or 'closed'): ARx/y, BRx/y, CRx/y etc. The Italian examples, however, present several different formal schemes, none of them the same as the French. The verse pairs each contain one to three melodic sections and may combine different sections from verse to verse before proceeding to the refrain. One combination is that found in the dance *Ghaetta* (see ex.3), in which each new verse begins with new material (A, C, E and F), continues with a second section of either new or old material (B or D), and concludes with the common refrain and 'open' and 'closed' endings: ABRx/y, CDRx/y, EDRx/y, FBRx/y.

Variations of this organization are found in five of the other seven Italian dances, in which a single refrain

Ex.2 *La quinte estampie real*, *F-Pn* fr.844, f.104

follows different combinations and numbers of verse phrases: *Tre fontane*, for example, has the scheme ABCRx/y, DBCRx/y, ECRx/y, FRx/y, while *Belicha* runs ARx/y, BRx/y, CRx/y, DERx/y, FERx/y. Two of the Italian dances, *Parlamento* and *In pro*, however, have a formal scheme found in no other refrain dance. They use new melodic material for the refrain and endings of the last two verse pairs, producing the following: AR1x/y, BR1x/y, CR1x/y, DR2s/t, ER2s/t.

In addition to their formal differences, the French and Italian *estampies* are also quite different in terms of melodic and phrase construction. The melodies of the French dances have relatively narrow ranges and are diatonic, emphasizing a single mode. The phrases are short, and within each *estampie* all the phrases are generated from a small number of melodic-rhythmic motifs.

In contrast, the melodic ranges of the Italian examples are wide, and the melodies are not modal but based on a contrast of tetrachords that include chromatic variation. The phrases are long and consist of a large number of melodic-rhythmic motifs. Most interesting is the basis of their melodic construction, which consists of a methodical exploration of the individual notes of contrasting tetrachords. The two melodic phrases of the first versicle of *Ghaetta* (see ex.3), for example, appear to be constructed from the ascending tetrachord *c′*, *d′*, *e′*, *f′*, and the descending tetrachord *b*♭, *a*, *g*, *f*♯. As a melody unfolds, each note of the tetrachord is singled out and emphasized

Ex.3 *Istanpitta Ghaetta*, *GB-Lbl* Add. 29987, ff.55–6

Prima Pars

1. Aperto

2. Chiuso

through repetition and variation. The two tetrachords are then explored and reconciled in the refrain.

The construction of the Italian dances more closely resembles that of eastern Mediterranean dance than that of European music of the same period. Its formal aspects are close to those of the *pesrev*, an instrumental form found in Turkey and Arab countries, and its melodic ideas conform closely to the Turkish *maqām* system and Arab theoretical practices (Handschin, 1930–31; McGee, 1982).

Four other medieval dances have been identified tentatively as *estampies* on the basis of their agreement with the forms of those discussed above: two in the Robertsbridge Codex (*GB-Lbl* Add.28550, one named *Petrone*, or *Retrove*, the other untitled) and two in the Faenza Codex (*I-FZc* 117, entitled *Tumpes* and *Sangilio*; ed. in McGee, *Medieval Instrumental Dances*, 1989). Both sets are in two voices, a slow-moving lower part and a rapid upper one. The individual versicles in all four compositions are quite long, with complex phrase combinations similar to those of the Italian examples. The Robertsbridge Codex melodies are composed according to the more common European practice, while those in the Faenza Codex bear a closer resemblance to the Italian pieces.

The general nature of the *estampie* as a dance is suggested by the contrast between the *estampie* and the carole described by Grocheio and other theorists such as Jean Froissart (*L'espinette amoureuse*, 358–63): 'And as soon as [the minstrels] had stopped the *estampies* that they beat, those men and women who amused themselves dancing, without hesitation, began to take hands for carolling'. Since we know that the carole was danced in the round, it is probable that the *estampie* was danced in the other major formation, in couples. Grocheio states that, in contrast with the energetic carole, the *estampie* was more suitable for dancers of all ages, but that it required irregular and complicated movement. This would tend to support the second of the two meanings given above, 'standing' or 'stationary feet': that is, a processional-type dance, perhaps the predecessor of the popular French basse danse and the Italian bassadanza of the 15th century.

TIMOTHY J. McGEE

Este. Italian family of rulers and music patrons. This important family, whose lineage can be traced continuously from the 9th century to the 19th, included a number of conspicuous patrons of music, especially during the period 1400–1700. Evidently of Lombard origin, the family name derived from the feudal stronghold of Este, near Padua, which they ruled from about 1000 to about 1240; thereafter they were the hereditary lords of Ferrara until 1598. Their dominion over Ferrara, first with the rank of marquis, later with that of duke, included Modena, Rovigo and other adjacent territories; after losing Ferrara to the papacy in 1598, they continued their rule as Dukes of Modena until 1859.

The earliest musical patron among the Estensi seems to have been Niccolò III (Marquis of Ferrara, 1393–1441), followed and outstripped in cultural patronage by his son Leonello (marquis from 1441 to 1450). Leonello was an illustrious supporter of the arts and letters and formed the first court musical chapel at Ferrara, which was staffed by professional singers brought mainly from France. His successor, Borso d'Este (first Duke of Modena in 1452 and first Duke of Ferrara in 1471), mainly fostered instrumental music, which was led by the great lutenist Pietrobono del Chitarino. In the late 15th century Duke Ercole I d'Este, for whom Josquin Des Prez wrote the *Missa Hercules Dux Ferrarie*, succeeded in making Ferrara a musical centre of European importance. His musicians included a staff of virtuoso instrumentalists as well as a large corps of singers, partly Italian, partly from France, Spain and northern Europe, who included Johannes Martini (1472–97), Jean Japart (1477–9), Johannes Ghiselin (1491–3), Josquin Des Prez (1503–4) and Obrecht (1504–5). Manuscripts of this period in the Biblioteca Estense, Modena, reflect the repertory of the

chapel and its division into a double choir during the years 1473–82.

In the 16th century the three succeeding dukes of Ferrara were all dedicated patrons of music whose efforts were flanked by those of other members of the family. The ducal line included Alfonso I (ruled 1505–34), Ercole II (1534–59) and Alfonso II (1559–97). Alfonso I's chapel included Antoine Brumel, Jan Michel and Antoine Colombaudi ('Bidon'), among others. His brother, Cardinal Ippolito I d'Este (1479–1520), maintained an opulent establishment of his own with a retinue of musicians that included, among others, Willaert (1515–19, after which he passed into the service of Alfonso I), Jean Braconnier, Gian Giacomo da Vicenza and Alexander Demophon. In the next generation the court chapel flourished under Ercole II, whose marriage to Princess Renée of France reaffirmed the court's longstanding ties with France. From 1547 to 1559 the principal court musician was Rore; Vicentino was an important secondary figure. Ercole II's brother, Cardinal Ippolito II, residing at the sumptuous Villa d'Este at Tivoli, was a powerful ecclesiastical figure with musicians in his employ, including at various times Vicentino and Palestrina. The final flowering of the Ferrara chapel under Alfonso II brought a strong emphasis on the virtuoso madrigal, on music for drama (a longstanding Ferrarese speciality) and on the cultivation of accompanied solo song, as exemplified by the works of Luzzaschi, Wert, Lodovico Agostini and others. Other 16th-century patrons among the Estensi were the little-known Sigismondo d'Este (1480–1524), brother of Alfonso I; Lucrezia Borgia d'Este (1480–1519), wife of Alfonso I; Lucrezia d'Este (1535–98) and Leonora d'Este (1561–1637), who married Gesualdo in 1594. Cardinal Luigi d'Este (1538–86), patron of Marenzio, was also important. Numerous madrigalists of the late 16th century dedicated works to these patrons.

When Duke Alfonso II died without a male heir in 1597, his cousin Cesare, son of the illegitimate Alfonso d'Este of Montecchio, claimed the title. Pope Clement VIII, however, challenged the legality of the claim and sent an expeditionary force to seize the duchy of Ferrara for the papacy. The Estensi hastily retreated to Modena in January 1598, there establishing a new capital for their depleted dominions.

Throughout the 17th century the dukes of Modena continued to support music as strongly as before. The reign of Duke Cesare (1598–1628) was notable for the employment of Orazio Vecchi as music teacher in the royal household, and for the promotion of tournaments and open-air festivities to foster civic pride. At the beginning of the reign of Francesco I (1629–58) a regular Cappella Ducale was established, consisting of a *maestro*, six singers and eight instrumentalists; prominent among the instrumentalists employed were Marco Uccellini and Benedetto Ferrari. The court orchestra, or *concerto degli stromenti*, at Modena became one of the finest in Italy in the reign of Francesco II (1674–94), numbering among its members G.M. Bononcini, Giuseppe Colombi, G.B. Vitali, T.A. Vitali and Antonio Allemani.

Francesco II, who came to power at the age of 14, was a generous patron of musicians: he enlarged the Cappella Ducale to 29 musicians by 1689, and purchased a large collection of music for the ducal library. Oratorios, operas, cantatas and chamber music by the leading composers of the day were performed at his court and in the theatres of Modena and Reggio nell'Emilia. Under Rinaldo I (1694–1737), who renounced his cardinalate to succeed his nephew as duke of Modena, music served chiefly as an adornment on state occasions. The dukes of Este in the 18th and 19th centuries, though retaining an interest in opera, allowed the tradition of generous musical patronage at court to decline.

Esterháza. *See* ESZTERHÁZA.

Esterházy. Hungarian noble family, noted as musical patrons. They are particularly associated with Joseph Haydn, who served four of the princes: Paul Anton (*b* 22 April 1711; *d* 18 March 1762; reigned from 1734), his brother Nikolaus (Joseph) 'the Magnificent' (*b* 18 Dec 1714; *d* 28 Sept 1790), Nikolaus's son (Paul) Anton (*b* 11 April 1738; *d* 22 Jan 1794), and Anton's son Nikolaus (*b* 12 Dec 1765; *d* 25 Nov 1833). Their ancestral castle is in Eisenstadt (in Hungarian, Kismarton), and the summer residence of Prince Nikolaus 'the Magnificent', was ESZTERHÁZA. (Their first names are sometimes cited in their Hungarian forms: Pál, Antal, Miklós etc.) The first of these, Paul Anton, was a grandson of the composer Prince Pál Esterházy and a great-grandson of Nikolaus Esterházy (*b* 8 April 1582/3; *d* 11 Sept 1645). Created palatine in 1625 and count in 1626, Nikolaus already maintained a musical establishment. He acquired from two marriages a fortune which formed the basis of the Esterházys' wealth. From the reign of Prince Pál (whose title was extended to the eldest son and tenant in tail in 1712) and his son Michael [Mihály] (*b* 4 May 1671; *d* 24 March 1721) five Kapellmeister are known: Paul Klebovszky (in the period 1674–7), Franz Schmidtbauer or Schmiedbauer (*b* ?Vienna, *c*1648–9; *d* Eisenstadt, 22 March 1701), Franz Rumpelnig (*c*1702–4), F.A. Payr (until 1714; *d* Eisenstadt, 20 Aug 1733) and W.F. Zivilhofer (1714–20). Prince Michael was succeeded by his half-brother Joseph ([József] Anton) (*b* 12 May 1687; *d* 6/7 June 1721), who died after only two and a half months; he was the father of Paul Anton and Nikolaus. His wife, Princess Maria Octavia (*c*1686–1762), acted as regent for Paul Anton, 1721–34; she maintained a small ensemble, at first directed by the bass J.G. Thonner (*c*1694–1761). On 10 May 1728 she appointed Gregor Joseph Werner as conductor, a position he held until 1766. During her regency and the reigns of her sons the household's Hungarian character was lost; it was she who introduced German as the court language.

Prince Paul Anton, who in 1734 married Maria Anna Louise, formerly the Marchioness of Lunati Visconti (*c*1710–82), appointed Haydn in 1761 as vice-Kapellmeister, making him Werner's subordinate in choral music but otherwise fully responsible. Paul Anton himself played the violin, flute and lute and began an important music collection. His brother, Prince Nikolaus 'the Magnificent', whom Haydn served for almost three decades, married Maria Elisabeth, formerly Countess Weissenwolf (1718–90), in 1737; he had an exceptional love of art and music and lived in a truly princely style. In the 1760s he built the Esterházy family palace, Eszterháza, on the Neusiedler See, with its own opera house and marionette theatre (for illustration *see* ESZTERHÁZA); thereafter he spent more of the year there, with his household, his orchestra and his opera singers, leaving only the chapel choir in Eisenstadt. He played the cello, the viola da gamba and probably the violin, and had a particular predilection for the baryton (viola di bordone), for which Haydn and other composers wrote numerous pieces with him in mind. In July 1782 or 1783 the emperor bestowed the rank of prince on all descendants of the line. This has led to confusion as to which Prince Nikolaus Esterházy was a member of the Vienna Masonic Lodge 'Neu-gekrönte Hoffnung' in 1790–93, and thus a lodge brother of Mozart in the last two years of the latter's life. Strebel believes this Nikolaus Esterházy, who served the lodge as Master of Ceremonies in 1790, was most likely the second son of Nikolaus the Magnificent (1741–1809). Prince Anton was twice married, to Maria Therese, formerly Countess Erdődy (1745–82), on 10 January 1763, and to Maria Anna, formerly Countess Hohenfeld (*b* 1767), on 9 August 1785. He did not share his father's fondness for music, and when he succeeded in 1790 he disbanded the orchestra (Haydn retained the title of Kapellmeister). Haydn left for Vienna and then visited London, and as he remained in Vienna only briefly between his first and second visits, he had little contact with Anton, the third of his Esterházy employers, news of whose death reached him in London. On 28 January 1799 Anton's widow married Karl Philipp, Prince of Schwarzenberg. Prince Nikolaus married Maria (Josepha Hermenegild), formerly Princess of Liechtenstein (1768–1845), on 15 September 1783; it was he who revived the disbanded orchestra. He is reputed to have had an unlimited enthusiasm for the arts and sciences and spent vast sums on his collections. He was specially fond of church music; it was his desire to celebrate his wife's name day with a new mass each year that stimulated the composition of the six large-scale masses between 1796 and 1802, the crowning achievement of Haydn's church music. Beethoven's C major Mass op.86 (1807) was also commissioned by Nikolaus. A portrait by Joseph Fischer shows him playing the clarinet.

Haydn's successor as Kapellmeister was J.N. Fuchs (*d* Eisenstadt, 29 Oct 1839), who had first been engaged in 1788 as a violinist. He had been appointed vice-Kapellmeister in 1802 and it was on him that the task of conducting the choral music fell during Haydn's absence, while supervision of the instrumental music was entrusted to the Konzertmeister, A.L. Tomasini. From 1804 to 1811 J.N. Hummel was also engaged at the Esterházy court as a Konzertmeister. The Austrian financial crisis of 1811, however, permanently ended the brilliance of life at the court. The extensive musical collection of the Esterházy archives has now been broken up: the secular works were moved to Hungary at the beginning of the 1920s and are now in the Széchényi National Library, Budapest, while the sacred works remain in Eisenstadt.

Several members of the cadet branch of the family are also of interest to musical history. At a memorial service for Count Franz [Ferenc] Esterházy (*b* 19 Sept 1715; *d* 7 Nov 1785) and the Duke of Mecklenburg-Strelitz, arranged by the Vienna Masonic Lodge 'Nev-gekrönte Hoffnung', Mozart's *Masonic Funeral Music* K477/479*a* was performed; 'Quinquin', the count's Lotharingian sobriquet, was adopted by Hugo von Hofmannsthal in *Der Rosenkavalier*. Each Monday and Friday during March 1784 Mozart performed in the concerts organized by Count Johann ([János] Nepomuk) Esterházy (*b* 18 Oct 1754; *d* 23 Feb 1840); in 1788 he conducted a performance there of C.P.E. Bach's *Auferstehung und Himmelfahrt Jesu* and in 1789 his arrangement of Handel's *Messiah* K572. Count Johann (Karl) Esterházy (*b* 1775; *d* 21 Aug 1834), who married Countess Rosine Festetics (1779–1854), engaged Franz Schubert to teach his daughters Marie (1802–37) and Caroline (1805–51). Schubert dedicated the F minor Fantasy for piano, four hands, D940, to Caroline; in recent literature there has been much speculation about the nature of their relationship. It was probably at the Pressburg home of Count Michael

Esterházy (*b* 9 Feb 1783; *d* 4 Dec 1874) that the nine-year-old Franz Liszt played on 26 November 1820; his success was such that his father, a bailiff on the sheep farm owned by the Esterházy princes in Raiding, was granted an annual income of 600 florins for a period of six years by the count and four other Hungarian nobles.

GÜNTER THOMAS

Esterházy, Pál [Paul] (*b* Eisenstadt [Hung. Kismarton], 7 Sept 1635; *d* Eisenstadt, 26 March 1713). Hungarian composer, poet and patron of the arts. He was the son of Nikolaus (Miklós) Esterházy, palatine of Hungary. He was a pupil at the Jesuit school in Nagyszombat, where he appeared in school dramas, and later he had a brilliant career as a statesman and soldier. In 1652 he was appointed governor of the county of Sopron and royal councillor, and in 1661 he became Lord Steward at the court of Leopold I in Vienna. He was created Hungary's palatine (1681) and prince of the Holy Roman Empire (1687).

In his collection of poems dating from 1656, *Palas s Ester kedves táncza* ('Much-loved dance of Palas and Ester' – a reference to his own name), Esterházy described instruments then in use in Hungary. In 1674 he engaged a church choir and an orchestra in Eisenstadt, which were to form the basis of musical life at the Esterházy residence. Esterházy was a virginalist and his repertory has survived; it includes some 80 sacred and secular songs and both international and east European (Polish, Slovak, Hungarian and Walachian) dances.

His only surviving musical work is a collection of 55 sacred cantatas, published in Vienna in 1711, *Harmonia caelestis seu melodiae musicae per decursum totius anni adhibendae ad usum musicorum* (ed. J. Breuer, Budapest, 1970; ed. F. Bónis, Kassel, 1972–; ed. A. Sas, Budapest, 1989); it dates from the last quarter of the 17th century and was completed by 1700. The collection, arranged according to the church calendar, comprises 40 solo, six duet and nine choral cantatas. Esterházy set traditional Latin texts together with his own poems and paraphrases. The music reflects the influence of the contemporary south German and north Italian Baroque style. Alongside original thematic material, he used traditional German melodies and Hungarian hymn tunes. The cantatas assume a variety of forms: Esterházy wrote both strophic, homophonic settings and polyphonic movements, combined vocal sections with instrumental sonatas or ritornellos, and made use of ostinato technique. His instrumental writing is colourful: beside strings and wind (flute, bassoon and clarino) he used timpani and a variety of continuo instruments (organ, harpsichord, harp and theorbo).

FERENC BÓNIS

Estes, Simon (Lamont) (*b* Centerville, IA, 2 Feb 1938). American bass-baritone. He studied with Charles Kellis at the University of Iowa, and after further training at the Juilliard School sang at the Deutsche Oper, Berlin (début as Ramfis in *Aida*), at Lübeck and at Hamburg. His success at the first Tchaikovsky Vocal Competition in Moscow (1966) led to engagements in both North America and Europe, including the role of Carter Jones in Schuller's *The Visitation* for San Francisco (1967). In 1978 he became the first black male artist to take a major role at Bayreuth when he sang the title role in *Der fliegende Holländer*, a performance of astonishing presence, preserved on video. Estes made his Metropolitan début in 1982 as the Landgrave in *Tannhäuser*. Among his other roles were Philip II, Wotan (at Berlin and the Metropolitan), Oroveso, Boris, John the Baptist, Porgy (including the first Metropolitan performances of Gershwin's work, 1985), the title role in Verdi's *Attila*, the four villains in *Les contes d'Hoffmann* and Gounod's Méphistophélès. He was a regular soloist in major choral works, notably Verdi's Requiem, which he recorded impressively under Giulini.

MARTIN BERNHEIMER/ALAN BLYTH

Estevan, Fernand (*fl* 1410). Spanish theorist. He described himself as a student of Remon de Caçio. At the time he wrote his *Reglas de canto plano è de contrapunto, è de canto de organo* (ed. M.P. Escudero García, Madrid, 1984) he was a sacristan of the Capilla de S Clemente at Seville. Of the three sections promised in the title (plainsong, counterpoint and polyphony), the one surviving copy of the treatise (*E-Tp* R.329), dated Seville, 31 March 1410, contains only the first. Three other 15th-century plainsong treatises, all anonymous and undated (*Bc* M.1327, *Mn* R.14670 and MS 14 of the monastery at S Domingo de Silos), give substantially the same rules as Estevan, but lack his musical examples.

Estevan approved of choosing between B♭ and B♮ to 'beautify' the chant. In approving chromatic alterations (E♭ and A♭ in all modes except 3 and 4, F♯ and C♯ in all modes except 5 and 6), he set a precedent followed by later Spanish authorities, of which the most helpful in specifying contexts for the application of *musica ficta* is *Mn* M.1282. In company with Egidius de Zamora (*fl* 1265), he assigned a particular emotional quality to each of the eight modes. Estevan invoked such authorities as Philippe de Vitry, Machaut, Johannes de Muris, Egidius de Murino and Albertus de Rosa, without, however, claiming that they approved of such use of accidentals in plainsong.

ROBERT STEVENSON

Estève, Pierre (*b* Montpellier, 1720; *d* ?Paris, after 1779). French academician and literary figure. He was a member of the Société Royale des Sciences et des Arts de Montpellier, and contributed early studies in mathematics, astronomy and physics. Shortly after the middle of the century he moved to Paris, where he participated in proceedings of the Académie Royale des Sciences. There he took issue with some of Rameau's ideas, questioning the validity of a theory based on the physical properties of sound without adequate consideration for elements that contribute to the quality of that sound and to its impact on the sensibility of the listener. He favoured a theory based on melodic rather than on harmonic principles, and argued for a ¼-comma mean-tone tuning system as ideally suited to music of the time. His later writings are concerned less directly with music, and increasingly with general issues of art, literature and, especially, aesthetics.

ALBERT COHEN

Esteves, João Rodrigues (*b* *c*1700; *d* Lisbon, after 1751). Portuguese composer. While a pensioner of João V he studied at Rome with Ottavio Pitoni from about 1719 to 1726. On returning to Lisbon he was appointed *mestre de capela* of the Lisbon Basílica de S Maria about 1729 and taught in the Seminário da Patriarcal. He composed 22 vesper psalms (*P-Lf*), several of them for eight voices. The dates on his numerous other works in that archive and his manuscript *Regras de acompanhar* ('Rules for accompanying') range from 1719, when he sent from Rome a set of four-voice *a cappella* Lady antiphons, to 1751. Of his approximately 100 manuscript works extant in Portugal, 91 survive in the Lisbon Cathedral archive (11 ed. in PM, ser.A, xxxiii, 1980). Among these is an eight-voice mass completed at Rome on 8 September 1721, which equals any of the hitherto published masses by Pitoni. Other works by Esteves are at Vila Viçosa: Choirbook 4 contains his four-voice Psalms cxix, cxxxix, cxxxx and cxxxxi (Vulgate numbering) in the 2nd, 3rd, 4th and 5th tones, Choirbook 16 his alternate-verse setting of the *Miserere*, in three to eight voices, for Holy Saturday Matins. His eight beautiful Christmas responsories (*P-EVc*) are for eight voices and violin. The 12-voice *Miserere* of 1737 is a masterpiece. Yielding to the

demands of virtuosos, his last dated work, a through-composed *Magnificat* in E minor with organ, calls for operatic qualities in the solo sections. Stylistically, his earlier works belong with his Lisbon contemporary Giovanni Giorgio in preferring the *stile antico*.

ROBERT STEVENSON

Esteve [Estebe] **y Grimau, Pablo** [Pau] (*b* Barcelona, *c*1734; *d* Madrid, 4 June 1794). Catalan composer. He moved to Madrid by 1760 where he won both popular acclaim as the leading composer of *tonadillas escénicas* and notoriety as a colourful character. Though he was imprisoned for allegedly slandering Madrid aristocracy in his *tonadillas*, his talents were such that he was admitted into the service of the Duke of Osuna as music master. Together with his equally famous collaborator, the playwright Ramón de la Cruz, Esteve soon turned to full-length opera, beginning with *La buena muchacha*, an adaptation in Spanish of Piccinni's *La Cecchina ossia La buona figliuola* (libretto by Goldoni after Richardson's *Pamela*), first performed in the Teatro de la Cruz in Madrid on 11 November 1765. This was followed by a partly re-composed adaptation in Spanish of Giuseppe Scarlatti's *I portentosi effetti della madre natura* (libretto by Goldoni), performed in the Teatro del Príncipe in Madrid on 12 June 1766 as *Los portentosos efectos de la Naturaleza*. Then on 25 December 1768, again in the Príncipe, he launched his own 'ópera cómico-bufo-dramática', with music and libretto by himself, entitled *Los jardineros de Aranjuez o También de amor los rigores sacan fruto entre las flores*.

From 1778 to 1790 Esteve was the principal *tonadilla* composer at the Teatro de la Cruz and the Príncipe, often writing the words as well as the music. In total he composed over 400 *tonadillas*, including *Garrido enfermo y su testamento*, *Fortunita* and *El Juicio del año* (ed. J. Subirá, Madrid, 1970) and *La soldada*, *La guía de Madrid* and *La provision de Madrid* (ed. F.J. Cabañas Alamán, Madrid, 1992). Many of his works are preserved in Madrid (*E-Mc*). His contribution to the development of Spanish zarzuela and opera was remarkable not least for the role he played in the polemic between Italianists and nationalists by forging links between fashionable Italian opera and popular Spanish traditions.

JACK SAGE/R

Estévez, Antonio (*b* Calabozo, 3 Jan 1916; *d* Caracas, 26 Nov 1988). Venezuelan composer and oboist. He began his musical studies in 1925 and the following year became a saxophonist in a village band. He moved to Caracas and studied the oboe and composition (with Vicente Emilio Sojo) at the Escuela de Música y Declamación (1934–44). From 1934 to 1945 he was an oboist in the Venezuela SO, and from 1940 to 1945 he taught at the National School of Music in Caracas. Estévez collaborated with Sojo and Juan Bautista Plaza in the transcription and rehabilitation of Venezuelan colonial music. From 1945 to 1949 he studied with Koussevitzky, Bernstein and others at Columbia University and Tanglewood. His first important work, the Concerto for Orchestra (1949), was composed at the suggestion of his classmate, the Cuban composer Orbón.

On returning to Venezuela, Estévez produced his most significant work, the *Cantata criolla*, which immediately won the public's favour at its première in 1954. Based on a popular legend in which the devil challenges a folk singer to a duel, the work was immediately recognized as an effective synthesis of Venezuelan culture. Despite its outdated nationalism and its traces of Debussy, Stravinsky and other 20th-century classics, the cantata remains intensely original.

Estévez became critical of his own musical language, which he considered old-fashioned, and on obtaining a fellowship from the National Institute of Culture he moved to Paris (1961) to study electronic techniques at the ORTF. On his return to Caracas several years later he founded the Estudio de Fonología Musical, from which resulted *Cromovibrafonía múltiple* (environmental music for the Venezuelan Pavilion at the Montreal World Fair, constructed by Jesus Soto) and *Cromovibrafonía II*. He taught harmony at the National School of Music in Caracas. In later years he adopted a more eclectic line, achieving notable recognition from both the government and the people of Venezuela.

WORKS
(*selective list*)

Concertino, ob, orch, 1942; Sonata, ob, pf, 1943; La rauda novia del aire, chorus, orch, 1944; Suite llanera, orch, 1948; Conc. for Orch 'Homenaje a José Angel Lamas', 1949; Cant. criolla (A. Arvelo Torrealba: Florentino, el que cantó con el Diablo), T, B, chorus, orch, 1954; 17 piezas infantiles, pf, 1956; Obertura sesquicentenaria, orch, 1962; Cromovibrafonía, elecs, 1967; Cromovibrafonía múltiple, elecs, 1972; 17 miniaturas, orch, 1983

Pieces for 1v, pf; choral works

HUGO LÓPEZ CHIRICO

Estey Organ Co. American firm of reed and pipe organ manufacturers. It was founded in 1846 by H.P. Greene, a maker of melodeons (small reed organs), whose business was purchased in 1848 by Jacob Estey (*b* Hinsdale, NH, 30 Sept 1814; *d* Brattleboro, VT, 15 April 1890). Estey owned a successful plumbing business in Brattleboro (1835–57), but a fire destroyed it. After that, he devoted himself solely to musical instrument making. In 1860 Levi K. Fuller (1841–96), a gifted engineer who later became

governor of Vermont, joined the firm, which was fast becoming a leading maker of parlour organs. Fuller was ultimately responsible for over 100 patents. In 1866 the firm was reorganized as the Estey Organ Co. with Jacob Estey as president, Fuller as vice-president, and Jacob's son Julius (1845–1902) as treasurer. In 1880 the firm produced its 100,000th reed organ. The Estey Piano Co., a subsidiary, was formed in 1885 by the acquisition of the Arion Piano Co.; John Boulton Simpson was president, assisted by Jacob Gray Estey and J. Harry Estey. Under Julius Estey a pipe organ department was opened in Brattleboro in 1901. This was run by William E. Haskell (1865–1927), who began building organs in Philadelphia in 1889; he had also worked with HILBORNE LEWIS ROOSEVELT, but spent his most productive years with Estey. He was one of the most gifted inventors in modern organ building, with many patents to his name, including the so-called 'Haskell bass', a short pipe capable of producing the pitch and tone of a full-length open pipe by means of an inverted interior canister. During the early 20th century Estey built many organs for the church and home based on orchestral tonal principles.

Among the developments unique to Estey were innovations in console design. Consoles of Estey's early electric-action pipe organs used stop-controls in the form of a miniature keyboard over the top manual; around 1923 the 'Estey Luminous Stop Console' was developed, in which the stop-controls were translucent buttons, lit from the inside to indicate when a stop was on. Later consoles, however, employed the more standard stop-tablets. In the early 1950s Estey collaborated with the makers of the Minshall organ to produce and market the Minshall-Estey electronic organ. From 1954 Estey manufactured its own electronic instrument, designed by Harald Bode; it had a six-octave keyboard and one octave of pedals. From the end of World War II the firm experienced financial difficulties and, after a series of reorganizations, declared bankruptcy in 1956. The Estey electronic organ was taken over by Magna Electronics in 1959 and was made for a few years in Torrance, California.

BARBARA OWEN

Esthetics of music. *See* PHILOSOPHY OF MUSIC.

Estienne, François (*b* Aix-en-Provence, ?bap. 12 Oct 1671; *d* Lyons, 5 March 1755). French composer. His death certificate, discovered by Vallas, informs us that he was 'sous-diacre du diocèse d'Aix', and that he died at Lyons 'agé d'environ 90 ans'. A François Estienne was baptized at Aix-en-Provence on 12 October 1671; the concurrence of the dates suggests that this may refer to the composer.

The Italian style, popular in the south of France, characterizes the works of Estienne, which prompts the belief that he studied in his native town, probably in the choir school of St Sauveur, under the directorship of Guillaume Poitevin. It is in 1718 that references to Estienne are first found in Lyons, as *maître de musique* of the Académie des Jacobins, founded that year. When its patron Mme Poulletier, Intendante de Lion, died, Estienne wrote 18 *motets à grand choeur* and one *noël en symphonie* for the Académie; this would seem to confirm his clerical status. In 1731 he succeeded P. de Villesavoye as director of the orchestra of the Académie des Beaux-Arts of Lyons, a post he held until his retirement in November 1739.

Of Estienne's works, 12 Latin motets probably written between 1718 and *c*1727, all but one autograph manuscripts, survive. Their beauty and splendour make it possible to appreciate the real value of this musician. Their division into individual movements, with alternating *récits* (similar in style to contemporary cantatas), duos, trios and five-part choruses (alternately contrapuntal and homophonic), recalls the structure imposed by composers such as Michel-Richard de Lalande. The four-part orchestra, mainly of strings and woodwind, is used to evoke the mood of the texts (drawn chiefly from the scriptures), sometimes by means of operatic effects.

WORKS

in F-LYm, unless otherwise stated

12 motets à grand choeur et symphonie: Accurite properate venite fideles (for St Joseph's Day); Beati quorum; Benedictus Dominus meus; Confitebor tibi, Domine; Cum invocarem; Dixit Dominus, C; Domine quis habitabit; Dominus regit me; Exaudiat te Dominus; Gaudete coelites, pour la fête de St Pierre; O felix et fausta dies, pour la fête de St Louis; Venite exultemus Domino
Other motets and noël en symphonie, lost; cited in 1766 catalogue, *LYc*

PIERRE GUILLOT (with JEAN-PAUL MONTAGNIER)

Estilo. An Argentine song type closely related to the *triste* and the *tonada* and characterized by emotionally charged sentimental song texts set either in quatrains or in DÉCIMA form. Texts are sung by a solo voice or in duet, in parallel 3rds. Its two distinct sections, the *tema* (textual message) and the *alegre* (a faster and more exuberant section), are separated by improvised guitar solos. Both sections have hemiola between the guitar and voice and rhythmic alternation between 3/4 and 6/8, although the *tema* often has a binary metre.

WILLIAM GRADANTE

Estinguendo. *See* ESTINTO.

Estinto (It.: 'extinguished', 'dead'; past participle of *estinguere*, 'to extinguish', 'quench'). A mark used in the later 19th century to express an extreme of quietness (e.g. in Liszt). The form *estinguendo* ('becoming barely audible'; present participle) also appears.

See also TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Estive. The name of a musical instrument which is found frequently in medieval French poetry and romances, and is believed to denote a form of BAGPIPE. Many forms of this popular instrument existed in the 13th and 14th centuries, but unlike the muse, which was a bagpipe in general, the estive was used more in association with the refined instruments, such as the harp and fiddle. This suggests that it was soft and delicate in tone, as these other instruments were. The name 'estive' may be connected etymologically with the Italian *stivare* (Lat. *stipare*, 'to compress'), or else with *estival* ('summer'); an English form, mainly of the 14th century, is 'stive'.

Also frequently mentioned are the 'estives de Cornoaille'. A 13th-century text quoted by Gérold in *Histoire de la musique* (Paris, 1936) describes a minstrel playing the 'lai Goron' faultlessly and very sweetly with this instrument. Again, in the *Roman de la rose*, a *controvaille* (invention) is sweetly performed on 'estives de Cornoaille' which Chaucer translated as 'hornpipes of Cornewaile'. The HORNPIPE (i) had a small out-curved bell of horn and was played with a bag or bladder, or with another horn enclosing the reed (or reeds) and held directly to the mouth.

Both forms appear in English church sculpture of the 13th and 14th centuries, but it may be that 'Cornish' or 'Breton' estives denoted the latter kind, for Thomas Wright, in *Anglo-Saxon and Old English Vocabularies* (London, 1884), cited Alexander Neckam's use (13th century) of estives as a gloss for 'tibiae' – a word which in general medieval usage denoted bagless reed instruments like the shawms. J.G. Kastner's *Danses des morts* (1852) quotes a passage from a 12th-century French Bible in which estive does duty for the 'tuba' of the Vulgate in Psalm xcvii (xcviii).

ANTHONY C. BAINES

Estocart, Paschal de l'. *See* L'ESTOCART, PASCHAL DE.

Estompé (Fr.: 'softened', 'shaded off'). A direction used particularly by Debussy where he required a damped or muffled effect. *See also* MUTE, §3.

Estonia. Country in Europe. The area south of the Finnish Gulf has been inhabited by the Estonians since about 3000 BCE. Like other Baltic states, Estonia has spent most of its history ruled by neighbouring countries, except for a short period of independence between 1918 and 1940, and since 1991.

I. Art music. II. Traditional music.

I. Art music

1. Before 1700. 2. 1700–1900. 3. Since 1900.

1. BEFORE 1700. There is evidence from about the turn of the millennium of the influence of Christianity, both Eastern and Western, in the culture of peoples living in Estonia, but it was the crusade of the Teutonic Order in the 13th century that brought present-day Estonia into the north German cultural area. Churches, monasteries, and later towns became centres of art music. Though Denmark conquered considerable parts of the country in the 13th century, and later also Swedes, Poles and Russians ruled, the language and culture of the upper classes was German until the end of the 19th century. The Estonian-speaking population mostly was peasantry, but formed also the lowest stratum of townspeople. Those who gained some education and social advancement, merged with the German-speaking community without essentially altering the ethnic opposition between upper and lower classes that remained an important feature of local cultural history up to the 1930s.

By the end of the 19th century the Estonian national revival had led to the rise of an Estonian-speaking middle class, and the competition between the two communities was reflected in musical and theatrical life. The Baltic-German population was deported to Germany after the Molotov-Ribbentrop treaty of 1939 by which the then independent Baltic countries were annexed by the Soviet Union.

Little is known of Estonian music before the Reformation. There is evidence of organs in some village churches (Helme, Paistu) from 1329; scarce fragments of earlier manuscripts have not been studied well enough to say anything about local church music. The Reformation reached Estonia in the 1520s and was established in the northern part; south Estonia remained under Polish rule after the Livonian war (1558–83), and the Catholic church was restored there until the Swedes conquered all the Baltic provinces in the 1620s. In the 16th century there were some attempts to translate Protestant hymns into Estonian. One of the earliest extant books with Estonian text is Heinrich Stahl's *Hand- vnd Hauszbuch für das Fürstenthumb Esthen* (1632–8), whose second part includes 18 pages of recitation tones for collects and prefaces with Estonian words and was the earliest locally printed music, produced by the printer of the Revalsche Gymnasium in 1637.

There was no court in Estonia: the towns were centres of art music, engaging town musicians, organists and cantors. Tallinn (Ger. Reval) had a strictly organized institution of town musicians from the end of the 15th century, and in Tartu (Ger. Dorpat, Russ. Yuryev) the first reference to a town musician dates from 1587. In the 17th century there were choirs and instruments in town churches in addition to organs and congregational singing. There are documents describing the roles of town musicians, cantors and organist in festive services (from 1674 concerning the church of St Nicholas in Tallinn and from 1681 for St Johannes in Tartu). St Johannes, the main church at Tartu, employed two cantors in the 1680s: a *cantor figuralis* responsible for the choir and a *cantor choralis* for hymn singing. Narva, Pärnu (Ger. Pernau) and Viljandi (Ger. Fellin) were also old Hanseatic towns with similar needs and similar organization.

Musicians who worked in Estonia in the 17th century included Johann Valentin Meder (cantor at the Revalsche Gymnasium, 1674–83) and Ludwig Busbetzky (organist in Narva, 1687–99), who had studied with Buxtehude in Lübeck around 1680. The Busbetzky family was one of the few local musical dynasties. Barthold Busbetzky had been engaged as a town musician in Tallinn in 1624; his son Barthold was an organist at St Nicholas in Tallinn (1658–99); and among the latter's sons were three organists: Christian and Heinrich as well as Ludwig.

In 1632 the University of Tartu was founded by the Swedish king Gustav Adolf, making Tartu an even more important cultural and intellectual centre. In 1640 a speech about music, *Oratio de musica* by Jacob Lotichius (later cantor of the cathedral school in Riga), was delivered and printed there.

2. 1700–1900. The Swedish period in Estonian history ended with the Northern War (1700–21), one of the most

disastrous periods in the history of these areas, when war, hunger and plagues ravaged the villages. Estonia was incorporated into the Russian empire, and the university, having evacuated from Tartu to Pärnu, closed there in 1710. Not until 1802 was it reopened, in Tartu. The 19th-century university employed music directors to conduct choirs and provide its festive occasions with music, but music was never studied there as a scholarly discipline. However, a recognized 19th-century music theorist, Arthur Joachim von Oettingen (1836–1920), was a graduate of Tartu and later professor of physics there.

By the middle of the 18th century the towns had recovered from the wars and musical life was flourishing; it became fashionable to take keyboard and singing lessons. The travelling opera troupe of Mme Tilly from Lübeck met an enthusiastic response in Tallinn performing Mozart's *Zauberflöte* and *Don Giovanni* (in 1795) among other popular repertory, and in 1809 a theatre was built in Tallinn, with a full-time troupe that also performed operas. The 19th century was the great age of choral societies, who gathered at Baltic-German song festivals (first in Riga, 1836, later in Tallinn, 1857 and 1866) and also organized performances of the great oratorios. Public concerts became common. In Tallinn and Tartu several music societies were active during different periods, and there were even some subscription series. Tartu, in particular, attracted travelling musicians, the common route from Riga to St Petersburg at the time passing through Tartu. Clara Schumann and Lizst were the most prominent among many who performed there.

The beginnings of popular education reach back into the 17th century. For peasant congregations the Swedes established a post of *köster* (Ger. *Küster*, Swed. *klockare*) at parish churches. This person had to teach young people to read and write, to sing church hymns and to pray; later, in the 19th century, the *köster* was also organist and village schoolteacher. A seminary was founded near Tartu in 1684 by Bengt Gottfried Forselius to train for this position: it was the first special school in Estonia for young men and it achieved good results. Towards the end of the Swedish period, the system of parish schools for peasant children started to build up, but all educational developments were interrupted by the Northern War for several decades.

The official German-oriented church was never as close to the Estonian peasantry as were the revivalist movements of the 18th century. Most influential were the pietist missioners from Herrnhut in Germany, who taught peasants not only to read and write, but also to read music and play the organ. Congregational singing had an important place in their services. As a counter-action, the official church became active in founding village and parish schools at the beginning of the 19th century and singing loomed large in their curriculum. Thus began the choral movement that became extremely significant in Estonian culture. Soon there were several well-trained parish choirs; that of Laiuse performed polyphonic choruses by Bach and Handel in 1835, and that of Põltsamaa, under Martin Wilberg, sang movements from *The Creation* and *Messiah* in 1856. Orchestras and instrumental ensembles also became widespread. At first whatever instruments were available played together, but by the middle of the century the brass band was the standard. Musical societies that had a choir and/or orchestra often also organized theatrical performances and were the principal means of social organization among Estonian peasants, because any political initiative was suppressed by the Baltic Germans as well as by the Russian authorities. The first Estonian song festival in Tartu (1869) brought together 1000 participants and became an important landmark in the national awakening movement. Song festivals have continued after every five years up to the present time. When the institutions of professional music life were established among the Estonian community in the early 1900s, the musical value of song festivals was often criticized, but their social function as one of the few legal patriotic festivals was as important in the Soviet era (1940–91) as it was during the Russification of the 1880s.

3. Since 1900. By the turn of the century the economic conditions of Estonians were considerably improved. The numbers of Estonians in the urban population increased quickly, and their growing wealth, education and national self-confidence formed the basis for a professional music culture. The Estonian music societies Vanemuine (Tartu) and Estonia (Tallinn), both founded in 1865, became the first institutional centres, each with an amateur choir, orchestra and theatre troupe. Singspiels, operettas and plays with music were very popular, but they also tried opera. Both societies engaged a full-time theatre troupe in 1906; Vanemuine opened its theatre the same year, Estonia followed in 1913, and regular opera performances started in the 1920s. Estonia developed into a national opera, while Vanemuine continued as a general theatre, and many new Estonian operas have been presented there. In 1908 the first series of symphonic concerts was organized by Vanemuine, with an orchestra of professionals and amateurs.

Early in the 20th century the first generation of professional Estonian musicians graduated from the St Petersburg Conservatory, the nearest and most accessible musical academy. The growing need for art music in the Estonian community forced most of them to be active in several fields; to teach, compose and to conduct choirs and orchestras. The most important composers among them were Rudolf Tobias (1873–1918), a powerful Romantic talent, who established large-scale symphonic and choral genres in Estonian music, Mart Saar (1882–1963), Peeter Süda (1883–1920), Heino Eller (1887–1970) and Cyrillus Kreek (1889–1962), the founders of Estonian national school in composition with more or fewer modernist sympathies, and Artur Kapp (1887–1952) and Artur Lemba (1885–1963), who both achieved high academic positions in Russia before repatriating after the Bolshevik Revolution and were more conservative as composers.

Estonia declared its independence in 1918. Very important for the future of Estonian music was the establishment of higher musical education in 1919, again simultaneously in Tartu with the Higher Music School (*Tartu Kõrgem Muusikakool*) and Tallinn Conservatory (*Tallinna Konservatoorium*). Soon the orchestras of Vanemuine and Estonia improved, and in the 1930s a new orchestra was formed at the radio that became the main concert orchestra (known since 1975 as the Estonian State SO), achieving particularly high standards during World War II under Olav Roots and later with Neeme Järvi. In 1920 Heino Eller became the composition and theory teacher at the Tartu Higher Music School, and his

pupils formed the next strong generation of Estonian composers. Most prominent among them was Eduard Tubin (1905–82), a great symphonist whose international recognition was delayed until Järvi left Estonia in 1979 and started to perform his music with famous orchestras.

Though most genres had been represented in Estonian music by the 1920s, choral music has maintained a special position. Synthesizing modern harmonies and old folk music, Saar and Kreek created a style of large-scale choral composition with a nearly orchestral treatment of the voices, a style that has remained popular among Estonian composers.

After World War II, when Estonia was incorporated into the Soviet Union, a period of stagnation followed in composition. Many prominent musicians had perished in the war or left the country in flight from the Soviet regime. Most institutions, however, continued working, and two full-time choirs were founded: the National Men's Choir (*Eesti Rahvusmeeskoor*) in 1944 and the Estonian Radio Mixed Choir (*Eesti Raadio Segakoor*) in 1945. The breakthrough of modern music came at the end of the 1950s, and was brought about by composers then completing their studies: Veljo Tormis (*b* 1930), Eino Tamberg (*b* 1930), Jaan Rääts (*b* 1932), Arvo Pärt (*b* 1935) and Kuldar Sink (1942–95). While Tamberg and Rääts brought neo-classical models into Estonian music, each in his own way, Pärt and Sink introduced serialism and other avant-garde techniques. Tormis is closest to the tradition of Saar and Kreek in his interest in folklore and preference for choral music, but his methods belong to the contemporary world. His music has helped Estonian choirs win prizes at international competitions since the early 1970s. From the next generation of composers, Lepo Sumera (*b* 1950) and Erkki-Sven Tüür (*b* 1959) have attracted attention.

In 1991 Estonia regained its independence and, despite economic problems, musical life benefited. Where the Soviet way had been to centralize everything in Tallinn, after independence several smaller towns made serious efforts to engage professional musicians; for example, Pärnu founded a municipal orchestra and Viljandi an ensemble for early music. There are also many regular music festivals.

II. Traditional music

1. HISTORY AND RESEARCH. The earliest references to Estonian folk music can be found in chronicles from the 12th century onwards (Saxo Grammaticus, Henry of Livonia, Russow, etc.). Certain old documents, such as records of local courts and those of church inspections, also provide information. The first fragment of an Estonian folktune was published in 1632 (in F. Menius: *Syntagma de origine livonorum*, Dorpat), but it was not until the end of the 18th century that A.W. Hupel, C.H.J. Schlegel and others began to take a profound scholarly and aesthetic interest in Estonian folk music, foreshadowed by the writings of J.G. von Herder.

Systematic collection of Estonian folk music began at the end of the 19th century under the direction of Karl August Hermann and continued later with the work of Oskar Kallas, Herbert Tampere, Udo Kolk, Ingrid Rüütel and others. The first sound recordings of Estonian folktunes were made using the Edison phonograph in 1912 by the Finnish researcher A.O. Väisänen. The Estonian Folklore Archives in Tartu now contain about 25,000 transcriptions and 55,000 sound recordings (including about 10,000 recordings of the music of other peoples). Extensive folk music collections are also held in the Museum of Theatre and Music and in the Institute of the Estonian Language in Tallinn.

The Folk Music Department of the Institute of the Estonian Language at the Estonian Academy of Sciences is the main folk music research centre in Estonia. It deals with the collection, research and publication of the traditional music of the Estonians as well as of other Finno-Ugric and Samoyed peoples; it organizes field expeditions (making video as well as sound recordings); it issues a series of monographs and folk music materials with commentary, *Ars Musicae Popularis*, as well as other publications, has created an Estonian folk music database, publishes CD collections and organizes international conferences.

2. FOLKSONG. Estonian folksong can be divided into two main historical-stylistic strata: ancient folksongs (*regivärsiline rahvalaul*, also referred to as *runo* songs, Kalevala-metre songs, alliterative songs, etc.), and newer strophic folksongs with end-rhyme. The two types are musically distinct, the former belonging to the old Balto-Finnic culture, the latter more closely related to the European folksong of the 18th century onwards.

A number of ancient, non-*runo* genres exist alongside *runo* songs, which include shouts or calls for signalling, communication, or coordination of rhythm (e.g. herding or hunting calls, work signals, ritual calls, etc.); imitations of natural sounds; incantations and spells used to influence natural forces, animals or humans, to initiate work processes, healing, etc.; laments (funeral dirges, wedding

laments) which survive only among the Setu people; songs in fairy tales; songs for children (lullabies, nursery songs) and some children's songs; and cumulative songs (which initially had a magic function but have now also become children's songs).

These genres possibly evolved earlier than *runo* verse, and have survived longer because of their specific purpose and function. They have characteristic modes of utterance unlike those of *runo* songs: intonation on a monotone; calling, shouting, etc., based on the contrast of two pitch levels; repetition of a step-by-step descending movement; imitation of natural and other sounds; or speech-like delivery corresponding to a narrative phrase with an undulating melodic contour in a generally descending direction. The melodic climax corresponds to the prosodic one, smaller rises and falls being connected respectively with the stressed and unstressed syllables of the words. The last type of melodic construction forms the main basis of *runo* song melodies, which are characterized by a more developed and stable tonal and melodic structure.

3. 'Runo' songs. The *runo* song form probably dates from the last millennium BCE when the Balto-Finnic tribes had not separated, and spoke the same Balto-Finnic proto-language. The same poetic form and subject matter link the old Estonian folksong with the Finnish, Karelian, Votic and Ingerian ancient songlore. *Runo* songs include work songs, wedding songs, calendar ritual songs, game-songs, lullabies and children's songs, and non-ceremonial lyrical and narrative songs. Most Estonian *runo* songs are lyrical; heroic epics (characteristic of Karelian and Finnish tradition) are not known in Estonia.

The *runo* song form dominated in Estonia up to the mid-19th century, when it was rapidly superseded by the newer end-rhymed folksong. Even in the 20th century, however, there were some old people in various parts of Estonia who were well versed in *runo* songs, and in some rare places the tradition of *runo* singing still exists – on the island of Kihnu off the west Estonian coast and among the Setus (a group living in the south-eastern corner of Estonia and in the neighbouring area of Russia, in the Pskov district).

The poetic form of runo song is characterized by alliteration and parallelism, and by the use of trochaic tetrameter. The 8-syllable verse-line is based upon the alternation of long and short syllables, the stressed positions not being fixed. Because the main stress in Balto-Finnic languages is always on the first syllable of a word, various rhythmic modifications may occur (illustrated in ex.1) and change during the song. There are also melodies

Ex.1 Changing stress patterns in Estonian 8-syllable verse-lines

in regular metre in which the word stresses are shifted according to the musical accents. Prolongation of the final note of a line is characteristic of north Estonian melodies. Such tunes may have a speech-like or regular metre. Sometimes every second note is prolonged (this is especially typical of swinging songs and lullabies, also of wedding and other tunes in some areas).

Ex.2 Wedding song

Leader: Neit-si-kä-ne, nuo-ru-ka-ne... kui hak-kad ko-dunt me-ne-mä... kui hak-kab ha-le tu-le-ma... ve-si sil-mist vie-re-mai-e... hak-ka en-ne ei-de kae-la...

Chorus: ...ka-ne, neit-si-kä-ne, nuo-ru-ka-ne.. -ne-mä, kui hak-kad ko-dunt me-ne-mä.. -le-ma ja hak-kab ha-le tu-le-ma.. -mai-e, ve-si sil-mist vie-re-mai-e... -la, hak-ka en-ne ei-de kae-la..

The oldest basic layer of *runo* tunes is represented by one-line refrainless melodies (i.e. tunes corresponding to one line of text) with a narrow tonal range (mostly a 3rd or 4th). These occur mostly in north and west Estonia. Among them one can differentiate between tunes with a descending melodic movement based upon speech-melody and rhythm and representing a generalized model of speech patterns (ex.2), and tunes with a descending-ascending movement. The first type were polyfunctional (i.e. used for different song genres), the latter (characterized by specific rhythmic patterns and melismas) belonged to the swinging songs (a particular genre of older calendar-ritual songs) in a restricted region of north Estonia (ex.3).

Ex.3 Swinging song

Leader: Tul-ge kii-ge-le, kü-la-nai-sed, Chorus: tul-ge kii-ge-le, kü-la-nai-sed...

The *runo* tunes of south Estonia consist first of all of one-line refrain tunes with a narrow range, in which the basic melody-line is followed by a short refrain (ex.4).

Ex.4 Midsummer night song

♪ = 162

Tul-ge jaa-ni-ku tu-le-le, jaa-ni-ku, jaa-ni-ku,

tul-ge tul-da hoi-da-mai-e, jaa-ni-ku, jaa-ni-ku...

Later, two-line refrain tunes appeared with a refrain at the end of both lines, and include both narrow-range tunes (e.g. a 4th) and those with a wider range. Refrain melodies were typical of work songs, calendar and family ritual songs and game-songs. Each song genre had a specific refrain word, while the same melody-patterns might be used for different genres. Herding calls (the so-called *helletused*) are characterized by specific formal and melodic structures and often by free rhythm.

The most popular melodic style of north as well as south Estonian *runo* songs consists of two-line refrainless melodies based upon different diatonic scales with a range

of a 5th or a 6th, often supplemented with a second or a fourth below. Both the major and minor 3rd occur. These melodies are especially typical of lyrical and narrative songs. Various rhythms and asymmetric structures, characterized by the repetition of some words and more 'melodious' refrains, are typical of south Estonian lyrical songs (ex.5).

Ex.5 Non-ceremonial lyrical song

♪ = 172

O-les si-na muis-te, *joe - da,* mul-le tul-lu,

joe - da, ui-lui-lu, mul-le tul-lu *jo.*

Runo songs were usually sung in unison without any accompaniment. Most genres were performed by a song-leader alternating with a chorus (or another singer) who joined in on the last syllables of the leader's verse and repeated it, perhaps varying or modifying the melody (see above ex.2 and ex.3). Everybody could join in, improvisation was frequent and as a result heterophony might appear. A specific type of drone singing was known in south Estonia: an accompanying voice performed the text on the same note, occasionally deviating from it, for example, at cadences. Herding songs, lullabies and nursery rhymes, charms and laments, sometimes also lyrical and other songs were performed by one person only.

A characteristic type of polyphonic singing is found in the Setu tradition. The melody sung by the leader is repeated (or varied) by a chorus forming the basic part (*torrõ*); its heterophonic modifications form a lower part ('lower *torrõ*'). One singer with a particularly high and resounding voice performs the higher supporting part (*killõ*: ex.6). The separate voices may form discordant-sounding intervals, the impact of which is emphasized by a persistent rise in pitch, initiated by the *killõ* and followed by the other parts. The rise is interrupted by a perpendicular descent (*kergütämine*), when the leader abruptly starts the next verse at a lower pitch, which is immediately accepted by the chorus. The Setu tunes are characterized by particular structures and rhythms. Their melody-lines are often longer than the *runo* verse, thus word repetitions, additional words and syllables, and refrain-like structures occur. A similar type of polyphony can be found among the Mordvinians (a Finno-Ugric people living in the Volga region in Russia). Features common to both these song traditions are abrupt descents of tonality in a basically smoothly ascending tessitura, a particular vocal timbre and singing in a strained manner, which differs greatly from the usual performing style of Estonian folksongs.

ka-r'a-kõ-nõ, *õl - lõ-lõõl - lõ,* ka-r'a-kõ-nõ,

õl - lõ-lõõl - lõ.

4. Rhymed songs. In the 18th century evolved songs in the so-called transitional form (i.e. those containing some traits of both the old and the newer song styles). These included some game-songs from the Medieval European repertory, which in Estonia were mostly adapted to local tunes, and dance-song melodies in triple metre and particular variable rhythms, deriving from bagpipe pieces, etc.

During the second half of the 19th century the end-rhymed strophic songs became predominant together with a new musical style characterized by a symmetrical four-line form, wider tonal range and use of the major-minor modal system. The influence of newer folksong styles of neighbouring countries as well as of German folk and popular songs was marked. Songs in this more recent style were not directly related to the working process or rituals. Instrumental dance-tunes were often used (polkas, waltzes, etc.). The men's role was considerably greater than in the *runo* song tradition which applied mostly to women's repertory. To the newer style belong game- and dance-songs, songs concerning historical events and social relations, soldiers' and sailors' songs, village songs (mostly humorous men's songs: ex.7), sentimental songs and ballads. Although monophonic singing is dominant, more recent styles of polyphonic singing as well as singing with instrumental accompaniment are found.

Sääl Võh-ma maal üks jär-ve-kaid, sääl e-lab väi-ke

Vai-gu vald, sääl Võh-ma maal üks jär-ve-kald, sääl

e-lab vai-ke Vai-gu vald.

5. Instruments. The older folk music instruments include the five- to seven-string *kannel*, which was trapezium-shaped, cut from a single block of wood and covered with a soundboard. This instrument was common to the earlier Balto-Finnic and Baltic tribes (*see* Kantele). During the 19th century a newer type of *kannel*, similar to the west European zither, with a soundboard made of staves, became widespread. Originally it had 15 or more melody strings, but later more strings were added; at the beginning of the 20th century harmony strings were introduced. Two basic playing styles have been used: in the first the strings not being used are damped with the fingers of one hand, while the other (usually the right) hand strikes chords on the open strings, the higher sounds forming the melody (the latter style may be supplemented with single sounds plucked by both hands); in the second, the right hand plucks the melody while the left hand

strikes bass chords on separate strings. In south Estonia a chordal *kannel* evolved, which was played in instrumental ensembles. During the 20th century a chromatic *kannel* was devised. There is no information about older *kannel* music (except for melodies for a special type of Setu *kannel* which persisted longer); newer songs and dance-tunes were played on the more modern *kannel*.

Herding aerophones form another subdivision of older Estonian folk instruments, including the herding trumpet (*karjapasun*), the buckhorn (*sokusarv*) and various pipes. They were originally used for performing various signal melodies, but also melodies for amusement, especially in more recent times.

As the herding trumpet did not usually have finger-holes, the basic harmonic series was used for producing short signals. The buckhorn usually had three or four, rarely more, finger-holes. The melodies consisted of a short introduction, a central section including a theme consisting of one or more short motifs and its variations, and a coda.

Whistles made of willow and other materials were also used as popular herding instruments. The majority of Estonian herdsmen's music instruments are single-reed aerophones, for example the *roopill* (reedpipe, usually with six finger-holes) and *vilepill* (pipe). The latter was usually made from a pine-tree branch with the pith pulled out and finger-holes cut in. In north Estonia a bell made from alder bark, and in Setu a buckhorn, was attached to the pipe.

The Estonian bagpipe (*torupill*) could use the reedpipe as a chanter. The windbag (made of a seal's, or any other bigger animal's, stomach or bladder; less often goat or dog skin was used: see illustration) was inflated through a wooden blowpipe with an internal valve to retain the air while blowing was interrupted, and had one or two, sometimes three, drone pipes, usually tuned to the system tonic; the second drone would be tuned to the fifth. The Estonian bagpipe belonged to the East European type and the earliest information dates from the 14th century. The bagpipe was especially popular in north and west Estonia, and for centuries was the main instrument for dance music at weddings, farmstead working bees, etc.

Torupill (bagpipe) player

Bagpipe pieces consist of an introduction (based on a prolonged note or short melody-line), a central section and a postlude (which generally ends with a trill on the fifth, sometimes the second or sixth). Melodies are usually based on a major pentachord or heptachord, and include many figurations. Many bagpipe melodies were later transferred to newer folk instruments, with corresponding changes according to the instrument's playing technique. Among older folk instruments, the jew's harp (*parmupill*) was also popular.

In some coastal regions of west and north Estonia the bowed *hiiukannel* or *rootsikannel* (Swedish *tallharpa*, bowed harp) with two to four strings was played. Another instrument borrowed from Sweden was the *mollpill* (psalmodikon), a monochord constructed of staves, in the shape of an upturned trough. It usually had one string and was used for accompanying religious songs. These instruments were probably introduced into Estonia only in the 19th century.

The fiddle (*viiul*) became widely disseminated in the 19th century, although it had been used in Estonian villages to some extent already in the 18th. The popular style of fiddling involved holding the instrument lower than the chin, which enabled the musician to accompany himself with singing. The basic repertory consisted of *labajalavalss* and newer dance-tunes (polkas, etc.). By the end of the 19th century the *lõõtspill* (village accordion), which was loud and could play a chordal accompaniment, displaced all other instruments for dance music. The dominating dances became the polka, later the waltz and other social dances.

Traditional folk music ensembles appeared in Estonian villages at the end of the 19th century. They consisted of two fiddles or of a combination of fiddles, *kannels* and an accordion. Sometimes a double bass, guitar, mandolin and others, as well as some rhythmic and noise-making instruments were used.

The fiddle, accordion and new types of *kannel* have survived to some extent as an unbroken tradition, while a number of older folk music instruments (e.g. the bagpipe and *hiiukannel*) have been reconstructed and revived in amateur folk music groups.

6. FOLKDANCES. There is little information about the old ritual magic dances. Some references from the 17th and 18th centuries tell of fertility dances which barren women performed naked around the Catholic chapels. On the isle of Muhu a special men's ritual dance (*tõrretants*) survived into the 20th century which was performed secretly by naked men around a beer barrel during Yuletide rituals and the wedding night. Wedding dances also belong to the ritual category: the first dance with the bride, and the dances performed by the wedding guests. Ritual wedding songs were usually performed with particular movements – moving in a circle, standing in a semicircle, stamping on the spot, etc. There are also references to dancing during certain feast days, for

example, in the 17th century in west Estonia in connection with the cult of the *Metsik* – a straw male doll around which young people danced during winter evening games. At Shrovetide or some other feast day, it was taken to another village or the forest, accompanied by bagpipe playing, singing, shouting and dancing; there is, however, no concrete information about the steps or character of the movements.

The dances imitating animals or birds (ox, bear, goat, magpie, etc.) probably also originated in magic practices.

From the end of the 18th century, dances of the polonaise type became popular as well as the three-couple dances. At the beginning of the 19th century, the quadrille and dances evolving from it spread, mainly in eastern Estonia, while the *labajalavalss* ('flatfoot waltz') – a group of couple-dances in triple metre performed in a circle – spread through northern and western Estonia.

A number of dances belonging to the country dance type, such as *Ingliska* ('English dance'), *Kalamies* ('the fisherman') and *Oige ja vasemba* ('the right and the left'), spread in the second half of the 19th century in north and west Estonia, as well as dances in which different elements were mixed.

At the end of the 19th century and the beginning of the 20th, the polka (with a number of elaborations), waltz and other more recent social dances became an integral part of Estonian folk tradition, surviving and being performed alongside the foxtrot, tango and other modern dances in the 1930s and later decades.

7. Contemporary trends. Amateur groups have now become the main mediators of traditional songs and music in contemporary culture, performing traditional styles as well as different arrangements and stylizations. During the Soviet period only highly stylized forms of folkdance and music, as well as new creations 'in folk style' were approved as they corresponded more to the officially recognized concept of culture – 'socialist in content and national in form'– and to the aims of official festivals. Nevertheless, even the 'acceptable' forms of the folklore movement provided a means of national self-expression for the people, as did the huge song festivals in which numerous amateur choirs from all over the country – tens of thousands of singers – take part and hundreds of thousands of spectators gather to listen. This tradition goes back to the first song festival held in Estonia in 1869. The feeling of national identity and the need to demonstrate it at these festivals has been maintained through the course of recent history, regardless of to what and to whom they may have been officially dedicated.

Traditional folklore groups, which started their activities in the 1960s, were for a long time in opposition to the dominant and officially preferred folkloristic movement. The international folklore festival 'Baltica' as well as a number of local folk music festivals (*Setu leelopäevad*, *Viru säru*, *Viljandimaa virred* etc.) represent new trends in the Estonian folklore movement. They are primarily orientated to the revival of local traditional styles that were not recognized during the Soviet period. More recently gatherings of traditional folk musicians and summer seminars for young musicians have become very popular, as modern folklore activities in Estonia have become a part of the international folklore movement.

Folk music greatly influenced the rise and development of Estonian professional music and continues to be a source of inspiration for a number of composers such as Veljo Tormis, Anti Marguste, Ester Mägi and so on. Here can be included songs by Alo Matiisen (who died in 1996) and others, which represent a synthesis of ancient *runo* singing and modern rock music. Collective singing of popular songs was an inseparable part of the 'singing revolution' in Estonia which led to the restoration of independence in 1991.

URVE LIPPUS (I), INGRID RÜÜTEL (II)

Estrada, Carlos (*b* Montevideo, 15 Sept 1909; *d* Montevideo, 7 May 1970). Uruguayan composer, conductor and teacher. In Montevideo he studied the piano with Adelina Pérez Montero, the violin with Carlos Correa Luna, Gregorian chant with Pedro Ochoa and harmony, counterpoint and composition with Manuel Fernández Espiro. He founded the Montevideo Chamber Orchestra, with which he performed the standard repertory as well as many Uruguayan works. In 1938 he travelled to Europe, studying at the Paris Conservatoire with Roger-Ducasse and Büsser (composition), Noël Gallon (counterpoint and fugue) and Philippe Gaubert, Albert Wolff and Paul Paray (conducting). Back in Uruguay he held appointments as conductor and professor of composition at the Montevideo Conservatory and as professor of harmony and counterpoint at Montevideo University. He was also music adviser to Uruguayan radio, and was widely active as a conductor, notably as founder-conductor of the Montevideo Municipal SO. On many occasions he returned to Paris (where he conducted the première of his First Symphony in 1951) and was made an officer of the Académie. Estrada's first compositions, keyboard and vocal pieces, date from 1930. In 1936 he initiated a new trend in Uruguayan composition, in opposition to the prevailing national style; his innovations included modal harmonic systems and a neo-classical formal control. In the early 1940s Estrada essayed larger forms: the oratorio *Daniel* (1942), incidental music for Paul Claudel's *L'annonce fait à Marie* (1943), the ballet *L'Illiade* (1957) and his Symphony no.2 (1967). His First Quartet, which won first prize in the SODRE (Uruguayan radio) competition, was first performed at the First Latin American Music Festival, Montevideo, in 1957. Other major works were his incidental music (1937) for Paul Verlaine's play *Les uns et les autres* and *Robaiyat* (1955), settings of Omar Khayyam's poems, both first performed with the composer conducting.

WORKS
(*selective list*)

Stage: Les uns et les autres (incid music, P. Verlaine) T, chbr orch, 1937, 1950; L'annonce faite à Marie (incid music, P. Claudel), 1943; L'Illiade, ballet, 1957
Vocal-orch: Daniel (orat), soloists, chorus, orch, 1942; Robaiyat (Omar Khayyam), S, orch, 1955
Orch: 2 suites, 1937, 1942; 2 syms., 1951, 1967; Concertino, pf, orch, 1944
Chbr: Qt no.1, 1956
Other choral works; songs, 1v, pf; chbr works; pf works

SUSANA SALGADO

Estrada, Julio (*b* Mexico City, 10 April 1943). Mexican composer and theorist of Spanish descent. He studied composition in Mexico with Orbón and in Paris (1965–9) with Messiaen, Boulanger and Xenakis, additionally taking courses given by Stockhausen in Cologne (1968–9) and Ligeti in Darmstadt (1972). He later studied computer music at Stanford University (1981) and in Paris (1980–83), as well as Amerindian music in New Mexico (1987). He gained the doctorate from the University of Strasbourg with his dissertation *Théorie de la composition: discontinuum-continuum* (1994).

In 1971 Estrada was appointed to teach composition at the Music School of the University of Mexico (UNAM). In 1976 he became active as a researcher at UNAM, where from 1990 he directed the research project 'MúSIIC' (Computer Interactive System for Research and Composition). In addition he has been a guest lecturer at several universities and a composer-in-residence in Darmstadt, Stanford and elsewhere. These activities have given rise to several essays and theoretical works (among them *Música y teoría de grupos finitos*, 1984), and the encyclopedia *La música de México* (1984–8), of which he is the editor.

After an initial phase in the tradition of Webern and Stockhausen, Estrada's style of composition developed throughout the 1970s from the 'controlled uncertainty' of *Memorias* (1971) to the integration of his own theories, notably that of the 'discontinuum' (a new theory of interval classes for scales of any subdivision). With works such as *eua'on* (1980) he explored his theory of the 'continuum', utilizing unstructured tonal and temporal areas and material in transition (e.g. glissandos). With *eolo-oolin* (1981–3) he began working with what he calls 'macro-timbre'; a synthesis of pitch, amplitude and harmonic content in a continuum of rhythm and sound. In *yuunohui'tlapoa* (1998–9) he combines his continuum and discontinuum theories. The opera *Pedro Páramo* (begun in 1992) is based on the composer's analysis of the tonal elements in the literature of Juan Rulfo (explained in *El sonido en Rulfo*, 1990), creating a world

of expression that shifts unexpectedly between the concrete and the unreal, a musical pendant to Rulfo's 'magic realism'.

MONIKA FÜRST-HEIDTMANN

Estrambote [estribote] (from Sp. *estribo*: 'stirrup'; Old Fr. *estrabot*; It. *strambotto*; Provençal *estribot*). A Spanish genre of poetic composition (*AAbbba*), originally known as *estribote*, that served as a conclusion to another poem; contrary to commonly held opinion, its character was not always satirical. The term 'estribote' is first documented in the writings of the 13th-century Castilian poet Gonzalo de Berceo, but the Andalusian poet Mucáddam is said to have coined, as early as about 900, the synonymous Arabic term *márkaz* ('stirrup') for the distich constituting the initial refrain of the ZAJAL (known in Spain as the *zéjel*), whose metrical structure was identical with that of the *estrambote*. Variant forms of the word *estribote* appear throughout Romance poetic literature from late 12th-century Provençal poetry to French, Italian and Hispanic literature of the 14th century, adopting different strophic combinations but maintaining the popular character of the form. Whether the Romance lyric developed from the *zéjel* or from medieval Latin prototypes is controversial. The metrical pattern of the *estribote*, cultivated also under different names (*dansa* in Provence, virelai in France, cantiga in Spain and Portugal, and *laude* in Italy), is characteristic of such *estribotes* as those by Juan Alvarez de Villasandino in the Cancionero de Baena, a collection of Castilian verse (1445; ed. J.M. Azaceta, Madrid, 1966). In his *Prohemio al Condestable de Portugal* (1445–9) the Marquis of Santillana used *estrambotes* to refer to musical settings of such verse, which as independent pieces with numerous variations came to be called villancicos by the turn of the century. The table of contents of the Cancionero Musical de Palacio, however, lists a group of frottolas under the heading *estrambotes*, probably as a result of the translation of the Italian term *strambotti*, by which those pieces were generally known; later in the 16th century the title-page of book five of Fuenllana's *Orphénica lyra* (1554) also designates as *estrambotes*, *sonetos* and *madrigales* a group of works in Italian. In the 17th century, however, the term *estrambote* was applied to an irregular stanza added to a poem of regular structure such as the sonnet. In a detailed description of an outdoor popular festival (*romería*) in the province of Asturias, Gaspar de Jovellanos (1744–1811; see Nocedal) twice equated *estrambote* with *estribillo*: first as a two-line refrain sung after each quatrain of a *romance* while men dance, and later (while women dance) as a four-line refrain whose first verse, 'Hay un galán de esta villa' ('There is a bachelor from this village'), uses the name for that kind of dance.

ISABEL POPE/EMILIO ROS-FÀBREGAS

Estrée, Jean d' (*b* early 16th century; *d* 1576). French composer, dance arranger and hautboy player. He was one of several Parisian performer-composers who were members both of various small professional instrumental ensembles (called 'joueurs d'instruments' of the Confrérie St Julien), as well as of the royal *Musique d'écurie*. From 1559 to 1564 he also took on the job of dance editor and arranger for the Parisian music publisher Nicolas Du Chemin. D'Estrée lived in the St Merri district of Paris on the right bank, along with many of the other members of the St Julien group. In one of the groups he played with, d'Estrée knew Du Tertre's friend, Pierre Joly.

Unlike the other two dance editors from mid-16th-century Paris (Du Tertre and Gervaise), d'Estrée did not compose chansons. His four books of *danseries*, however, contain a repertory which is extensive, and which overlaps with many of the dances contained in Arbeau's *Orchésographie* (1588). Although only the superius and bassus parts of the first three of d'Estrée books and the bassus part of the fourth book survive, 52 pieces of the total number were reprinted in Phalèse's *Liber primus leviorum carminum* (RISM 1571[14]), of which all the parts are extant. Fortunately, too, the superius and bassus parts of the incomplete pieces give one a fairly good idea of the quality of the whole set.

D'Estrée's four books as printed by Du Chemin open with some 120 branles of different kinds. These lively circle-dances so characteristic of 16th-century France were either in duple metre (for instance, the *bransle commun*, the *bransle de Bourgogne*, the *bransle de la guerre* and the *bransle de Champaigne*), compound triple metre (the *bransle gay*, the *bransle de Poitou* and the *bransle legier*), or contained sections in duple metre combined with sections in compound triple (as in the fourth *bransle de Malthe* and the third *ballet*). D'Estrée included many of the character and 'miming' branles (for instance, the *bransle de la torche* and the *bransle des sabots*) mentioned by Arbeau. There are also eight allemandes – quick, duple-metre dances with phrases of irregular length – followed by two *allemandes courantes* in triple metre. Gervaise had used the word 'courante' before in his *Sixième livre de danceries* (1555), in connection with two triple-metre branles, appearing after a group of duple-metre *bransles de Champaignes*.

D'Estrée's third book includes pavanes, galliards and basse danses; these dances were becoming old-fashioned in the latter half of the 16th century as Arbeau testified. D'Estrée, like Gervaise, occasionally used chanson melodies in his dances – for instance, Sandrin's *Si j'ay du bien* and Claudin's *Si j'ay du mal et du bien* for the first pavane and the first basse danse, respectively.

D'Estrée's fourth book (1564) is harder to reconstruct than the first three, for only the bassus parts survive. All the pavanes and most of the galliards from this final book are in five parts. D'Estrée even scored a few dances for six parts, perhaps reflecting the favourite number of performers in the small professional groups with which he himself played.

All of d'Estrée's dance arrangements have very harmonic bass lines. Unlike those arranged by Gervaise and Du Tertre, d'Estrée's stress the crucial harmonic chords I, IV and V, and make little attempt to fulfil a melodic function. Perhaps this reflects the royal musician's instrumental orientation and lack of experience as a chanson composer. But d'Estrée was much more inclusive in the repertory he presented than were either Gervaise or Du Tertre; many of the dances he gave are exotic with imaginative and foreign titles (e.g. *Bransle de Malthe*, *Ballet du Canat*). His four books provide a repertory of dances which is probably closer to actual dancing practices of the times than the more abstract collections assembled by Attaingnant's editors.

WORKS

Edition: *Dansen uit 16e eeuw (1572)*, ed. G. Wellekoop (Rotterdam, 1958) [based on Phalèse's publication of 1571]

Premier livre de danseries (Paris, 1559): 58 branles, 4–6 parts
Second livre de danseries (Paris, 1559): 56 branles, 4–6 parts
Tiers livre de danseries (Paris, 1559): 10 branles, 12 character dances, 10 allemandes, 3 pavans, 8 galliards, 5 basse danses, 4–6 parts
Quart livre de danseries (Paris, 1564): 5 pavans, 9 galliards, 10 branles, 1 bal, 4 allemandes, 4–6 parts

CAROLINE M. CUNNINGHAM

Estreicher, Zygmunt (*b* Fribourg, 3 Dec 1917; *d* Geneva, 12 Sept 1993). Swiss musicologist of Polish origin. He studied in Kraków at the conservatory and with Jachimecki at the university, and in 1939 continued his studies under Franz Brenn at Fribourg University, where he took the doctorate in 1946 with a dissertation on Inuit dance-songs. From 1940 to 1945 he worked as a choirmaster; he then held library posts in Fribourg and Neuchâtel and in 1948 became responsible for the music section in the Ethnographical Museum of Neuchâtel. He was appointed an external lecturer at the University of Neuchâtel in 1951, later becoming director of the musicology course in 1954; from 1954 to 1969 he was professor as well as director of the University Library. He became reader in musicology at the University of Geneva in 1961 and was professor from 1969 to 1988. Estreicher's research was devoted to ethnomusicology and the music of Beethoven and J.-J. Rousseau. His private research archive is in the Ethnographical Museum of Neuchâtel.

ETIENNE DARBELLAY/DOROTHEA BAUMANN

Estribillo (Sp., diminutive of *estribo*: 'stirrup', 'support'). The refrain of certain Spanish 'fixed forms' such as the *zéjel*, *estribote*, cantiga, canción and villancico; since these lyric forms were usually sung, *estribillo* also refers to the melody of the refrain (*see* ESTRAMBOTE and VILLANCICO). The first datable use of the term occurs in Gonzalo Correas's *Gramática griega* (Valladolid, 1627), where it appears several times meaning 'refrains of old songs' ('estribillos de cantares viejos'), and once as 'estribillos de villanzicos'. Lope de Vega also used the root *estribo* to mean refrain. In the music collection *Romances y letras a tres vozes* (*c*1620), the term *vuelta* (return) occurs more frequently than *estribillo* to indicate refrain; later cancioneros use both *estribo* and *estribillo*. Although the term is believed to be a diminutive of the Spanish *estribo*, it has also been suggested (see Malkiel) that it may be related to the old Spanish words *trebejo* (diversion, play), *trebejar* (to play, to frolic) and their old Galician-Portuguese counterparts *trebelho* and *trebelhar* (to leap, to dance). That etymology, if the true one, suggests that a dance pattern repeated at certain intervals while singing could be connected to the origins of vocal refrains. The manuscript *E-E* X.iii.3 (copied before 1248), describing the ceremonial of the crowning of the kings of Castile, states that in church, after the Alleluia, 'virgins who knew how to sing came, sang a cantiga and made its *trebejos*'; two illuminations depict the virgins dancing and playing instruments. The Cancionero de Baena, an anthology of Castilian verse (1445; ed. J.M. Azaceta, Madrid, 1966), contains a Galician-Portuguese poem by Macias (*fl* 1340–70) in which the term *trebello* in the last verse of each strophe refers to apparently well-known two-line refrains that follow each strophe; the poet states that he sang the *trebellos*.

ISABEL POPE/EMILIO ROS-FÁBREGAS

Estribote. ESTRAMBOTE.

Estwick, Sampson (*b* *c*1656; *d* London, 16 Feb 1739). English cathedral singer and composer. According to Thomas Ford (*GB-Ob* Mus. e. 17) he was 'bred up under Capt Cook' in the Chapel Royal. He matriculated at Christ Church, Oxford, on 4 April 1674, later taking the degrees of BA (1677), MA (1680) and BD (1682). He was a chaplain of Christ Church from 1679 to 1711, although the college battel books suggest that after 1700 he was rarely present; from 22 December 1691 until his death he was a minor canon of St Paul's Cathedral, London, where he also became sacrist and succentor. Estwick belonged to the Mermaid Tavern music club in Oxford and in 1725 was listed as a founder member of the Academy of Vocal Music (*Lbl* Add. 11732). At the request of the stewards of the London Cecilian celebrations of 1696, he preached a sermon entitled *The Usefulness of Church-Musick* (London, 1697/*R*).

Estwick's act songs show that he shared his friend Henry Aldrich's interest in Italian music. Brief ritornellos for two violins often punctuate vocal solos, and phrase lengths tend to be regular. Effective use is made of chromatic harmony: sometimes for variety, as in the long ground-bass movements that make up much of *Julio festas*, and sometimes as elements of a formally purposeful pattern of modulation, as in the prelude to *O Maria, O diva*. His two solo songs (*c*1682) are in contrasting styles, one declamatory and the other lyrical. Thomas Hearne wrote that Estwick was 'reckon'd to understand Musick as well as any Man in England'; later writers, such as William Hayes, commended his powers as a performer, which he retained into old age, and his personal character.

WORKS

ACT SONGS

Io triumphe accende plausibus, S, A, B, SSATB, str, bc, *GB-Lcm*, *Ob* [partly by R. Goodson and H. Aldrich]
Julio festas, A, T, B, SATB, str, bc, *Lcm*, *Ob*, *Och**
Nunc juvat doctas, 2vv, bc, *Och* Mus.1142B; a verse added to Aldrich's act song Jam satis somno
O Maria, O diva, A, T, B, SATB, str, bc, *Lcm*, *Ob*, *Och* (mostly autograph)

OTHER SONGS

An amorous sigh, 1v, bc, *GB-Lbl*
What art thou, love, 1v, bc, *Lbl*

Eszék (Hung.). *See* OSIJEK.

Eszterháza [Esterháza; Eszterház]. Palace in west Hungary in the village now called Fertőd. From 1766 to 1790 it was the summer residence of Haydn's employer Prince Nikolaus ESTERHÁZY 'the Magnificent'. The Süttör hunting lodge, designed by A.E. Martinelli, was erected at the southern end of the Neusiedler (Fertő) Lake in 1721 and served as the home of the younger brother Prince Nikolaus, who had his own theatre and marionette group, while Prince Paul Anton resided in Eisenstadt (Kismarton), the centre of the Esterházy domain. On his brother's death (1762) Nikolaus became head of the family and the wealthiest Hungarian nobleman, and decided to turn the Süttör lodge into a splendid palace like Versailles, rivalling Schönbrunn. The central building was erected between 1762 and 1766 (fig.1); it may have been designed partly by Melchior Hefele, and the design was revised by the prince himself. The frescoes and decorations were partly painted by J.B. Grundmann, Haydn's first portraitist. The opera house, opened in 1768 with Haydn's *Lo speziale*, was destroyed by fire in 1779 but was rebuilt in time for the first performance of Haydn's *La fedeltà premiata* early in 1781. From 1768 a special music house provided a rehearsal room and modest apartments for musicians, singers and actors; Haydn had a four-room suite. A marionette theatre, erected in 1772 and decorated in grotto style, was opened in 1773, on the occasion of the Empress Maria Theresa's only visit to Eszterháza. The first international event of the establishment, the magnificent festival on the occasion of the visit of the French Prince Rohan in 1772, was celebrated in György Bessenyei's long poem *Eszterházi vigasságok*. More buildings were erected and the huge park was laid out; the residence was nearly finished when another Hungarian poet, Márton Dallos, gave a detailed description of it in 1781. In 1784 the *Beschreibung*, written under the supervision of Prince Nikolaus and well illustrated with ground plans and engravings, described the whole complex, including the rebuilt opera house (fig.2), the picture gallery and the library. (The famous gouache painting of the Munich Theatermuseum, supposed to represent an Eszterháza performance of *L'incontro improvviso* with Haydn at the harpsichord in the orchestra, is probably not authentic.)

Music, composed and directed by Haydn, was only one of the attractions at Eszterháza: during the mid-1770s there were notable dramatic productions by Carl Wahr's group (1772–4) and the Diwald company, well known for their performances of Shakespeare and Schiller and Pauersbach's marionette group (which also performed at the Schönbrunn Schlosstheater) was equally celebrated. From 1776 the number of opera performances under Haydn steadily increased and from about 1780, when the prince was at Eszterháza from early February to late November or December, there was a regular operatic season with a modern repertory and unique in that it was maintained by a private establishment. There were 67 premières and 1038 opera performances between 1780 and 1790. Librettos were printed, the house librettist being Nunziato Porta (from 1781), and the stage designer was the gifted Pietro Travaglia (from 1777). The prince planned the repertory; he had paid correspondents in Italian opera centres (Count Durazzo in Venice, the composer Pichl in Milan, etc.) who sent him the scores of new successes. The most frequently performed composers apart from Haydn were Cimarosa (13 operas), Anfossi (ten), Paisiello (eight) and Sarti (seven); a Mozart performance, of *Le nozze di Figaro*, was planned in 1790.

1. Eszterháza Palace: mezzotint by János Berkeny after Szabó and Carl Schütz, 1791; note the Gypsy band in the foreground

2. Plan, cross-section and elevation of the opera house at Eszterháza: engraving from 'Beschreibung des Hochfürstlichen Schlosses Esterháss im Königreiche Ungern' (Pressburg, 1784)

The orchestra was fairly small (maximum 24) and included such distinguished musicians as Tomasini, Andreas Lidl and Anton Kraft. Well-trained singers, mainly Italian, were engaged for short terms, because they suffered severely from the damp of the nearby marsh and the winter north wind (the women included Jermoli, Ripamonti, Maria and Mathilde Bologna, Barbara and Palmira Sassi and Valdesturla, and from 1779 Luigia Polzelli, said to be a close friend of Haydn; the men included Karl Frieberth, Dichtler, Specht, Bianchi, Bragh-etti, Gherardi, Jermoli, Moratti, Morelli, Negri, Nencini and Andrea Totti).

After Nikolaus's death the magnificence vanished at once; his successor Prince Anton held one more ceremony in the palace (August 1791; an engraving, reproduced here, shows Gypsy musicians playing in the yard), and then the gallery and other attractions were removed to Eisenstadt and the opera house became a storage place.

In 1959 a Haydn summer festival took place in the partly renewed palace to mark the 150th anniversary of Haydn's death.

For bibliography *see* ESTERHÁZY.

LÁSZLÓ SOMFAI

Etcheverry, (Henri-)Bertrand (*b* Bordeaux, 29 March 1900; *d* Paris, 14 Nov 1960). French bass-baritone. He studied in Paris and made his début in 1932 as Ceprano (*Rigoletto*) at the Opéra, where he sang until the mid-1950s. Among the roles he created there were Tiresias in Enescu's *Oedipe* (1936) and the Prince of Morocco in Hahn's *Le marchand de Venise* (1935); he also sang Bluebeard in the first performance at the Opéra of Dukas' *Ariane et Barbe-bleue*, as well as roles in Egk's *Peer Gynt* and Pfitzner's *Palestrina* in their first productions in France. His repertory at the Opéra included Don Giovanni, Wotan, Boris and Méphistophélès. He first appeared at the Opéra-Comique in 1937 as Golaud, a role he also sang at Covent Garden and La Scala. His roles at the Opéra-Comique included Seneca (*L'incoronazione di Poppea*), Ourrias (*Mireille*) and Nourabad (*Les pêcheurs de perles*). His Golaud is preserved in the 1942 recording of *Pelléas et Mélisande*, conducted by Désormière.

HAROLD ROSENTHAL/R

Etendue (Fr.). *See* RANGE.

Eterna. German record label. It was used by VEB Deutsche Schallplatten, the state record company of the former German Democratic Republic, for its classical music recordings. It first appeared on the 78 r.p.m. records of Lied der Zeit, an enterprise of Ernst Busch, who was granted a licence to produce records in August 1946. Lied der Zeit was nationalized in 1953. A programme of modernization began five years later and in the years 1958–77 VEB Deutsche Schallplatten acquired Western equipment for recording and manufacture and recruited its own expert teams for production and engineering. Three churches (in Dresden, Leipzig and Berlin) were converted into recording studios and a new label, Nova, was introduced for contemporary music.

Co-production of recordings with Western companies began in 1954 and was financially beneficial. Artistic and technical excellence resulted in success in the West: major achievements included many large-scale projects such as *Die Meistersinger* (1971, Herbert von Karajan, EMI), *Der Freischütz* (1973, Carlos Kleiber, Deutsche Grammo-phon), Richard Strauss's orchestral music (1975, Rudolf Kempe, EMI) and the *Ring* cycle (1980–85, Marek

Janowski, Eurodisc). Also valuable was the preservation of the achievements of artists and ensembles little known in the West (Rudolf Mauersberger and the Dresden Kreuzchor, the earlier work of Peter Schreier, Theo Adam and Kurt Masur), and of performers who might normally have had an international reputation (the Suske and Ulbrich Quartets and the pianist Walter Olbertz).

By 1985 VEB Deutsche Schallplatten had over 800 employees and an annual turnover of DM 300 million (DDR). Its decline was partly the result of a decision (reversed only in 1989) not to adopt the CD format but was finally caused by the political demise of the German Democratic Republic itself. The company's archive of master tapes was acquired in 1991 by Edel AG, Hamburg. By 1997 much of it was available on the CD label Berlin Classics; for some issues the Eterna label has been revived.

Ethelred. *See* AELRED OF RIEVAULX.

Etheria. *See* EGERIA.

Ethikos, Nikephoros (*fl c*1300). Byzantine composer of liturgical chant. Ethikos held the office of *domestikos*, the leader of the left choir in a Byzantine church, but it is not known in which church or city he worked. His name is mentioned by MANUEL CHRYSAPHES (*fl c*1440–63) in a chronological list of five important Byzantine composers of kalophonic *kontakia*, and is placed between the names of JOANNES GLYKYS (*fl* late 13th century) and JOANNES KOUKOUZELES (*fl c*1300–1350). He was, therefore, probably active during the late 13th century, and possibly also during the first years of the 14th, that is, contemporary with the early part of the reign of the Byzantine Emperor Andronikos II Palaeologos (1282–1328).

About 40 chants by Ethikos survive in the AKOLOUTHIAI manuscripts and the kalophonic stichēraria of the 14th and 15th centuries. The melodies transmitted in the Akolouthiai manuscripts are relatively simple, but Ethikos also composed one or two highly melismatic pieces in the kalophonic style (*see* KALOPHONIC CHANT). Among the simple settings are chants for both halves of the Doxology, several *allēlouïaria* for Christmas and Holy Thursday, and a number of selected verses from the *amōmos* psalm (Psalm cxvii) and the *polyeleos* (Psalms cxxxiv–cxxxv) sung at ORTHROS. A few verses from antiphons for Christmas and the feast of the Transfiguration also survive, as well as settings of Byzantine hymn texts. In the 15th-century akolouthiai manuscript *GR-An* 2406 are preserved a single *kratēma* by Ethikos, a short *prologos* intended to precede a *kratēma* and a through-composed kalophonic setting of Psalm ii for HESPERINOS. A greater selection of his longer compositions are contained in the kalophonic stichēraria.

Ethikos's compositions and those of his most important younger contemporaries and successors are significantly more conservative in style than the melodies of Koukouzeles, Korones and Joannes Kladas. Ethikos's chants are shorter in length, narrower in vocal range and less boldly disjunct in their melodic lines – leaps of more than a 4th are rare. Only in the *kratēma* in *GR-An* 2406 are intervals of a 6th, 7th and octave used. The through-composed setting of Psalm ii, like those by Joannes Glykys and Tzaknopoulos, is also less extended; only a single line from the psalm is melismatically elaborated and most of the second half of the chant is taken up by a single *teretisma*. These three chants by Glykys, Ethikos and Tzaknopoulos are examples of an early stage in the development of the kalophonic style and are more compact than the longer, often effusive settings (with lines from several psalm verses) by later composers such as Koukouzeles, Korones and Kladas. Ethikos's compositions occupy a position in the development of Byzantine chant that lies between the older anonymous and traditional repertory and the more innovatory chants of his successors in the 14th and 15th centuries.

EDWARD V. WILLIAMS/CHRISTIAN TROELSGÅRD

Ethiopia, Federal Democratic Republic of. Country in East Africa. Located in the northern highland plateau of the horn of Africa, it has an area of 1,104,300 km², and in 2000 its population was estimated at 66·18 million.

Ethiopia was first mentioned by classical writers in the 2nd century CE as the kingdom of Aksum. The absence of written sources obscures historical events during the first millennium of the empire, but indigenous royal chronicles provide details from the 13th century onwards and trace periods of geographical expansion and consolidation. A distinctive aspect of Ethiopian history in the broader African context is its independent, non-colonial past, being occupied only briefly by Italy during World War II. (For the history and musical traditions of Eritrea, which was colonized by the Italians from the late 19th century and which achieved full sovereignty in 1993, *see* ERITREA.)

Ethiopia has always been a multi-ethnic empire with numerous languages, a range of belief systems and diverse cultural traditions. However, there has also been considerable contact between ethnic and religious groups. Christianity was established as the state religion in about 332 CE, giving rise to a distinct sacred musical tradition and an indigenous system of musical notation (see below, §II). The Ethiopian Orthodox Church was at the centre of virtually all aspects of political, economic and cultural life until the 1974 revolution, which removed the monarchy closely associated with the Church and displaced the longtime hegemony of the highland Christian Amhara people. Today, about 37% of the population belong to the Orthodox Church and about 47% are Muslim; the remainder follow various other religions. (For a discussion of the music of the Ethiopian Jews,

known as the Beta Israel or Falasha, *see* JEWISH MUSIC, §III, 9.)

I. Traditional music. II. Orthodox church music.

I. Traditional music

1. Music and society. 2. Musical specialists: (i) The *dabtarā* (ii) The *azmāri* (iii) The *lālibēlā*. 3. Musical instruments. 4. Musical systems. 5. Recent developments. 6. Research.

1. MUSIC AND SOCIETY. Music has played an important role in Ethiopian life, in a variety of locales and social contexts, past and present. The formidable topography of the Ethiopian plateau, divided from the north-east to the south-west by the Rift Valley and surrounded on three sides by dramatic escarpments, renders travel and communications difficult, thus both discouraging outside influences and perpetuating distinct local and regional styles. This isolation encouraged stylistic musical consistency within circumscribed geographical areas, such as on the highland plateau where largely monophonic or heterophonic textures and a highly melismatic vocal style have prevailed in contrast to the multi-part musics of the southern and western lowlands.

Since music is so often embedded in distinctive rituals and life cycle events, ethnic boundaries reinforce and emphasize the emergence of regional musical styles. Vadasy has catalogued dance in a number of areas, documenting rhythms and steps that distinguish regional musical expressions (1970; 1971; 1973). Important festivals and seasonal work patterns have given rise to distinct repertories associated with specific times and circumstances, such as more than 30 different types of songs performed by the Dorze at rituals, community gatherings and during work.

Yet some aspects of musical practice are shared: for instance the ubiquitous presence of *eskestā* (dances with lively shoulder movements) across ethnic boundaries and the playing of *wāshint* (flutes) by shepherds in highland and lowland areas throughout the country. There is also evidence of interaction between sacred musical traditions of adjacent religious groups; for example, the Ethiopian Orthodox Church shares its musical system, *zēmā*, with the Beta Israel (*see* JEWISH MUSIC, §III, 9). Even prototypical highland Amhara traditions show evidence of intercultural influence, such as the spoken dialect of the singers known as *azmāri*, which although largely based in the Amharic language, borrows words from other south and north Ethiopic languages and from Arabic (Leslau, 1952, pp.106–08).

In addition to its use in daily and religious life, music was of great importance in Ethiopian political arenas, with secret musical codes sung by messengers in the past to identify positively the sender of a written message (Messing, 1957). In many sacred and secular contexts, musical instruments served as insignia of power, with the materials (silver, gold) from which an instrument was made signalling a patron's rank and status. Official proclamations were drummed in local marketplaces, a mode of communication replaced in the late 20th century by loudspeakers and the radio. The texts of songs were replete with hidden meanings (using a literary device termed 'wax and gold' after the lost wax-process of gold casting) that could be used to level political dissent or to provide a means of expressing patriotism.

While scholarly interest has focussed on rural locales and traditional musical forms in both sacred and secular domains, Ethiopian urban centres past and present have always provided venues for musical activity. Gondar, the Ethiopian capital from 1635 to 1887, served as a major centre for the transmission of Ethiopian sacred music and is acknowledged in oral traditions as the site for innovations during the 18th and 19th centuries in liturgical dance and instrumental practice. Municipalities have continued to patronize musicians in the modern era: during the early 1970s musicians were kept on the civil payroll in Gondar and in Addis Ababa, where musicians were retained by Radio Ethiopia.

The relocation of the Ethiopian capital to Addis Ababa in 1887 and its emergence as a national and international centre for politics and commerce led to important changes in music, primarily through the support of Haile Selassie (regent, 1917; emperor, 1930–74). Selassie was the founding patron of several musical ensembles, including the first marching band and the Imperial Court Orchestra. The end of Italian occupation in 1941 marked the beginning of a new musical era known as *zemenāwi muzikā*, or 'modern music', during which time the traditional and jazz ensembles at the Haile Selassie I Theatre Orchestra were founded (1946). A national folklore group, Orchestra Ethiopia, brought together traditional solo musicians from all areas of the country in 1963 and featured group performances of folk music medleys of different regions. The National Yārēd School began offering instruction in both Ethiopian and European musics and musical instruments in the early 1960s. A diverse recreational musical life blossomed in Ethiopian urban areas, supported by live bands playing a wide range of popular musics in night clubs and restaurants. The radio, and national television to a much more limited extent, broadcast musical performances which offered support to national policies. The dissemination of music through cassettes began to emerge in 1972, and Ethiopian popular music found a growing audience at home and abroad.

In addition to cassette technology, a major factor aiding the spread of Ethiopian music worldwide was the emigration of Ethiopians following the inception of the 1974 revolution which resulted in the establishment of Ethiopian diaspora communities in Europe (particularly Italy and Sweden), the USA (Washington, DC, New York, Boston and Los Angeles) and Israel. The proliferation of Ethiopian music and musicians abroad led to the founding of traditional Ethiopian musical ensembles in Israel and Washington, DC.

2. MUSICAL SPECIALISTS. The hierarchical nature of historical Ethiopian society had a powerful impact on the social organization of music, particularly in the highlands, where patronage played a critical role in perpetuating most musical traditions, sacred or secular. The little research carried out in the southern areas suggests a very different perspective on music-making; many Dorze who are not musical specialists participate in singing complex polyphonic structures, while Hamar musical performance is a much more individual, if non-specialist, activity. While there is active participation by the general highland population in musical events celebrating life cycle occasions, and entertainment, particularly in dance, the following section necessarily focusses on the well-documented musical specialists of the highlands. Some professional musicians come to music through exposure through their family, whether talented aristocrats, highly trained

church musicians or members of occupational castes. For instance, the practice of playing the *beganna*, a ten-string lyre, was transmitted in the past among accomplished Ethiopian aristocrats and is widely represented in traditional Ethiopian iconography, where powerful Ethiopian emperors are portrayed as King David playing the lyre.

(i) The dabtarā. The *dabtarā* is a non-ordained church musician who trains in church schools for 15–20 years. Each *dabtarā* masters the *zēmā* sacred musical system and learns the *melekket* system of church musical notation while performing the liturgy as an oral tradition (see below, §II). Most *dabtarā* specialize, one becoming an authority on singing the music of the *deggwā* (hymnary), another being an expert in *aqqwāqwām* (liturgical dance). The authority of church musicians is based largely on their connection to St Yārēd, a mythical figure credited with composing and codifying *zēmā* under the influence of divine inspiration. Many *dabtarā* acquire skills as healers and magicians, writing amulets and performing oral therapies to cure illnesses and other indispositions. *Dabtarā* were also found among the Beta Israel where they chanted the liturgy. However, the Beta Israel *dabtarā* credit their *zēmā* to a monk named Abba Sabra, recalled in oral tradition to have joined their community in the 15th century and to have codified their liturgy and its musical content.

(ii) The azmāri. The *azmāri* is usually a male professional musician who sings and accompanies himself on a *masēnqo* (one-string lute) at the behest of patrons, whether in the historical court, in *ṭej bēts* (local taverns), at weddings and festivals associated with the church calendar, in contemporary urban hotels or on the radio. According to Cynthia Kimberlin (1976), who surveyed 41 *azmāri* in Addis Ababa, most were Christians of Amhara, Tigre or Galla descent, and only eight were descended from fathers who were musicians.

In the past, the *azmāri* played an important role as a social critic, improvising sophisticated texts of praise or criticism. The *azmāri* is closely associated with the rousing *shillēlā* song genre. The subcategories of *shillēlā* are described by Kebede (1971): the *fukerā* praises the achievements of a great warrior while denigrating enemies; the *kerera* inspires a warrior in battle; and the *fanno* memorializes a dead hero. Colourful descriptions are found in the literature of the *azmāri*'s verbal skill, including occasions when they inadvertently incurred their patron's wrath (Mondon-Vidailhet, 1922). Many *azmāri* were executed by the Italians during the occupation (1936–41) for fear that they would incite resistance to colonization. *Azmāri* continue to play an active role in post-revolutionary Ethiopian culture.

(iii) The lālibēlā. The *lālibēlā* are a hereditary caste of singers who carry the stigma of leprosy. *Lālibēlā* improvise songs of praise in exchange for food and alms outside the homes of wealthy urban Ethiopians during early morning hours. Mainly of Christian Amhara descent, *lālibēlā* travel as couples and sing duets: the woman repeats a refrain sung to vocables, while the man declaims an improvised text in a vocal style that approaches heightened speech. The *lālibēlā* are associated with several types of song, including strophic songs performed at weddings (*māsse* and *awello*). Some *lālibēlā* also compose and perform songs sung at *tazkār*, a memorial service. (See Shelemay, 1982.)

3. Musical instruments. The wide range of musical instruments used in Ethiopia, includes some that are widespread but with regional variations. Apart from their musical roles in solo and ensemble contexts and in accompanying vocal music, many convey important symbolic meanings within Ethiopian culture.

Ethiopia has a plethora of lyres, ranging from the five-string *dita* used in the south, to the ten-string *beganna* of the highlands. The structure of the six-string *krar* and the manner in which its constituent parts are named and linked symbolically to rural hut construction and agricultural implements is detailed by Kebede (1977, p.381). Kebede also outlines the *krar*'s association with the Devil due to its function as an accompaniment of songs praising love and beauty. Other prominent chordophones include the single-string *masēnqo* (bowed lute; which requires considerable virtuosity and is almost exclusively associated with the *azmāri*. In the south, musical bows have been found, including unusual models with three strings (see the disc notes by Simon, 1970–76).

Aerophones are common, most prominently the bamboo flute, termed *wāshint* in the highlands. Large *malakat* (end-blown trumpets) made of bamboo or metal and often over a metre in length are used to announce ceremonial occasions in several regions, while smaller *holdudwā* (animal horns) with carved bamboo mouthpieces are found mainly in the south. Ensembles of three end-blown *embiltā* (flutes) without finger-holes, each of which produces two tones – the fundamental and another a 4th or 5th higher – play interlocking parts; *embiltā* made of bamboo are common in the south, while metal is more common in the north. *Fantā* (panpipes) are found in the south among the Konso and other peoples.

A wide variety of idiophones is found throughout the country. Several of the most prominent varieties are associated with the liturgical practices of the Ethiopian Orthodox Church, including hand-held *ṣenāṣel* (sistrum) made of bronze or silver. The *maqwāmiyā* (prayer staff), which serves to support an Ethiopian *dabtarā* during long hours of prayer, is both waved in the air and pounded on the ground to reinforce rhythmic patterns. The *dawal*, an idiophone fashioned of resonant stone slabs or wood, was long hung outside rural churches and sounded to call the faithful to prayer. A round metal gong called a *qachel* was played to accompany the liturgy of the Beta Israel; the term *qachel* can also refer to a small bell. Recordings have been made of a *tom* (lamellophone) among southern groups such as the Nuer and the Anuak. Lamellophones among the latter are described as wooden soundboxes with umbrella spokes mounted on top of a metal bridge. Leg rattles constructed of small metal bells strung together are commonly used in the southern lowlands.

While membranophones are not as prominent in Ethiopia as they are elsewhere in Africa, they play an important role in both sacred and secular repertories. The *kabaro*, a large kettledrum struck by the hands, is used to accompany the Ethiopian Orthodox liturgy with complex rhythmic patterns. Smaller drums of the same name are used to accompany secular music and dance. The *nagārit*, a flat kettledrum played with a curved stick, is associated with state functions and royal proclamations; this drum was also traditionally used to accompany the Beta Israel liturgy, its only documented liturgical use (*see* Jewish music, fig.18). The *atāmo* is a small hand-drum popular

among the Gurage and other southern peoples and is sometimes made of clay.

4. Musical systems. Most research to date has been carried out on the secular music of the highland Amharas, notably by Kebede (1971) and Kimberlin (1976). Four types of *qeñet* (tuning systems or melodic categories) are distinguished by Ethiopian secular musicians: *tezetā*, *bāti*, *anchihoy* and *ambāsel*. Each category subsumes many songs, some of which take the name of the category, such as the ubiquitous *tezetā*, a song of reminiscence. The four *qeñet*, as analysed by Kebede and Kimberlin, are derived from two basic interval sets, each of which can be permutated by transpositional techniques. *Tezetā* and *bāti* share different transpositions of the same hemitonic pentatonic pitch set, while *ambāsel* and *anchihoy* share a second, although *anchihoy* is often characterized by additional microtonal inflections of the 1st and 4th pitches. Terminology related to tuning systems incorporates a concept of tonic or central pitch, termed *malāsh*, a 'returning tone' which can be heard repeated at phrase endings.

Virtually no research has been carried out into the rhythmic properties of Ethiopian music and there is little documentation of indigenous concepts of duration, although certain rhythmic patterns are named in accordance with their associations with different regions and ethnic groups. Vadasy's studies of Ethiopian dance (1970; 1971; 1973) correlate foot patterns with rhythmic motifs in several highland regions.

While highland music, sacred (*zēmā*) and secular (*zefēn*), is largely monophonic or heterophonic in texture, lowland musical traditions among people such as the Dorze include complex polyphonic structures. Dorze polyphonic singing (*edho*) with as many as five parts has been recorded and explicated by Bernard Lortat-Jacob (1994).

5. Recent developments. Ethiopia was ruled by a transitional government in 1991–4, which granted Eritrea its independence in 1993. The country was renamed the Federal Democratic Republic of Ethiopia in 1994. Contemporary Ethiopian music features the following elements: reliance on heterophonic textures, emphasis on the importance of texts in vocal music, preference for melody over rhythm, use of polyphony through a hocketing technique, overlapping or alternating melodic phrases and widespread use of chordophones with membranophones in supporting roles. Some musicians are intercultural in their conscious attempt to integrate musical elements from two or more distinct cultures. Male musicians continue to dominate public vocal and instrumental music, whereas female musicians are primarily vocalists who participate in private social and familial events. Although various musics co-exist in urban centres, music in the rural areas maintains a greater homogeneity. Ethiopians have an affinity with other musics, including those of China, Japan, Korea and India as well as the Sudan, Somalia, Egypt, Kenya, Uganda and South Africa.

Recent trends include the opening of private music schools, the emergence of all-female bands, a growing number of celebrity musicians, burgeoning underground and mainstream cassette industries, the proliferation of domestic and foreign music agents and worldwide dissemination of Ethiopian music. Defining Ethiopian music within geographical boundaries can be problematic as some musicians work within an international circuit that can span continents and collaborate with musicians from other countries, as exemplified by Aster Aweke. Ethiopian-composed music is primarily oral, as in the works of Alemu Aga, Asnakech Worku and Nuria Ahmed Shami Kalid (Shamitu), while other composers (such as Ashenafi Kebede, Esra Abate Iman and Mulatu Astatqê) notate their music or use both oral and written methods.

Protestant Churches, unlike the Ethiopian Orthodox Church, allow women to sing, dance and play musical instruments such as the *kabaro* (double-headed cylindrical drum), *ṣenāṣel* (sistrum) and *maqwāmiyā* (prayer staff). The Western six-string guitar is now a familiar fixture along with the secular *krar* (five- and six-string plucked lyre). Within Muslim communities, music is still based on traditional practices in the religious realm, but less so in secular contexts.

Foreign and domestic music agents pay generous fees for materials from new talent. Conglomerates guided by multinational interests and marketing acumen sponsor music competitions to identify such new talent. This environment encourages quality to be measured in terms of cassettes and compact discs produced and sold, rather than by the music itself. As a result some tapes of inferior quality are marketed with similar-sounding music aided by over-amplified keyboard synthesizers and drum machines.

Although members of the older generation may lament the paucity of inspired lyrics and melodies symbolizing the creative integrity of earlier times, music will be viewed by some as a commercial venture while others will view it as a time-honoured tradition that has developed over centuries and has been integrated into the Ethiopian life cycle. There will always be a group of musicians who possess compelling reasons to compose and perform traditional, popular and intercultural musics for their own sake, regardless of the consequences.

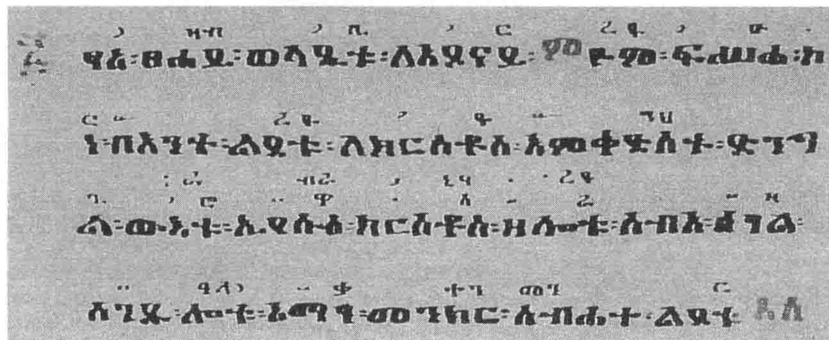
6. Research. Early observations of Ethiopian music were made by explorers (Villoteau, 1809) and diplomats (Mondon-Vidailhet, 1922). Modern musical scholarship has been shaped by historical and ideological factors, including practical limitations on carrying out ethnomusicological fieldwork during the Ethiopian revolution of 1974–91 and the widely held perception that Ethiopia is central neither to African nor Middle Eastern studies. The majority of modern research focusses on musical traditions related to the highland plateau Christian Amharas (Kebede, 1979–80; Kimberlin, 1976; Shelemay and Jeffery, 1994–7). Brief projects in southern Ethiopia among the Dorze and Hamar peoples are published as recordings with notes by Bernard Lortat-Jacob (1994) and Artur Simon (1970–76). In addition, a diverse, if sparsely documented, sampling of a broad array of Ethiopian musics has been recorded ranging from polyphonic love songs of the Gidolé people to songs performed at Emperor Haile Selassie's 80th birthday celebration by members of the Burgi and Borana tribes.

II. Orthodox church music

1. Introduction. 2. Oral, written and aural sources. 3. Music theory. 4. Notation. 5. Performing practices.

1. Introduction. The Christianization of Ethiopia can be dated to the conversion of Emperor 'Ezānā in about 332 CE by Frumentius (*c*300–*c*380), who was consecrated

by the Alexandrian Patriarch Athanasius as the first bishop of Aksum, the capital of the early Ethiopian kingdom. The Ethiopian Orthodox Church continued to depend upon Alexandria for the appointment of its patriarch until 1950, and for this reason it is sometimes confused with the Coptic Church of Egypt (*see* COPTIC CHURCH MUSIC).



From earliest times the Ethiopian Christian tradition has been distinctive in its use of its own liturgical language, Ge'ez, and in its largely indigenous liturgical and musical practices. Early unidentified sources introduced Judaic customs, such as the observance of the Saturday Sabbath, and the expansion of the Ethiopian Church and its traditions were also influenced by the arrival of Syrian Monophysite monks after the Council of Chalcedon in 451. Although the paucity of written sources obscures much of the early history of the Ethiopian Church, indigenous royal chronicles and hagiographies detail a process of expansion and consolidation beginning in the late 13th century. A period of intense creativity and conflict during the reign of Emperor Zar'ā Yā'qob (1434–68) was followed by the near destruction of the Church during a devastating Muslim invasion of Ethiopia from 1529 to 1541. Only in the late 17th century did the Church rebound for a renewed period of growth emerging from the new capital at Gondar. The first half of the 20th century saw the shift of church administration and education from rural monasteries to urban institutions, most notably in the modern Ethiopian capital, Addis Ababa. The revolution of 1974, which overthrew the monarchy closely associated with the Church, set in motion a series of political changes that resulted in the establishment of Ethiopian Orthodox churches in diaspora communities, as well as the founding of a separate Church in Eritrea, which became independent from Ethiopia in 1993.

The following describes the musical practices of the Ethiopian Orthodox Church as constituted historically and maintained through the years of the revolution within Ethiopia. It does not include the music of non-Orthodox Churches that were established through missionary activity in Ethiopia from the mid 19th century, nor innovations that can be seen in individual diaspora churches or different locales.

2. ORAL, WRITTEN AND AURAL SOURCES. The Ethiopian Christian sacred musical corpus, termed *zēmā* ('pleasing sound', 'song' or 'melody'), is attributed in traditional written and oral sources to the divine inspiration of St Yārēd, a holy man said to have lived during the reign of Emperor Gabre Masqal, variously dated between the 6th and 9th centuries. Yārēd is credited with conceiving the Ethiopian Christian musical system, composing the chants and organizing them into service books. While the Ge'ez texts of the Ethiopian liturgy were written down in manuscripts from an early date, liturgical performances were largely sustained through the oral tradition. Even following the innovation of a notational system by two 16th-century musicians, Azzaj Gērā and Azzaj Rāgu'ēl, in an effort to preserve the musical tradition in the wake of the Muslim conquest, most highly trained church musicians, *dabtarā*, continued to transmit Ethiopian chant orally. By the late 20th century the informal circulation of cassette recordings was widespread within Ethiopia; the few published recordings by foreign ethnographers serve to document the chant tradition.

The Ge'ez liturgy of the Ethiopian Church is still transmitted by parchment manuscripts and through printed books, which are facsimiles of 20th-century manuscripts, distributed by the Church. The book known as the *qeddāsē* contains texts and musical notation for the Eucharist, including 14 different Anaphoras, which combine some materials borrowed from other Churches with locally composed texts. The *zemmārē* contains chants sung during Communion in honour of the Eucharist. The liturgy is intoned by the priest, *qēs*, while the *zemmārē* are elaborate chants sung by *dabtarā* trained in their performance. The main musical corpus of the Ethiopian Church is a group of chants divided among several different service books and performed at the non-monastic or Cathedral Office before the Eucharist on Sundays and holidays. On Sundays and festivals, the *deggwā* is the primary service book (fig.1), while chants for Lent are collected in the *ṣoma deggwā*. Some *deggwā* portions for annual fixed feasts are collected in a book called the *ziq*. Other books contain special chants: for example, 'responses' for major annual holidays and funerals are found in the *mawāse'et*; and 'chapters' from psalms that constitute the Common of the Office appear in the *me'erāf*.

The chants from the various books can be classified according to nearly two dozen types termed 'portions'; these fall into three rough categories in which musical and liturgical characteristics overlap. To summarize, one category includes three types of portion that serve as 'model melodies' and which are memorized by student *dabtarā* at night, without notation. Portions of a second category are related by the same incipit, or *bēt* ('house'), and some are associated with various numbers of repetitions of the word 'halleluyā' or with a psalmodic refrain. Members of the final group are not united by melodic model or by *bēt* but are used regularly with

1. *'Ge'ez zēmā' from an Ethiopian 'deggwā' (for a transcription see ex.1)*

certain psalms or canticles from which they derive their names and sometimes melody.

While most Ethiopian texts are prose, there is also a genre known as *qenē*, consisting of improvised, rhymed poems of various lengths. The singing of *qenē* requires considerable expertise in complex metrical structures; some *dabtarā* undertake years of special training to acquire this skill.

Several foreign historical and ethnographic sources contain transcriptions of Ethiopian Christian melodies and rhythms from the oral tradition (see Velat, 1966; and Shelemay and Jeffery, 1994–7).

3. Music theory. Ethiopian *dabtarā* recognize and discuss three categories of melody, or *selt* ('mode', 'manner', 'device', 'liturgical chant'), named *ge'ez*, *'ezl* and *arārāy*. *Ge'ez zēma* (ex.1) is the most frequently used and is characterized by frequent vocal slides (*rekrek*) and a background pitch set consisting of a series of 3rds, the size of which vary and which are frequently embellished by neighbouring tones. *Arārāy zēmā*, called the 'daily *zēmā*', is commonly heard and is perhaps most easily recognized by its high tessitura (ex.2*a*). *'Ezl* (ex.2*b*) is associated with annual holidays and is exclusively used during Holy with a variable 3rd degree (C–D–E/F–G–A). The identity of the pentachord is often blurred by the variable intonation of the 3rd degree and the interval formed by the 2nd and 3rd degrees (D–F and D–E respectively), which falls between the two Western intervals.

All three categories of melody are characterized by what may be called, following terminology in Ethiopian secular culture, the *malāsh* ('returning tone'), a pitch that is reiterated at phrase endings and cadences. While any of the three pitches from the series of 3rds may serve as the *malāsh* for a *ge'ez* melody, the unembellished middle 3rd is often used as the final at the end of phrases or the final cadence of a chant. The *malāsh* for *'ezl* and *arārāy* examples can only be determined in the context of the performance of an entire portion and often requires the confirmation of the notational sign for a cadence (*anber*), since the typical cadential gesture of a descent and return of a minor 3rd can occur at two places within any given form of the pitch set. Finally, the traditional account of the life of St Yārēd gives rise to metaphorical associations linking *ge'ez* with the Father, *'ezl* with the Son and *arārāy* with the Holy Spirit.

The rhythmic aspects of the Ethiopian Christian musical system are articulated primarily in conjunction with training *dabtarā* to play instruments that accompany the *deggwā* and associated liturgical dance. While a full understanding of time organization in the Ethiopian liturgical tradition awaits a careful ethnographic investigation of dance and associated instrumental usage, it appears that rhythm is conceived as a series of short, named patterns of different lengths, most of which can be played at different rates of speed (for a brief description and transcription of drum rhythms, see Furioli, 1982–3, and Shelemay, 1986).

4. Notation. The notational signs used in Ethiopian church music, first seen in manuscripts of the late 16th century, are of four types. The largest category includes over 650 linear signs, known as *melekket*, each consisting of one or more characters of the Ethiopic syllabary. A *melekket* constitutes an abbreviation of a word or phrase (*serāyu*) drawn from the liturgical source text with which a short melodic unit or phrase is commonly associated. Only when notating a portion containing the liturgical source text for a given sign would the word *serāyu* or its abbreviation – usually *-yu* or *-rāyu* – be substituted for the *melekket*. The *melekket* are divided into three categories, one each for melodies of the *ge'ez*, *arārāy* and *'ezl*.

The three other types of sign include the *yafidal qers*, the *bēt* and the *halleluyā* numbers. Most of the approximately one dozen *yafidal qers*, termed 'conventional signs' by Velat (1966), are not derived from the Ge'ez syllabary and prescribe aspects of articulation, continuity, motion and vocal style. The *bēt*, abbreviations from the syllabary drawn from the incipits associated with certain model portions (see above, §2), are placed in the margins of

Ex.1 Transcription of *qe'ez zema* from an Ethiopian *deggwa*

Ex.2

(a) Transcription of *arārāy zēmā*

(b) Transcription of *'ezl zēmā*

manuscripts. Finally, numbers are placed before portions preceded by the word 'halleluyā', indicated by the number of times that word should be repeated. The melodies of the *halleluyā*, since they precede most of the model portions, are also linked to a governing *bēt*. To be able to perform a given portion from notation, however, requires a deep knowledge of the entire liturgy as an oral tradition.

5. Performing practices. After years of studying the Ge'ez language and liturgy, an Ethiopian church musician is trained at a *zēmā bēt* ('chant house') where he learns chant melodies, the *melekket* and liturgical dance. Although in the past there were several distinct vocal stylesassociated with and named after prominent northern monasteries where *dabtarā* were trained, notably, Bethlehem, Qoma and Achaber, by the late 20th century the Bethlehem style was considered to be the most cosmopolitan and is used in most major Ethiopian churches and church schools. A comparative transcription of these three styles is given in ex.3.

Similarly, instrumental accompaniment and dance mentioned in the earliest extant description, designated by the term *aqqwāqwām*, are still sustained with some regional variations (see Harrison, 1973, p.51). Instruments include a cylindrical kettledrum (*kabaro*), the hand-shaken metal sistum (*ṣanāṣel*), and a prayer staff topped with a T-shaped tang-cross (*maqwāmiyā*) that is both

Ex.3 Comparative transcription of the first *melekket* in *ge'ez zēmā*, as performed by three different *dabtarās* from the Bethlehem (B), Qoma (Q) and Achaber (A) styles

2. *Priests with percussion instruments used in Ethiopian liturgical music: maqwāmiyā (prayer stick), kabaro (kettledrum) and ṣanāṣel (sistrum): wall painting in the church of Maria Zion, Aksum*

waved in the air and pounded on the ground (fig.2). Liturgical dance is performed by two lines of Ethiopian *dabtarā* facing each other, with a *kabaro* player at each end. When performed in a liturgical setting on a Sunday or holiday, many portions are first sung as plainchant (*qum zēmā*) and then repeated several times with different combinations of instrumental accompaniment and dance at increasingly faster rates of speed. When celebrating a ritual in a traditional Ethiopian church, musicians perform in the outermost of the three concentric ambulatories, a space called the *qenē mahlat* ('place of *qenē*').

Ethnochoreology. The study of dance in contexts outside the western world.

1. The study of dance. 2. A structured movement system. 3. Studies and their histories. 4. Ethnochoreological approaches.

1. THE STUDY OF DANCE. Although Western dance and its music have made inroads into the performing arts of even the most remote corners of the world, the indigenous movement traditions of most nations continue to flourish, and indeed continue to influence dance in the West. Studies of dance in the non-Western areas of the world are not usually carried out by typical dance historians, who generally have specific ideas about what dance is and how it should be studied; rather, they are usually carried out by ethnochoreologists who have backgrounds to appreciate and understand movement in the larger scheme of cultural forms, and by indigenous researchers who work on the movement systems of their own cultures as well as other dance traditions, including ballet and modern dance. The differences in approach are similar to differences in approach of musicologists and ethnomusicologists. Although some researchers in both sound and movement claim there are no differences in approach, musicologists and dance historians are apt to look at the subject from the point of view of their own cultural history, focussing on sound and movement themselves rather than as integral parts of a total way of life. Ethnochoreologists, on the other hand, feel that sound and movement are not transparent and do not yield their secrets to the uninitiated. These differences in approach derive in part from the Western idea that most dances and musics are part of entertainment, whereas in the non-Western world that is not usually the case.

Recent trends in the study of dance suggest that the terms 'Western dance' and 'non-Western dance' perpetuate a false dichotomy; a focus on who studies the dances and their points of view might be more appropriate. This article will focus on ethnochoreological approaches and their histories. Some studies result from turning the anthropological eye upon 'ourselves' while some use

insights from dance history to explore the 'other'. Dance history work may be informed by anthropological theory (e.g. Foster, 1986) or anthropological study may be informed by dance history (e.g. Novak, 1990). Studies of performance may be informed by both (as in Drewell's work on African dance and her study of the Rockettes). Similarly, Hopi dance and ballet have both been considered as ethnic dance (Keali'inohomoku 1969–70), and a ballet-dancer has written a general book on ethnochoreology (Royce, 1977).

Most ethnochoreologists agree that movement researchers must take into account that composers, dancers and audiences are made up of historically placed individuals with culturally specific backgrounds and that it is necessary to examine how these individuals learn to interpret how they move and what they see. They feel that the notion that dance is a universal language is still too common, and object to the idea that outsiders can understand body movement without knowing the cultural-movement language. In short, they believe that it is necessary to understand a culture in order to understand its movement traditions. On the other hand, many dancers and researchers in the non-Western world feel that ballet and modern dance are movement languages that can be (and have been) adopted universally.

2. A STRUCTURED MOVEMENT SYSTEM. Cultural forms that result from the creative use of human bodies in time and space are often glossed as 'dance', but the word itself carries with it preconceptions that mask the importance and usefulness of analysing the movement dimensions of human action and interaction. Dance is a multi-faceted phenomenon that, in addition to what we see and hear, includes the 'invisible' underlying system, the processes that produce both the system and the product, and the socio-political context. In many societies there were traditionally no categories comparable to the Western concept, and the word 'dance' has been adopted in many languages. Movement analysis from an ethnochoreological point of view encompasses all structured movement systems, including those associated with religious and secular ritual, ceremony, entertainment, martial arts, sign languages, sports and games. What these systems share is that they result from creative processes that manipulate (i.e. handle with skill) human bodies in time and space. Some categories of structured movement may be further marked or elaborated, for example, by being integrally related to 'music' (a specially marked or elaborated category of structured sound) and text.

Analyses that would make it possible to separate movement systems conceptualized as dance and non-dance according to indigenous points of view (or even if there are such concepts) have not yet been carried out in many areas. Most researchers simply use the term 'dance' for any and all body movements associated with music, but it should be remembered that this is a Western term (as is 'music').

Structured movement systems are systems of knowledge – the products of action and interaction as well as processes through which action and interaction take place – and are usually part of a larger activity or activity system. These systems of knowledge are socially and culturally constructed – created by, known and agreed upon by a group of people and preserved primarily in memory. Though transient, movement systems have structured content. They can be visual manifestations of social relations and the subjects of elaborate aesthetic systems, and may assist in understanding cultural values and the deep structures of society. An ideal movement study of a society or social group analyses all activities and cultural forms in which human bodies are manipulated in time and space; social processes that produce them according to the aesthetic precepts of a specific group of people at a specific point in time; and the components that group or separate various movement dimensions and activities projected into kinesthetic and visual forms. Indigenous categories define most satisfactorily these movement systems. Discovering indigenous views on the structure and content of movement systems, as well as creative processes, movement theories and philosophies, is difficult but necessary for understanding culture and society.

In order to be understood as dance, movements must be grammatical: they must be intended and interpreted as dance. The grammar of a movement idiom, like the grammar of any language, involves structure, style and meaning. It is necessary to learn to recognize the movements that make up the system, how they can vary stylistically, and their syntax (rules about how they can be put together to form motifs, phrases, larger forms and whole pieces). Competence to understand specific pieces depends not only on movement itself but on knowledge of social and cultural context.

Specially marked or elaborated movement systems result from creative processes that manipulate human bodies in time and space so that movement is formalized and intensified in much the same manner as poetry intensifies and formalizes language. Often the process of performing is as important as the cultural form produced. These specially marked movement systems may be considered art, work, ritual, ceremony, entertainment or any combination of these depending on the society and context. A person may perform the same or a similar movement sequence (consisting of grammatically structured movement motifs) as a ritual supplicant, as a political act, as an entertainer or as an ethnic identity marker. Thus, the same movement sequence may be meant to be decoded differently if performed for the gods, for a human audience or as a participant for fun; and it may be decoded differently depending on an individual's background and understanding of a dance idiom itself, as well as the particular performance and the beholder's mental and emotional state at the time.

Grammatically structured human movement may convey meaning by mime, dramatic realism, storytelling, metaphor or with abstract conventions. The movements may constitute signs, symbols or signifiers, in any combination. Essentially, movements are cultural artefacts that convey the idea that these movements belong to a specific culture or subculture or that a specific type of movement is being activated for a particular purpose. Movement sequences may be audience-orientated to be admired as art or work, they may be participatory to be enjoyed as entertainment or as markers of identity, they may make political or social statements, bring religious ecstasy or trance, or be performed as a social duty. Movements given by the gods and ancestors may be perpetuated as cultural artefacts and aesthetic performances even if their meanings have been changed or forgotten as reference points for ethnic or cultural identities. Although dances tell stories, especially on a superficial level, there are texts and subtexts, narratives and nuances, artistry and aesthetics, in every movement tradition.

3. STUDIES AND THEIR HISTORIES. There are historical differences between European, American and other indigenous traditions in regard to ethnochoreological studies of dance: the European tradition derived from comparative musicology and folklore studies, the American tradition primarily from the anthropological perspectives of Franz Boas, and traditions in other parts of the world from historical written accounts, oral traditions and colonial encounters. In recent years, however, owing to meetings of the ethnochoreological study group of the International Council for Traditional Music (ICTM), more understanding of the variety of perspectives has developed together with a sharing and adoption of each other's views. European contributions to dance study have been detailed from the later 19th century and its post-Romantic interest in rural people and peasants (Lange, 1979–80). Folk-dances were often described and recorded with the aid of questionnaires focussing on the choreological products and the migration of these products into urban settings. The aims of European studies were classification, definition of local and regional styles, historical layers and intercultural influences – similar to the aims of musical folklorists – and Lange notes that 'the comparative method was primarily used' (1979–80, p.20). The European focus on dance structure goes back to studies of Hungarian dance by Martin and Pesovar (1970) and was elaborated and systematized by a group of scholars under the aegis of the International Folk Music Council (now ICTM) which published their syllabus in 1975. Work on structural analysis is still undertaken by the ICTM Ethnochoreology Study Group (Torp, 1990; Nahachewsky, 1993; Giurchescu and Bloland, 1995). British perspectives include derivations from folk music and folklore (Buckland, 1991) and social anthropological perspectives (Spencer, 1985), including those elaborated by John Blacking and Andrée Grau on the nature of dance cross-culturally based on the 'thinking moving body' (Grau, 1993, p.24).

In America, those engaged in ethnochoreological studies – usually termed 'dance ethnology' or the 'anthropology of human movement' – debate issues similar to those of ethnomusicology: that is, what constitutes ethnochoreology or ethnomusicology and whether these disciplines should be primarily about movement and musical products or should incorporate anthropological theories on processes, events, ethnoaesthetics and cultural constructions in relation to structured sound and movement. As American ethnochoreologists have traditionally worked with movement traditions not their own, their research tends to be more diffuse and less detailed in movement content. Their aim is to understand a whole society and to illuminate how human movement, as part of activities and events, assists in understanding all societal dimensions.

An early proponent of ethnochoreology was Gertrude Kurath who noted that the ethnographic study of dance was 'an approach toward, and a method of, eliciting the place of dance in human life – in a word, as a branch of anthropology' (1960, p.250). Kurath, a dancer and art historian, was drawn into the study of Amerindian dance by William Fenton and Frank Speck to examine choreology in areas where they had already carried out ethnographic research. Recognizing that movement or 'dance' was an important part of ritual activity in Amerindian life, they looked for someone who would be able to describe, analyse and make sense of the movements. They had already collected data on the 'context', and Kurath's task was to assist them in gathering empirical data about choreographic groundplans, body movements and cultural symbolism as reflected in choreographic patterns.

A pioneer of empirical, product-orientated studies in America, Kurath's colleagues in Europe included Curt Sachs, (whom she called 'the amiable wizard') as well as folklorists and musicologists working within their own cultural traditions and focussing primarily on systemization, classification and diffusion. Kurath used European sources, many of which were tied to theoretical notions about evolutionary cultural stages and German *Kulturkreis* diffusion theory. She was also interested in comparisons and often drew them from European folk-dance traditions, such as studies by Danica and Ljubica Jankovic of South Slav populations. Kurath echoed her European colleagues in her interest in choreology as the science of movement patterns which involved the breaking down of 'an observed pattern in order to perceive the structure' and the 'synthetic process of choreosocial relationships' which could be used for 'attacks on space and time' involving 'area study, intrusion and diffusion and problems of change' (1956, pp.177–9). Most of Kurath's publications, however, are descriptions of specific dance occasions, with detailed information on costumes, musical instruments, ground plans, postures, gestures and steps, with some analysis, comparisons and context.

One of the founders of anthropology in the USA was FRANZ BOAS who, although he came from a German scientific tradition, rejected many of the ideas of his homeland, focussing instead on cultural variability. He rejected universal languages of art or dance and provided the foundation for the examination of dance and responses to it within individual cultures. Intellectual descendants of this tradition can be traced from Boas, through Herskovits and Merriam (an important anthropological voice in American ethnomusicology) to Keali'inohomoku and Royce. The Boasian and Herskovitsian emphasis on cultural relativism was widespread in America and was elaborated by proponents of ethnoscience in the 1960s. Boas's view that 'if we choose to apply our [Western] classification to alien cultures we may combine forms that do not belong together. . .. If it is our serious purpose to understand the thoughts of a people, the whole analysis of experience must be based on their concepts, not ours' (1943, p.314) was combined with Malinowski's concept that our goal should be 'to grasp the native's point of view, his relation to life, to realize *his* vision of *his* world' (1922, p.25). Added to this was Kenneth Pike's dictum that we should 'attempt to discover and to describe the pattern of that particular language or culture in reference to the way in which the various elements of that culture are related to each other in the functioning of the particular pattern' (1954, p.8). From Pike came the 'etic/emic' distinction; 'emic criteria savor more of relativity, with the sameness of activity determined in reference to a particular system of activity' (1954, p.11). It is these theoretical bases that still inform the work of most ethnochoreologists.

These Boasian empirical traditions, when combined with acknowledgement of the importance of insiders' views, and theories of competence and performance taken from concepts of Saussure and Chomsky, resulted in studies based on linguistic analogies. Using etic/emic distinctions derived by 'contrastive analysis', concepts were elaborated as ethnotheories and ethnoscientific structuralism. Movements and choreographies were analysed to find the underlying system. Systems, of course,

cannot be observed, but must be derived from the social and cultural construction of specific movement worlds. These systems exist in memory and are recalled as movement motifs, imagery and as system, and are used to create compositions that produce social and cultural meanings in performance. Such analyses involve deconstructing the movements into culturally recognized pieces and learning the rules for constructing compositions according to the system.

This type of analysis has been used primarily by anthropologists – Kaeppler on Tongan dance (1967, 1972); Rena Loutzaki on dance style among Greek refugees from northern Thrace (Bulgaria) now resident in Greece (1989); and Frank Hall, in a study of improvisation in American clog dance (1985). Concepts were adapted from Chomsky, Saussure, semiotics and 'semasiology' by Drid Williams, studying with British anthropologists, into a methodology concerned with the semantics of body languages in which the focus is on meaning. Like semiotics, which deals with communication and the doctrine of signs, semasiology is a theory and methodology based on 'action signs' that deal with the semantic content of human languages. According to Williams (1981, p.221), it is 'based on an application of Saussurian ideas to human movement and the result is a theory of human actions that is linguistically tied, mathematically structured and empirically based – but not "behaviourally-based". Semasiology is a form of semantic anthropology'. The methods of semasiology have been used by Brenda Farnell (1994) in her study of Plains Indian 'sign language' and by Rajika Puri (1983) to investigate the place of *haste mudra* in Indian dance as an expression of Indian society.

The psychobiological basis of dance and the ways in which human dance differs from the so-called 'dances' of other animals has been studied by Hanna (1979, 1988), working on gender communication and emotion. The representation of emotion in dance has been investigated by Loken-Kim (1990); examining sentiment terms used by Koreans to evaluate women's *salp'uri* dance and sentiment words used in first-person accounts of Korean women's lives, she explored the social construction of female gender.

In the Middle East, Al Farugi delineated aesthetic principles and examined how they were manifested in various cultural forms and how they might be applied to human movement (1978). She noted that, although dance is not considered an art form in this area, human movements express the same aesthetic evaluative concepts as other Islamic visual arts, such as architecture. Beginning with the overall aesthetic principles of abstract quality and modular form, she elaborated five aesthetic concepts appropriate for an examination of human movement – non-programmatic, improvisation, emphasis on small intricate movements, serial structure and mini-climaxes.

What makes movement studies anthropological is the focus on system, the importance of intention, meaning and cultural evaluation. Anthropologists are interested in socially constructed movement systems, the activities that generate them, how and by whom they are judged, and how they can assist in understanding society. While some anthropologists, such as Cowan (1990) and Schieffelin (1976), choose not to get involved in movement detail but focus primarily on context and meaning, others, such as Farnell and Kaeppler, combine detailed attention to the movement itself with the historical, social and cultural systems in which the movement is embedded. Farnell's work on Plains Indian sign language focusses on the movements of the signing tradition, the stories told and the culture they express (1994). The ritual non-Christian basis of a modern Hawaiian dance genre with the underlying theme of how tradition is negotiated to make it appropriate for its time is the focus of Kaeppler's monograph on Hawaiian *hula pahu* (1993). Other anthropological concerns include Cartesian mind/body dualism (Varela, 1992), martial arts (Lewis, 1992), iconography (Seebass, 1991), tourism (Sweet, 1985), and urban multiculturalism (Ness, 1992). In short, the aim of anthropological works is not simply to understand dance in its cultural context, but rather to understand society through analysing movement systems.

In contrast to anthropological studies of dance, the focus of dance ethnology is often on dance content; the study of the cultural context aims to help illuminate the dance. For example, research on the court context of the Javanese Bedhaya is brought to bear on understanding the dance (rather than research on the Bedhaya in order to understand the Javanese court). Events within which dances occur and the syncretism of Christian and pre-Christian movements from which they are composed are dealt with in Allegra Fuller Snyder's work on Yaqui Easter ceremonies; in addition, her cross-cultural emphasis and work on dance symbolism (1974) are important ethnological concerns which deal with cultural identity (1989). Elsie Dunin's extensive work on Balkan dance carried out in the Balkans, California and Chile focusses on movements and choreography, showing how these persist or change over time in their area of origin and when they are transplanted, as well as the events in which they occur (1987, 1988, 1989). Although grounded in the work of Ivancan and the Jankovic sisters, Dunin's studies are part of an overall concern with ethnicity and ethnic identity. This concern has also been addressed by Judy van Zile who studied the transplantation of Bon dance traditions from Japan to Hawaii (1982). Van Zile has also carried out research on historical aspects of Korean dance movement and has done extensive work on Labanotation and its application to non-Western movement systems. In his work on Newfoundland traditions and North American step-dancing Colin Quigley (1985) raises the important issue of expressive identity in diverse dance cultures within the pluralism of American society, investigating how and why distinctive traditions are perpetuated and/or changed through contact with other cultural worlds. Concerns with ethnic identity, minority status and gender, as well as concepts of body, self and personhood are topics receiving attention within dance ethnology. In these studies, the social relationships of the people dancing are placed in the background while the dance itself and its changes over time are brought into the foreground. Beyond Europe and America, dance researchers from the rest of the world have undertaken numerous studies of their own traditional dances and those of others. For instance, dance has been an academic subject at the University of Ghana since 1962 and several these have been written by African scholars. At the School of Performing Arts at Hong Kong the three–part curriculum includes ballet, modern and Chinese dance. The Japanese scholar Kimiko Ohtani has researched dance in Japan, Okinawa and India. Korean scholars have researched their own dances, with their basis in Shamanism and Buddism as well as ballet and modern dance. Kapila Vatsayan has published extensively on Indian dance and

culture, while Nina de Shane, a Mohawk Indian, has worked on the political importance of dance to ethnic identity. Arzu Öztürkman has worked on dance and nationalism in her native Turkey. Indonesian scholars including I Made Bandem, Soedarsono, Sal Murgiyanto and I Yayan Dibia have done extensive research on dance traditions of their own culture as well as elsewhere in Indonesia and beyond. The research of Mohd Anis Md Nor in his native Malaysia, Amy Ku'uleialoha Stillman on Hawaiian dance, Kauraka Kauraka and Jon Jonassen on Cook Island dance, Maria Susana Azzi on Argentine tango, and many others suggests that the importance of dance to political and national values, as art, and as markers of ethnic and cultural identities has only begun to be realized.

4. ETHNOCHOREOLOGICAL APPROACHES. Ethnochoreological approaches that have been used to comprehend the multi-faceted phenomenon of dance include analyses of the following:

Structured movement systems. Analysis of movement dimensions of larger activities to discover how a society conceptualizes movement and concepts about the body through which movement takes place.

Social. Analysis of social contexts in which activities take place, who performs them, and their roles in ethnic and cultural identity.

Deep and surface structures. Analysis of structured movement systems to understand the underlying cultural philosophy and how it is manifested in other cultural forms.

Events. Analysis of an event to find the place that dance and other structured movement systems play within it, also taking into account circumstances leading up to it and decision-making about dances.

Structure. Analysis of the structure of a movement system using linguistic analogies to derive kinemes and morphokines (or similarly termed pieces of movement) comparable to phonology and syntax/grammar in spoken language analysis.

Motifs. Identification of important motifs within a movement system is probably the most important step in the analysis of dance structure. Motifs are grammatical sequences of movement that combine smaller movements in characteristic ways and are verbalized and recognized as motifs by dancers, composers and audience members.

Choreography. Ordering of motifs simultaneously and chronologically is the process of choreography; a dance can be analytically broken down or built up from its component parts.

Local genre categories. Analysis of the 'folk taxonomy' of culturally recognized dances within a specific culture to discover how categories differ from each other and non-dance systems of movement.

Energy. Analysis of how much and what kind of energy is expended and if the product is intended to look energetic or energyless.

Aesthetics. Like other cultural forms, movement is evaluated by participants and audiences, and the researcher should attempt to discover indigenous way of thinking about and evaluating movement in general and dance in particular.

Music and text. Music (structured sound) and spoken-/written texts accompany texts that should be examined and analysed.

Ethnohistory. Analysis of ethnography in historic perspective using sources such as illustrations, historical writings and oral histories to understand the history of movement forms and possibly reconstruct them.

Continuity and change. Analysis of how movement systems have changed over time and the development of frameworks for the analysis of change.

Theory and ethnotheory. Important in the study of human movement systems is the study of movement theory and philosophy of movement from the point of view of the society in which the movement takes place. The use of Western dance theory for analysis of non-Western dance is inappropriate, and a researcher must attempt to discover indigenous theories about movement. How did the structured movement systems originate? Are they codified into genres? How and by whom can dances be composed? How can (and cannot) movements and postures be combined? Is there a vocabulary of motifs and a grammar for their use? Are there notions about energy and how it should be visually displayed? On the basis of movement, can dance be separated from ritual? And more basic still, does a culture or society have such concepts?

Relationship of movement to emotion, ritual and art. Analysis of movement as a form of affective culture and how it can generate changes in attitude or feeling. Related questions concern whether dance or other movements are considered 'art' by the society under study, and if ritual movements are the same or different from dance movements.

Style. Analysis of the core characteristics of a movement tradition and ways of performing should lead to the definition of style. Or conversely, a stylistic analysis should lead to the definition of core characteristics and ways of performing movement motifs and putting them together.

Composition/choreography and improvisation. Choreography is generated according to rules and it is necessary to explain what these rules are. Improvisation is a kind of instantaneous choreography and consists of the spontaneous ordering of culturally acceptable or grammatical movement-units or motifs (rather than the generation of new movement units). Who does the choreography and what is the social status of such individuals?

Teaching methods and learning. Teaching and learning vary greatly from culture to culture. In some areas children learn primarily by copying adults, while in other areas a student's body may be physically manipulated by the teacher.

Performing spaces, clothing and properties. Analysis of where dances are performed and how clothing and properties influence movement reveals cultural constructs.

Outsider's point of view. Although ethnochoreologists usually focus on insiders' points of view, an analysis of the views of outsiders may serve to identify patterns of movement that are taken for granted by an insider. Such patterns are useful for analysing dance and its associations with other cultural manifestations, noting similarities and differences between choreographers and drawing attention to movement patterns of neighbouring and more distant social groups.

Movement and meaning. Perhaps most difficult is the analysis of meaning of specific movements and meanings of a movement system as a whole. Meaning is usually associated with communication. Concepts that can be usefully employed in this approach are those derived from Chomsky, based on competence and performance, and

Saussure, based on *langue* and *parole*. 'Competence' or knowledge about a specific dance tradition is acquired in much the same way as competence in a spoken language is acquired. Competence relates to the cognitive learning of the rules of a specific dance tradition as *langue* is acquired in a Saussurian mode. Competence enables the viewer to understand a grammatical movement sequence that he or she has never seen before. 'Performance' refers to an actual rendering of a movement sequence, *parole* of Saussure, which assumes that the performer has a certain level of competence and the skill to carry it out. A viewer must have communicative competence in order to understand movement messages.

Through these approaches and types of analysis ethnochoreologists derive their basic data. What they do with these data and how they are presented in publication varies widely. From such wide-ranging research and analyses, ethnochoreologists focus attention on movement content as well as social, cultural and political concerns such as gender, the body, ethnic, cultural and national identities, the negotiation of tradition, and turning the ethnochoreological eye on any society. It is often more productive to deal with only one, or a few, of these considerations at a time, and publications usually focus on specific aspects of human movement systems. In order to find the larger view as advocated here, it is necessary to read widely in the works of a dance scholar to see how various aspects of movement come into focus as part of a total cultural system.

ADRIENNE L. KAEPPLER

Ethnomusicology. The study of social and cultural aspects of music and dance in local and global contexts. Specialists are trained primarily in anthropology and in music, but the multidisciplinary nature of the subject leads to different interpretations.

I. Introduction

The origin of the term 'ethnomusicology' is attributed to the Dutch scholar Jaap Kunst (1950), who used it in the subtitle of his book *Musicologica: a Study of the Nature of Ethno-musicology, its Problems, Methods, and Representative Personalities* (Amsterdam, 1950). In European languages it is equated with French *ethnomusicologie*, Italian *ethnomusicologia*, German *Ethnomusikologie* or *Musikethnologie* and Polish *etnografia muzyczna*. The term 'ethnomusicology' has also been adopted by specialists in the Czech Republic and Slovakia and the Netherlands. In Germany and Austria some scholars continue to use the phrase *Vergleichende Musikwissenschaft* ('comparative musicology') to stress affiliation with the work of Stumpf, Hornbostel (Berlin) and Lach (Vienna) (see Wiora, 1975, Graf, 1974). Russian, Bulgarian and Ukrainian scholars distinguish *etnomuzïkal'naya* (the study of the music) from *etnografiya muzïkal'naya* ('musical ethnography') in turn equated with *muzikal'naya fol'kloristika*. Since the early 1980s, the term *minzu yinyuexue* has been adopted in China to denote 'ethnomusicology' (*see* China §I). There are regional interpretations of the term. For instance, in Indonesia, both Western scholars and indigenous scholars trained in the West equate ethnomusicology with the study of Indonesian art music, while for scholars in the Academy of Central Java it is used to denote the study of the music of other Indonesian islands.

Historically ethnomusicology has been a scholarly discipline primarily within universities in the USA, Canada and Europe (see §II). Its specialists are trained in music or in anthropology, sometimes in both. Research is undertaken in university departments of music or anthropology, in ethnographic museums and in research institutes of national academies of science, found particularly in Eastern Europe. As the following survey of musical activities illustrates (§II below), a multitude of musical research was being undertaken by a range of people from many Western countries prior to World War II including ethnologists, anthropologists, sociologists, comparative musicologists, folklorists, psychologists, physicists, missionaries, clerics, explorers, civil servants and enthusiasts, forming multiple influences both inside and outside the academy that affected contemporary thinking. This melting pot includes distinctive figures who have been simultaneously co-opted into the lineages of different disciplines. Ethnomusicologists and scholars in Folk Life Studies or Folkloristics, for instance, lay equal claim in their disciplinary ancestry to the English folksong collector CECIL J. SHARP (*see also* FOLK MUSIC, ENGLAND, §II), the American CHARLES SEEGER or the Hungarians BÉLA BARTÓK and ZOLTAN KODÁLY, despite these individuals' own perceptions of their affiliations.

Similarly, a single geneological line is difficult to create for any single country, since these will vary individually according to a combination of personal interest and professional and cultural orientations. For instance, the myth of origin of the American discipline may be projected back to 'founding fathers' such as ERICH MORITZ VON HORNBOSTEL (1877–1935), who taught a heady interdisciplinary mix of music psychology, comparative musicology and music ethnology (*Musikalische Völkerkunde*, *Musikethnologie*) in Berlin supported by his mentor CARL STUMPF; FRANZ BOAS (1858–1942) who, after moving to North America from Berlin in the 1880s, established fieldwork as a prerequisite of American anthropology and through his students influenced the anthropological strand of ethnomusicology; to GEORGE HERZOG (1901–84), Hornbostel's student, who moved to Columbia University to study anthropology with Boas and established a consistent methodology for comparative musicological study and archival work; Charles Seeger (1886–1979) with his interest in vernacular musics and linguistics; and eventually to the musicological methods of MANTLE HOOD and the anthropological methods of ALAN P. MERRIAM which exacerbated the theoretical and methodological 'great divide'. Alternative lineages might point to the work of 'founding mothers', such as Alice Cunningham Fletcher (1838–1923), who collaborated with the Omaha Indian Francis La Flesche (1857–1932) throughout her life, and Frances Densmore (1867–1957), author of over a dozen monographs on different Amerindian groups. Or they might draw upon figures from different disicplines relevant to the multiple approaches that have traditionally contributed to our understanding of music, such as MUSICOLOGY, sociology, social and

cultural anthropology, linguistics, psychology, folklore, political science and economics.

In Britain, the 'father of Ethnomusicology' is perceived generally as the British physicist and phonetician, ALEXANDER JOHN ELLIS (1814–90) who suggested that 'acoustical phenomena' should be studied by scientists rather than musicians, since those who had been trained in particular musical systems tended to consider 'familiar' sounds as 'natural' (1885). That the conceptualization of music – the way we listen to and evaluate musical sounds – is not value free was later to be developed in the British context by JOHN BLACKING in his theories on music as 'humanly organized sound'. An anthropologist and ethnomusicologist from Cambridge is bound to point out the term 'fieldwork' was appropriated from natural science for anthropology by the ethnologist Alfred Cort Haddon, who led the 'Cambridge Anthropological Expedition to the Torres Strait' in 1898. This multidisciplinary project, which included the physician and musician Charles Myers and photographer Anthony Wilkin, was equipped with the high technology of the day: two phonographs with recording and playback facility, a cine camera, still cameras and a magic lantern projector. Recordings of music on wax cylinders, some of which were transcribed using Ellis's system of 'cents' (division of the equal-tempered semitone into 100 equal parts), are now housed in the British Library National Sound Archives in the UK (Clayton, 1996) and Australia. The film – the first piece of ethnographic film made in the field – which depicts dance sequences performed at re-enactments of the Malu-Bomai ceremonies – is now in the National Film Archives in the UK and the Australian Institute of Aboriginal and Torres Strait Islander Studies in Canberra. Several hundred field photographs including some of the masked dances of the Malu-Bomai cult are in the collections of the Cambridge Museum of Archaeology and Anthropology. The emphasis on direct field research on this expedition provided the basis for the development of intensive fieldwork as the essential methodology of British anthropology: 'the ethnographic method'. Haddon's evocative description of the dance emphasizes 'performance' and 'experience' both of which are very much to the fore in contemporary ethnomusicological writings. From these origins, then, the anthropological lineage proceeds through the theoretical developments of Bronislaw Malinowski's strategizing Trobriand performer constantly reshaping tradition, through Radcliffe-Brown's elucidation of the power of the Andaman Islanders' music and dance to act as a moral force on the indivual (1922) and the parallel developments in; comparative musicology (e.g. Fox Strangways, 1914) and folk music research (Cecil Sharp and his descendants) before proceeding through Hamish Henderson at the School of Scottish Studies and John Blacking who moved from Cambridge to Paris then Belfast.

In addition to cropping up in different disciplinary lineages, certain personages appear in the national lineages of the same discipline. For instance, CONSTANTIN BRĂILOIU who, following the Romanian Sociological School shaped by Dimitrie Gusti argued that music was indissolubly attached to social phenomena, is important for French, Romanian and Swiss ethnomusicology.

Not for the first time, ethnomusicology is faced with the need to reassess its perceptions of history (compare, for instance, the historical methodologies of §II and §III below), its subject matter, methods and ethics (see §IV). The subject matter of ethnomusicology has been constantly debated since its inception. Initially, it was perceived as all music outside the Western European art tradition and intended to exclude Western art and popular musics. It concerned itself with the musics of non-literate peoples; the orally transmitted music of cultures then perceived to be 'high' such as the traditional court and urban musics of China, Japan, Korea, Indonesia, India, Iran and other Arabic-speaking countries; and 'folk music', which Nettl (1964) tentatively defined as the music in oral tradition found in those areas dominated by high cultures. At the beginning of the 21st century, ethnomusicology embraces the study of all musics in local and global contexts. Concerned primarily with living music (including music, song, dance and instruments), recent studies have also investigated music history (Blum, Bohlman and Neuman, 1991). A discipline that first examined music 'in culture' (Merriam, 1964) and then 'as culture', and has had 'fieldwork' as integral to its methodology now presents both 'culture' and 'fieldwork' as problematics rather than givens (see §IV).

Since its inception, ethnomusicology has always seen connections between itself and other disciplines, as outlined above. It never fitted happily into the modernist dichotomization between 'us' and 'them'; the contemporary hot debate on whether musicology is part of ethnomusicology or vice versa therefore becomes irrelevant. Musicology is one of many theoretical and methodological interweaving strands in a discipline that recently moved in the West from concentrating on the traditional musics of the exotically removed 'other' to POPULAR MUSIC, both local and global, (e.g. Manuel, 1988; Waterman, 1990; Berliner, 1994; Mitchell, 1996; Schade-Poulsen, 1999), WORLD MUSIC (e.g. Keil and Feld, 1994) and Western 'art' music (e.g. Born, 1995); from traditional interdisciplinary relationships to contemporary interactions with disciplines such as cultural studies (e.g. Lloyd, 1993; Straw, 1994) and performance studies (e.g. Schechner and Appel, 1990; Schieffelin, 1994; Pegg 2001); and from homogeneous, structural and interpretive perspectives to those of experience (e.g. Rice, 1994; Blacking, 1995). Ethnomusicology as a discipline is not homogeneous and, clearly, is no longer confined to the West or to Europe. It is now well placed to take on board the diverse national ethnomusicologies represented in this dictionary which include those who recently emerged from the former Soviet Union, non-European scholars and musicians untrained in the Western system.

See individual country articles for details of national archives and histoires as well as entries on cultural regions, concepts, genres, instruments and individual musicians. See also ETHNOCHOREOLOGY; TRANSCRIPTION; NOTATION (§II); SOCIETY FOR ETHNOMUSICOLOGY (SEM); INTERNATIONAL COUNCIL FOR TRADITIONAL MUSIC (ICTM); and BRITISH FORUM FOR ETHNOMUSICOLOGY (BFE).

II. Pre-1945

1. Background. 2. Northern and western Europe. 3. Southern and eastern Europe. 4. North America.

1. BACKGROUND.

(i) Early sources. Western interest in non-Western music dates back to the voyages of discovery, and the philosophical rationale for the study of foreign cultures derives from the Age of Enlightenment. Jean-Jacques Rousseau

(1712–78) argued that music is cultural not natural and that diverse peoples would react differently to 'diverse musical accents'; his *Dictionnaire de Musique* (1768) includes samples of Swiss, Iranian, Chinese and Canadian Amerindian music.

As early as the 17th century Europeans, including missionaries, explorers and civil servants, made contributions to music research in the colonies, through references in diaries and monographs. Captain James Cook (1728–79) recorded careful descriptions of the music and dance of Pacific islanders (1784); the Swiss theologian Jean de Léry (1534–1611) wrote about Brazil in *Histoire d'un voyage faict en la terre du Brésil* (1578), which includes musical notation and describes antiphonal singing between men and women and dancers in elaborately feathered costumes. Jacques Cartier (1491–1557) observed Canadian Amerindian singing and dancing on his New World voyages (1534, 1535–6) and his crew entertained the Amerindians with 'trompettes et aultres instruments de musique' (Biggar, 1924).

The early literature is particularly rich in writings on Chinese music. The French Jesuit Jean-Baptiste du Halde (1674–1743) based his monograph, *Description géographique, historique, chronologique, politique et physique de l'empire de la Chine et de la Tartarie chinoise* (1735), on reports of Jesuit missionaries to China from the 16th century onwards. The French cleric Joseph Amiot (1718–93) served for some 60 years as a missionary in Beijing, where he wrote the pioneering study, *Mémoire sur la musique des Chinois tant anciens que moderns* (1779). The Irish-born Earl of MacCartney in 1793–4 led an embassy from the King of England to China, where he met with Father Amiot (1793–4; published, 1962). The party comprised 95 persons including a six-man German band that played for the Chinese on an assortment of string and wind instruments (supplied by the English musicologist Dr Charles Burney). The German theologian and music critic Gottfried Wilhelm Fink (1782–1846) published a monograph on Chinese and Hindustani music, *Einiges über die Begründungsweise* (1831). He also proposed an early diffusionist theory of European music (1831, *Erste Wanderung der ältesten Tonkunst*).

Francis Taylor Piggot, author of *The Music and Musical Instruments of Japan* (1893), spent years with Japanese musicians; his valuable treatise describes many aspects of Japanese musical life, some now obsolete. For the Arab world the Frenchman Guillaume-André Villoteau (1759–1839) worked at the request of General Bonaparte during the Egyptian campaign. In his three major works Villoteau discussed Arab folk and art music, the music of minority groups in Egypt from Asia, Europe, and sub-Saharan Africa and Ethiopian, Armenian and Greek music (1812, 1813, 1816). The French composer, Francesco Salvador-Daniel, lived in Algeria from 1853 to 1865; he combined eastern and western systems in his compositions and compared them in his essay, *La musique arabe, se rapports avec la musique grecque et le chant grégorien* (1863), in which he argued that Arab and Greek modes were similar, contradicting Villoteau's theory.

In modern times some ethnomusicologists have put these sources to good use, for example in the analysis of musical change. In her research on Tongan dance, Adrienne Kaeppler used the diaries of Captain James Cook's third voyage (1784) to confirm that the structures of the *me'etu'upaki* formal ceremonial dance survived relatively unchanged after the conversion of the T'ui Tonga chief to Christianity in the late 19th century and that the informal *me'elaufola* dance, for which Cook describes graceful hand and arm movements, was renamed *lakalaka* after conversion to Methodism (Kaeppler, 1970).

The writings of Mungo Park (1771–1806) provide evidence of stylistic continuity in African music. Imprisoned during his travels, he recorded observations in his diary about native song and dance, for example this passage about the women's songs of Bambarra, Niger (20 July 1796).

> They lightened their labour by songs, one of which was composed extempore; for I was myself the subject of it. It was sung by one of the young women, the rest joining in a sort of chorus. The air was sweet and plaintive, and the words, literally translated, were these. – 'The winds roared, and the rain fell. – The poor white man, faint and weary, came and sat under our tree. – He has no mother to bring him milk; no wife to grind his corn. *Chorus*. Let us pity the white man; no mother has he, &c, &c' (Park, 1799).

This passage describes some important features of African music; its integration with work and play, the predominance of leader–chorus form and the use of improvisation.

A useful anthology of early sources is given in Harrison (1972).

(ii) Scientific advances. Scientific investigation of non-Western music was made possible by the invention of the phonograph in 1877 by Thomas Edison. The phonograph facilitated fieldwork, offering pioneering comparative musicologists the possibility of playback from which to transcribe and analyse.

Scholars were quick to use the phonograph, recording many two- to four-minute samples of music on wax cylinders, which they added to their collections of instruments, photographs and notations made 'by ear'. The first field recordings were made by Jesse Walter Fewkes in 1890 among the Passamaquoddy Indians of Maine. In Hungary Béla Vikár (1859–1945) began recording in the field in 1896, and in Russia, Evgeniya Linoyova in 1897. The portable and convenient cylinder machine continued to be used in the field until the 1950s, even though more advanced technology, such as wire, and then tape recorders became available.

The English phonetician, Alexander J. Ellis (1814–90), an expert on the psychology of hearing and acoustics is often said, by English scholars, to be the father of modern ethnomusicology, and his publication 'On the Musical Scales of Various Nations' (1885), the first scientific and fair-minded appraisal of non-Western tuning systems, to mark the birth of the new study. Although he felt his hearing was faulty (or perhaps for this very reason), he devised the 'cents' system of pitch measurement, whereby the Western tempered semitone is divided into 100 cents, the octave into 1200 cents. The precision of his system allowed the objective measurement of non-Western scales. Musical scales, Ellis maintained, were the product of cultural invention and not based on natural acoustical laws. All musical scales were equally natural, hence equally good. The pronouncement he read before the Royal Society in 1885 is a credo for modern ethnomusicology, that 'the Musical Scale is not one, not "natural", nor even founded necessarily on the laws of the constitution of musical sound, so beautifully worked out by Helmholtz, but very diverse, very artificial, and very capricious' (p. 526). This finding brought into question the superiority of Western tempered tuning and led the

way to open-minded cross-cultural comparison of musical systems. It dealt a harsh blow to the pernicious theory of the 'contemporary ancestor' as applied to music, whereby so-called 'primitive' music was understood to represent an early phase in the evolution of European art music.

Ellis was assisted in his investigations by Alfred James Hipkins (1826–1903), specialist on temperament and pitch, of the Broadwood piano firm. This team measured the non-diatonic and non-harmonic tunings of Asian instruments, breaking precedent by testing in a performance setting rather than in the lab. They studied visiting Japanese musicians (1885), Central Javanese music during a gamelan appearance at the London Aquarium (1882) and Chinese court music at the International Health Exhibition (1884). In their findings they debunked the prevalent notion that pentatonic scales had developed in Asian cultures because of insensitivity to the subtleties of the semitone: 'It is found that intervals of three-quarters and five-quarters of a Tone, and even more, occur. Hence the real division of the Octave in a pentatonic scale is very varied'.

2. Northern and western Europe.

(i) Germany and Austria. Cylinder collections from colonial holdings steadily mounted in the archives of Berlin, Vienna and other European capitals. Most of these early recordings were made during ethnological fieldwork. Within the scientific climate of the late 19th century, with evolutionary theories spawned by Darwinians prevalent in the social sciences, this mounting body of data fueled the development of Vergleichende Musikwissenschaft ('comparative musicology').

Psychologists and acousticians of the Berlin Phonogrammarchiv, including Carl Stumpf (1848–1936) and Erich M. von Hornbostel (1877–1935), studied hundreds of cylinders recorded by German ethnologists in colonial territories from Africa to the Pacific. From analysis of this extremely limited and diverse material they posited ambitious theories about the distribution of musical styles, instruments and tunings. These included evolutionary schemes and later in the 1930s reconstructions of music history. This movement is often called the 'cultural-historical school'.

Carl Stumpf's landmark study 'Lieder der Bellakula Indianer' (1886), based on work with a touring group of Bella Coola Indians from British Columbia, is reckoned, by German scholars, to mark the birth of ethnomusicology as a scholarly discipline. Stumpf's pioneering ethnography deals with the repertory of an individual group, with a description of musical elements, including transcriptions in Western notation and a discussion of the relationship of Bella Coola music to its cultural context. One of Stumpf's assumptions was that the world's musics can be divided into individual units, each with its own system and rational.

The Berlin school produced many monographs, particularly by Stumpf's brilliant assistant Hornbostel, who, in his early writings, collaborated with Otto Abraham (1872–1926) whose special interest was psychology and absolute pitch. Many co-signed articles entitled 'Phonographierte . . . melodien', were appended to the great German ethnographies of the day, extended essays which dealt with the scales, tonal systems, and rhythms of the early cylinder collections. Marius Schneider (1903–82) and Mieczyslaw Kolinski (1901–81) assisted Hornbostel; and Curt Sachs (1881–1959), professionally trained in the history of art, joined with Hornbostel in their seminal classification for organology, *Systematik der Musikinstrumente* (1914). The Viennese scholars of this generation included Adler's successor Robert Lach (1874–1958), Richard Wallaschek (1860–1917), Siegfried Nadel (1903–56), Walter Graf (1903–82) and Albert Wellek (1904–72).

The aim of comparative musicology was to outline the historical and genetic relationships between the music systems of the world, based on evolutionary models and genetic classification in biology. Many scholars of comparative musicology had trained in the natural sciences and this orientation was the hallmark of their research: Hornbostel was trained in chemistry, Boas in physics and geography and Abraham was a physician. The comparative approach of other scholars, for example Ellis, originated in linguistics. Their writings demonstrate historical relationships between musical systems described in terms that are unacceptable in modern parlance, for example, the progression from 'simple' music to 'complex' and 'sophisticated' systems. This work presupposed a Eurocentric perspective posing such dichotomies as 'primitive' versus 'civilized' peoples.

Comparative musicology was relatively short-lived, lasting from around 1885 until the death of Hornbostel in 1935, even though the need to compare melodies from around the world to determine their age was introduced as early as 1863 by Friedrich Chrysander. Interdisciplinary in nature and world-wide in scope, this experimental field sought to explain the origins of music and its subsequent historical development in the broadest cross-cultural comparative terms. Using diffusionist theories, Hornbostel (1911), Kunst (1935–6) and Sachs (1938), claimed historical links between the music of insular South-east Asia and of Africa. A connection between Madagascar and South-east Asia was also suggested, based on instruments, tunings and linguistic relationships. A.M. Jones (1964) correlated other cultural elements (fine arts, agriculture), an extension of the theory that has been refuted. Drawing on limited samples of music, the Berlin and Vienna scholars used tonal measurement and psychological testing to develop theories, many of which have not held up in the light of new data collected after World War II.

The most ambitious of these was *Kulturkreislehre*, the 'theory of culture circles', a theory of the history of culture advanced by Fritz Graebner (1877–1954), and the clerics Father Wilhelm Schmidt (1868–1954)) and Father Wilhelm Koppers (1886–1961). They proposed that culture developed in one geographical region, thought to be in Central Asia, and spread in waves of migration out from this centre. According to the theory, similarities between *Kulturmerkmale* or 'culture traits' (objects and forms of social organization) resulted from past migrations; traits discovered farthest from the centre were reckoned to be the oldest; and identical objects and ideas might exist thousands of miles apart. This notion assumed the fundamental uninventiveness of humankind ('monogenesis'), and was espoused dogmatically by the Germans, rejected by the British and French anthropological schools and eventually dismissed by German-born anthropologist Franz Boas (1858–1942) and his students at Columbia University. Important studies which embraced this theory include: Ankermann, 1902; Hornbostel, 1933; Wieschoff, 1933; Danckert, 1937; and Hübner, 1935, 1938. Curt

Sachs' most ambitious study of musical instruments, *Geist und Werden der Musikinstrumente* (1929), was based on *Kulturkreis*. In this instruments were historically ordered and organized into 23 areas using distribution and technological level; those found in scattered regions were thought to be older than those found everywhere. The impact of such a theory in ethnomusicology is puzzling in light of its limited and brief role in the history of anthropology.

The *Blasquintentheorie* ('theory of blown 5ths') of Hornbostel (1927), was the most sensational proposal of the Berlin school. Berlin scholars found many examples of equipentatonic and equiheptatonic scales while measuring the tunings of instruments in collections. These scales with equally-spaced tones appeared to be widespread and thus of particular significance. By testing Brazilian panpipes (and blowing harshly on some of the tubes), Hornbostel derived the hypothesis that many non-Western tuning systems were based on intervals of 678 cents (rather than on Pythagorean 5ths of 702 cents). However, Hornbostel failed to heed Ellis' argument that 'there is no practical way of arriving at the real pitch of a musical scale, when it cannot be heard as played by a native musician; and even in the latter case, we only obtain that particular musician's tuning of the scale, not the theory on which it was founded' (1885). When the *Blasquintentheorie* theory was disproved by Manfred Bukofzer for lack of empirical evidence (1937), the Berlin school lost credibility for much of its other powerful ethnographic work.

(ii) The Netherlands. Early Dutch scholarship focussed on the music of their colonial holdings including the East Indies (now Indonesia), the Moluccas, the Dutch Antilles, and Dutch Guiana (Surinam) on the South American coast. Several important ethnographies on Java, the most densely populated island of the Indonesian archipelago, included music, beginning with the writings of the philologist J.A. Wilkens whose linguistic survey includes an inventory of the instruments and description of the gamelan orchestra (1850), J.P. Veth's survey on Javanese music (1875), and J. Groneman *De gamelan te Jogjakarta* (1890), based on his years in Yogyakarta where he served as physician to the sultan. Groneman sent descriptions and photos of the court gamelan to Jan P.N. Land whose study of non-European scales and intervals (including Arab and Indonesian material) was researched in consultation with Alexander J. Ellis. The descriptions were published as the 'Foreward: On Our Knowledge of Javanese Music' (1890), to the Groneman monograph.

The leading figure in Dutch ethnomusicology is Jaap Kunst (1891–1960), whose early music ethnography on the Dutch island of Terschelling (1915) is still used by the islanders. Kunst first visited Java in 1919 on an 18-month tour as the pianist of a trio. Kunst remained in Java to study the gamelan tradition of the palace of prince Paku Alam in Yoyjakarta. His prolific correspondence with Hornbostel during the 1920s and 30s (some 160 letters) illustrates the scholarly dialogue of the period between the World Wars and reveals Kunst's methods for his classic *De toonkunst van Java* (1934). Hornbostel and Kunst were fascinated by the two gamelan tuning systems, the seven-tone *pélog* and the five-tone *sléndro*, which Kunst measured with a self-devised monochord. Hornbostel used Kunst's measurements to support the *Blasquintentheorie* and Kunst was surprised by Manfred Bukofzer's disproof of it: 'If ever I had had any confidence in a theory, it was this one', he wrote to Bukofzer in May 1936.

In collaboration with his wife, Kunst also wrote authoritative and lengthy monographs on the music of Bali (1925), Flores (1942), Nias (1939) and Hindu Javanese instruments (1928).

(iii) France and Belgium. The leading French musicologist of the early 20th century was André Schaeffner (1895–1980), who did exhaustive fieldwork with the Dogon people of Mali (formerly French Sudan). Schaeffner, a specialist in organology, worked with Curt Sachs and Sachs's instrument study of 1929 was the impetus for Schaeffner's work, *Origine des instruments et musique. Introduction ethnologique à l'histoire de la musique instrumentale* (1936). Schaeffner includes Western art music in his study, and paints a picture of universal origins of instruments based on secondary souces and his own fieldwork.

In Paris, Dr L. Azoulay recorded 400 wax cylinders in 74 Asian, European and African languages at the World Exhibition of 1900, a collection that formed the basis of the first French archive, the Musée Phonographique de la Société d'Anthropologie de Paris, expanded in 1938 to become the Phonothèque Nationale. In 1929 Schaeffner established the Museé d'Ethnographie du Trocadéro, renamed Musée de l'Homme in 1937.

In Belgium, the music historian François-Joseph Fétis (1784–1871) was one of the first to recognize the value of non-Western music in his *Histoire général de la musique, depuis les temps les plus ancien jusqu'á nos jours* (5 vols., 1869–76). He includes material on the music of China, Japan, India and the Central Asian Kalmyks, Kyrghyz, Kamchadals and other Siberian peoples. He recommends the study of ethnology, anthropology and linguistics for music historians. Both Fétis and the Bengali musicologist Sir S.M. Tagore (1840–1914) gave their instrument collections to King Leopold II. These instruments formed the basis of the Musée Instrumental du Conservatoire Royal de Musique of Brussels, 1877, a collection studied by the Belgian organologist Victor-Charles Mahillon (1841–1924), who developed a classification system for instruments, with four main categories, autophones, membranophones, chordophones and aerophones (1880–92), a scheme that was the foundation for the Hornbostel–Sachs system (1914).

Extensive Belgian research was carried out on the music of Central Africa, beginning with the study of E. Coart and A. de Haulleville (1902) based on the collection of Musée du Congo Belge at Tervuren established in 1837 (now the Musée Royal d'Afrique Centrale). A. Hutereau recorded some 210 wax cylinders in north-eastern Zaire between 1910–12, particularly of the Zande people. Musical instruments of the Belgian Congo were studied by Joseph Maes from 1912, Gaston Knosp (1934–5, published by P. Cullaer in 1968) and Olga Boone (1936).

(iv) Britain. British colonial writings on Indian music begin with Sir William Jones's (1746–94) *On the Musical Modes of the Hindoos* (1792). His music treatise was based on his reading (in Persian translation) of the *Saṅgīta-darpaṇa* of Dāmodarapandita (*c*1625), the *Saṅgīta-pārijāta* of Ahobala Paṇḍita (17th century, also in Persian translation) and the *Rāga-vibodha* (1609) of Somanātha. The value of Jones's treatise lies not in its essential accuracy or strength of argument but the role it

had in bringing the traditions of North India to the attention of Western scholars.

This was followed by Captain N. Augustus Willard's *A Treatise on the Music of Hindoostan* (1834), that includes descriptions of forms and an informative glossary. The Jones and Willard essays were reprinted in an early anthology, *Hindu Music from Various Authors* (1875), by S.M. TAGORE, who influenced Mahillon, Ellis (1885) and Hornbostel and Abraham (1904, *Phonographierte indische Melodien*).

The scholarly exchange between English and Indian scholars includes: *The Hindu Musical Scale and the Twenty-Two Shrutees* (1910) by the Indian scholar K.B. Deval, who examined the 13th-century *Saṅgīta-Ratnākara* in the light of Western research; *Introduction to the Study of Indian Music* (1913/*R*) by Ernest Clements, who correlates modern Hindustani scales with the early scales discussed by Deval; and *The Music of India* (1921) by Herbert A. Popley, who consulted with the Indian theorist, V.N. BHATKHANDE (1860–1936).

Around 1910 A.H. Fox Strangways (1859–1948) carried out research in India, recorded cylinders of North and South Indian classical music, Vedic chant, *ghazal* and *tappa*, and extremely valuable samples of Ādivāsī and traditional music (1914).

A major figure was the Dutch-born London-based linguist and musician Arnold A. Bake (1899–1963). He began his research in the 1920s, did doctoral research at Tagore's academy, Shantiniketan, learned to sing the songs of Rabindranath Tagore, Bengali *kīrtan*, traditional and some classical genres. He made several trips to India up to the 1950s, totalling some 15 years in the subcontinent. He collected material from eastern India, South India, Sind (now Pakistan), Ladakh and Punjab, Ceylon (now Sri Lanka) and Nepal (Bake, 1949, 1957, 1970).

Interest in English traditions began in the first half of the 19th century. The first published folksong collection was John Broadwood's *Old English Songs as Now Sung by the Peasantry of the Weald of Surey and Sussex* (1843). By the 1890s interest had increased and was marked by the publication of important collections by Lucy Broadwood (1893, 1908), Frank Kidson (1891) (1895, 1895–6) and Rev. Sabine Baring-Gould (1895, 1895–6). Also important was the work of the American scholar Francis James Child (see §4(iii)(a) below).

The most influential collector of English folksong and dance was Cecil Sharp (1859–1924). Sharp and his contemporaries believed that 'authentic' traditions were dying out and that scholarly interest had only been focussed on them after they had been greatly affected by the Industrial Revolution, general education and urbanization. In the interests of urgent preservation they sought most of their material from singers over the age of 60. Sharp advocated the use of folksongs in education and in the composition of an 'authentic' English repertory of art music. Maud Karpeles (1885–1976) and her sister were also leading figures in this movement, which came to be thought of as a folksong 'revival' (*see* FOLK MUSIC; FOLK MUSIC REVIVAL; ENGLAND).

In *English Folk Songs: Some Conclusions* (1907) Sharp set out his principles of folksong evolution: continuity (the unfailing accuracy of the oral record); variation (spontaneous invention, the product of the individual); and selection (based on the taste of the local community). He collected 4977 tunes during his career some of which came from the trips he made with Karpeles to the USA. There they collected tunes and variants from people of English, Lowland Scots and Scots-Irish descent in the southern Appalachian mountains of North Carolina, Virginia, Tennessee and Kentucky. They used this work to illustrate the theory of marginal survival, whereby traditions lost in their native environment have been preserved by immigrant groups.

After Sharp's death Karpeles edited his two-volume *English Folk Songs from the Southern Appalachians* (Sharp and Campbell, 1917). Returning to the southern Appalachians in 1950 and 1955 she discovered that many of the traditional songs they had earlier collected were no longer performed. In 1935 she organized the International Folk Dance conference at Cecil Sharp House, hosting 800 dancers from 18 countries, after which the International Folk Dance Council was established.

Another major figure in the English folksong revival was Percy Grainger. He began his study of folksong at the North Lincolnshire Musical Competition in Brigg, 1905. During the next four years he collected about 500 songs, surviving on 216 cylinders, mainly from Lincolnshire, Gloucestershire and Worcestershire, as well as sea shanties from Dartmouth and vendor's cries from London. Amid protests, he advocated the use of the Edison phonograph in fieldwork, presenting his case in 'Collecting with the Phonograph' (1908–9). Grainger was able to demonstrate that irregularities in folksongs were systematic; variations between verses significant; accents, dynamics and ornamentation essential to style; and that folksongs rarely could be analyzed in terms of conventional modes, as advocated by Sharp. In 1908 he persuaded the Lincolnshire singer Joseph Taylor to issue nine songs with the Gramophone Company; the first commercial recordings of folksong.

3. SOUTHERN AND EASTERN EUROPE. The collecting projects of southern and eastern Europeans of the second half of the 19th century were largely contributions to folkloric studies. These collectors feared that entire repertories were on the point of extinction, repertories that were thought a proper base for nationalist styles of art music. Early collectors were motivated by musical nationalism, theories of self-determination and by hope for a musical rationale for a pan-Slavic identity. Thus composers of the late 19th century, from Janácek, to Grieg, Sibelius, Bartók and Rimsky-Korsakov were indebted to the painstaking research of song collectors. Whereas German scholars focussed on small samples of music from distant colonies, eastern European collectors explored their own linguistic setting, amassing large collections, thousands of song texts and, later, tunes, which they sought to classify and compare. The approaches of folk music research and comparative musicology were synthesized after World War I in the studies of Béla Bartók for Hungary and adjacent regions, the Romanian collector Constantine Brăiloiu, Klement Kvitka for Ukraine, Adolf Chybinski for Poland and Vasil Stoin for Bulgaria. These later writings dealt with theory, method, documentation and analysis, in light of the orientation of the Berlin school.

(i) Bulgaria. The leading Bulgarian scholar was Dobri Christov (1875–1941), who was the first to identify characteristic asymmetric rhythms (1913). Bartók started recording in Bulgaria in 1912 and referred to these rhythms as 'Bulgarian' (1938). A contemporary of

Christov, Vasil Stoin (1880–1938) organized the collection of some 24,000 Bulgarian folksongs (without recording equipment), including instrumental tunes with indices classifying rhythms and scales (1928–39). His theoretical study (1927) was an important source for Hornbostel, Bartók and the Ukrainian scholar Klyment Kvitka. In 1910–11 the Russian scholar Nikolai S. Derzhavin recorded songs from the Bulgarian areas of Russia (1914) and worked until 1915 in the Taurian, Kherson and Bessarabian provinces.

(ii) South Slav. Karol Štrekelj (1862–1912) amassed the first collection of Slovenian folksongs to include melodies (8000 texts including 200 melodies; 1895–1923), Štrekelj, and later Matija Murko (1861–1952), headed the Slovenian language section of the Viennese project, *Das Volkslied in Oesterreich*; between 1906 and 1914, 12,000 songs and melodies were collected (Murko, 1929). Russian ethnomusicologist Evgeniya Linoyova recorded some 100 cylinders of Slovenian songs, housed in the Phonogram Archive in St Petersburg.

The Croatian musicologist Franjo Ksaver Kuhač (1834–1911) made the most important collection of southern Slav folksong, with 1600 songs, melodies, texts and piano accompaniments. His monumental study (fieldwork 1861–9) extended from Slavonia through central Croatia, Slovenia, Vojvodina, Istria, Serbia, Dalmatia, Bosnia and Hercegovina, Bulgaria and Macedonia (1877–82); some of his massive collection remains unpublished. Between the wars the composer and ethnomusicologist, Božidar Širola (1889–1956) organized the instrument collection of the Ethnographic Museum in Zagreb. Another leading Croatian scholar, Vinko Žganec (1890–1976), published song collections from his native Medjimurje (1924–5).

The first Serbian nationalist composer, Stevan St Mokranjac (1856–1914), based his choral suite *Rukoveti* on the folksongs of Serbia, Macedonia, Kosovo, Montenegro and Bosnia. He published a study of Serbian folk music and collected extensively in Kosovo, and notated the repertory of the Serbian Church chant (Bušetić and Mokranjac, 1902; Mokranjac, 1902, 1935). Vladimir R. Djordjević (1869–1938) published Macedonia and Serbian folksong collections (1928, 1931). The Belgrade composer and ethnomusicologist Kosta P. Manojlović (1890–1949) began the music section of the Ethnographic Museum; this collection was moved to the Musicological Institute of the Serbian Academy after World War II. He recorded in Serbia, Kosovo and Macedonia from 1932 to 1940.

In Bosnia, Hercegovina, Macedonia and Montenegro almost all folk music research before 1939 was carried out by outsiders: Kuhač from Croatia, the Czech Kuba and Mokranjac, and Djordjević and Manojlović from Serbia. Marko K. Cepenkov (1829–1920) from Macedonia, whose collection of folklore texts was gathered from 1856–1900, left material also on folk music instruments, with drawings. During 1934–5, the American scholars Milman Parry (1902–35) and Albert B. Lord recorded in Hercegovina, Bosnia, Montenegro and Macedonia, focussing on south Slavic heroic songs. They collected over 12,500 texts, 800 heroic song texts, and 2200 double-sided disc recordings of 350 heroic songs (Bartók and Lord, 1951). Parry and Lord also preserved on aluminium discs an archaic style of southern Slavic narrative song, mainly from Gacko, Hercegovina.

(iii) Poland. Oskar Kolberg (1814–90) began notating Polish folksong in 1839, paying particular attention to the ritual and folkloric setting of the songs. He published 33 regional monographs under the title *Lud: Jego zwyczaje, sposób życia, mowa, podania, przysłowia, obrzędy, gusła, zabawy, pieśni, muzykz i tańce* ('The folk: their customs, ways of life, language, legends, proverbs, rituals, spells, entertainments, songs, instrumental music and dances') and 11 with the general title *Obrazy etnograficzne* ('ethnographic pictures').

The distinctive music of the mountainous Podhale region, south of Krakow, was studied by Stanisław Mierczyński (1894–1952), who notated by ear the free and complex rhythms and Lydian scales typical of this district (1930).

Helena Windakiewiczowa (1868–1956) published several analytic studies on Polish song including a work on rhythm (1897), poetical form (1913), musical form (1930), pentatonic scales (1933) and a catalogue of parallels between Polish and Moravian folksongs (1908). Jan Czekanowski (1882–1965) took part in the German Central Africa Expedition (1907–9) during which he recorded cylinders in Rwanda (Czekanowski 1911–27). Hornbostel published two articles on these cylinders of the Wakusuma and a transcription and analysis of 43 songs from Rwanda (1911, 1917).

Other early recordings were made by Bronisław Piłsudski (1866–1918) who, during political exile in eastern Siberia, recorded the Ainu, Gilyak and Orochi peoples of Sakhalin (1912), and the Gilyaks and Orochi (*c*1896–1905). 83 of his cylinders were deposited in the Phonographic Institute of the University of Poznań.

In 1930 Łucjan Kamieński (1885–1964) organized the Regionalne Archivwum Fonograficzne as part of the University of Poznań. In 1935 Julian Pulikowski (1908–44) organized the Centralne Archiwu, Fonograficzne in Warsaw. These two collections were destroyed during World War II.

(iv) Bohemia, Moravia and Slovakia.

(a) Bohemia and Moravia. The pioneer of Bohemian folksong collection was the Czech poet Karel Jaromír Erben (1811–70), who published 2200 texts and 811 melodies as well as games and other genres (1842–3 and 1862–4). His anthology is carefully documented and classified, and particularly significant for its complement of village material. Jan Rittersberk was first to publish Czech folksongs (1825), a collection notable for ribald humour and urban content, drawn from Bohemian and Moravian materials collected in 1819 by the Vienna Gesellschaft für Musikfreunde under Austrian decree.

The Czech musician and scholar Ludvík Kuba (1863–1956) collected Lusatian Serbian songs and instrumental melodies (1887, 1922) and songs from towns in Bosnia and Hercegovina (Kuba, 2/1984). His notes are impressive for their unique approach to folklore, with lucid writing and evocative comments, including statements by performers and accounts of performing practice, and Kuba's professional sketches and drawings of instruments and regional costumes. His work covers a wide geographical area including collections from Lusatia, Old Serbia, Macedonia, Dalmatia, Bosnia and Hercegovina.

The scholarly study of Czech folk music was established in two important studies by Otakar Hostinský (1847–1910) which include 16th-century material (1892)

and statistical analyses of some 1000 secular melodies (1906).

Moravian collectors include the cleric František Sušil (1809–68), whose collection dates from the 1840s and 1850s (2361 texts and 1890 melodies); despite his 'corrections' of texts his anthology is comprehensive, including religious genres, ballads, love songs and some lyrics from broadsides (1860). The philologist Frantisek Bartoš (1827–1906) sought to gather the Moravian folk heritage before it was taken over by urban culture. His collection is marred by editorial faults, but remains important for its size and variety particularly the eastern materials from Slovácko and Valašsko (1882).

Leos Janáček (1854–1928) edited music from the 1898 and 1899–1901 Bartoš collections and published a discourse on Moravian music. In his own compositions he drew on the 300 songs he collected in the field. He served as the Czech-language director of the Moravian and Silesian section of the 1904 Viennese project, *Das Volkslied in Oesterreich*, for which he instructed collectors, contacted Moravian teachers, developed methods and systems of notation, and organized cylinder recordings. In 1917 he declined to send the collection of 10,000 songs to Vienna, and it remains in Brno. His collection of Moravian love songs was published posthumously (Janáček and Váša, 1930–6). Janáček's Moravia team recorded Slovak musicians from 1909 to 1912, including 25 Terchov part-songs. The French Pathé company, in cooperation with the Paris Institut Phonétique, recorded Czech singers and bands in Prague studios; noteworthy is the Chodsko collection, reissued for the 1962 meetings of the International Folk Music Council in Czechoslovakia.

(b) Slovakia. The classic collection of Slovak folksong is *Slovenské spevy* (1880–1926), although compiled primarily by amateurs and lacking systematic organization, it remains an important source of folksong.

Béla Bartók recorded in Slovakia from 1906 to 1918 (1959–). The Hungarian Béla Vikár recorded in northwestern Slovakia (Trenčiansko) from 1903 to 1907; his cylinders were transcribed by Bartók, who included them in his Slovak collection along with those of Kodály from the 1900s. In 1929, working for the French Pathé company, musician and film-maker Karel Plicka (1894–1987) selected Slovakian singers and instrumentalists (including musicians from Subcarpathian Russia) to be recorded in Prague. From 1924 to 1939 Plicka notated by ear some 8500 melodies and texts and additionally 10,000 texts (Plicka, 1961).

(v) Hungary. Since 1832, the Hungarian Academy of Sciences has been responsible for the collection and publication of folksongs both to preserve 'authentic song' and to present composite versions of folksongs to form a national public aesthetic and musical taste. Early Hungarian work includes that of collector Károly Szini, who published 200 melodies in notation (1865); Áron Kiss prepared an important collection of Hungarian children's games (1891); and István Bartalus (1821–99) produced *Magyan népdalok* (1873–96), a seven-volume work including items acquired through correspondence and pieces by contemporary composers.

The philologist Béla Vikár (1859–1945) was first to record Hungarian folksong with the Edison phonograph in 1895. Zoltan Kodály (1882–1967) began transcribing Vikár's recordings in 1904. Scholars such as Lászkó Lajtha (1892–1963) and Antal Molnár (1890–1983) worked from the Ethnographic Department of the National Museum (later the Museum of Ethnography).

Kodály set out on his first collecting trip in 1905, Bartók in 1906. Working in collaboration, they divided the districts they hoped to cover between them. Bartók's travels took him to neighbouring countries and led to comparative studies. Between 1906 and 1918 Bartók collected 3223 Slovak melodies and between 1908 and 1917, 3500 Romanian melodies. In 1913 he collected Arab music in Biskra, North Africa and in 1936 travelled to Turkey. His Hungarian collections include 2721 songs (1924). In *A magyar néodak* (Hungarian folksong) (1924) Bartók summarized his work with Kodály and presents 8000 melodies, attempting to reconstruct the evolution of Hungarian folksong through classification and typology. His work *Népzenénk és a zomszéd népenéje* (Our folk music and that of neighbouring peoples) (1934) presents a comparison of Hungarian, Romanian and Slovak songs, notable for the 1930s. Kodály's *A magyar népzene* (Hungarian folk music) (1937) covers the entire oral tradition of Hungary including instrumental genres, folk customs and the relationship of music to culture. In 1953, Kodály founded the Folk Music Research Group of the Hungarian Academy of Sciences (renamed the Folk Music Research Department of the Institute for Musicology in 1974); its major project has been publication of *Corpus musicae popularis hungaricae* (1951–). The collection of the Institute of Musicology is expanding (holdings of some 150,000 melodies) and research is ongoing, reflecting the changing scene.

(vi) Romania. The leading figure of Romanian musicology was Constantin Brăiloiu (1893–1958), who founded the Folklore Archives of the Society of Romanian Composers in 1928. Noted for his thoroughness and method, for using the phonograph, cameras and questionnaires, Brăiloiu outlined his system in 'Esquisse d'une méthode de folklore musical' (1973). His interest in *colinda*, wedding songs and laments is reflected in his various collections (1931, 1936, 1938). He was first to identify the syllabic giusto of Romanian traditional song (1948), the asymmetrical *aksak* rhythms of eastern Europe (1951) and the antiquity and universality of the three-tone pitch system. Brăiloiu rejected the German focus on extra-European musics (1959) and sought to reconstruct the history of traditional song of his own country, identifying more or less advanced states of dissolution.

(vii) Russia and Ukraine. During the mid-19th century, Prince V. Odoevsky and A. Serov sponsored the scientific study of Russian folksong, including the connections of music with ethnography, cultural history, philology and physiology. Examining only folksongs before the time of Peter the Great (1672–1725), considered distinctively 'Russian', they sought to examine the material on its own merits rather than by the standards of European music. They compared the rhythms and modes of the Russian repertory to those of ancient Greek theory. Odoevsky also conducted research on Russian orthodox chants (1867, 1871). Serov dealt with the harmonization of folksongs and their use by nationalist composers (1870–71).

The Russian nationalist composers Mily Balakirev (1837–1910), Nikolay Rimsky-Korsakov (1849–1908) and Modest Musorgsky (1839–81) acknowledged the importance of folksong in creating a nationalist school of composition. Balakirev's important collection of folksong

appeared in 1886 and Rimsky-Korsakov transcribed seasonal songs and Ukrainian *dumy* (epics; 1876–7; 1882). The Ukrainian collector Mykola Lysenko (1842–1912) was a pioneer in the study of folksong; he published some 1000 Ukrainian songs (1868–1906; 1874; 1896) and studied instrumental music (1894). The first transcriptions of Russian folk choral polyphony were published by Yuly Melgunov and Nikolay Palchikov, fascinating *a cappella* pieces with simultaneous improvisation by individual choristers. Distortions were introduced as Melgunov homogenized the individual variants and rendered them as a piano score (Melgunov, 1879–85; Palchikov, 1888).

P. Sokalsky's theoretical monograph (1888) identified three ages of song, that of the interval of the 4th, the 5th and the 3rd. He emphasized the union of song tune and text, the problems of notating irregular folk rhythms and intonation and the common source of Russian and Ukrainian music.

The first recordings of Russian music were of the *byliny* epic bard Ivan Ryabini in Moscow around 1894. Evgeniya Lineva took the Edison cylinder machine to the field in 1896, recording in the central Russian and Novgorod provinces (1897–1901), Ukraine (1903), the Caucasus (1910) and Austria-Hungary (1913) (e.g. Lineva 1904, 1909). She accompanied her collections with interviews of musicians and descriptions of performances. In 1901 the Music-Ethnographic Commission supported a team of ethnologists to record *byliny* from Arkhangel'sk district, the White Sea region, Don Cossacks part singing (1904), and choral songs from Voronezh district; the Commission published five volumes on methods of collecting, notation and analysis (1906, 1907, 1911, 1913, 1916).

After the Revolution of 1917, The Association of Proletarian Musicians (1923–32) declared traditional village music harmful to the Proletariat ideology. Nonetheless, collectors continued their work although the many collections of the 1930s sometimes include material composed to illustrate Soviet realism.

Ethnomusicology in the former USSR began with the research of Filaret Kolessov, Evgeny Gippius and Klyment Kvitka. Kvitka (1880–1953) began his collection of Ukrainian song in 1896 and also worked in southern Russia, Belorussia, Moldavia and Crimea. He published comparative studies including the mapping of song types, their structural characteristics and associated rituals. In 1922 Kvitka organized the Bureau of Musical Ethnography of the Ukrainian Academy of Sciences and in 1937 the Bureau of Study of the Musical Creation of the Peoples of the USSR at the Moscow Conservatory.

Gippius accompanied Belorussian Zinaida Evald on the 1926–30 expedition to the north Russian rivers, where they recorded over 500 cylinders (*Iskusstov Severa*, 1927–8). Gippius' 1933 essay on methodology criticizes Western ethnomusicology and discusses a 'production-consumption' music function model. In 1926–7 he founded the Music-Ethnographic Bureau at the Leningrad Conservatory and the Phonogram-Archive (later the Phonogram-Archiv of the Pushkin House, Institute of Russian Literature).

Kvitka's student, Moshe Beregoviski (1892–1962), was the foremost scholar of his generation of the music of Eastern European Jewry. He set new standards of fieldwork, documentation, transcription and analysis. He was harshly critical of Bartók, whose research was based on notions of a 'monolithic and inert peasantry', an assumption that could not account for the rich musical repertory of urban Jewish workers, artisans, and businessmen.

4. North America.

(i) Amerindian music. American ethnographies of late 19th century and early 20th avoided Germanic theories, concentrated on Amerindian music and were based on extended fieldwork with individual tribes. American scholars used the phonograph to preserve the vanishing traditions of aboriginal peoples.

The ethnologist Jesse Walter Fewkes (1850–1930) was the first to use the treadle-run Edison cylinder machine in the field during his research with the Passamaquoddy Indians of the north-eastern USA (1890) and in the south-west with the Zuñi Pueblos (1890) and the Hopi Pueblos (1891). Fewkes' recordings were transcribed and analysed by the American psychologist Benjamin Ives Gilman (1852–1933) who concluded that these peoples had conscious norms for the intervals in their songs. Later in an article on Zuñi melodies he described the minute differences between the Amerindian tonal system and the Western tempered scale (1891).

Alice Cunningham Fletcher (1838–1923) was noteworthy for her lifelong collaboration with the Omaha Indian singer Francis La Flesche (1857–1932), son of the Omaha chief and the first Amerindian ethnomusicologist. For their first work, *A Study of Omaha Music* (1893), songs were collected by ear, the informant repeating the item as necessary. The melodies were notated and harmonized by piano teacher John Comfort Fillmore (1843–98), who prepared the transcriptions for Fletcher's early work and wrote on the theory of Indian music. Fillmore believed that Omaha songs had pitch 'discrepancies' because the Indians had an inferior sense of pitch discrimination. The Omahas sang in unison, and octaves (men and women singing together, sometimes in falsetto), and to Fillmore a sort of harmony seemed to be achieved. He tested his chords against the Indians' perception of the songs, and settled on those harmonies claimed by his subjects to be most pleasing to Indian ears. He asked 'many times' and the informants, confronted by the satisfied transcriber, had to choose between unsatisfactory alternatives.

Fillmore tried to reduce Omaha Indian songs to pentatonic or minor scales, but: 'there remained some very puzzling cases of songs whose tones could not be reduced to either the major or the minor scale'. He also had a problem when Indians sang the note 'about a quarter of a tone above the pitch', which he tried to resolve by 'syncopation'. He struggled with the phrasing, which, he said, had a 'rich variety' with anywhere from two to seven measures to a phrase.

Fillmore's work was bitterly criticized by Gilman who rejected Fillmore's theory of latent harmony. Gilman published his Hopi and Zuñi transcriptions without key or time signatures, ridiculed Fillmore's use of Western notation and experimented with a 45-line quarter-tone staff. During his work sessions with cylinder recordings, Gilman recorded the rotation speed of the machine, the condition of the batteries as well as other details of method.

Frances Densmore (1867–1957) was the most prolific collector of the period, employed for 50 years by the Bureau of American Ethnology at the Smithsonian

Institution. She collected over 2000 Indian melodies and wrote over a dozen monographs on the music of individual tribes from every part of North America including the Chippewa (1910–13), Teton Sioux (1918), Papago (1929), Choctaw (1943) and Seminole (1956).

The anthropologist Franz Boas (1858–1942) taught the holistic study of musical cultures through contemporary anthropological fieldwork methods to a new generation of students at Columbia University, including Helen Heffron Roberts (1888–1985) and George Herzog (1901–84). Boas opposed the speculation, reductionist thought, and armchair studies of the German school and stressed thorough ethnographic description. He encouraged anthropologists to study music, included musical transcriptions in his publications and made important analyses of rhythm in Northwest Coast Indian songs (1887). He also published the first comparative study of the same song as transcribed by different scholars (1896, 1897).

(ii) Black American Music.

(a) Pre-Civil War. Descriptions of music before the Civil War attest to African features of slave songs, for example, Benjamin Latrobe's descriptions of celebrations in Place Congo, New Orleans, including drums, a string instrument, singing and dancing. James Eights presents a more fair-minded account of the Pinkster celebrations of New York slaves, written at the time of the Revolutionary War (1867). Thomas Jefferson notes that slaves play the 'banjar' and 'in music they are more generally gifted than the whites' (1782). Richard Allen, first bishop of the African Methodist Episcopal Church, compiled the earliest book of black hymns and 'wanderings strains' (1801).

During the Second Great Awakening, as camp meetings were attended by blacks and whites alike, observers noted the enthusiasm and idiosyncratic performing practice of the blacks. Voicing a characteristic White Victorian sentiment, John F. Watson criticized blacks for dancing during worship and for singing 'merry airs' (1819).

Motivated by political and moral agendas, White observers heard black music accordingly: advocates of slavery reported that slave songs were happy; abolitionists found them sad. The abolitionists, William Francis Allen, Charles Pickard Ware and Lucy McKim Garrison collected and published *Slave Song of the United States* (1867), which includes examples of sacred music from South Carolina, Georgia, the Sea Islands and some inland slave states. Allen's introduction discusses performing practice including harmony, intonation, leader-chorus form, tempo variation and describes the 'shout', noting regional variations.

(b) Musical origins. The early studies of black music by musicologists tried to pinpoint the origins of African-American style. Richard Wallaschek found scant evidence of Africanisms in transcriptions of Negro spirituals, and claimed they were imitations of European song (1893). Hornbostel concluded that African and European musics are 'constructed on entirely different principles' and could not be combined (1928).

The success of the Fisk Jubilee Singers of the 1870s, the first of many popular 'Jubilee' choirs from black colleges, stimulated publication of their song arrangements and reviews of their concerts (Marsh, 1875). Spiritual collections of this period include Johnson and Johnson (1925, 1926), Grissom (1930) and Work (1940). Spirituals were the first black musical genre to receive comprehensive scholarly attention.

Early in the 20th century a controversy arose that lingered on until the 1990s. In *Afro-American Folksongs* (1914) Henry Edward Krehbiel (1854–1925) asserted that black American music was purely African material, that it sprang, without any outside influences, from its unique historical position. In *White and Negro Spirituals* (1943) George Pullen Jackson (1874–1953) put forward the 'white origin theory', arguing that black music had been influenced by Anglo-American song and constituted an integral part of the British tradition. Jackson discovered many of these white spirituals published in shape-note hymn books of the early 19th century. For example, the black spiritual 'Down by the Riverside' is derived from the white spiritual 'We'll Wait Till Jesus Comes', published in 1868. The black spiritual 'I want to Die A-Shouting' uses a variant of the tune from the white spiritual 'New Harmony', but takes parts of its text from three other white spirituals: 'Amazing Grace', 'Jesus My All' and 'Am I a Soldier'. This 'white origin theory' was rejected by James Weldon Johnson and J. Rosamund Johnson (1925–6), John W. Work (1940), Mieczyslaw Kolinski (1969) and John Lovell (1972).

During the 1940s, anthropological theory weighed in heavily on the debate over the origins of spirituals. Melville J. Herskovits (1895–1963; *The Myth of the Negro Past*, 1941) and his student Richard A. Waterman ('African Influence on the music of the Americas', 1952) developed important anthropological theories based on hypotheses of culture change that included acculturation, syncretism and cultural focus, and demonstrated how European and African forms had blended to produce new genres bearing features of both parent musics. European and African music, they argued, have many features in common, among them diatonic scales and polyphony. When these two musics met, during the slave era, it was natural for them to blend; a lack of shared features explains why European and Amerindian musics failed to combine.

Herskovits and Waterman maintained that musical survivals, 'Africanisms', were stronger in areas of the New World where blacks predominated numerically. In the West Indies, particularly in Haiti, Jamaica and Trinidad, for example, Shango and Vodou cult songs (derived directly from Africa) are still sung (these songs may have changed or even died out in their original African setting). In the USA the cotton plantation system placed blacks in close association with white musics, and fewer pure Africanisms can be identified in black folksongs of the American South. Herskovits proposed a scale of intensity, rating music as 'a little African' in the urban North, 'quite African' in the rural South, and 'very African' on the Gullah islands (Herskovits, 1941; Waterman, 1948, 1951, 1952).

(iii) European American music.

(a) Early collections. *The English and Scottish Popular Ballads* (1883–98) by Francis James Child (1825–96) contains some of the oldest ballads of the English tradition, including multiple versions, and a variety of topics: apocryphal legends, Christian miracles, outlaw tales, history and lore, feuds and raids and domestic quarrels. The 'Child ballads' mentioned in practically every subsequent study refer to the 305 songs in his collection. Over 100 Child texts and around 80 tunes have been collected

in the USA (Child himself made no special search for New World variants, discovering only 18).

American collecting methods differed from those of the British, due in part to the size of the continent and the fact that Americans were more inclined to accept newly composed popular folksongs. Some collections were based on fieldwork, but many were assembled through correspondence with friends, relatives, students and state folklore societies.

The earliest systematic collection was *Games and Songs of American Children* (1883) by poet and literary scholar William Wells Newell (1839–1907), a Harvard student of Frances James Child. This collection of tunes, texts, formulae, rules and movements was gathered during fieldwork with children (some on the streets of New York) and interviews with adults, and is a product of the late 19th-century romanticized vision of the freedom and adventure of childhood. Newell challenged the theory of Francis Barton Gummere (1855–1919; 1896), which claimed that ballads were derived from group-sponsored dance-songs, at its ethnological roots, and proposed a ballad history for the Old and New Worlds based on literary evidence.

In 1888 the American Folklore Society was founded by Newell, Child and Franz Boas, modelled on the Folklore Society of Britain. The centennial of American independence stimulated a review of national culture incorporating folklore of the frontier experience, the social experiment of democracy and American social pluralism. Newell, executive secretary of the Society up to the time of his death, served as editor of the *Journal of American Folklore* (1888–1900) and for the first nine issues of *Memoirs*. These publications served as a forum for early collectors, the issues reflecting changing approaches and attitudes in American folksong research.

Music found its place in folksong study, first in the UK with the work of the Folk-Song Society (founded in 1898), and in the USA with the work of Philips Barry, who investigated text, tune, performance and transmission. Unlike his English counterpart Cecil Sharp, Barry collected broadsides and music-hall ballads, refusing to make a distinction not recognized by the folk. Barry demonstrated the history of communal re-creation by comparing ancient ballads with their modern variants including those he had collected in New England, beginning in 1903. He argued for the vitality of the ballad tradition, self-renewing, flourishing in cities as well as countryside, embracing popular forms and at times perpetuated via the printed page (1905, 1913).

Henry Marvin Belden (1865–1954) began collecting in Missouri in 1904. He proposed a programme to recover American versions of Child ballads and to answer questions regarding the origins of the American repertory (1905). Belden emphasized documentation including the circumstances of recording, biographical information and local concepts of song origin. He argued for comprehensive collection (including printed versions), contrary to the selective methods of European contemporaries, who rejected popular and broadside material. While acknowledging Gummere's important contribution to ballad study (1911), he mounted a vigorous attack on his communalist theories (1909).

In the early 20th century state folklore societies were founded, dedicated to collecting and preserving Old World folksong. In 1914 the US Department of Education instigated a rescue mission for ballads and folksongs, stimulating an era of collecting by local enthusiasts and academics that lasted through the Depression until World War II. The extensive regional collecting between the two World Wars reflected the amount of unstudied material, a reaction against the theoretical preoccupations of the earlier generation and a search for a sense of national tradition in the face of striking regional diversity.

These regional eclectic collections are nondiscriminatory, include all material sung from memory and cite all known variants, including imported and indigenous narratives, lyric songs, popular music-hall songs, game songs, instrumental music and black songs (mostly collected from White informants). The first major collection of southern folksong, from members of both black and white populations, was Tennesee-based E.C. Perrow's *Songs and Rhymes from the South* (1912).

Three typical essays of the early 20th century illustrate cross-cultural historical studies of ballad themes: G.H. Gerould, 'The Balad of the Bitte Withy' (1908); Walter R. Nelles, 'The Ballad of Hind Horn' (1909); and Paul Franklin Baum, 'The English Ballad of Judas Iscariot' (1916). Characterized by broad comparisons, they are summations of the sparse evidence then available.

(b) The populist movement. John Avery Lomax (1867–1948) was a pioneer in the study of south-western lore. At Harvard in 1907 he encountered folklorists Kittredge and Barrett Wendel, who encouraged him on a venture to collect the songs of cowboys, miners, stage drivers, freighters and hunters, through correspondence as well as field trips. He was the first scholar to collect Anglo-American folksongs with the Edison phonograph (Lomax and others, 1947). Lomax's *Cowboy Songs and Other Frontier Ballads*, with 112 song texts and 18 tunes, was published in 1910. Lomax presented his collection as 'indigenous popular songs that have sprung up as has the grass on the plains', a romantic interpretation that supported the communalist views of Kittredge and of Wendell, who wrote an introduction to the Lomax collection. Lomax cleaned up the language and combined lines from different versions to produce a 'complete' song, violating the 'ethics of ballad-gatherers, in a few instances, by selecting and putting together what seemed to be the best lines from different versions, all telling the same story. Frankly, the volume is meant to be popular' (1910).

In 1931, Lomax resumed his collecting career, setting out with Alan, his son, on a four-month, 16,000-mile trip to record black American songs (1934). In southern prison camps they encountered prisoners who still sang old work songs. In one of the jails in 1933 the Lomaxes met Leadbelly (Huddie Ledbetter) (1885–1949), a black American songster, blues singer and guitarist. They engaged him to record much of his repertory of some 500 songs for the Library of Congress Archive (1935–40). *Negro Folk Songs as Sung by Lead Belly* (1936) is one of the first extensive presentations of an individual repertory.

The composer Ruth Crawford (1901–53) transcribed, arranged and edited hundreds of recordings from the Archive, many of which were published by John and Alan Lomax in *Our Singing Country* (1941). In the collection, *Folk Song USA: the 111 Best American Ballads*, John and Alan Lomax and Charles and Ruth Seeger (née Crawford) presented a popular anthology with piano arrangements and annotations (1947).

A market for commercial folk music steadily developed from the 1920s to 1940s as recording technology improved. With the popularization of folk radio broadcasts prior to World War I, record sales plummeted (Alan Lomax was featured as a radio personality for many years on 'Well-springs of America', 'Transatlantic Call' and 'Your Ballad Man'). During the 1920s, in a search for new material, record producers turned to folksong, black and European (especially race and hillbilly; pejorative terms later replaced by blues, soul, country and western). In 1939 Moses Asch (1905–86) founded Asch Records (later Folkways), releasing recordings of Leadbelly and Woody Guthrie. Other labels featured Josh White, Burl Ives and Carl Sandburg. On the Folkways label Asch amassed a huge collection of commercial folk music with help from colleagues Henry Cowell and Pete Seeger.

(iv) Canadian studies. The foremost collector of French Canadian materials was anthropologist and ethnologist Charles Marius Barbeau (1883–1969). In 1946 in collaboration with his leading disciple, Luc Lacourière, he founded the Archives de Folklore at Laval University, the first of several folklore programmes at Canadian Universities and the repository (together with the National Museums of Canada, Quebec City) for field recordings of the French tradition. The publication of *Les archives de folklore*, organ of the Archives, began in the same year. Barbeau's writings include *Alouette: nouveau recueil de chansons populaires* (1946), 'La guignolée au Canada' (1946) and *Le rossignol y chante* (1962).

The Anglo-Canadian tradition has been documented by Helen Creighton (1950, 1960, 1962, 1971), Edith Fowke (1963, 1965, 1970) and Edward D. Ives (1962, 1964, 1971). The folksongs of Newfoundland have been collected by Kenneth Peacock (1954, 1960, 1965) and Maud Karpeles (1930, 1971).

Seminal anthropological studies of Inuit culture were made by Franz Boas (1888). Zygmunt Estreicher (1917–93), a Swiss musicologist of Polish origin, wrote his doctoral dissertation on Canadian Caribou Eskimo dance-songs (1948) and in 1954 Laura Boulton (1899–1980) issued her Folkways recording and booklet summarizing the Hudson Bay and Alaskan traditions.

III. Post-1945 developments

1. INTRODUCTION. Ethnomusicology entered a distinctively, even radically, new phase of its history in the wake of World War II. Ethnomusicologists took pains to declare the disciplinary independence of their field, even when this meant placing distance between ethnomusicology and the several disciplines with which it had shared issues, methodologies and institutional structures, especially musicology, anthropology and folklore. Whereas ethnomusicological approaches remained more eclectic than unified during the second half of the 20th century, the discipline itself moved decisively in the direction of unity. It first challenged the role of comparison and the primacy of the musical object implicit in *Vergleichende Musikwissenschaft* ('comparative musicology', see §II, 2 (i) above) during the first half of the century, and then accorded greater significance to cultural materials gathered during ethnographic fieldwork and to the more quantitative and 'scientific' methods of the social and systematic sciences (Nettl, 1964; Schuursma, 1992).

Symbolizing the dramatic disciplinary realignment and the distinctive achievements of the discipline during the second half of the 20th century has been the name 'ethnomusicology' itself, adopted in the early 1950s because of its inclusiveness but increasingly called into question in the 1990s because of its exclusiveness (Kunst, 1950; Bohlman, 1992). The identity of ethnomusicology in the practices and products of its scholars and in its academic and pedagogical structures became increasingly canonized in the decades after World War II, while in the decades approaching the end of the 20th century disciplinary boundaries began to blur in new ways, especially in the 1990s, precisely at a historical moment in which ethnomusicology was enjoying its most influential presence among the humanities and social sciences (see Rice, 1987).

World War II and its aftermath unleashed entirely new processes of globalization that increased the availability of music on hitherto unimaginable levels. New forms of cultural and economic contact replaced previous European colonial forms. Collecting projects were no longer carried out primarily as an extension of colonial intervention, with the concomitant aim of locating non-Western music in the comparative framework of Western, largely European, history. Armed with new recording technologies, ethnomusicologists of the post-World War II era were able to embark upon fieldwork untrammeled by the necessity of assessing a music culture's historical stage of development. Synchronic observation quickly supplanted diachronic observation in importance, and at the same time linguistic and national musical boundaries were dismantled to make way for shifting and contested cultural landscapes.

Just as the places in which ethnomusicological field research took place shifted dramatically after World War II, so too did the global geography of its institutional practices. The historical centre of *Vergleichende Musikwissenschaft* prior to World War II, as its name suggests, was Central Europe, with many approaches to ethnomusicology outside Central Europe also influenced extensively by German and Austrian scholars (Bose, 1953). Post-World War II ethnomusicology shifted its centre to North America, receiving its initial impulse from immigrant students and scholars during and after the war, many of them with Central European intellectual roots, for example, Walter Kaufmann, George List, Bruno Nettl and Klaus Wachsmann.

No less crucial for the growing influence of North American ethnomusicology was the conscious embrace of the disciplinary affinity with social and cultural anthropology (Merriam, 1964; Reinhard, 1968). Already in the late 19th century, North American scholars had drawn heavily upon anthropological methods, especially in their field studies of Native American music. In the 1950s, however, North American ethnomusicologists took their engagement with anthropology several steps further, insisting on the primacy of ethnography and fieldwork (A. Seeger, 1991; McAllester, 1954), and establishing the institutional basis of the Society for Ethnomusicology in the American Anthropological Association. Even in the 1990s, debates about the extent of anthropology's influence on ethnomusicology continued to form on two sides of a global divide, with American ethnomusicology's

engagement with anthropology on one side and European and Asian trepidation about ethnographic approaches to the study of music on the other (Bohlman, 1992).

The radical new phase of ethnomusicology's history that was well underway already within a decade after World War II resulted from the convergence of four paradigm shifts, each having its own revolutionary impact on the field (see Kuhn, 1970). Firstly, World War II itself brought about a sweeping reformulation of the nation-state on a global level, which in turn led to completely different instantiations of music and nationalism. The geographical, cultural, and musical boundaries of European and Asian empires were greatly reduced, in some cases necessitating the reformulation of ethnomusicological methods (for example, the concept of folksong as a representation of 'speech islands' in German musical folklore). The independence of former European colonies in the late 1940s, many of them crucial to pre-World War II canons of ethnomusicology (particularly India and Indonesia, which gained independence from the UK in 1947 and from the Netherlands by 1949 respectively) led to the reconfiguration of colonial structures as indigenous ontologies for research. The nation-state as a site for intensive and extensive musical research was a global phenomenon by the early 1950s, and the institutional and political practices of ethnomusicology were transformed to respond to this phenomenon.

Secondly, debates about the appropriate subjects and approaches of ethnomusicological research proliferated. By coining the name 'ethno-musicology' (later just 'ethnomusicology'; see Kunst, 1950), Jaap Kunst made it possible to name and describe the paradigmatic shift away from musical comparison and toward social scientific methods (see Sturtevant, 1964). The prefix 'ethno' effectively replaced the adjective 'comparative', but more crucially it marked a shift from methods that relied on universals to forms of representation that emphasized local and individual distinctiveness (Merriam, 1977; C. Seeger, 1977).

As important as the term 'ethnomusicology' was to the post-World War II paradigm shift, it has not proved to be unassailable, and its appropriateness was increasingly called into question in the 1990s, when the Society for Ethnomusicology prompted a third shift, openly debating replacing the term with another, or even several others, that more appropriately described changing practices (see §7 below). The discursive debates of the 1990s did not produce an obvious replacement for 'ethnomusicology', but they did continue to underscore the persistence and seriousness of the same discursive debates that had brought about the disciplinary revolution of the 1950s.

The fourth paradigm shift has accompanied technological revolutions. In part because of their reliance on field research and in part because of the widespread experimentation with systematic methodologies, ethnomusicologists have quickly responded to the technological changes that have multiplied the representational potential for the field. In the immediate wake of World War II, the use of portable magnetic tape recorders and the emergence of the long-playing record produced a change of technologies that enabled ethnomusicologists to collect, transport, analyze and disseminate musical information with relative ease and at moderate cost. Film and video technologies in the 1960s and 70s were no less sweeping in their impact on field research. The spread of new and inexpensive technologies to musicians, especially cassette, digital (CD) and internet, unleashed a massive globalization of musical production in the 1980s and 90s, and ethnomusicologists quickly responded to that globalization, documenting the concomitant paradigm shift in musical meaning and the mass consumption of musical culture.

The second and third paradigm shifts, in particular, lead to the representational revolution that constitutes the fourth paradigm shift (Bohlman, 1991). What ethnomusicologists collected, analyzed and documented underwent an enormous transformation from the 1950s to the 1990s. Whereas the sound recording technologies of the 1950s shaped the ethnographic practices at the time, ethnographic practices rarely relied only, or even primarily, on sound recording in the 1990s. The representational revolution during the second half of the 20th century made it possible to provide a much thicker description of musical soundscapes, the multiple levels of musical performance and consumption in society, and the multiple directions of musical change at local and global levels (Feld, 1990). With seemingly unlimited representational potential at their disposal, ethnomusicologists at the end of the 20th century were faced with the challenge of providing as complete a picture of the diverse phenomena constituting music as possible, a challenge almost diametrically opposed to the more focussed tasks of the 1950s, when ethnomusicologists were charged with the isolation and collection of as much musical data as possible.

The historical tension between ethnomusicology as a field that draws more and more musics into a canon for study, and ethnomusicology as a discipline whose methods, if not unified, are distinctive, had become even greater by the end of the 20th century (C. Seeger, 1970). Ethnomusicology was again undergoing an extensive discursive and methodological revolution. Many of the paradigm shifts that spawned the sweeping disciplinary changes of the 1950s were evident again in the 1990s, engendering sweeping change in the discipline. Nationalism, for example, reasserted itself in the 1990s, not only in the new nation-states of a post-communist Eastern Europe, but in post-colonial nation-states wishing to strengthen regional and international power in a fluid transnational political culture. Debates, too, raged again in the 1990s, and accordingly ethnomusicologists actively engaged in a process of realigning disciplinary borders and establishing new discursive alignments with disciplines as diverse as cultural studies and film studies. If technological revolution brought about a fourth paradigm shift already in the late 1940s, internet technologies are the cause of virtually unchecked shifts in the 1990s, ranging from the worldwide trafficking of digitalized sound to the transformation of traditional ethnographies through publication in internet journals, such as *Ethnomusicology On-Line* and *Music and Anthropology*. The representational revolution evident in the fourth paradigm shift, finally, stimulated an entirely new set of debates about the structures, methods, pedagogies and subjects of the field, stimulating a dizzying array of new disciplinary alignments, some perhaps ephemeral but others crucial to the reshaping of the discipline's identity in the 21st century.

2. THE DISCOURSES OF SCIENCE. Ethnomusicology became a new and different kind of science after World War II. During the second half of the 20th century new forms of scientific inquiry broadened the range of objects

available for investigation, while at the same time refining the procedures for study. Ethnomusicologists, especially in the 1950s and 60s, sought new forms of exact measurement, particularly those machines that would draw upon methods from the physics of sound to represent the cognitive parameters of music with objective detail, for example, the melograph employed by Charles Seeger at UCLA (C. Seeger, 1953). European systematic musicologists were among the first to adopt developing digital technologies in the 1970s and 80s to propose new scientific procedures for the representation of musical sound (see Zannos, 1999). Although the history of ethnomusicology had always looked towards the physical and natural sciences for parallel procedures and models, the tendency toward scientism accelerated rapidly in the second half of the 20th century (see Bohlman, 1991). By the end of the 20th century, nonetheless, the larger questions ethnomusicologists faced were is ethnomusicology a science, and, what kind of science can and should ethnomusicology be?

Several distinctive shifts accompanied the endeavours of ethnomusicologists to strengthen the scientific foundations of their field. Firstly, the broadly historical framework of comparative musicology was replaced by an ethnographic framework. Secondly, procedures based on pre-existing collections of music, in which music was treated as an object, gave way to collecting through fieldwork, in which music's subjective qualities were also investigated. Thirdly, the transcription of music using Western notation was severely scrutinized and it was supplanted by forms of representation that depended on technological reproducibility. Fourthly, psychological theories that treated music as the product of nature were replaced by theories from the cognitive sciences, which examined music as the product of human mental processes. Fifthly, musics that had been examined as self-referential symbol systems were transposed to contexts outside themselves, allowing music to be investigated as a component in a larger cultural complex. These shifts toward 'scientific' methods rarely followed similar paths and though proponents of all purported to redefine the scientific framework for ethnomusicology, they did so in ways that were scarcely comparable (see the different approaches in Zannos, 1999). By the closing decades of the 20th century, moreover, postmodern and post-colonial trends in ethnomusicology challenged the scientific impulse characterizing the first decades of ethnomusicology's radical realignment after World War II.

The comparative focus of ethnomusicology prior to World War II depended on a broadly historical ontology of music, in which music, wherever it was found, fitted the models of an organic and linear history. Traditional and non-Western musics, therefore, were comparable throughout the world because they could be calibrated as fulfilling different stages of development. The teleology from which comparative musicology developed depended on the Hegelian model of a universal history that moved ineluctably toward Europe as civilization developed ever higher levels. Accordingly, the comparativists ultimately constructed their own models of non-Western music as fulfilling an earlier stage of Western music history, or reflecting Western music history at a different stage of its development (see Schneider, 1976).

The wholeness of universal history was mirrored by the psychological models of music that emanated from the work of comparativists such as Carl Stumpf and Erich von Hornbostel, who were influenced by gestalt psychology (Schneider, 1999; Klotz, 1998). The question ethnomusicologists attempted to answer was, just how could the methods of the field perceive, measure and represent the parts that constituted that whole? The comparativists argued that wholeness largely cohered from a complex of systems with bases in both the physics of sound – hence, nature – and in musical and cultural practice. Javanese and Balinese traditional musics provided one of the most consistent sources of experimental material for investigating the natural and cultural domains of systemeticity. The instruments of the gamelan, particularly the idiophones, made it possible to investigate both the more or less fixed boundaries of tuning systems and the infinite variety within them that individual gamelan orchestras nonetheless demonstrated, theoretically tuned to themselves, and therefore demonstrated a complex of culturally bounded decisions (Hood, 1966; Rahn, 1979).

The historical rupture effected by World War II brought about a dramatic rejection of the historical framework upon which comparative musicology had depended. Whereas ethnomusicologists whose careers had been established prior to the war (e.g. Curt Sachs; see Sachs, 1962) sought ways to rejuvenate the field as an historical science, a new generation turned away from history and embraced the new scientific possibilities developing in the social and natural sciences. By recasting ethnomusicology as an 'anthropology of music', Alan Merriam was one of the first scholars to formulate a science of music that recognized music as only one of the subjects of ethnomusicology's scientific investigation (Merriam, 1964). His tripartite model held that music was but one of three subjects of inquiry, the other two being 'behaviour' and the 'conceptualization' of music, thereby drawing upon both psychological and aesthetic trends in anthropology.

The British social anthropologist and ethnomusicologist, John Blacking, pushed the scientific turn in yet another direction, that is, into biology. Music-making, Blacking argued in a series of very influential works (for example 1979 and 1995), was based in the human body, in both its genetic and physical structures, rendering music, therefore, a species-specific practice within nature. Culture, therefore, was not primarily a context for music, rather a product of musical practices that combined with other fundamental human activities to yield society. Blacking's provocative appeal to the biological sciences stimulated an interest in related musical phenomena with physical bases, notably dance, but he never fully theorized a set of biological parameters for ethnomusicological investigation before his death in 1990.

The attempts to introduce scientific discourse from the natural sciences were not without their detractors, and by the 1990s growing discontent, even outright resistance, countered scientism as emerging disciplines within the humanities, especially post-colonial studies and cultural studies, increasingly influenced ethnomusicology. Claiming that ethnomusicologists working in the natural sciences had neglected deeper social and historical problems – examining the biological structures of musical practice, for example, but ignoring the explicit presence of music in racial constructions and racism (see Radano and Bohlman, 2000) – new discourses of ethnomusicology

endeavoured to be more broadly responsive to the culture and politics of modernity and the post-colonial world. Research methods turned towards problems arising, for example, from the globalization of the nation-state in the 1980s and 90s, yielding post-colonial forms of fieldwork that investigated the nationalization of music archives or the nationalization of music education. New methods, drawn from political science and sociology, were adapted to interpret the politicization of musical institutions and the commercialization of world-music consumption (for example Mitchell, 1993). At the end of the 20th century, the sharp tensions between methods adapted from cognitive and natural sciences and those drawn from cultural studies and the reflexive shift in the social sciences defined new faultlines in ethnomusicology's engagement with science and scientific methods, revealing that it had become not a single scientific field in the second half of the 20th century, but a cluster of disciplines that continued to formulate scientific procedures in different ways.

3. Disciplinary revolutions. As ethnomusicology spread across and embraced the methodologies of a growing number of disciplines during the second half of the 20th century, its history was subject to the changes within those disciplines. Ethnomusicology's disciplinary revolutions were not primarily confined to developments within musical scholarship, but rather responded frequently to paradigm shifts in other disciplines. If, at mid-century, ethnomusicology turned away from the mainstream developments within musical scholarship, especially historical musicology, there was also a reintegration into the mainstream by century's end, particularly during the 1990s as other areas of musical scholarship varied and strengthened their interaction with ideas and developments outside music. The disciplinary revolutions during the half-century following World War II fall into two distinctive periods: those from around 1950 to 1975 followed paths that placed distance between ethnomusicology and mainstream scholarship; those from around 1975 to the end of the century sought, however tentatively, to influence the mainstream by seeking integrative paths.

No intellectual history was more profoundly influential on ethnomusicology's history in the second half of the 20th century than that of social and cultural anthropology. The collection and analysis of musical phenomena was already an important component of anthropology by the second half of the 19th century, particularly in North America, with the intense interest in Native American music, and in European traditions whose growth accompanied the spread of colonial empires (see Schneider, 1976). Anthropology provided ethnomusicologies not only with an impulse and framework for studying the cultures of 'others' deemed different, but a set of methods and technologies for appropriating their cultures. After World War II, however, it was not so much anthropology's methods or the cultures investigated by anthropologists – Native American music retained its central role – that brought about ethnomusicology's most sweeping paradigm shift in the 1950s but rather anthropology's challenge to the object of study itself, music. Claiming that musical scholarship had far too little evidence for and knowledge of the vast variety of musical repertories, Alan P. Merriam and David P. McAllester in the USA and John Blacking in the UK argued that the comparative study of music had been premature. More critical in the 1950s and 60s would be the expansion of fieldwork, the enrichment of basic collections and the refinement of ethnographic methods. Concomitantly, anthropologists called for a reconceptualization of music e.g. in Merriam's tripartite model. The paradigms of anthropology are most evident in the shift of ethnomusicological focus from music to music cultures, in other words, music as inseparable from the entire complex of society and culture.

Anthropology and other social science disciplines also shaped ethnomusicology's history, in some cases undergirding traditional areas of research, in others laying the groundwork for distinctively new directions. Folk-music research, for example, retained a large measure of its importance, but was redeployed from philological and textual to ethnographic and contextual approaches. In the USA Charles Seeger and Bruno Nettl theorized new approaches during the 1950s and 1960s. Folk music was no longer idealized as universal, but was investigated as a domain of cultural practice allowing local and regional groups to express uniqueness and difference. Ethnicity became the primary factor for North American folk-music scholars, while individuals as music-makers and small-group performance increasingly influenced scholarship in West and Central Europe, for example in the work of Ruth Finnegan (1989) and Ernst Klusen (1969). Previous emphases on text also underwent an anthropological turn, notably in the work of Steven Feld and Anthony Seeger, both of whom established new paradigms for musical anthropology by retheorizing the relation between music and language (Feld, 1990; A. Seeger, 1987).

Despite influences from the social sciences, ethnomusicology did not abandon its historical connections to humanistic and musicological study. Several emerging paradigms of the 1950s intensified the concern for the musical object. Ki Mantle Hood's notion of 'bi-musicality' privileged the musical component in ethnomusicological participant-observation, arguing that the only way to know another culture's music was to develop fluency as a skilled performer, a goal possible only after years of intensive study. Organological research in ethnomusicology, moreover, continued to emphasize the integrity of musical instruments, whose identities were circumscribed by the objects themselves and their positions within classificatory systems indebted to 19th-century philological methods. The organological methods adapted from Curt Sachs and Erich M. von Hornbostel by scholars such as Klaus Wachsmann and Laurence Picken (1975) in the decades after World War II also gave way to new approaches to organology, such as those theorized by Erich Stockmann (for example in the series *Studia instrumentorum musicae popularis*) and Margaret Kartomi (1990), which responded to the distinctive forms and interrelations between instruments within each music culture. A similar shift of focus from discrete data to the complex interrelations within cultural systems characterized the revolution in systematic musicology. Systematists such as Oskár Elschek and Albrecht Schneider expanded melograph techniques by developing new computer applications, that allowed ethnomusicologists to read beyond the sound itself and to interpret the ways in which acoustic phenomena represent cultural context.

Characterizing ethnomusicology's disciplinary revolutions was a renewed concern for musical texts, a reinterpretation of culture and its meanings, and a reintroduction of historical methods. Theories from

literary criticism, particularly the processes of music as a symbolic and signifying form of expression, drawn from the work of Jacques Derrida and Michel Foucault, generated new analytical languages for talking about music. Popular music, both as the product of small groups or as globalized world music, increasingly became a postmodern object of ethnomusicological enquiry, with many scholars negotiating with the emerging theories of British and American cultural studies, from Stuart Hall to Arjun Appadurai. Ethnomusicologists also turned to 'new historicism' and other post-structural theories to find the new ways in which music contributed to the construction of history itself (see Blum, Bohlman and Neuman, 1991).

If ethnomusicology's forays through the interdisciplinary terrains of the late 20th century produced quite different types of revolutions, some affording only short-term exchanges across disciplinary borders, others yielding long-term paradigm shifts, the sheer multitude of those forays reveals a dynamic history, one in which experimentation was valued as a means of questioning and challenging the mainstream of musical scholarship on an increasingly global level.

4. Political contexts. The history of ethnomusicology has frequently formed along international ideological faultlines, articulating and, at times, politicizing them. Because scholarship prior to World War II had participated quite fully in colonialism and its appropriation of culture for use and consumption in the West, the field was often unable to extricate itself from the post-colonial fissures forming as new nations achieved independence and distanced themselves from the control of Western nation-states. Colonialist alliances between Western 'Selves' and non-Western 'Others' underwent processes of radical realignment and ethnomusicology itself entered a phase in which it struggled toward institutional centralization when many of those previously studied were calling for resistance to disciplinary centralization according to Western intellectual and academic models. Attracted to the ideological and political issues of the post-colonial world, many ethnomusicologists also confronted the need to reexamine and recast the political motivations that they had inherited from the era of colonial expansion into and representation of the world's cultures.

As post-colonial delineations shifted, so too did ethnomusicology's paradigms. Within European ethnomusicology the fissure between East and West, already a product of the Enlightenment, deepened as the cultural implications of the Cold War became increasingly evident. Eastern European ethnomusicologists remapped musical folklore to reflect regional musical landscapes so that they would constitute new nationalist realities. Supported with resources from national academies of science, ethnomusicologists intensively collected at the local and regional level, assembling an image of the nation based on related, balanced parts (see Elschek, 1991; Nixon, 1998). Eastern European nations came to embody national musics – for example Romanian, Bulgarian or Yugoslav – and the new national musics contributed to the writing of new national histories, such as the 'six centuries of democratic struggle' undergirding the canon of 'folk music' in the German Democratic Republic (Steinitz, 1978). Western European ethnomusicologists, in contrast, frequently eschewed nationalism, albeit for no less ideologically motivated notions about the democracy of music-making. There was relatively little support of ethnomusicological research at the national level, with institutional frameworks both proliferating and fragmenting. The importance of the split between East and West in Cold War ethnomusicology is not to be underestimated, for it also shaped the institutionalization of ethnomusicology at a global professional level, particularly in the history of the International Council for Traditional Music, whose activities, such as conferences in both East and West, sought to bridge the ideological divide separating the regions.

By the 1970s new schisms began to supplant the division between East and West. A palpable geographical shift between North and South, with major divisions between Europe and Africa, and between North and South America, increasingly replacing the divide between East and West. Those who had previously been studied asserted their intellectual right to represent themselves and to do so with methods of their own making and implementation. The power implicit in Western music history and anthropology was subjected to growing scrutiny and criticism. Scholars from Africa and South America, as well as from other areas of emerging economic and political power in the so-called Third World, continued to turn to European and North American ethnomusicology because of opportunities for advanced study, but they insisted on the necessity for new forms of dialogue and exchange that both highlighted the differences between North and South, and charted new, more international historical paths for ethnomusicology.

In the closing decades of the 20th century the explosion of Asian economic power and the implosion of European nationalism again shifted ethnomusicology's paradigms along ideological faultlines. National schools and institutions of ethnomusicology developed in some Asian countries, such as China, Indonesia and Japan. Some Asian ethnomusicologists, such as those in Australia and Japan, drew upon and extended Western models, whereas others, such as those in China and India, turned toward distinctive models of their own, which often represented music history according to indigenous paradigms, often quite devoid of European teleological patterns (see Qureshi, 1991; Wong, 1991). South American and African ethnomusicological histories also took shape and followed distinctive directions in the 1980s and 90s, influenced more by post-colonial responses and even ideological rejection of the West than by the power accrued from global economic expansion.

During the 1990s, particularly in response to the end of the Cold War and periodic economic crises in Asia, the paths along which ethnomusicology's history had formed entered new phases of destabilization and engendered new debates about and challenges to the ways in which the field could study, represent and appropriate world musics. At their core, most debates about who possessed the intellectual capital and political power to study whom remained rooted in historical problems and persistent questions about music and identity. Native American musical scholarship, for example, deepened its stance toward the rights of any scholar to study Native American musical practices. Few questioned the claims that Native American should themselves largely control access to and the representation of their musical practices, but just how non-Native American might work together on ethnomusicological research remained open to question (see Herndon and McLeod, 1981; Diamond and others, 1994)

and spawned new versions of older, historical questions, such as the gendered presence of ethnomusicologists in ethnographic research (Frisbie, 1991).

New ideological schisms, some ontologically more reactionary and others more intellectually radical, formed in the new ethnomusicologies emerging in the 1990s. Some scholars working in the Middle East and in Islamic traditions of the Mediterranean and Central and South Asia, for example, began to argue for approaches that would place musical repertories and practices in more appropriately Islamic categories, reflecting a larger tendency to view Islam as a determining factor in world history and culture. Islamic musics and Islamic ethnomusicology would therefore cut across and even negate the history and geography at the core of Western ethnomusicology, yielding histories of scholarship shaped entirely within their own religious traditions (see al-Faruqi, 1985; Qureshi, 1991).

The critique of African ethnomusicologists levels its attacks at the Western underpinnings of ethnomusicology. Rather than seeking to articulate an overarching category, such as 'Islamic ethnomusicology', African scholars deny the very possibility of an 'African ethnomusicology', decrying the damage such disciplinary categories have unleashed throughout the colonialist presence in Africa and the post-colonialist attempts to redress that presence (see Agawu, 1995; Appiah, 1992; Masolo, 2000). The challenge of the new ethnomusicologies at the end of the 20th century has been to expose old and new ideological faultlines, and to insist that ethnomusicologists recognize and address the politicized paradigms that shape the past, present and future of their field.

5. Institutional strands. As ethnomusicology's distinctiveness and independence as a discipline grew during the second half of the 20th century, educational and scholarly institutions increasingly defined, directed and, to some extent, limited the directions in which ethnomusicology developed. Two general historical directions asserted themselves, one inclusive, the other exclusive: institutions generating the inclusive impetus sought to open methodological boundaries, embrace scholarship from other disciplines and broaden the field of inquiry; more exclusive institutions stressed more rigorous methodological approaches, stressed ethnomusicology's uniqueness and focussed on the growth of ethnomusicology from within. Exclusive institutions generally were more locally or nationally bounded than inclusive institutions.

The most common institutional sites for the development of ethnomusicology were governmental agencies and centres of learning and education. Broadly speaking, the governmental agency furthered research which begins with fieldwork in a field that hypothetically includes an entire population group, provides opportunities for archiving and processing of music from the group, and concludes with some kind of dissemination and return of research material to the group. Governmental agencies range from local arts and humanities councils to academies of science on the national level. These institutions dominate ethnomusicological research in many countries, notably in Central and Eastern Europe, in South America, and in many emerging nations of Africa and Asia, in which governmental agencies are charged with the institutional inculcation of national culture and cultural nationalism.

One of the primary institutional reasons for the international spread of ethnomusicology after World War II was its growing presence as an academic discipline in the university and other institutions of higher education. Teaching posts and research possibilities proliferated rapidly, particularly as the humanities and social sciences in universities throughout the world sought to attract students from other nations. University programmes in ethnomusicology drew a large – and crucial – percentage of their students from areas of the world whose musics were being taught. Especially in the USA, but to some degree also in the UK, Japan, Italy, Austria and West Germany, ethnomusicology became a primarily academic discipline in the 1950s and remained so until the end of the 20th century. During the 1980s and 1990s, university programmes offering advanced training and degrees in ethnomusicology spread to countries throughout the world, often founded by returning scholars, who had received graduate degrees in ethnomusicology from Western universities. Such institutions drew upon Western approaches and methods, but adapted these to local resources and concepts of music and music education.

In the 1980s and 90s institutions within private and business sectors expanded their support of ethnomusicology, particularly as such institutions perceived the possibilities for the mass collection and dissemination of world musics. In the first decades after World War II recording companies, usually small and rarely subsidiaries of transnational conglomerates, sponsored collecting endeavours, among the most notable of which were the Moses Asch's Folkways recordings (Cantwell, 1996; Goldsmith, 1998; McCulloh, 1982) and the UNESCO-sponsored anthologies from countries and regions throughout the world. With the entry into the market of Electra (Nonesuch), Ocora and other international recording companies in the 1960s and 70s, the possibility of marketing musics from the world as 'world music' became increasingly attractive to the private sector. In the 1980s and 90s other areas of the private sector, particularly publishing houses and concert organizers, provided a substantially new and powerful institutional infrastructure for ethnomusicology.

Academies of science, national sound archives and their related agencies transformed their production of sound recordings from formats dedicated to more limited archival and scientific uses to those making more public and commercial dissemination possible. The EU, for example, sponsored nationally-based recording projects among its members that were designed to make regional musics available on CD, thereby emphasizing the EU's concern for regionalism. By the end of the 20th century, new recording technologies, not only CD, but also internet and CD-ROM, stimulated a turn toward historicism as historical recordings, among them the field recordings from the beginning of the 20th century, were rereleased and recontextualized for scholarly and public consumption. Virtually every type of institution, therefore, could sponsor and finance its own recording projects, expanding the availability of sound documents for historical and ethnographic research on local, national and international levels.

The proliferation of new forms of music publishing yielded new contexts for institutionalizing ethnomusicology after World War II. Rather than contributing mosaic pieces to larger histories of music as they had at the

beginning of the century, ethnomusicological monographs became genres that reflected the new forms of research and institutionalization. Scholars used the monograph to represent a music culture as extensively and intensively as possible, with sections devoted to ethnographic detail, transcription, and biographical studies of musicians. The ethnomusicological monograph, therefore, responded to the enjoinder from the critics of comparative musicology to collect more empirical evidence from throughout the world and examine that evidence in greater detail. During the 1960s and 70s, publishing in ethnomusicology shifted focus from series emphasizing area studies to those attempting to embrace the integrity of ethnomusicology as a discipline unto itself. Journals provided venues for ethnomusicologists to present empirical studies, but even more important, the journals introduced a discursive venue for extensive debate about the nature of the discipline and for critical self-reflection about methodology, interdisciplinarity and ethics (for example Merriam, 1977; Gourlay, 1978; Shelemay, 1999). One measure of ethnomusicology's expansion and diversification in the final decades of the 20th century was a parallel increase in the journals devoted primarily to ethnomusicology research (Etzkorn, 1988). In the 1980s and 90s, new publishing venues for reference works in ethnomusicology emerged, usually conceived as encompassing the musics of a nation or region (Stockmann, 1992) or providing encyclopedic coverage of many world musics, as with the *Garland Library of World Music*.

Soon after World War II ethnomusicology entered a phase of extensive professionalization, leading in turn to new possibilities for international contact and the exchange of information and resources. Two scholarly societies, the SOCIETY FOR ETHNOMUSICOLOGY (SEM) and the INTERNATIONAL COUNCIL FOR TRADITIONAL MUSIC (ICTM), have dominated the field's professionalization. The histories of the two societies reveal that they have been more different than alike, for they have responded to the changing nature of ethnomusicology in distinctive ways. The ICTM's conceptualization of music was nationally, rather than internationally, bounded. Many articles in the early volumes of the ICTM's journal were devoted to comprehensive definitions of the folk music in individual countries, replicating in many ways the template of comparative musicology. The term 'folk music' was retained as a designation of the ICTM's official object of study until 1981, despite attempts to redefine that object (Elbourne, 1975). The ICTM has located music as an object at the centre of its discourse, reflecting a European disciplinary preference for musical folklore and the predilection of many scholars to write on their own musics rather than looking beyond their national borders for areas of study. National committees wishing to admit more methodological variety and breadth have occasionally struck out in independent directions, as in the UK and Ireland, with the BRITISH FORUM FOR ETHNOMUSICOLOGY. ICTM conferences have moved from host country to host country, and attendance from all sides of international political conflicts has been facilitated, maintaining the ICTM's emphasis on an international membership and disciplinary inclusivity.

The Society for Ethnomusicology, in contrast, has followed a path shaped by North American ethnomusicologists and institutions. The SEM has concerned itself less with the object of study than with the development of new methodologies and the encouragement of interdisciplinarity between the humanities and the social sciences. In part to redress the American domination of the SEM, European scholars formed the ESEM in the 1980s, which attracted growing numbers of participants to its conferences in the 1990s. The SEM and ICTM together occupied the professional activities of most ethnomusicologists until the end of the 20th century. Together, they heightened the potential of ethnomusicology to include a multitude of approaches to local and world musics, and to musicological and anthropological approaches, making it possible for ethnomusicologists to choose from a broad spectrum of disciplinary methods and institutional alignments.

6. OTHER ETHNOMUSICOLOGIES. Ethnomusicology as a discipline did not escape the post-colonial theories of the final decades of the 20th century, which increasingly criticized the Western intellectual engagement with and appropriation of music cultures elsewhere in the world. Whereas ethnomusicological research reached into more and more places, and a growing number of scholars from non-Western countries received formal ethnomusicological training, directly or indirectly, in Western, especially American, universities, ethnomusicology's virtually ubiquitous presence became the focus of a concern that indigenous traditions of scholarship were repressed or even failed to take shape because of the hegemony of Western ethnomusicology, its institutional structures and the power it wielded in the collection, dissemination and interpretation of the world's music. At issue were questions of ownership: whose music was subjected to ethnomusicological study; by whom and for whom; whose musical resources could be appropriated; to what ends; and whose ethnomusicology should have the right to examine other musics?

By the end of the 20th century such questions had led to an extensive scrutiny of ethnomusicology as a global discipline and had spawned growing forms of intellectual challenge to Western ethnomusicology, chief among them the establishment of new programmes of study and research, which in turn responded to national and regional differences and spurred the emergence of other discourses (see Béhague, 1991; Perlman, 1994; I.K.F. Wong, 1991; Zhang, 1985).

Though many of the 'other ethnomusicologies' were genealogically and institutionally bound to Western ethnomusicology, they largely sought forms of scientific independence that allowed them to forge models for research and teaching appropriate to their own national and local needs. Were, for example, basic ethnomusicological assumptions about the ontology of music sufficient, and were the genres and typologies borrowed from the West productive? Emerging national discourses naturally emphasized the local and the ways in which diverse local traditions collectively represented the nation, usually referred to with categories that juxtaposed traditional music with the nation. Thai music, for example, was privileged in programmes in Thailand (D. Wong, forthcoming).

Whether or not 'folk music' in an Asian national history had meanings parallel to those in Europe was, nonetheless, a different question (Jones, 1995). European musical terminology was itself one of the greatest problems as scholars sought to broaden their scopes (Blum, 1991). Different traditions of pedagogy and concepts of music

history and historiography were equally problematic (Qureshi, 1991). The models borrowed from the field of cultural studies, such as globalization and transnationalism, exacerbated rather than solved the need for intellectual independence, for these models, too, placed non-Western musical traditions in a position subservient to the hegemony of Western economic and cultural power (Slobin, 1993). Articulate performers, such as Sumarsam and Ali Jihad Racy, channeled another type of response, translating indigenous music-making to ethnomusicological discourse.

The most sustained critiques of a global ethnomusicological hegemony have been those from East Asia, South Asia and Africa. Distinctive critiques from South American and Middle Eastern scholars began to crystallize in the 1990s as ethnomusicology established itself more securely in institutions of higher education. It would not be entirely correct to subsume all these critiques and the other scholarly traditions from which they are issuing under the single umbrella of post-colonial response, for they respond to the colonial presence of ethnomusicologists, be it as missionaries, government officials or scholars financed by transnational foundations, in different and distinctive ways. Indian critiques of Western views and methods, for example, take as their point of departure the *longue durée* of an intellectual history of Indian music.

If Indian scholars have been dismissive of Western ethnomusicology, particularly its terminology, scholars in African and China, in contrast, have been sharply oppositional, calling in their extreme forms for a break with Western scholarly approaches. African critiques have coalesced around various forms of post-colonial response, with African scholars consistently drawing attention to the ways in which the terminologies and discourses of African music have been imposed in such ways as to discipline African cultures and thereby to reduce them to a position of subservience (Masolo, 2000). African scholars have debunked commonly-held theories stated by comparative musicologists in the first half of the 20th century, as well as by Africans attempting to construct the pan-African aesthetic and ideology of *négritude*, that there was a larger field of practices that could be subsumed under the single rubric of 'African music'. Whereas many Western concepts, foremost among them the insistence that the basis of African musics was rhythm, imposed primitiveness, thereby racializing African musics, new ethnomusicological voices emphasize the ways in which indigenous concepts challenge the very metaphysics of music on a global scale (Erlmann, 1999).

Chinese ethnomusicologies and ethnomusicologists have tended to be less post-colonial asserting that the ideologies and histories motivating the study of Chinese musics are distinct from those of the West in certain fundamental ways. The historical issues derive not only from the distinctive character of Chinese political and cultural history, but also the nexus of 20th-century ideological conflicts within East Asia itself, such as the interrelations between mainland China, Taiwan and Hong Kong. Ideological and historical issues influence the ways in which, for example, minorities in China are recognized as part of a national culture, or the ways in which religious musical practices have survived in isolation or in highly politicized contexts, be they in mainland China or Taiwan, or even in the extensive Chinese diaspora (Chen, 1999). In a series of articles and internet exchanges, J. Lawrence Witzleben was particularly effective in focusing debates about the direction a Chinese ethnomusicology would need to proceed, so that by the end of the 20th century many new ethnomusicologies were turning to the critiques coming from Chinese scholars as touchstones for their own moves towards independence.

The critique of Western ethnomusicological hegemony did not only have a regional basis in Asia and Africa, but rather it came to unleash new forms of ethnomusicological discourse in Europe and North America. In particular, popular-music studies were empowered to formulate approaches to the study of musics and cultural practices that many believed had been too long neglected by mainstream ethnomusicology. The rise of popular-music studies in the 1980s marked a turn from the privileging of élite non-Western musics, hence, also the colonialist stance of late 20th-century ethnomusicology towards the musical practices of working-class and powerless members of industrialized societies. 'Popular music' did not only assume a new set of ontological meanings, but rather it required substantially new theoretical and ideological approaches, which together informed the journal, *Popular Music*. Much scholarship devoted to popular music, therefore, took shape outside mainstream ethnomusicological discourse, and it came to challenge ethnomusicology through its more broadly based and inclusive methodologies that allowed scholars to investigate popular musics within the global context of late 20th-century transnationalism.

One of the most striking characteristics of ethnomusicology's development in the closing decades of the 20th century is that ethnomusicologists took the challenges to their disciplinary hegemony seriously, seeking to address many of the issues raised by other ethnomusicologists. By responding to the critiques of the emerging other ethnomusicologies, the discipline maintained one of its fundamental tenets, that of inclusivity. Indeed, if that inclusivity had historically also provided one of the components of the discipline's hegemony and expansion together with colonial histories, it also opened ethnomusicology's discursive borders at the end of the 20th century, stimulating many scholars to look outward and to attempt to grapple with the challenges to the discipline rather than looking inward to buttress the approaches and methodologies that the critiques were actively trying to dismantle.

7. Unitary field or cluster of disciplines? In the mid-1990s, at the moment of its most extensive presence in the global study of music and of its greatest influence on the shaping of an interdisciplinary musical scholarship, ethnomusicology became the focus of a chorus of criticism calling for a renaming of the discipline. There was no single motivation for the call to rename the discipline, but rather the call itself signalled that a crucial historiographic juncture had been reached, a shift in paradigms, if not a moment of disciplinary rupture and revolution, paradoxically following on the heels of the discipline's most widely acknowledged successes. There was also no single term that won overwhelming support, or that really solved the problems that the call for renaming the discipline identified.

A younger generation of North American ethnomusicologists claimed that 'ethnomusicology' misrepresented their own disciplinary training, suggesting that the discipline was merely a subdiscipline of a larger musicology. The methods employed in new studies of popular

music or drawn from cultural studies were not, so they claimed, primarily musicological. There was a further argument that ethnomusicology, as the discipline devoted to 'ethnic groups' and all musical cultures and subcultures, should be charged with the brief of studying all musics – folk, popular, classical, Western, non-Western, ect. In contrast, other critics claimed that ethnomusicology had increasingly turned inward because of its successes, making it more exclusive and deflecting the reflexive turn that had inspired the generations after World War II. Feminist and post-colonial theories, so this critique held, have slipped to only secondary significance as ethnomusicology strove to strengthen its institutional and political structures.

The most arresting call for renaming the field came from traditions that had taken shape outside Europe and North America, in economically developing countries and in the emerging discourses and academic traditions of the so-called Third World. The name 'ethnomusicology', so these critics decried, had too long represented a skewed distribution of power between Western musical scholarship and the cultures whose music it studied and appropriated. By retaining the name of their discipline, ethnomusicologists had also failed to question the historical split between Europe and its others, between industrialized nations and economically disadvantaged nations, and between music cultures formed by history and the people who had been denied history.

Various names were proposed as replacements for 'ethnomusicology', for example, 'cultural musicology' or 'musical anthropology' or, in the spirit of Charles Seeger, simply 'musicology', but there was virtually no agreement that any of these solved the range of problems cited in the critique levelled against 'ethnomusicology'. In the late 1990s the debate intensified, and it unleashed a new and productive discourse about the nature of ethnomusicology's methods and its goals as a discipline and field. The debates clustered around the question: was ethnomusicology a unitary field, or was it a cluster of disciplines? On the one hand, ethnomusicology at century's end increasingly claimed the disciplinary structures of a unitary field, a canon of theory and methods, and publications and programmes of advanced study that undergirded these. National and international scholarly societies and a palpable presence in public debates about globalization and transnational cultural capital also lent ethnomusicology strength as a unified and central field. On the other hand, the more centralized the field became, the more difficult it had become to embrace diverse ontologies of music and methodologies of musical scholarship. As a centralized field, ethnomusicology was only tentatively dealing with the political and cultural realignments following the end of the Cold War in 1989. It was left to local and national efforts to deal with many of the challenges of a post-Cold War, postmodern world, such as continuing civil strife in Eastern Europe and South and South-east Asia. To the more politically progressive scholars of the 1990s, ethnomusicology seemed too encumbered by its growth and successes to engage critically and actively with the presence of music in the rising tide of racism and nationalism.

By the end of the 20th century the question remained open as to whether the new – or renewed – debates about the discipline's name were symptomatic of a change in the central core of the discipline. Whereas the debates might have been contradicted by the growth of ethnomusicology in institutions internationally, there were more fundamental historiographical questions than the challenge to the name itself. Did 'music' really remain the central object of ethnomusicological study, especially given the challenges of ethnomusicology to the limits of representation in a postmodern age? Would the institutional structures that supported the sea changes in the second half of the 20th century be those that provided the basis of ethnomusicology in the 21st? Would the cluster of scientific discourses embraced by ethnomusicologists change in fundamental ways? Would ethnomusicology really expand into new public spheres with the potential to bring about a major change in its language and political responsibilites, for instance, with the growth of the 'world music industry'?

The period in ethnomusicology's intellectual history from 1945 to the end of the 20th century began with the challenge posed by renaming the discipline so that it would best represent a group of disciplines and scientific practices in the humanities and social sciences, and it concluded with the same challenge. Among the debates that generated responses to that challenge, few were characterized by a hardened stance that ethnomusicology was a single discipline whose defenses needed to be strengthened to fend off those malcontents who would strike at its very heart, symbolized by the name ethnomusicology. The persistence and vitality of the challenge to the discipline's names, be they 'comparative musicology', 'the anthropology of music' or 'ethnomusicology', revealed that ethnomusicology did not locate a single object at its centre, nor did it rely on a core of tools that all ethnomusicologists needed to acquire in order to command a common body of knowledge.

At the end of the 20th century, ethnomusicology remained a discipline openly willing to pose new questions, to embrace different and diverse methodologies, and to break with tradition when required by the empirical evidence. The paradigm shifts and radical reformulation of ethnomusicology in the decade after World War II had become normative by the end of the century, empowering ethnomusicology as a cluster of disciplines, discourses and scholars, challenged rather than fettered by the symbolic baggage of a name, to respond to the ever-changing meaning and presence of music on the world's contested cultural landscapes at the turn of the century.

IV. Contemporary theoretical issues

1. Theory and culture. 2. Communities and their musics. 3. Ethnicity. 4. Nationalism. 5. Diasporas and globalization. 6. Race. 7. Sexuality and gender. 8. New historicism. 9. Practice theory. 10. Music theory and analysis.

1. Theory and culture. Summarizing ethnomusicological theory, following Nettl (1983), as 'the study of music in and as culture' is no longer a straightforward matter. The classical Enlightenment notion of theory, as modular, testable and preferably verbal abstraction, articulated from an all-seeing distance is itself subject to serious epistemological and methodological doubt. In an important sense, ethnomusicologists might be described as living in a post-theoretical environment, one shared by many in the social sciences and humanities. 'Post-theoreticism' is of course itself a theoretical condition. The recursive nature of this enterprise has often been noted, in music studies and elsewhere. Doubt and

scepticism as to the very possibility of theory have initiated inquiry into the historical and political conditions of ethnomusicological theory, reflexive attention to fieldwork practice, and vigorous consideration of alternative modes of ethnographic expression, written, recorded, filmed, staged or displayed (for examples of experimental ethnographic writing, see Coplan, 1994, Kisliuk, 1997; on biography, see Danielson, 1997; on film, see Baily, 1986; on recording, see Zemp, 1996; on museum ethnography, see Simpson, 1996).

One might also ask whether the culture concept still serves as a unifying rubric for ethnomusicological research. Many other scholarly traditions are now also involved in investigating music 'in and as culture'. The culture rubric also fails to define the work of many ethnomusicologists. This is particularly so in Britain and France, where culture has not been the overriding theoretical precept, and in Germany, where the culture concept has been substantially discredited by its appropriation by Nazism. The buoyant state of the US university system and university presses has done much to spread North American culturalogical models of ethnomusicological research, but this is far from being the whole story. In recent decades, the culture concept has come under sustained hitorical critique. The term culture emerged, as Elias pointed out, in a process of sociogenesis following the assembly of the German nation-state in the period following the Thirty Years War, separating the courtly, French-speaking nobility from an emerging German-speaking middle-class intelligentsia (Elias, 1982). In this context Kultur referred to a process of self-making and 'inner' achievement, as opposed to the 'outer' formalities of courtly etiquette and behavioural form. For Herder and those who followed him in 18th-century Germany and elsewhere in Europe, Civilization connected the individual to universal norms, while Culture was the incommensurable property of groups and, more specifically, nations. In this sense the history of the 'culture' concept was inextricably bound up with the history of the characteristic institutional forms of modernity itself. Critiques of modernity in recent decades have almost necessarily implied a critique of the notion of culture itself.

Ethnomusicological understandings of music culture have often been criticized in precisely these terms. Ethnomusicologists have indeed been inclined to ignore or downplay the problematic relationship of culturalism with the self-interested pronouncements of colonial and post-colonial elites. They have also often failed to understand and sufficiently distance themselves from the baggage of an Enlightenment rationalism in which European and non-European 'others' are simply there as examples or 'cases' for classification according to metropolitan criteria. Ethnography in this mode purports to provide connections and an inclusive framework for analysis, but often reifies, abstracting texts from contexts, enabling commodification and other forms of exploitation. Culturalism relies on the myth of insider knowledge as providing the only relevant terms for grasping the particularities of meaning and expression in a given community, but, ironically, fieldwork interlocutors are rarely granted the status of co-authors of ethnographic knowledge, and too often consigned to muted oblivion as exemplars, illustrations and, occasionally, statistics. Criticism of ethnomusicological theory and practice has often been expressed in these terms from outside the discipline, but similar concerns have been articulated by practicing ethnomusicologists for some time (Keil, 1991; Guilbault, 1993; Waterman, 1990).

So, it is legitimate to ask whether 'culture' continues to serve as a useful anchor for ethnomusicological theory. On the one hand, ethnomusicologists brought up in the culturalist traditions are increasingly sensitive to the limitations of the term. They are more attentive to critical voices from within cultural studies and the sociology of culture, and more aware of traditions of studying other musics in which 'culture' is not central. Hyphenated formulations such as 'socio-cultural' draw attention to the need to transcend the local in analysis, and to understand social and historical forces which may lie outside the field of vision of local actors, and the organizing, meaning-making, structuring capacities of these local actors in constant dialectical interplay. On the other hand, the notion of culture has often nurtured radical activism by and for the sake of minority, peripheral or disadvantaged groups, in ways which have become increasingly attentive to problems of interest, agency, voice and the unwitting perpetuation of metropolitan stereotypes. The very notion of African American 'culture', as articulated by Boas and Herskovits in the early and middle years of the 20th century, played a role in the civil rights movement in the USA. Today, notions of 'strategic essentialism', articulate a variety of global subaltern alliances, temporary affective bonds of shared political destiny, in culturalist terms. As Weiner puts it: 'culture is no longer a place or a group to be studied. Culture, as it is being used by many others, is about political rights and nation-building. It is also about attempts by third-world groups to fight off the domination of transnational economic policies that destroy these emergent rights as they establish their own nation-states' (Weiner, 1995). The idea of cultural critique as a form of political engagement is still very much alive in contemporary ethnomusicological writing. In this partial and strategic sense the notion of 'music in and as culture' might continue to generate productive questions.

2. Communities and their musics. From rituals involving intense face-to-face interaction to situations of electronically mediated dispersal, ethnomusicologists continue to be driven by a fascination with the socially integrative effects of music and dance. Social anthropologists have stressed the functional and structural properties of music and dance in terms which have generally owed much to Durkheim's discussion of effervescence (Durkheim, 1915). Ethnomusicological theorists of the role of music and dance in constructing imagined communities (Anderson, 1983) in situations of wide spatial dispersal have stressed the dynamics of specific media systems, from cassette to the web, with some stress on the radical possibilities for self-imagining and mobilization that these media open up. In different ways, all of these writers perceive music and dance as a kind of 'deep sociality' (Finnegan, 1992), engendering a vital sense of community, of participation and affective bond.

A distinctive ethnomusicological contribution from within this line of inquiry has been directed at the question of how music, as opposed to or in relationship with other activities, achieves this task. Music clearly plays an important role in symbolizing community, expressing and structuring the relationship of parts to wholes, male to

female, tradition to modernity, self to collectivity (e.g. Mitchell, 1956 on the Kalela dance; Mach, 1994 on national anthems; Sugarman, 1997 on gender). Communities undoubtedly recognize themselves as such in their music making, and constitute themselves through and around this recognition. But music-making and dance do more than express or symbolize processes taking place elsewhere in the social structure, as indicated by the considerable surplus of affect they generate in performance. As Blacking's ethnomusicology constantly stressed, music-making is often itself the primary context in which a community reproduces and transforms itself: the Venda Tschikona dance was, for example, the only event at which Venda came together as an entire community. Musical principles in more isolated and socially fragmented musical genres all revealed, on analysis, significant examples of primary modelling systems which organized and informed significant aspects of Venda collective life. This insight has been extensively elaborated in tribal, 'enclave' societies on the far peripheries of nation-states (Seeger, 1987, Parkes, 1994), in situations of migrancy and diaspora, whether within or outside the nation-state (Sugarman, 1997; Bohlman, 1991), and in urban subcultures (Reily, 1992; Baumann, 1990). It continues to challenge and inspire a great deal of contemporary ethnomusicological thinking. Its Durkheimian roots continue to be evident.

For Charles Keil, music brings people together through 'participatory discrepancies'. The theory of participatory discrepancy also draws on a reading of Durkheimian effervescence: participation takes place in 'collective mental states of extreme emotional intensity, in which representation is as yet undifferentiated from the movements and actions which make the communion towards which it tends a reality to the group. Their participation is so effectively lived that it is not yet properly imagined' (Durkheim, quoted in Keil, 1994). Slight deviations in timbre and pulse, such as give rise to the particular styles and sounds of jazz or polka drummers, or the overlapping and slightly discrepant textures of the trumpets and shawms used in Tibetan monastic music generate the performative ebb and flow, the groove which is central to communal musics. The task of socio-musical analysis is then one of comprehending, and finding some means of representing, just how such discrepancies operate in relation to meaning and feeling in a given musical context. Whether or not western musical transcription and analysis can adequately engage with these discrepancies, often located in minute details of rhythmic and timbral inflection, and whether or not the process simply reinscribes traditional assumptions rooted in grammar-based music theory, is open to discussion.

Bernard Lortat-Jacob discusses the centrality of music in the production of community in highland Berber festivities in the High Atlas in Morocco (see Lortat-Jacob, 1994, for a comparative analysis in relation to community festivity in Sardinia and Romania). In this situation, good music is good festivity, and vice-versa. No distinction is really possible, despite a minimal level of functional differentiation of musicians and other festival-goers. Analysis of the event, and the collective *ahwash* in particular, demonstrates not only a complex process of interaction among the participating drummers and singers, but a musical process of the progressive acceleration, expansion and displacement of internal elements within a rhythmic figure over the course of the performance. This sensuous texturing of the event achieves an effervescence which is central to the festivity, and its role in reproducing highland Berber life, not only as an image, but also as the very practice of Berber sociality. Processes of effervescence, solidarity and collective representation are thus mutually constituting and defining. Lortat-Jacob (1994) suggests a continuum between festivities (such as those of the Berber highlands) which rely on internally generated community mechanisms, and those which rely on others, both for musical services, and as a symbolic site of otherness through which community identity and a sense of self is configured. This shift, from homeostatic mechanisms for reproducing communities to the unstable and unruly dynamics of constructing selves through the medium of others, is revealing. Ethnomusicology in the last ten years of the 20th century was, indeed, absorbed by the question of difference, particularly in relation to matters of ethnicity, nation, race, gender and sexuality. It has also reflexively generated concern with the ways in which the discipline of ethnomusicology itself constructs difference, and the consequences of this process.

3. Ethnicity. Since the 1960s, anthropologists have been inclined to think of ethnicity as a process of categorization producing social and cultural difference. For many ethnomusicologists, this has shifted the emphasis from the production of homologies linking a specific social structure with a specific musical style, to thinking about musical style as a way of producing difference in a more complex and plural ensemble of social relationships. It also initiates an inquiry into the power relations that structure such relationships. The presence of powerful 'difference producers' in a given social space has fundamental implications for those whose means of representation are less powerful. The relatively powerless see themselves partially through the eyes of the relatively powerful. The extent of this 'partiality' is variable and crucial to cultural analysis; it also frames the political and cultural consequences of powerlessness in significant ways. Attention to the production of difference in cultural analysis has been accompanied by parallel attention to the question of representation. Theories of articulation and mediation (see Guilbault, 1997), drawing particularly on the work of Stuart Hall (e.g. see Hall, 1986), have problematized homology theories positing a one-on-one connection between social structure and cultural morphology. Musical performance is increasingly seen as a space in which meanings are generated, and not simply 'reflected'; 'ethnic' markers, like any other, are the negotiated products of multiple, labile, and historically constituted processes of difference making. They operate upon social space, and do not simply reflect differences already 'there' (on the performative turn in ethnicity studies, see Stokes, 1994).

A general interest in matters of ethnicity has raised questions about the relationships between academic ethnomusicology and forms of musical research, cultural activism and writing being pursued outside the academy. On the one hand, it has sharpened the focus on the disjunction between the deconstructive project, in which identities are shown to be relative, historically mobile and culturally constructed, and the demands of political struggle outside of universities, in which research and writing are geared to the strategic tasks of rendering old myths suitable and usable for contemporary political

struggle. The issue is sharply focussed in the British Isles, for example, around questions of revisionism and Celtic nationalisms (see Chapman, 1994, for an ethnomusicological angle), and more generally in post-colonial critique. It has also sharpened, and rendered substantially more complex, distinctions between ethnomusicological writing in first world capitalist democracies, and that in parts of the world, notably sout-east Europe, where academic ethnomusicological production is closely identified with nation-building processes or with related resistance struggles (Pettan, 1998). Global habits of attention to metropolitan theoretical trends have disseminated various forms of deconstructive historicism theory widely. These have been brought 'back' to the Euro-American metropolis by scholars (among whom Edward Said, Homi Bhabha and Gayatri Spivak are pre-eminent) who received their intellectual formation elsewhere, nuanced by a keen sense of colonial continuities in the post-colonial world, and the imperatives of establishing a coherent politics in the face of this. The extent to which post-colonial theory has succeeded in doing so, or has, on the contrary, weakened the basis of collective political action, and allowed Euro-America to appropriate and export yet another valuable commodity ('radical theory') to the 'third world' is sharply debated. Ethnomusicologists are of necessity increasingly sensitive to these kinds of dilemmas. They assume a sharp focus in relation to questions surrounding nationalism.

4. NATIONALISM. The history of the culture concept and that of the nation-state are entangled. The difficulty of distinguishing an object of study, 'the nation', from the very tools of analysis we might use to define and critique such an object (historicism, the culture concept, ethnography and so forth) renders critical intellectual engagement a complex and reflexive project. At the same time, 'globalization', which means in practice the hegemony of norms and values associated with some of the largest and most powerful nations across much of the world, has recast nationalism as a language of resistance on the part of those excluded from its apparent benefits. This is the case whether nationalism is harnessed by the nation-state apparatus itself or by subaltern elements within it. Critical thinking in western Europe, responding to the break-up of Yugoslavia and the re-unification of Germany in the 1990s, has addressed both the apparent 'exceptionally' of ethno-nationalist violence and the counter-intuitive possibilities of 'good nationalism'. One of the compelling difficulties in thinking about nationalism, for ethnomusicologists and others, remains one of taking a persistent and disturbing issue seriously.

Ethnomusicologists have responded in four different ways to nationalism's increased prominence as a political issue in the later 1980s and 1990s, all of which continue to bear strongly on research. Firstly, inspired by Hobsbawm and Ranger's notion of nation-states as 'invented traditions' (Hobsbawm and Ranger, 1983) and Anderson's analysis of the relationship between print-capitalism and the emergence of national 'imagined communities' (Anderson, 1983), ethnomusicologists have attended to the ways in which national musics have participated in the construction of a national imaginary, with some stress on the artificiality and alien nature of the musical elements that were assembled to constitute new national styles. Others have consistently stressed the class dynamics of the encounter between bourgeois nationalists and their working-class or regional others.

Secondly, the post-colonial dynamics of nation-state building have been the object of sustained analyses by a number of ethnomusicologists. The inheritance of colonial constructions of colonized others has been hard and in some cases impossible to shake off. As Fanon suggested, post-colonial élites have been haunted by ambivalent desires and interests which have in some senses bound them more closely to their former colonial masters than did the colonial system itself. The pervasive contours of colonial thinking have been traced in the analysis of national musics from the Eurocentric aspirations of the Cairo congress of 1932 and the paternalism of French orientalists in North Africa, to versions of French metropolitan Noirisme in the Francophone Caribbean. Colonial contours may also be perceived in reverse in post-colonial nation-states. In West Africa, British colonial élites developed cultural policies which were explicitly designed to counter creolism; on the one hand the British colonial administration worked through 'native' administrations of their own making, and on the other existing creole élites in West African cities constituted a powerful threat to colonial trading interests. 'Creolism' in this sense became as much a colonial construction, albeit a negative one, as nativism. Post-colonial West Africa's turn to creole cultural forms as the new language of national identity involved some strategic selections which demand understanding in terms of the jockeying for power on the part of certain élites at the expense of others, but which also speak powerfully of the continuity of colonial ethnic categories in the construction of new nationalisms.

Thirdly, ethnomusicologists have attended to the processes of othering involved in national culture construction. This approach has characteristically assessed the process of national music culture building in terms of the construction of difference, in which the desired ethnic constitution of the nation-state is conflated with notions of modernity. Others are 'othered' according not only to their perceived spatial distance from national centres, but to their remoteness from modern national temporality. The musical signification of communities that are held to be pleasure-loving or 'easy-going', from a metropolitan perspective, registers the characteristic ambivalences of these formulations. Indeed, ambivalence is a vital component of the pleasures and desires associated with them: they generate a certain frisson of difference, but under controlled and regulated conditions. The extent and nature of this supervision in states with strong traditions of socio-cultural engineering varies from the quiet encouragement to the partial acknowledgment of transnational and Diaspora musics produced elsewhere, outside of nation-state control. Studies of the quasi-exclusion of orientalized others in a variety of Eastern European and Middle Eastern situations (e.g. Rasmussen, 1996, Stokes, 1992, Buchanan, 1996, Rice, 1994), and of Black others in the Caribbean (e.g. Wade, 1998, Averill, 1997, Guilbault, 1993, Pacini-Hernandez, 1995, Austerlitz, 1997) characterize this approach. Such approaches have a dual focus, on both the dynamics of national-musical construction, and on the related dynamics of subaltern popular musical styles.

These forms of 'othering' implicit or explicitly connected to the development of a national-culture are closely related to population movements both within and outside of nation-state boundaries. Nationalism, understood as a temporary holding-form for capital accumulation, has

articulated forms of industrial expansion which have generated import-substituting industrial expansion, in particular the mechanization and capitalization of agriculture, which, in turn, have provoked huge movements from rural areas to cities. The ideological and 'economic' dynamics of the situation are impossible to disentangle. Migrant music making is simultaneously the product of an ideological process of self-fashioning (as modern citizen-subjects, increasingly with a global frame of reference) and the effort to organize and in some cases exploit self-sustaining bases for communal life on the part of rural-urban migrants. A substantial literature has concerned itself with rural-urban migrant musics, from questions of before-after social change and processes of cultural transformation, to investigations of the ways in which 'the rural' is fantasized and the object of ideological manipulation on the part of music industries, national élites and migrants themselves. If there has been a shift in this kind of literature in recent years, it has been from a national to an increasingly transnational frame.

5. Diasporas and globalization. The most conspicuous population movements at the end of the 20th century are transnational, and identity strategies on the part of migrants increasingly revolve around transnational parameters. While intra-national labour-migrant movements have not necessarily declined, and in fact are in some circumstances being increased by global and transnational trends, transnational movements, for ethnomusicologists, have been conspicuous, close to home, and also associated with newer and more pressing theoretical paradigms. These have been concerned particularly with race, diaspora and globalization.

The accelerated global flow of labour, capital and culture has informed related lines of inquiry into Diasporas and other varieties of 'travelling culture' (Clifford, 1992). While an earlier migration literature tended to stress before-after patterns of assimilation and acculturation in accordance with modernization theory paradigms, contemporary theories of music in diaspora elaborate the cultural ambivalences of return, subalternity in host societies, and the forging of transnational strategic alliances, as illustrated by the appropriation of black expressive culture among many North Africans in France and Turks in Germany (Gross, McMurray and Swedenburg, 1997). Travelling culture theorists conceptualize migrancy as a paradigmatic postmodern condition (see in particular Clifford, 1992) initiating a significant critique of cultural theory predicated on bounded culture areas, nationalism chief among them. In the light of such theories, ethnomusicological attention to music in conspicuous sites of movement (tourism or pilgrimage, for example), or in the lives of 'travellers' (Jews, Roma) invites consideration of the more or less violent historical processes through which travellers are marginalized and 'othered' and through which notions of bounded and authentic culture are summoned into existence, policed and maintained (Bohlman, 1993; Silverman, 1996).

Successive micro-electronics revolutions (from the transistor to the silicon chip and the web) have had an incalculable impact on mass media dissemination in the latter part of the 20th century. The movement of mass mediated musical genres across the world constitutes an inescapable fact for ethnomusicologists. It also marks a productive moment of engagement of ethnomusicological theory with mass media and, more recently, globalization theory. One product of this has been a stress on the incapacity of nation-state systems to generate coherent national musical systems in the face of musics which rely on micro-electronic systems of reproduction that lie largely outside of their control (Manuel, 1993), and on trans- or multi-national sites of production (Rice, 1994, Virolle, 1995). The idea that the nation-state is no longer capable of intervening meaningfully in the production of meaning is, however, increasingly being challenged. Indeed, in the face of global *laissez-faire* capitalism, nation-states and national media policies are increasingly seen by the European social-democratic left as offering some hope for cultural democracy and diversity.

Globalization theory has sought new terms for understanding global cultural production. Appadurai's terminology of ethnoscapes, technoscapes, finanscapes and mediascapes (Appadurai, 1996) has been particularly significant for a number of ethnomusicologists and popular music scholars. Slobin draws on Appadurai's terminology to grasp new relationships between global supercultures, subcultures and intercultures (Slobin, 1993). In a fractal landscape of potentially infinite regress, global forces produce 'micromusics', that is, endlessly varied local and localizing particularities. The term 'culture', unhitched from its national moorings, assumes different forms. Culture is, in this context, provisional, reflexive and mediated. It is no longer the semi-invisible ground of being and belonging, but a site of manipulable and malleable self-fashioning, in which the boundaries of this self are constantly open to question and negotiation. Hybridity and creolism are crucial aspects of global cultural consciousness, not in the sense that their origins are 'no longer' pure (since no culture's origins are or can be), but in the sense that they engender new forms of relativizing self-consciousness, of being neither here nor there, 'us' or 'them', but being in-between, in a 'third space' (Bhabha, 1994). The possibilities that these conceptualizations offer for a radical politics have been keenly debated in post-colonial theory; ethnomusicologists have approached hybridity and creolism in terms of the opportunities they afford for re-thinking bounded entities by stressing their relational character and their capacity to undermine essentializing cultural strategies. They join others in suggesting that music offers peculiar opportunities for re-configuring identities.

For others, globalization is understood as an advanced phase of capital accumulation in accounts which stress either continuities with the colonial past, or the radical new demands of information-based economies. Crucial to this kind of understanding is an argument rooted in Marxian dialectics and directed against modernization theory. In varieties of modernization theory, capitalism is commonly perceived to advance by encountering others as it expands across time and space, and then by subordinating them to its own disciplines and imperatives. The dialectical argument emphasizes capitalism's production of otherness from within. This propensity to produce and model otherness is a crucial aspect of capitalism's restless energy and the West's global expansion, as a large historical and anthropological literature on the mid-19th-century world fairs has emphasized. What was represented was not so important as the fact of representation; a representational system, which referred ultimately only to itself and its own representational powers, derived its formidable energy from this fact. Reality becomes an

'effect' sustained by all manner of trickery, and all representation represents is yet other domains of representation, in an endless chain of 'hyperreal' signification. This forms the background to some influential critiques of the world music industry by ethnomusicologists (e.g. see Erlmann, 1996), in which Otherness is fetishized, modelled and packaged according to the demands of the first world culture industry system. Far from marking a new hegemony of the periphery, world music, some argue, marks a more decisive phase in the hegemony of the centre. The ethnomusicological task is simply one of determining the relationships between different sites and centres of production. In both scenarios, 'culture' assumes strategic and instrumental forms; the culturalist assumption that cultural morphologies provide a relatively transparent window onto 'forms of life' is substantially problematized.

6. RACE. Race is often distinguished from ethnicity in terms of the supposedly voluntaristic qualities of the latter and the coerced and imposed qualities of the former. This perspective predominates in US based scholarship, where it marks a clear distinction between hegemonic and subaltern identities, and responds to the ongoing legacy of slavery and the civil rights movement within the USA. Theories of ethnicity in Europe are less inclined to make such distinctions. The radical political movements of the 1960s were, in Europe, more directly concerned with decolonization in Africa; the rights of minorities 'at home' were a lesser issue. All ethnicities, in most European writings on the subject, are marked by greater or lesser degrees of power on the part of the various parties involved in the production of difference. The terms 'race' and 'ethnicity' are often used interchangably.

On both sides of the Atlantic, however, critics have argued that the brutal dislocations of slavery and colonial encounter have played central, if buried, roles in the emergence of western Enlightenment reason and the paradigmatic forms of modernity associated with it. 'Reason', then, becomes a highly problematic tool in the analysis of 'race', which has generated a double discourse in response. One side of this is an appeal to Enlightenment reason: racial discourse is irrational, and has no place in a just and democratic society. Critics stress that the Enlightenment was built on the back of slavery; reason itself, conceived in Enlightenment terms, is tainted by western self-interest. On the other side lies an appeal to primordial African identities and a rejection *tout court* of western Enlightenment rationality. These however suppress the varieties of post-slavery experience, and the possibilities of framing reasonable, democratic and plural cultural futures in the diaspora. They also appeal to a language of retentions, which is either explicitly used as a means of evaluating the authenticity of a wide range of African-derived New World musics, from blues to jazz, or used more generally as a means of identifying the particularity of black American experience.

Black cultural and literary criticism has devoted considerable energy to developing forms of critique that can engage more productively with this either/or choice; writing in these theoretical traditions has had an increasing impact on ethnomusicologists and others involved in the study of black musics. Ethnomusicologists have responded to the question of African retentions with considerable caution, however. For some, Afrocentrism remains an obstacle to critical understanding, tending to reproduce the very system it sets out to subvert. A number of more empirically driven studies have focussed on the large variety of musical genres that an Afrocentric canon has excluded, for example the music of the Harlem Renaissance. For others, the notion of African 'retentions' has some strategic value, principally as a kind of deconstructive irritant to the pretensions of Enlightenment rationality.

Poststructuralist critique has addressed the problem of race primarily as 'a pernicious act of language' (Gates, 1985). Seen as language, of a particularly unstable and unexpectedly creative kind, the question of race becomes one of comprehending black cultural experience in terms of 'literary' techniques, in the widest possible sense, particularly those associated with troping and 'signifying', understood as a form of destabilizing, critical repetition and intertextuality. The theory has been applied extensively to jazz, rock and pop. A more sociological angle on this genre of theory has been provided by George Lipsitz, who sees in black expressive cultural style, and music in particular, an increasingly globalized language of resistance and subversion, connecting subaltern groups in the first world metropoles to form new majoritarian forms of radical consciousness (Lipsitz, 1994). The point amplifies and globalizes one made somewhat earlier in British subcultural theory.

Paul Gilroy's Black Atlantic thesis has been particularly influential. Gilroy situates his argument dialectically between enlightenment appeals to non-racial reason, and Afrocentrism. The former is disabled through its suppression of its racial undertow; the latter occludes the varieties of black experience, as though African styles 'survive' in the present without bearing any of the marks of their complex mediation through non-black expressive styles. Reasoned critique, which draws on and embraces its suppressed and racialized past, provides the possibility of movement away from this sterile binarism. For this purpose, Gilroy draws on Du Bois's influential formulation of 'double consciousness', '(that) sense of always looking at one's self through the eyes of others', as Du Bois wrote in 1903 to initiate this dialectical movement, concentrating principally on writers (such as Du Bois) who have dealt creatively with this 'doubleness' and, more generally, the movement of African and African expressive styles as they cross and re-cross the Atlantic. Gilroy concludes by stressing the significance of music as a space affording particular expressive possibilities.

Gilroy's Black Atlantic thesis is not ultimately incompatible with a certain form of Boasian culturalism as developed by Melville Herskovits, and later by ethnomusicologists such as Charles Keil (1991). This specifically addressed 'culture of poverty' and 'poverty of culture' arguments about African American ghetto life. For conservative theorists, African Americans were caught between cultures, but could not be described as possessing their own. Anthropologists in the USA devoted considerable energies to debunking such claims, and did so in ways which stressed forms of cultural creativity in the New World diaspora which developed African 'retentions', rather than endlessly looking back and referring to them. More specifically, Gilroy's attention to the Atlantic as a site of crossings, mediations and exchanges, draws on and stimulates a detailed and thorough consideration of the movements of African derived popular musics 'back to Africa', both in the form of autobiographies of

musicians who have risen to fame on the back of the world music industry, and in ethnomusicological writing attentive to the complex global movements of black popular musical styles in various parts of Africa (see Collins, 1992, Waterman, 1990, Erlmann, 1991). The prospects for ethnomusicological theory might usefully be considered in the light not only of productive dialogue with academic cultural theory elsewhere, but also with a significant body of non-academic writing on global popular genres for a non-academic audience.

7. Sexuality and gender. Gender has been a pressing and extremely long-standing issue in ethnomusicological research. A substantial body of writing now exists, detailing women's musical worlds (Doubleday, 1988), the musical production of gendered ideologies (Sugarman, 1997), and problems of male bias in matters of documentation and interpretation (e.g. Keeling, 1989). The radical energies which informed feminism and gender studies in the 1970s and 80s have been largely transformed into questions about sexuality in the 1990s. Though often conflated, movement from the one to the other contains both significant continuities and breaks. Both are concerned with the assumption of the universal Enlightenment subject on which significant areas of musicological history writing and analysis continue to operate. Both critique the gendered and heteronormative nature of Enlightenment modernity, and do so through simultaneously documenting areas of cultural experience hidden or 'muted' (Ardener, 1989) by these normative processes, and, reflexively, by considering the disciplinary mechanisms which constitute this muting. Both are thus concerned with the construction of alterities, a concern which connects gender and sexuality issues to the broader questions of identity discussed above, and implicates questions of gender and sexuality with questions of ethnicity and race. In both cases, gender and sexuality have characteristically been seen as cultural constructions with profound ideological ramifications; attempts to ground these differences in nature (understood biologically) are usually understood by both feminists and Queer theorists as part of a more general problem of ideological obfuscation, itself demanding critical attention.

Gender theorists have understood sexuality as constitutive of gendered norms. Anthropologists of the Mediterranean in the 1960s and 1970s were among the first to look consistently at the construction of masculinity in this light. This partially accounts for the fact that some of the first studies of musical genres to explicitly thematize the cultural construction of masculinity have been concerned with the Mediterranean area; Robert Walser's study of Heavy Metal constitutes an analogous move in relation to a popular music genre in North America (Walser, 1993). This focus on the unstable dynamics of the sexual and gendered 'centre', and the anxiety-laden work involved in making it less so, link traditional concerns of gender theory with Queer theory's more radical point of departure.

Queer theory has drawn more directly on Freudian and Lacanian psychoanalytical theory, and separates the question of gender from the question of sexuality. In this respect it has marked a break with the kind of cultural constructivism which typified an earlier moment of feminist writing in ethnomusicology (and the social sciences and humanities in general). Lacanian theory sees mechanisms of identification as a disruptive process. The linguistic signs through which identities are constructed are seen by Lacanian theorists as inherently unstable, never fully able to exclude 'always-already' present others from the self, and always prone to being undone by their own work of identity construction. It has stressed investments of pleasure and desire in the processes of identification, a move which addresses the spectre of violence which haunts the work of gendered, sexual and ethnic identification, particularly when these forms of identification bolster one another. But it also stresses the playful ambivalence of signs of identity, and reads texts against the grain to release hidden or repressed readings. Queer theory has initiated significant conversations between musicologists and ethnomusicologists who have a similar critical interest in exposing the limiting heteronormative assumptions that govern canonical activity in both areas. It has, arguably, done more than anything else in recent years to rekindle the radical and questioning spirit of reflexivity that is central to culturalist thinking in general, and ethnomusicology in particular.

8. New historicism. Ethnomusicology's turn to difference might usefully be compared and contrasted with that of the new musicology. Musicologists inspired by the new historicism have been inclined to represent the western art music canon as other to itself, establishing a mode of critical estrangement and distanciation from, for example, the musical cultures of early modern Europe. The process of 'othering' in the new musicology has a double task, one being to counteract the false sense of historical security and familiarity that canonical moments in western European music history engender, and the second being to open the way for critical readings and revisions. Hermeneutic philosophy, particularly that of Gadamer and Ricouer, has provided the dominant conceptual framework, explicitly connecting the new musicology with some influential theorizations of interpretation in ethnomusicology (see Rice, 1994). Hans-Georg Gadamer outlined a theory of historical inquiry in terms of a dialectical process in which a jolt of unfamiliarity (*Verfremdung*) in the encounter with a historical text is absorbed in a fusion of horizons (*Horizontverschmelzung*). This is achieved in a 'consummatory moment of conversation' (*Vollzugsform des Gesprächs*).

Where Hegelian epistemology stresses a teleology of assimilation (*Aneignung*), Gadamer suggests that interpretative historical inquiry is structured by a permanent and sustainable encounter with an Other. The fusion of horizons of self and other creates an enlarged self, but one whose enlargement inexorably brings that self face to face with new others, and so the process continues. Ricouer revised Gadamer's dialectic, suggesting that the alternation between 'distanciation' and 'appropriation' (to use Ricouer's terminology) be regarded not as the succession of a negative state by a positive state, but as one in which, to use later critical language, distanciation and alterity is 'always-already' present in the activity of historical interpretation. Historical knowledge positively demands the existence of Others; it does not simply overcome it in a critical moment in which the horizons of self and other are fused as Tomlinson has stressed in an influential discussion (1993). The task of a hermeneutic historical musicology of Others is thus to locate the strange in the familiar past, and to engage in dialogue with this past, reading texts against the grain, probing for their silences and aporias, particularly with regard to

matters of gender and sexuality, to locate points of unfamiliarity whose interpretation might be put to productive use in the present. Ethnomusicologists construct the same dialogue in the present. No provisional bracketing of the other as 'Other' is required, since this has been pre-configured into the encounter between ethnomusicologist and interlocutor. The issue is not confused by false familiarity. But in a similar way, dialogue generates an unravelling of self, and an expansion of the means of understanding details of musical style.

The dominant movement within ethnomusicology in the 1990s was however predominantly in the opposite direction, although motivated by a similar critical impulse. While the new historicism in western art musicology has sought to understand areas of the western canon as remote cultures, many ethnomusicologists have been concerned with showing that the very idea of 'remote cultures', amenable to mapping and comparison, is the product of characteristically modern institutions, notably the nation-state, colonial expansion and the commodity form. The two fields of enquiry new historicism and ethnomusicology, share common horizons in respect to a deeply rooted reflexive and deconstructive impulse. New historicists emphasize the cultural construction of the canon by demonstrating its repressions and aporias (in relation, for example, to magic, or to non-heteronormative sexualities). The work that has gone into constructing a transcendental and ultimately ahistorical body of exemplary composers and music works resistant to any kind of critical attention becomes itself the object of critical attention.

Notions of ethnography inform the project and provide a point of dialogue with ethnomusicologists involved in historical study. Questions of ethnography in both new historicist writing and ethnomusicology converge, for example, in discussions of historiography (Bohlman, 1997) and in emerging historical interest in space and the public sphere. Ethnography and fieldwork, however, also bear on some more conventional ethnographic projects carried out by anthropologists and ethnomusicologists, 'studying up' by focussing on western art music institutions. Ethnography in this context rhetorically creates 'others', and thus places in historical, social, cultural and political contexts musical practice which is often considered to transcend any such contextualization. Transcendental claims concerning western 'high' art culture, and indeed others, mark crucial sites in the reproduction of dominant ideologies, particularly those concerned with the pre-eminence and universality of western modernity. Critique of this sort, from both new historicists and ethnomusicologists, is directed at what Janet Wolff has called the 'ideology of autonomous art' (Wolff, 1987).

Ethnomusicologists have engaged in a similar critique of their own canonical practices. Chief among these practices is the location of 'other cultures' in ways which transcendentalize and de-historicize cultural difference. In particular, new critical ventures in ethnomusicology have focussed on genres (notably popular musics; e.g. see, Waterman, 1989; Pena, 1985; Reily, 1992; Baily, 1981; Averill and Stokes, 1992; Pacini Hernandez, 1995; Austerlitz, 1997), communities (diasporas, transients and travellers; see Silverman, 1996; Slobin, 1996; Bohlman, 1996), and issues (gender, sexuality and race; see Sugarman, 1997; Currid, 1997; Bohlman and Radano, forthcoming) whose critical investigation simultaneously reveals some of the quasi-colonial dynamics of the culture concept, and gives form and direction to contemporary critical energies in combating pernicious racial, sexual and gendered ideologies 'at home'. Discussions about identity and positionality in a variety of intellectual fields (notably post-colonial studies, black and feminist literary criticism, and globalization theory) have sharpened ethnomusicological critiques of certain aspects of culturalist thinking. These have focussed attention on the ways in which cultural understandings of others have failed to account for the ways in which western military and economic power have framed certain objects of analysis and occluded others, decisively shaping the ways in which these others have been represented and, in turn, have come to represent themselves. At the same time, the discipline of ethnomusicology has from the outset been characterized by an innate and compulsive disposition to a certain critical reflexivity. Foundational texts were concerned as much with matters of method and epistemology as they were with furnishing transparent knowledge about other musics. The reflexive turn in many other areas of the humanities and social sciences operates upon and in relation to a larger body of less methodologically self-absorbed writing. Within ethnomusicology, and to a somewhat lesser extent popular music studies, it builds on more mainstream and historically established disciplinary habits.

9. Practice theory. Accounts of culture have often endorsed crude Marxian tendency to see music as an epiphenomenon of other social and cultural facts, and construct an explanatory pyramid with a wide base of productive social relations at the bottom and an isolated artwork at the top. Poststructuralism upends this pyramid. What is significant is not so much how culture is produced as how (and what) it produces: 'cultural production' replaces the 'production of culture'. Practice theory in ethnomusicology brings the 'cultural production' and 'production of culture' approaches together. It draws on a renewed attention to matters of history in those disciplines which have invested heavily in non-historical, synchronic forms of analysis (notably social anthropology). It also engages with Marx's well-known aphorism in *The Eighteenth Brumaire of Louis Bonaparte* (1852/1978): 'Men make their own history, but they do not make it just as they please; they do not make it under circumstances chosen by themselves, but under circumstances directly found, given and transmitted from the past' (1978).

Practice theory is most directly associated with the work of Bourdieu, Giddens and Sahlins. The work of each is informed by a certain 'work' model of consciousness informing Hegelian philosophy in general, and underpinning Marx's aphorism cited above. In this, consciousness of individual self as subject comes into being through the 'labour' of expressive externalization, reflection on and reappropriation of that work. That achieved 'work' confronts new circumstances, ones not 'chosen by themselves', generated by forgotten histories, the unintended consequences of past action, the emergence of new actors on the historical scene and so forth. This generates new forms of consciousness, and the development of new structures in an ongoing dialectic relationship with new circumstances. This dialectical model has displaced the term 'culture', either by juxtaposing it with

the social, or by replacing it with other terms, such as 'practice' and 'habitus'.

Practice theory has informed a relatively recent 'turn to history' on the part of a number of ethnomusicologists and others, a turn which itself demands historicization. This is partly motivated by a desire to credit other histories and historiographic traditions with some explanatory force, in relation for example to notions of tradition in a variety of south-east Asian genres (Stock, 1996; Slawek, 1993; Capwell, 1993). Other histories, in this sense, not only explain something about how other musics come to be and to mean, but also how they shape notions of action and agency and in this sense generate change. It is also partly motivated by a desire to understand how music, conceived as practice, 'produces' a sense of the past, and of temporality, more generally. Musical practice unfolds through time, and literally embodies temporal processes. It is, in this sense, a resonant medium. The temporal processes modelled through music thus engage in powerful and significant ways with experiences of change elsewhere in a given social and cultural space, which may be sharply marked in situations of de-colonization, nation-state formation and related population movements.

The ways in which music models a community's sense of its past, present and future have been the subject of studies of 'Western' art musics in the Middle East, the emergence of national popular 'traditions' in Africa, and among immigrant communities in the United States. In each case, practice theory enables a dual focus, firstly on conditions of musical production, and secondly on the ways in which musical practice itself constitutes conditions for future action and events. This has been a productive and influential move. Most significantly, it has enabled a closer attention to 'texts', which might, in the light of practice theory, be seen in ways which do not simply reify or reduce them to 'contexts'. Practice theory not only brings ethnomusicology to bear on questions of music history which have hitherto been the sole domain of musicologists, but also into a more productive engagement with music theory and analysis.

10. Music theory and analysis. Academic music theory and ethnomusicology parted company in the 1960s. Ethnomusicologists turned increasingly to Geertzian hermeneutics and ethnoaesthetics, viewing the application of western theoretical methodologies to non-western musics with concern and suspicion. Many influential forms of academic music theory and analysis became more and more invested in explaining and legitimating the post-war European and, later, American avant garde. Theory, for many ethnomusicologists, was simply a way of marking European distinction, consigning the rest, the people without music theory, to historical and political insignificance.

One particular problem of theory, for ethnomusicologists, has revolved around the problem of representing music with words, or with logocentric formal grammars. Authoritative theoretical models deriving from linguistics have always invited criticism for their logocentrism when applied to musical grammars, although the assumption of a fundamental divide has also been criticized. Poststructuralism and Piercian semiotics have, more recently, sought to provide theorizations of how music signifies in ways which avoid the pitfalls of Saussure's influential separation of the signifier and the signified, and address the peculiarities of musical signification (Turino, 1999).

Later studies looked more empirically at the relationship between verbal or written theory, and the musical practice that theory purported to describe. Echoing Bourdieu's concept of theoreticism as cultural capital, habitus and bodily hexis, John Baily (1988) drew attention to the lack of fit in urban Western Afghanistan between Hindi musical theoretical terminology and its usage by Afghan musicians in Herat. Music theory emanating from metropolitan centres often embodies cultural aspirations rather than social realities, and words used to describe musical procedures came to be seen as unreliable guides to musical experience, at best. Blacking's anthropology of the body pushed this scepticism to an extreme. A complex melodic line on the *mbira*, for example, could be understood in terms of a 'dance of the thumbs' over the keys, and not of an abstracted Cartesian reasoning that could unproblematically assume verbal form. Language could only be redeemed for theoretical purposes if it was understood as bearing the mark of musical and other forms of non-verbal communication. And these, for Blacking, were to be understood ultimately in terms of the body. Work in this period increasingly drew on the cognitive theory of the time to substantiate the links between musical style and economies of gesture and movement.

The ethnomusicological tradition of theoretical scepticism is a long one, rooted in the liberal culture of academic research in the Anglo-Saxon world. It has, at the same time, exposed ethnomusicologists to the charge that they are reluctant to engage with the fine details of musical production and interpretation. Many, and probably the majority, remain ambivalent about the application of western music-theoretical systems to non-western musics. Other writers see the division of musical systems into those in which music theory is applicable, and those in which it is not as a quasi-colonial form of ethnocentrism. Provided culturally appropriate criteria are employed in the process of segmentation (and this is a crucial condition), there is no reason why the basic principles of music semiotics should not, for example, be applied to non-western musics (Agawu, 1999; see also Arom, 1991; Rouget, 1996). Post-colonial musicologies, however, complicate the question of 'cultural appropriateness'. The instinctive turn to the *balungan* ('skeletal melody') in Javanese gamelan as the source of the most relevant information in modal analysis has been strongly contested by recent Indonesian scholars (see, for example, Sumarsan, 1992). The same is true of analytical expectations concerning octave duplicability in Middle Eastern *maqam* performance. Nonetheless, ethnomusicologists would concur that the application of western music theory to other musics can provide a common language with which music theorists and ethnomusicologists might discuss common problems in a mutually transformative way. It might also shed light on socio-historical processes which are currently obscured by interdisciplinary vagueness and a reluctance to consider musical processes in detail, such as the 'retention' and transformation of African socio-musical processes in the western hemisphere (Blum, 1999).

The task is now considerably more complex than the division, and reconciliation at some future date, of those concerned with 'texts' and those concerned with 'contexts' would suggest. The role of 'texts' in generating 'contexts' has been a persistent theme in the ethnomusicological

study of community (see §2 above); it has also been substantially retheorized by practice theory. The dangers of reifying texts and contexts (with separate methodologies for identifying and explaining 'details') have been clearly identified. Many would argue, therefore, that this is a false opposition. However, the music theoretical terrain significantly changed over the course of the 1990s. Even if there was a distinction to be made between contextual and textual inquiry, the question would now be 'with what kind of textual inquiry should ethnomusicologists engage?'. There have been three seismic shifts during the 1990s in the ways music analysts and theorists consider musical texts. One of these might be characterized as the gradual loosening of the hegemony of Schenkerian depth theory. The main shift within this tradition is associated with Cohn and Dempster's work in the early 1990s, arguing that musical surfaces might in fact be understood in terms of the working out of a variety of processes of transformation, and not just one from a single Urlinie. This relocates the theoretical task to the 'surface' and disrupts the hierarchical and reductionist assumptions of traditional Schenkerian practice. It also inverts an entire representational paradigm, in which theory reflects processes of composition, and performance, in turn, reflects the insights of theory. The implications for an ethnomusicology based on fieldwork and ethnography are direct: music theory no longer demands an abstracted art work as a starting point for comprehending music, and places performers and the performance situation at the centre of an analysis.

Lacanian psychoanalysis provided an influential method of close textual reading over the last decade. Its impact on music analysis is more inchoate, but of significance. Lacanian theory stresses the production of subjectivity through discourse, which is to say, through our everyday involvement in acts of seeing, hearing and speaking. Discourse, bearing the marks of traumas associated with early infant development, is both marked and disrupted by the always-already present Other it overtly seeks to exclude. Subjectivity is consequently an unstable and fragmented process, organized around complex anxieties, fears and pleasures. Seeing, hearing and speaking are thus not, as in Enlightenment rationalist thinking, the means by which stable, pre-formed selves gain stable and reliable knowledge about an external world, and texts are not transparent windows onto this knowledge. Analysis of texts identifies these marks of disruption and distortion, and uses them to account for some of the ways in which texts are both historically produced and historically productive. Psychoanalytic music theory has grappled with the peculiarities of musical signification; it has had a major impact on recent feminist music analysis influenced in more diffuse ways by post-structuralism, and also on some recent accounts of the history of Western music analysis. Its applicability to ethnomusicological practice, and, indeed, to non-western musics has yet to be explored in full. It offers distinct possibilities for organizing a social and cultural analysis of texts, though ethnomusicologists have perhaps been cautious of its tendency to an assumed and somewhat ahistorical universalism.

Finally, cognitive psychology, energized by major advances in neuroscience particularly in regard to modularity and neural mapping, has also transformed the close reading of musical texts. These developments have perhaps had the most obvious impact on ethnomusicological writing in the late 1980s and 1990s. Since the mid-19th century, psychologists of perception have turned to the study of music to provide demonstrable and measurable data concerning what was, and remains, the purest evidence of the human mind's structuring capacities. The quest for cognitive universals using evidence derived from a wide range of music cultures marked this research then as now. A number of music psychologists have turned unselfconsciously to non-Western data, while a number of ethnomusicologists have turned, with perhaps a greater degree of methodological introspection, to cognitivist issues. Studies of music cognition have aimed to provide an account of the competencies and knowledges that 'a player needs to know in order to generate acceptable music in his society' (Kippen, 1987).

Ethnomusicologists have stressed the importance of non-Western music in raising questions of competence that Western art musics do not foreground, particularly in regard to improvisation (jazz has provided a particularly significant area of research; note Berliner, 1997), and pitch and rhythmic perception in cultures with, for example, variable interval sizes and non-metrical concepts of pulse. Cognitive approaches based on Western art music practices have also characteristically assessed musical cognition in relation to the decisions made by individuals, either as sound producers or listeners. More recent cognitivist approaches in ethnomusicology have stressed the necessity of grasping musical competence in music cultures in which interactive group processes predominate. Javanese gamelan has provided a valuable point of comparative reference (Brinner, 1995). They have also stressed the need for framing experimental questions in culturally appropriate, contextually sensitive ways, and, more radically perhaps, they have argued for the crucial importance of dialogue between musician and researcher. Kippen's 'dialectical ethnomusicology' (1987) pursues the question of tabla rhythmic pattern generation in Lucknow with the aid of a computer program to generate rhythmic patterns, and to assess the compatibility of given rhythmic patterns to given generative grammars. The simultaneous process of analysis and pattern generation is conducted *in situ* with a tabla *ustad* who evaluates the patterns generated, identifies faults and revises the grammar with the ethnomusicologist. Small, portable and unobtrusive technology now permits this to take place in a culturally appropriate context. The construction of metagrammars for understanding, for example, the choice of one grammar over another, or the innovative application of rules from one grammatical system to the material more commonly associated with another at a given moment in improvisation or composition remains an ongoing project.

Ethos. An ancient Greek musical term, describing a concept important in the relationship between ancient Greek music and education.

1. Meaning of the term. 2. Ethos in lyric poetry. 3. Theoretical descriptions of the 5th century BCE. 4. Plato. 5. The Hibeh papyrus. 6. Aristotle. 7. Hellenistic theorists. 8. Ethos and the genera. 9. Ethos and rhythm. 10. Other factors. 11. Late antiquity and the early Middle Ages. 12. Conclusion.

1. MEANING OF THE TERM. The term occurs as a noun, *ēthos*, from Homer onwards. Its original meaning was 'accustomed place'; Hesiod first used it as 'custom'. With Heraclitus it acquired the added sense of 'character', more precisely 'moral character', often regarded as the result of habituation. When the term is used in English transliteration, 'ethos', with reference to ancient Greek music, the last-named meaning should be understood. Ethos should be taken as an attribute not merely of persons but also of musical phenomena, which are then considered as vehicles for conveying ethical attitudes, not as having any kind of moral nature in themselves.

Greek ethos theory brings together many aspects of a belief held by various Hellenic authors and by some later figures. These men, among them poets and philosophers of the greatest eminence, expressed in differing ways their belief that music can convey, foster and even generate ethical states. It must be emphasized that to a Hellene the notion of a 'theory of ethos' would have had no meaning. The notion of 'die Lehre vom Ethos' or 'die Ethoslehre' was developed primarily by German scholarship and creates the illusion of a single, continuing pattern of belief. Since the close of the 19th century the erroneousness of a unitary approach has been partly recognized; yet there is still need for an awareness that many differing views, sometimes sharply opposed, made up the shifting pattern of beliefs concerning musical ethos. An examination of some of these views will be undertaken here. The factors that must be considered include ethnic or literary associations, religious considerations and the physical qualities of modes or instruments.

2. ETHOS IN LYRIC POETRY. When indications of ethos occur in poetry, they almost always concern mood rather than morality. Writing early in the 7th century BCE the lyric poet TERPANDER described Sparta as the home of 'the clear-voiced Muse and Justice' but made no close connection between the two factors. Several decades later another poet of Sparta, ALCMAN, made the claim that Apollo played the aulos. This suggests strongly that at the time it was possible for Spartans to credit the instrument with a tranquil mood. Here the contrast with later Athenian opinion is extreme. At the beginning of the 6th century BCE STESICHORUS wrote of 'delicately finding out a Phrygian melody' to sing of the Graces in springtime. Phrygian modality was closely associated with the aulos throughout the classical period; the fact that Stesichorus presented it as gentle and joyous may support Alcman's statement. Again there is a strong contrast with what was to become the majority opinion, although PLATO was willing to ignore the majority. Evidently a given mode or instrument might be credited at different times and places with distinctly different characteristics.

Pitch, resonance and timbre constitute the physical nature of a mode or instrument, considered in terms of experienced sound. Resonance was far more a property of the kithara than of the lyra; the penetrating quality of the aulos was well known. Variation in timbre was so narrowly limited by factors of construction as to be unimportant. Absolute pitch had no place in Greek music; relative pitch and tessitura, however, figured prominently. They are reflected in terms such as 'intense' (*suntonos*), 'relaxed' (*aneimenos*) and 'slack' (*chalaros*). Originally tuning descriptions, these came to be used to differentiate modes. Occasionally they were made to serve the additional (and wholly improper) purpose of conveying an ethical judgment; for writers of comedy, the temptation to make them do this was especially great. When the late 6th-century poet LASUS OF HERMIONE called Aeolian a 'deep-sounding' (*barubromos*) mode he may merely have been seeking to describe its relative pitch, perhaps with a suggestion of timbre as well; or the description may actually apply to the deep tones of the long-stringed barbitos used by Aeolic poets. In either case, the dimension of ethos has not yet been added.

To an imperfect but recognizable degree, this addition was made at the beginning of the 5th century BCE by an outspokenly conservative poet, PRATINAS OF PHLIUS. He counselled using Aeolian as a mean between the modal extremes of 'tense' and 'relaxed', and called it 'well suited to all braggarts in song'. Since this mode was never a mean in any technical sense known to us, the reference would appear to concern the MIMESIS of character traits. Neither anguished nor serene, it was thought to express the blithe and forthright manner of the Aeolian peoples. They could indeed be 'braggarts in song'; the great ALCAEUS is an example. Pratinas's remarks illustrate the ethnic type of ethos belief; although it reappeared periodically in Greek literature, it was hardly ever put forward seriously by a creative or analytical writer of the first rank. The value of what Pratinas said lies elsewhere. Like Terpander, he made no causal connection between modality and morality. He did, however, see appropriateness in the relationship between a musical mode and a

mode of social deportment, which a Greek of the central classical period judged by moral standards.

Somewhat similar conclusions may be suggested concerning a fragmentary statement from the lost *Paeans* of PINDAR, dating probably from the earlier decades of the 5th century BCE; the 'Dorian melody [*melos*] is [?the] most dignified'. The scholiast, or late commentator, who quoted the fragment asserted that Pindar was referring to the Dorian mode. The propriety of equating melody with mode gains support from a definition given by Winnington-Ingram (1936, p.3): 'Mode may be defined as the epitome of stylised song, of song stylised in a particular district or people or occupation'. This was especially true in the 7th and 6th centuries BCE. When Lasus, for example, referred to the Aeolian *harmonia*, he was probably thinking less of a scale pattern than of a melodic style that had become localized among Greeks who spoke the Aeolic dialect. It is undeniable that, in the present fragment, Pindar described Dorian melody with a term that seems entirely at home in the vocabulary of the later, fully developed doctrines of ethos. Nevertheless, a distinctively ethical valuation of music had not yet appeared. Pindar was concerned here with stateliness, not with the excellence of the soul. Although in the first Pythian ode he praised the power of music with singular exaltation, and although he gave cosmic meaning to the symbolism of lyre and *harmonia*, his fiercely aristocratic standards of honour and reverence are set far deeper than the level of any conscious principle of modal ethos.

3. THEORETICAL DESCRIPTIONS OF THE 5TH CENTURY BCE. The earlier decades of the 5th century, which produced Pindar's finest efforts as a poet-composer, also brought the first surviving theoretical statements concerning the ethical power of music. Much speculation has been devoted to the question of the ultimate origins of such views. Among the Greeks themselves there was a tendency to look to Egypt; Plato was one who did so, wrongly supposing that in matters of music Egyptian conservatism had never been shaken. It now appears likely that belief in ethos originated in a view of music as magically potent that was widely held throughout the Near and Middle East. The liberating force was Pythagorean theory, whereby musical phenomena were brought under the control of number and of proportionate relationship (one of the main senses of *harmonia*). This liberation held within itself the danger that a new kind of imprisonment might emerge from it, through a devotion to abstract harmonic relationships and cosmic values. The second escape, to a psychology and an aesthetic of musical expression, can be seen in the doctrines of DAMON, a contemporary and friend of Pericles, as they compare with those of the Pythagorean philosopher PHILOLAUS of Tarentum.

According to Philolaus, the nature of number and relationship does not admit of falsehood. Number and truth, he asserted, are in close natural union; and it is in the cosmic force of *harmonia* that the disparate elements of the cosmos are interrelated and men are enabled to grasp reality. Although the authenticity of the fragments attributed to Philolaus remains under dispute, no one doubts that they represent Pythagorean doctrine. This is true also of the statement by Damon that musical activity arises out of the activity of the soul and affects its nature favourably or unfavourably. It is in his example of 'liberal and beautiful' songs and dances as beneficial that the departure from tradition begins to be evident. The first of these terms, which means 'befitting a freeborn man', shows a combination of social and ethical presuppositions, and the second seems prophetic of the view of the beautiful that was to take shape in 4th-century philosophy. The Damonian school is also credited with the doctrine that even in a continuous melody the notes create or bring out character through similarity. The reference may be to a simple stepwise melody.

Damon was the first musical theoretician who is supposed to have applied moral valuation to the metrical complexes known as rhythms. With this tradition, doctrines of rhythmic ethos made their earliest appearance. Plato ascribed to him the claim that changes in musical styles (*tropoi*) are always accompanied by radical changes in the laws of the state. This statement, in which the use of *tropos* may show the influence of Pythagorean terminology, has fundamental importance both for ethos and for education. Although he has been credited on too little evidence with too much influence, Damon is undoubtedly a major figure in the history of musical ethos. Through his direct agency or mediation, doctrinal foundations were strongly established. The system gives the impression of having appeared suddenly, almost as if without antecedents; yet this cannot have been the case. It is difficult to add anything to the hypothesis of a distant origin in magical beliefs of the Near and Middle East; but the currents of musical influence during the formative period were apparently running westward from Asia rather than northward from Egypt.

The later decades of the 5th century offer little evidence bearing upon ethos. When the Socrates of Aristophanes' *Clouds* (649–51) speaks of familiarity with the rhythms as a social accomplishment, very possibly he was reflecting the playwright's own low opinion of Damon's concern with metre. In any case, the vital ethical factor is not considered. As the century came to its end TIMOTHEUS of Miletus violently altered the time-honoured choral hymn to Dionysus, the dithyramb, making the text an elaborate libretto and filling the musical accompaniment with frequent modulations. He thereby did away with the possibility of any single and stable ethos, to the extent that modality could contribute to this.

4. PLATO. In the early 4th century Plato condemned such practice. In all musical matters he commended singleness, simplicity and universality. Technical matters seldom came under discussion, for his interests lay elsewhere. Thus in the *Symposium* certain aulos melodies attributed to MARSYAS are credited by Alcibiades with a unique power to grip the soul, whatever the performer's degree of skill may be; the ethos is wholly melodic and rhythmic. While Alcibiades could only comment on the power of music, Socrates as Plato's spokesman sought to account for it. In doing so he used Pythagorean estimates of the importance of number, the formal component that mode and rhythm hold in common. The dynamic process of ethos, he explained, consists in these two aspects of musical experience lodging fast in the soul's deepest recesses. A more abstract explanation is given by the real or fictitious Pythagorean scholar Timaeus in the dialogue that bears his name. Harmony has motions akin to those of the soul, which it can help to restore to an inner concord; in like manner, rhythm is an aid to inner gracefulness.

According to the *Laws*, pleasure does not constitute a valid part of ethos, being merely the result of habituation; but the kind of music to which one becomes accustomed makes a great deal of difference to the moral result. Accordingly, the place of music in education received close attention from Plato. Habituation also involves a belief in mimesis, and Plato fully recognized the role which this element plays in the forming of habits. He repeatedly failed, however, to reconcile the component of musical ethos which is mimetic of human attitudes with the rhythmic and melodic component of ethos. Thus it was impossible for him to maintain any coherent theory, although many of his individual insights are brilliant. Especially admirable is the realism so often evident in his discussions of the place of modality and rhythm in man's life, even when the lack of a central position produces uncertain or contradictory responses. He saw music as a vehicle of ethos through mimesis; and he held to this practical view even if it had to be at the expense of Pythagorean theories of number and cosmic harmony.

5. THE HIBEH PAPYRUS. A papyrus of the 3rd century BCE, the so-called Hibeh discourse, contains a sharp attack upon believers in musical ethos. There is some reason to believe that its contents were originally written not much later than 390 BCE; they may thus be slightly earlier than Plato's *Republic*. Their unknown author (?Alcidamus) chose a variety of targets: fanatical harmonicists, the Damonian school and probably, on the subject of mimetic excellence, Plato himself. Trivial in tone and argument, the Hibeh discourse may gain its greatest distinction from the fact that it contains the earliest certain reference to ethical qualities associated with the genera. The author denied, for example, 'that the chromatic makes men cowardly or that the enharmonic makes them brave'. Throughout much of the discourse the author attacked a general type of harmonicist for absurd extremes of behaviour, and was not so much concerned with such serious theorists of music as Damon or Plato.

6. ARISTOTLE. Certain views maintained by Plato were taken up by his great pupil: belief in habituation as the source of character; recognition of music's influence on education for better or worse. It is the differences, however, that predominate. Aristotle avoided applying ethical terms to the actual experience of music. According to his theories of psychology and perception this experience was not an attitude of the soul but merely a *pathos*, something that happens to one. Moreover, he regarded music as a skill rather than a virtue; and in making this statement he substituted *ta mousika*, which approaches the meaning of the modern term 'music', for *mousikē*, the time-honoured concept in which music as such was fused with a literary text to form an unquestioned unity.

Aristotle's treatment of rhythm has not survived; when he dealt with mode, he was usually matter-of-fact. For the symbolic treatment of the *harmonia* by Pythagorean theorists, and for their use or abuse of number theory generally, he showed polite contempt. His flat pronouncement that the *harmonia* consists of notes and nothing else is typical. In one passage only did he devote some attention to practical problems of ethos: the long examination of music, considered as a part of education, with which the extant text of the *Politics* comes to a close. Here his disagreement with Plato becomes particularly evident. He declared repeatedly that education in music looks towards the later enjoyment of cultured diversion, not towards noble living. PAIDEIA itself now has its restricted sense of elementary schooling rather than that of the lifelong culture experienced through music and poetry. Instrumental music is regarded as capable in itself of expressing ethos. The classification of the modes – evaluated according to the findings of unidentified experts – no longer has an ethical basis, and all of the modes are approved for discriminating use. Such discrimination is to be shown partly by providing vulgar audiences with a corresponding kind of music.

These practical recommendations are believed to have their theoretical basis in two propositions: that modes and rhythms contain 'likenesses' (*homoiōmata*) of every emotion and ethical state, and that we have a natural affinity for them. The theory of likenesses, which may owe something to Damon, was probably meant to be conformable to Aristotle's belief that in perception we receive the impression of the 'form' of an object. The claim of natural affinity for modality and rhythm, twice asserted, calls to mind Pythagorean beliefs relating to the soul's motion, although such a source seems unlikely. Probably the most provocative element in all the comments on music in the *Politics* involves the concept of *katharsis*, or purgation. Here the background is an old and primitive way of looking at ethos. The Pythagoreans had employed the allopathic variety of purgative therapy, whereas the Aristotelian method is homeopathic: a state of passion is relieved by rousing the same sort of feeling rather than the opposite sort. In the end there is no adequate explanation of *katharsis*, since it appears only for a moment in the *Poetics*. What might have been Aristotle's greatest contribution to ethos theory was never realized.

7. HELLENISTIC THEORISTS. With Aristotle's pupil, ARISTOXENUS of Tarentum, begins the Hellenistic and Greco-Roman approach to music which resulted in a long series of handbooks on theory. Aristoxenus himself maintained a high ethical view of his subject; he lamented the passing of the old standards of performance. His concern, however, was practical (like Aristotle, he accepted all the modes as useful) and markedly empirical, and his interest lay in aesthetic theory rather than in doctrines of ethos. Much later, in the time of MARCUS TULLIUS CICERO, the Epicurean philosopher PHILODEMUS of Gadara repeatedly attacked the presentation of such doctrines by a minor Stoic, Diogenes of Babylon. One example of these seems to have been the claim that music, when correctly used, creates a highly rhythmic and harmonious nature – this doctrine represents familiar orthodoxy since Damon's time. Diogenes was concerned mainly to present musical-ethical experience as rational, while Philodemus, as a follower of Epicurus, considered the whole of music irrational. Apart from the arguments of individual proponents, the distinctive feature of Stoic thought that has a bearing upon ethos is its treatment of the passions as disturbances within the soul. This view accords well with the remarks in the *Timaeus* on the power of rhythm and harmony to regulate the soul's motion. To insist upon music as rational, on the other hand, introduces a quite different element.

8. ETHOS AND THE GENERA. The technical handbooks of the late classical and early Christian centuries repeatedly

offer ethical descriptions not only of modes but of genera, rhythms and even individual poetic feet. The abstractness of such system-making is far more evident than its usefulness. To consider what ethos meant to late theoreticians leads in most instances to a dead end, and for actual musical practice the safest conclusions to be drawn are probably the most general ones. Distinctions according to genus concern the varying position of the two inner notes of the tetrachord, giving the three main genera together with many *chroai*, or 'shadings'. The ethos of the diatonic genus was thought to be virile, strong and austere. Eventually this strength was looked down upon as lacking in urbanity, but such a judgment signifies little more than a shift of popularity that had given one of the other genera a favoured position. The chromatic genus was usually associated with lamentation and womanish softness; the descriptions vary somewhat.

The case of the enharmonic genus is a special one. According to tradition, it first appeared in a form that did not have the semitone evenly divided into two *dieses*. This simpler version, attributed to the Asiatic aulete OLYMPUS THE MYSIAN, had strongly sacral associations from the beginning; it was used in some measure throughout the Hellenic period. The later enharmonic, with a divided semitone in the tetrachord, was described by the Greeks (not necessarily correctly) as the most recently introduced of the three genera. The fact that they honoured it so highly has been thought puzzling, and their ascription of ethos to it may have been founded upon a response to the earlier form. In the Hibeh discourse, the author's denial shows that some thought the enharmonic genus capable of making men brave – a belief that was at least well suited to the special connection (real or supposed) between this genus and Dorian modality. The fact that the Hibeh writer also denied that the use of the chromatic genus could cause cowardice shows a pattern of beliefs regarding generic ethos already formed, or taking shape, in the period when Plato wrote his *Republic*. Later in the 4th century Aristotle spoke admiringly of the melodies of Olympus, which probably retained the 'primitive' enharmonic. As the bitter comments of his pupil Aristoxenus make clear, the newer form of the genus had been almost forgotten by the time the century ended. It was replaced by the chromatic, which eventually gave way to a re-establishment of the diatonic. The latter development may, as Winnington-Ingram has suggested, be connected with a reappearance of modality from folk sources. If so, the areas of speculation concerning ethos widen appreciably.

9. ETHOS AND RHYTHM. According to Socrates in the *Republic*, Damon applied ethical descriptions to rhythms and also to poetic feet. The Aristophanic evidence noted earlier seems to support this statement. Socrates said little about the rhythms, preferring that questions of detail be addressed to Damon. He did state that they were mimetic, like the modes, and that they derived their proper pattern from the natural rhythm of a good life. In a description that recalls this principle, Aristotle spoke of the dactylic hexameter as the most sedate and stately of all metres; much later, the writers on rhythmic ethos called dactylic metres solemn. In the late handbooks, most of which are collected in Jan's *Musici scriptores graeci*, rhythms are categorized ethically according to a great variety of criteria. Long syllables were thought to convey exaltation and serenity, whereas short ones roused the hearer to wildness. The same criterion of syllable length was applied to individual feet, especially to the dactyl, and to the sequences beginning or ending a line of verse. Frequent pauses were considered agitating, and individual feet were classified further according to the even or uneven pattern of metrical units they embodied. Tempo (*agōgē*) had unusual importance: its variations could give different kinds of ethos to the same rhythm. Plato mentioned it as one of Damon's concerns.

To find further examples of fact or convincing conjecture that will support the theorizing of the handbooks is not always easy. It seems likely, as one possibility, that in his dealings with rhythmic ethos Damon used the comparative method associated with him, the *sunkrisis* of the Hibeh discourse. More important, in lyric and tragedy, from the 7th century BCE onwards, metrical effects in both rhythms and feet were carefully chosen with reference to the emotional content of the text or the dramatic action or both. The handbooks offer elaboration and conjecture based upon the evident fact of this practice; the truly valuable source is the literature itself.

10. OTHER FACTORS. Late theorists mentioned additional ethical categorizations, but these can be noted here only in passing. The high, middle and low regions of the vocal or instrumental gamut were described as enervating, quieting and rousing, respectively. The terms probably derive ultimately from the triple classification of melodies mentioned by Aristotle in the *Politics*. Modulation (*metabolē*) might involve shifts among these regions, as well as between one scale or genus and another; a mysterious further type, used in melopeia, supposedly involved tetrachordal ethos in a special way that is not clear.

Granting that many other factors had a measure of importance, it is nevertheless impossible to escape the fact that Greek views on ethos were concerned primarily with modality. Several bases were proposed, some clearly stronger than others. A particularly weak choice was that of interpretation in terms of ethnic character. The 4th-century Academician known as Heraclides Ponticus attempted such an analysis. Religious considerations, another possible basis, were seldom mentioned prominently. The contrast between Apollo and Dionysus, between native Hellenic elements and alien oriental ones, has been given a disproportionate prominence by modern scholarship. A further possibility is that of characterizing a mode ethically through its technical properties. There are some instances of this in the treatise of ARISTIDES QUINTILIANUS and other Neoplatonic sources.

Finally there is the ethical description of a mode or rhythm through association with a form of literary composition, serious or popular. The fact that this offers no consistent basis of theory was made clear several times in the case of Phrygian. Nevertheless, association of ethos with literary forms in fact occurred much more frequently than any other association throughout the Hellenic period. The extremely wide range of this approach, from choral odes to drinking-songs, makes it the most nearly adequate single explanation of beliefs concerning ethos.

There is no one explanation, however, even as there is no one theory. The so-called 'theory of ethos' was made up of many views that differed widely at times and possessed as a common basis simply the conviction that music exerts a moral influence upon men. During the chief periods of creative and critical Greek thought, these

views had importance for writers of the highest eminence; throughout succeeding centuries they established attitudes towards musical ethos that seriously influenced the thinking of the Romans and of their Christian successors.

11. LATE ANTIQUITY AND THE EARLY MIDDLE AGES. In Roman culture, the process of transmission began during the 1st century BCE, when the polymath MARCUS TERENTIUS VARRO made ethical value his criterion in assessing the role of music. Writing around the beginning of the Christian era, the geographer Strabo referred to the ancient view of poetry as teaching virtue. He noted, moreover, that even in his own day music teachers claimed to impart culture and to improve moral character (*ēthē*, plural of *ēthos*). QUINTILIAN, that most eminent of all Roman educators, associated music with rhetoric as Cicero had done. Evidently he believed in its ethical powers, and he spoke of the 'silent power' of rhythm and melody present even when instruments alone are employed. When he dealt with ethical problems themselves, however, what concerned him was the spoken word; and what he valued about music was its contribution to the training of the 'good man skilled in speaking', the orator.

Musical ethos was more characteristically associated with philosophy as a propaideutic. The connection was made by Philo Judaeus in the beginning decades of the 1st century CE, by certain of the 3rd-century Neoplatonic philosophers and eventually, in the early 6th century, by BOETHIUS. During the patristic period, between the last two of these stages, attitudes varied according to locality. Basil the Great was typical of the Greek Fathers in taking his cue from Plato's discussions of the importance of music for education. Among the Western Fathers, AUGUSTINE OF HIPPO defined music as 'knowing how to sing and play well'. This concept had already been put forward by Aristides Quintilianus, who had gone back to Damon and Plato and also to Aristoxenus. Its significance lies in its combination of an aesthetic dimension with an ethical one. Boethius ignored the first of these; and although he discussed the second at some length, he defined the true *musicus* strictly in terms of a rational and speculative command of the subject. For him, the propaedeutic virtue of music was that, like mathematics, it strengthened the rational powers and drew the soul into the realm of true being through the force of number, that is, Pythagorean number.

12. CONCLUSION. During the Renaissance and modern periods, the question of ethical power in music has not ceased to exercise the minds of theorists. It must nevertheless be acknowledged that the particular constellation of beliefs that constituted Hellenic ethos doctrine had no continuing existence. Individual elements reappeared at times, most vividly perhaps in the 16th century, when the comments of Plato and Aristotle were echoed by many and diverse admirers ranging from the Italian composer-theorists to John Calvin. But the glory had departed: the old Hellenic beliefs had been adapted to new ends, not only in the West but in India and the Islamic countries; and during this process of adaptation they were refashioned with increasing freedom. The history of their new forms is proper subject matter for a separate study.

WARREN ANDERSON/THOMAS J. MATHIESEN

Etienne of Liège. *See* STEPHEN OF LIÈGE.

Etkin, Mariano (*b* Buenos Aires, 5 Nov 1943). Argentine composer. He studied privately with Graetzer and Ernesto Epstein in Buenos Aires. He held a fellowship at the Di Tella Institute (1965–6), studying with Ginastera, Xenakis, Earle Brown and Gandini. From 1968–70 he studied conducting with Hupperts in Utrecht and Boulez in Basle, and composing with Berio at the Juilliard School of Music in New York. He has taught composition and electronic music at McGill University in Montreal and (1982–5) Wilfrid Laurier University in Ontario, Canada, and composition and analysis at the Faculty of Fine Arts of the National University of La Plata, Argentina, from 1986 onwards.

Etkin has declared (1991) that 'to compose is similar to making a trip or following an itinerary. You never know if the materials approach you or if you are approaching

them. The same landscape may seem to repeat itself. Very different perceptual scales seem to co-exist'. This statement illustrates his penchant for opposites, for intermediary stages (like dream and wakefulness) and for dichotomies. The titles of many of his works reflect this: for example *Distancias* refers to the geographical displacement of the composer, who was living in a foreign country while composing the work, as well as to the 'distances' between registers and between different attacks.

ALCIDES LANZA

Etler, Alvin (Derald) (*b* Battle Creek, IA, 19 Feb 1913; *d* Northampton, MA, 13 June 1973). American composer, oboist and educationist. After early success as a composer, he entered the University of Illinois and continued studying composition with Arthur Shepherd at Case Western Reserve University in Cleveland (1931–6). In 1938 he joined the Indianapolis SO as an oboist. Two seasons later he travelled extensively in Latin America as an oboist and composer with the North American Wind Quintet. During this period he also received two Guggenheim Fellowships (1940 and 1941) and at the request of Fritz Reiner composed two symphoniettas (now withdrawn) for performance with the Pittsburgh SO. These successes led him to abandon a career as an oboist in favour of composing and teaching. He went to Yale University (1942–6) as instructor of wind instruments and conductor of the University Band, and studied composition with Hindemith (1942–4). He then taught at Cornell University (1946–7) and at the University of Illinois (1947–9) before being appointed professor at Smith College, Northampton, in 1949. In 1968 he was named Henry Dike Sleeper Professor of Music, and in 1972 Andrew Mellon Professor of Humanities. He is the author of *Making Music: an Introduction to Theory* (New York, 1974).

Etler's earlier compositions exhibit a harmonic vocabulary and instrumental treatment resembling that of Bartók and Copland, with occasional flights into jazz. After his remarkable Quintet for Brass Instruments (1963) he abandoned his earlier style, experimented with serial procedures, and began to give greater prominence to timbral and textural elements. He used free rhythms, frequently interspersed with sharp, often jazzy accents, and strong dissonance, combined with sophisticated, multimetric background textures. In spite of these doubtless self-conscious explorations, Etler's music never became academic, and never lost its stubborn aggressiveness and sensuous vitality.

KURT STONE/MICHAEL MECKNA

Eto, Toshiya (*b* Tokyo, 9 Nov 1927). Japanese violinist. He was one of Suzuki's first child pupils before the latter's development of group violin teaching for children (a method with which Eto strongly disagrees). When he was 12, Eto won a national competition that brought him attention in Japan, but the war precluded his international development until, in 1947, he went to the Curtis Institute, Philadelphia, as a pupil of Zimbalist, having spent four years at the Tokyo Academy of Music. In 1952 he made his New York début at Carnegie Hall; he taught at the Curtis Institute from 1953 to 1961, when he returned to Japan to teach between his frequent concert tours. His British début was at the Queen Elizabeth Hall in 1968. His expressive approach to the Romantic repertory is balanced by wit and agility in 20th-century music. He owns and plays violins by Stradivari (the 'Sandars' of 1695) and Guarneri 'del Gesù' (1736).

Etruria. The region of western Italy occupied by the ancient Etruscans; the name is a Roman one.

1. General history. 2. Sources. 3. Instruments. 4. Music in religious and social life.

1. GENERAL HISTORY. The Etruscans (Lat. *Tusci, Etrusci*; Gk. *Turrhēnoi, Tursēnoi*) were probably of east Mediterranean origin, migrating to north-west Italy in the 9th to 8th centuries BCE. Modern research (Pallottino, Pfiffig etc.) suggests that they did not migrate as an ethnic unity but grew together gradually (from about the 10th century

BCE onwards) in central Italy from different indigenous and non-indigenous ethnic, linguistic and cultural elements as the 'populi Etruriae'.

From the late 8th century until the 1st century BCE they inhabited the fertile region of west-central Italy between the Arno and the Tiber bounded by the Tyrrhenian Sea and the Appennines, approximating to modern Tuscany. Their economy and culture were based on agriculture, fishing, hunting, metal-working in bronze, gold and iron, and trading by sea as far away as the coast of Asia Minor. They achieved their greatest territorial expansion in the 6th and 5th centuries BCE, with loosely federated autonomous cities from Mantua to Capua. The focal point of their civilization was the temple of Voltumna, an Etruscan deity, situated in the region of Volsinii (Orvieto) on Lake Bolsena.

Economic crises, social struggles and repeated invasions by the Gauls in the north and the Romans in the south led to the decline of the Etruscan cities from the 4th century BCE. In 396 Veii fell to the Romans, and in 264 Volsinii. By the early 1st century BCE other Etruscan cities had been granted Roman civic rights; in 27 BCE the whole of Etruria was finally subordinated to the administration of Caesar Augustus.

2. SOURCES. Knowledge of Etruscan musical culture derives from two principal sources, in the absence of surviving music of Etruscan origin. The first is the literary evidence of Greek and Roman authors; the second, and more important, is Etruscan painting and relief work. The subject matter of Etruscan art derives from the pictorial arts of the Greeks, but Etruscan music-making is sometimes shown; and certain features of the costumes of Etruscan musicians and dancers distinguish them from their Greek or Ionian predecessors. The details of these scenes often recur, and sometimes they agree with the evidence of Greek and Latin authors; thus general conclusions about Etruscan musical culture are possible.

The archaeological evidence, varying in date between the 6th and 1st centuries BCE, is found in vase and wall paintings, reliefs on urns and sarcophagi, bronze statuettes etc. Most of it comes from Etruscan tombs and was part of the funerary cult of the nobility; nevertheless its evidence is valid. The Etruscans, like the Egyptians, long believed in a life after death, and wished to be entertained by musicians and dancers in death as they had been during their lives.

3. INSTRUMENTS. The archaeological and literary evidence indicates that the Etruscans' musical instruments (and consequently also their musical system of modes – *harmoniai, modi* – and melodic structures) were the same as those of the Greeks in the Archaic period (6th and 5th centuries BCE); the Etruscans traded with the Greeks, in south Italy (Magna Graecia) and overseas.

Of the Greek chordophones, the Etruscans adopted the archaic phorminx (fig.1), the forerunner of the kithara, with a rounded resonator and in-curving yoke arms (Stauder, 1973), the lyre (*lyra*) and barbitos. The Greeks used the last two instruments primarily to accompany singing, but the Etruscans evidently preferred instrumental music alone. Wind and string players are frequently depicted accompanying male and female dancers; ensembles of trumpeters and horn players are often shown accompanying public processions (Zebinger, 1982).

1. Phorminx player: detail of the relief on an ash urn, terracotta, late 6th or early 5th century BCE (Museo Nazionale Etrusco, Chiusi)

Unlike the Greeks, the Etruscans particularly cultivated wind instruments. Greek authors described them as the 'inventors' of trumpets (Aeschylus, *Eumenides*, 567–8; Sophocles, *Ajax*, 17; scholium to Euripides, *Phoenissae*, 1377; Diodorus Siculus, v.40.1; Athenaeus, iv.184a; Pollux, iv.85). The trumpet used in the Mediterranean area, a short tube of bronze or iron with a small bell (salpinx, tuba), was developed by the Etruscans both as the long lituus with a hooked bell bent backwards and a removable mouthpiece (Behn, 1954), and as the hoop-shaped cornu with a transverse bar for greater ease and security in performance (fig.2; see also Wegner, *MGG1*). A bronze lituus, 1·6 metres long, from Caere (Cerveteri),

2. Cornu and lituus players: detail of a fresco from the tomb of the Hescanas, Porano, near Orvieto, end of the 4th century BCE (copy by G. Gatti in the Museo Archeologico, Florence)

3. Musicians playing tibia and lyre: detail of a fresco in the Tomba dei Leopardi, near Tarquinia, c480–470 BCE

survives (Rome, Museo Gregoriano Etrusco, room III), and a bronze cornu of Etruscan origin (Rome, Villa Giulia Museum, no.51216 in the inventory). Other Etruscan wind instruments include the panpipes (syrinx), which were widespread; the double pipes (auloi, tibiae; *see* AULOS and TIBIA), which unlike their Greek prototypes mostly appear with conical bell-extensions on the pipes to reinforce the volume (Jannot, 1974); and, later, transverse flutes, as represented for example on an urn relief (*see* FLUTE, fig.4) of the late 2nd or early 1st century BCE in the tomb of the Volumni near Perugia (Hickmann, 1952).

Percussion instruments are depicted less frequently. However, vase paintings, bronze mirrors and statuettes show that men and women often danced, singly, in pairs or in circles, to the rhythmic accompaniment of clappers (crotala) (Hill, 1940). Large decorated bronze bells were frequently used in burial rites.

4. MUSIC IN RELIGIOUS AND SOCIAL LIFE. Music must have occupied an important position in both public and private Etruscan life, primarily because of the funerary cult mentioned above (§2). Professional tibia players performed during the lying-in-state, sacrificial rites and magic lamentations for the dead, and string instruments were played for the processions and dances of the burial ceremonial; this is shown by a number of reliefs on urns from Chiusi dating from the Archaic period (late 6th or early 5th century BCE) (Paribeni, 1938). Games and banquets were held to commemorate deceased notables, and instrumentalists and dancers performed in addition to the competing athletes (Thuillier, 1985).

Brightly coloured wall paintings from underground burial chambers near Tarquinia and Chiusi show the Etruscans' predilection for music joined with dancing, banqueting and other social occasions: these pictures were to provide the dead with the entertainment they had enjoyed while they were alive (Banti, 1960). Such banqueting scenes, with musicians and dancers of both sexes, are depicted in the Tomba delle Leonesse (*c*530–520 BCE), the Tomba del Citaredo (*c*490–480 BCE), and the Tomba dei Leopardi (*c*480–470 BCE; fig.3), all near Tarquinia. Of the well-known frescoes from Tarquinia, those of the Tomba del Triclinio (*c*470 BCE) are outstanding: six young dancing girls and two youths are shown entertaining the guests at a banquet; they are guided by a tibia player and a performer on the barbitos (possibly the dance leaders, for they participate in the dance steps). The graceful and expressive positions of legs and arms suggest that the dance was markedly rhythmical and animated. Similar emphatic gestures linked with music and dancing occurred later in some Etruscan stage performances by actor-dancers (*histriones*, *ludiones*).

Etruscan tibia players performed at armed dances and boxing matches (Athenaeus, iv.154a): the literary evidence is confirmed by a black-figure amphora of the late 6th century BCE from Vulci, now in the British Museum (fig.4). They were popular as hunt-followers (Aelian, *De natura animalium*, xii.46), and were employed to encourage kitchen slaves in their work (Pollux, iv.56). The Etruscans' general preference for the tibia rather than string instruments contrasts them with the Greeks and reveals a taste for colourful, orgiastic music (Pallottino, 1984). Even the scourging of slaves was carried out to the sound of the tibia (Plutarch, *De cohibenda ira*, 11c; Athenaeus, xii.518b).

Instrumental ensembles were popular in Etruria. Marriage ceremonies, depicted in carvings on stone sarcophagi from Caere (mid-5th century BCE; fig.5) and Vulci (late 4th century BCE), show performers on double pipes, string instruments, a horn and a lituus, all wearing a professional uniform of long robes. Similar musical ensembles at funeral processions recur on alabaster urns from Volterra (2nd to 1st century BCE). Musicians with horn and lituus are also shown mingling with the crowds at funeral processions in wall paintings in the Tomba Bruschi (3rd or 2nd century BCE) and the Tomba del Tifone (mid-2nd century BCE) near Tarquinia.

4. *Tibia player accompanying a boxing match: detail from a black-figure amphora from Vulci, late 6th century* BCE *(British Museum, London)*

Musical life in Etruria embraced every section of society (Jannot, 1988). Professional musicians, professional female dancers and actor-dancers were recruited from the slaves, and the fame of the Etruscan musicians and dancers persisted even under the Roman Empire (Wille, 1967). During an epidemic at Rome in 364 BCE, Etruscan dancers were brought to Rome for propitiatory ceremonies, and they performed to their customary tibia accompaniment (Livy, vii.2.4: 'The *ludiones* summoned from Etruria, dancing to the melodies of the tibia player without any singing [sine carmine ullo ... ad tibicinis modos saltantes] ... performed movements which were in no way unseemly, in the Etruscan manner'). The Romans used tibia players in various ways in their centuries-old cult music; these can be traced to Etruscan origins (Virgil, *Georgics*, ii.192–3; Ovid, *Fasti*, vi.653; Strabo, v.2.2). The Roman use of the tuba, lituus and cornu, mainly as military signalling instruments, was also derived from the Etruscans.

GÜNTER FLEISCHHAUER

Ett, Caspar (*b* Eresing, 5 Jan 1788; *d* Munich, 16 May 1847). German composer and editor. His musical education began at the Benedictine monastery at Andechs, where he was introduced to the musical style of Palestrina through the *Gradus ad Parnassum* of Fux. Ett continued his training at the Gregorianum in Munich, where his instructors included Joseph Schlett (organ), Joseph Graetz (composition) and his eventual mentor, Johann Baptist Schmid (singing). Upon graduating from the Gregorianum, Ett worked independently in Munich as a teacher and participated in the publication of two collections of sacred songs for use in Bavarian schools. In 1816 Ett became organist at St Michael, a position he held for the rest of his life.

A prolific composer, Ett wrote nearly 300 works for use at St Michael. These ranged from collections of simplified Gregorian chant for voice and organ, such as *Cantica Sacra* (1827), to larger *a cappella* choral works, such as the nine-part motet *Die neun Chöre der seligen Geister* (1836) and large-scale requiems, such as the Requiem in E♭ (1842) for orchestra, chorus and soloists. As an active reformer of church music in the post-Enlightenment period, Ett sought to improve the quality of both *a cappella* and instrumentally accompanied music. He never endeavoured to displace instrumental music from the church service, only to improve that which was used.

Undeniably Ett's greatest contribution lay in his editions of music by Renaissance and Baroque composers, of which there are more than 100. These were the first modern editions of sacred music, and initiated the revival of Renaissance polyphony in 19th-century Germany. Represented among Ett's editions are diverse composers including Ockeghem, Palestrina, Lassus, Lotti, Leo, Durante, Baj, Allegri and Handel. The most renowned of Ett's editions, prepared with J.B. Schmid, was of Allegri's *Miserere*, and served as the basis for the first performance of that work in Munich on Good Friday 1816. It should be noted, however, that Ett made no attempt to present these works in authentic form. Rather, works were

radically altered: *a cappella* works had instrumental parts appended, voice parts were occasionally deleted or added, movements by different composers were blended into a single mass, works were retexted, and nearly all works were abbreviated, with as little as a few bars to as much as over half of the original musical material cut. Ett typically prepared several different editions of individual works; for example, he created three different editions of Palestrina's *Missa Papae Marcelli*, and four editions of the *Missa Aeterna Christe Munera*.

In addition to his musical pursuits Ett studied languages, mastering as many as 14 in his lifetime. This led to his writing compositions for both the Greek Orthodox church and the Synagogue in Munich. Later in life he developed a special fascination with Sanskrit, and wrote the first study of the language to appear in German (the manuscript was destroyed by fire during World War II).

WORKS

all MSS in the Archiv Kirchenmusik, St Michael, Munich

18 masses, 2–8vv, incl. Laetare Jerusalem, Ad Dominica palmarum, In Nocte Nativitatis Domini; 6 requiems; 10 litanies; many collections of chant settings, incl. 12 sets of responsories and 4 sets of graduals; other liturgical works incl. 3 Miserere, 3 Salve regina, 2 Stabat mater, 2 Alma Redemptoris, 6 Deutsche Messen, 5 vespers

PAUL MORRISON

Ettinger, Max [Wolf, Markus] (*b* Lemberg [now L'viv], 27 Dec 1874; *d* Basle, 19 July 1951). German composer and conductor. He studied the piano with Herzogenberg in Berlin, and harmony and composition with Rheinberger and Thuille in Munich. After brief engagements as Kapellmeister in Saarbrücken (1906–7) and Lübeck (1910–11), productions of his ballet *Rialon* (Munich, 1911) and his opera *Judith* (Nuremberg, 1921) gained him recognition as a composer. He resumed his conducting career in Leipzig in 1920 and later conducted in Berlin (1929–33). In these years Ettinger showed a particular fondness for the *Literaturoper*, writing operas based on texts by Boccaccio, Friedrich Hebbel, Georg Kaiser, Goethe, Frank Wedekind and Emile Zola.

In 1933 the political situation in Germany forced Ettinger, a descendant of Eastern European Jews, to emigrate to Switzerland. There he began to compose *Bekenntnis* music in opposition to the Third Reich. Among these works are oratorios and cantatas on Jewish themes and texts, such as *Das Lied von Moses* (1934–5), *Jiddisch Leb'n* (1942) and a Yiddish Requiem (1947), compositions employing Hebraic folk and cantorial music, and works that explore compositional techniques denounced by the Third Reich. Noteworthy among the later chamber music is the Second String Quartet (1945), a work influenced by Hassidic melodies.

WORKS

(selective list)

STAGE

Rialon (ballet), Munich, 1911; Judith (op, 3, Ettinger, after F. Hebbel), op.28, 1920, Nuremberg, 1921; Der eifersüchtige Trinker (op, 1, F. Freksa, after Boccaccio: *Decameron*), op.14, Nuremberg, 1925; Juana (op, 1, G. Kaiser), op.33, Nuremberg, 1925; Clavigo (op, 2, Ettinger, after J.W. von Goethe), op.34, Leipzig, 1926; Frühlings Erwachen (op, 3, Ettinger, after F. Wedekind), op.36, 1928, Leipzig, 1928; Dolores (op, 3, Ettinger, after E. Zola), op.40, 1930–31, Vienna, 1936; Der Dybbuk (ballet), 1946–7

VOCAL

Choral: Weisheit des Orients (O. Khayyám), op.24, 4 solo vv, chorus, orch, 1921; Das Lied von Moses (Bible), 4 solo vv, chorus, orch, 1934–5; Königin Esther, 1940–41; Jiddisch Leb'n, 1942; Jiddisch Requiem, 1947; small-scale choral works on texts by J.W. von Goethe, G. Falke, F. Schiller

Solo: Bertram de Born (melodrama, L. Uhland), spkr, orch, c1910; Wovon Menschen leben (melodrama, L. Tolstoy), sprechstimme, high v, pf, 1944; Aus Goethes Westöstlichem Divan, S, Bar, chbr orch; 170 lieder on Ger. Swiss, Jewish and Palestinian texts

INSTRUMENTAL

Orch: Ov. 'Was Ihr wollt', op.4, 1906; 3 Traumbilder, op.31, *c*1924; Altenglische Suite, op.30, 1932 [from Fitzwilliam Virginal Book]; Alte Tanzsuite nach Tremais, op.42, 1933; Conc., hn, str, timp, 1936; An den Wassern Babylons (Gesänge der babylonischen Juden), small orch, *c*1940; Cantus Hebraicus, variations on a Hebraic melody, 1943

Chbr: Sonata, vn, pf, op.10; Sonatine, 2 vn; 2 Sonatas, fl, ob, cl, bn, pf, op.20, 1916; Phantasie on 2 Yiddish Folksongs, vn, pf, *c*1945; 2 Str Qts, op.32/2, 1945; editions: sonatas by P.A. Locatelli, G. Pugnani; Mozart Serenade K250

ANDREW D. McCREDIE

Ettore [d'Ettore], **Guglielmo** (*b* Sicily, *c*1740; *d* Ludwigsburg, wint. 1771–2). Italian tenor. He sang in Naples in Jomelli's *Temistocle* in 1757 and Hasse's *Achille in Sciro* in 1759. He later moved to Bologna where Padre Martini heard him and recommended him to Andrea Bernasconi in Munich. In 1761 he was engaged there, remaining in service until 1771. He appeared in several Italian centres in the 1760s, among them Venice and Verona in 1765, in operas by Sarti, and Turin, where in 1767 he sang in Bertoni's *Tancredi* and Quirino Gasparini's *Mitridate, rè di Ponto*. By then he was a Cavaliere ('d'Ettore'). He sang the title role in Bernasconi's *La clemenza di Tito* at Munich in 1768 and Admetus in Guglielmi's *Alceste* the next year in Milan. Burney reported that he was the most applauded of the singers in Sacchini's *Scipio in Cartagena* in Padua in 1770; elsewhere he referred to him as reckoned 'the best singer of his kind on the serious opera stage'. Schubart wrote that he had 'never heard anyone sing with the feeling of a d'Ettore' (*Schubart's Leben und Gesinnungen*, Stuttgart, 1791–3, i, p.94). Ettore's range extended from *A* to *d'''* and his vocal abilities included a capacity

for wide leaps. In 1770–71 he sang the title role in Mozart's *Mitridate* in Milan; the young composer had to write five versions of his entrance aria and Ettore ultimately included an aria by Gasparini in place of another of Mozart's. Relations were so strained that eight years later the mention of Ettore's name evoked unpleasant memories for Mozart. Ettore was engaged at the Württemberg court on 28 January 1771 but died the next winter. His compositions, which are unpublished, include arias and many 'Duetti Notturni' written in a fluent melodic style (*D-Mbs*, *I-Mc* and *Pca*)

HARRISON JAMES WIGNALL

Etude (Fr.). The French equivalent of 'STUDY', widely adopted for fairly short pieces whose principal aim is the development or exploitation of a particular aspect of performing technique, such as Chopin's Etudes op.25. The term étude was also used as a title by some 20th-century composers, usually to indicate a piece exploring a specific aspect of the composer's craft (e.g. Stravinsky's Four Etudes for Orchestra, 1928–9).

□

Euba, Akin (*b* Lagos, 28 April 1935). Nigerian composer. His early musical career was nurtured by his father and influenced by W. Echezona and T.K. Ekundayo Phillips. A government scholarship allowed Euba to study with teachers including Arnold Cooke and Eric Taylor at Trinity College, London (1952–7), where he gained diplomas in teaching and piano performance and earned two fellowships in piano and composition. In 1962 a Rockefeller Foundation grant enabled Euba to study ethnomusicology at UCLA (BA 1964, MA 1966), where resources in world music prompted a diversification of his compositional materials and techniques. He completed the PhD in ethnomusicology at the University of Ghana in 1974. Euba held lecturing and professorial posts at the universities of Lagos (1966–8, 1977–81) and Ife (1968–77). He was a research scholar at Iwalewa-Haus at the University of Bayreuth (1986–91). In 1988 he founded and became the director of the Centre for Intercultural Music Arts in London; he is the Andrew W. Mellon Professor of Music at the University of Pittsburgh.

His exposure to Nigeria's diverse indigenous musical traditions as senior programme assistant (1957–60) then head of music (1960–65) at the Nigerian Broadcasting Corporation informed his subsequent compositions, for instance such works as *Six Yoruba Folksongs* (1959) and *The Wanderer* (1969). Examples of his ingenious combination of indigenous timbres and Western and African instruments are found in *Abiku I* (1965) and *Four Pieces* (1966). The possibilities for creating art music in an authentic African idiom that he expounds are put into practice in his concept of 'African pianism', which explores through piano music the percussive, shifting tonal and rhythmic contrasts commonly found in indigenous musical traditions. While specific influences from indigenous practices include call-and-response, repetition, use of a 'time-line', polyrhythms, constrasting timbres and percussive attacks, his compositional vocabulary also includes serialism and dodecaphony, as in *Scenes from Traditional Life* (1970).

DANIEL AVORGBEDOR

Eucheria. *See* EGERIA.

Euclid (*fl* Alexandria, *c*300 BCE). Mathematician and theorist. His *Elements of Geometry* has from the earliest times been the basis for the study of geometry in the West. The definitions in book 5 of ratios and proportions, perhaps attributable to Eudoxus, are of great mathematical importance because they accommodate incommensurable magnitudes. Numerous other mathematical works, some no longer extant, have been ascribed to Euclid, and writings on music have also been attributed to him in several ancient and medieval Arabic, Greek and Latin sources (Proclus even claimed that he wrote an *Elements of Music*). Of the two treatises on music that have come down to us bearing Euclid's name, the *Harmonic Introduction* (*Eisagōgē harmonikē*), containing Aristoxenian music theory, is now ascribed to CLEONIDES; the other, *Division of the Canon* (*Katatomē kanonos*; *Sectio canonis*), survives in more than 200 manuscripts in which three distinct traditions are discernible – a Greek version, a shorter Greek version, and a shorter Latin version in Boethius's *De institutione musica*.

The *Division of the Canon* contains a discussion, based on Pythagorean principles, of the relationship between mathematical and acoustical truths. In the philosophical introduction, which possibly quotes Pythagoras, the author draws a parallel between sound and motion, specifically in terms of vibration; he treats musical acoustics as a branch of arithmetic and proposes a definition of consonance limited to intervals built on multiple or superparticular ratios. Other sections of the treatise include arithmetical and acoustical propositions, a passage devoted to the enharmonic genus and another in which the two-octave canon is divided according to the diatonic genus. Like the *Elements of Geometry*, the *Division* is largely compiled from a number of different sources, and its varied and sectional nature would suggest that it is not the work of a single author. The *Division*'s underlying assumptions appear to derive from the *Elements*, but the acoustical propositions, though similar in style to the latter work, especially to books 7–9, are less rigorous in their logic, even to the extent of displaying false reasoning. By virtue of its brevity and its focus on fundamental issues, the *Division* has been a source of interest to music theorists since antiquity, and in one form or another the work has been edited, translated and commented upon many times since the 15th century.

ANDRÉ BARBERA

Euing Lutebook (*GB-Ge* Euing 25 (olim R.d.43)). *See* SOURCES OF LUTE MUSIC, §7.

Eule, Carl Diedrich (*b* 1776; *d* Hamburg, 30 Aug 1827). German conductor and composer. He was the son of Gottlieb Eule, an actor and *buffo* singer (who was from 1798 for some years one of the directors of the Hamburg theatre), and succeeded J.F. Hönicke as musical director there in 1809. Eule wrote for Hamburg a number of German comic operas, including *Der verliebte Werber* (1799), *Oberstleutnant Taps* (1803), *Fernando* (1807), *Der Unsichtbare* (1809), *Der tote Onkel* (1810) and *Der Antiquitätensammler* (1812), of which *Der Unsichtbare* was the most successful, making the round of the German stages until about 1870. Scores of two other operas, *Das Amts- und Wirtshaus* and *Giaffar und Zaide*, are preserved at *B-Bc* and the Munich Opera archives respectively. Besides his works for the stage, Eule wrote a number of concert arias, a string quartet and piano music (opp.7–10 reviewed in *AMZ*, December 1821).

ALFRED LOEWENBERG/DAVID J. BUCH

Eulenburg, Ernst (Emil Alexander) (*b* Berlin, 30 Nov 1847; *d* Leipzig, 11 Sept 1926). German music publisher. He studied at the Leipzig Conservatory and founded his publishing firm in Leipzig in 1874. He published chiefly educational and choral material (*Deutsche Eiche*). In 1891 he obtained the miniature score series published by Albert Payne in Leipzig, and in 1894 took over the London firm Donajowski's edition of scores, combining the two series. More than 1000 works have appeared in the *Eulenburgs kleine Partitur-Ausgabe* (Eulenburg Miniature Scores). The firm also publishes symphonic orchestral music, including works by Atterberg, Graener, S.W. Müller and Trapp. In 1911 Kurt Eulenburg (*b* Leipzig, 22 Feb 1879; *d* Wembley, 10 April 1982), son of the founder, became partner and in 1926 sole proprietor; he moved the firm to London in 1939. After World War II branches were established in Zürich (1947) and Stuttgart (1950); the original Leipzig firm ceased to exist. The London operation was taken over by Schott in 1957 with Kurt Eulenburg remaining in charge of production. Since 1980 the firm (Ernst Eulenburg und Co. GmbH, Mainz, and Ernst Eulenburg Ltd, London) has been under the control of Schott in London, as a wholly-owned subsidiary.

HANS-MARTIN PLESSKE/CLIFFORD CAESAR

Eulenstein, Charles (*b* Heilbronn, 1802; *d* Styria, 1890). German jew's harp and guitar player. After an initial lack of success in his native country, he travelled through Switzerland in 1825–6, eventually arriving in Paris where he worked as a guitar virtuoso. In 1827 his op.1 (a set of 12 airs for solo guitar) was published by Richault in Paris, and in the same year he appeared in London as a guitarist and jew's harpist. He produced extremely beautiful effects by performing on 16 jew's harps, having for many years cultivated this instrument in an extraordinary manner. The patronage of the Duke of Gordon induced him to return to London in 1828; but he soon found that the iron jew's harp had so injured his teeth that he could not play without pain, and he therefore spent more time playing the guitar. At length a dentist devised a glutinous covering for his teeth, which enabled him to play his jew's harp again. He was very successful in Scotland and thence went to Bath (1834–45), to establish himself as teacher of the guitar, concertina and the German language. He published more than a dozen works for the guitar between the late 1820s and early 1840s (mostly intended for amateurs), including *A New Practical Method for the Guitar* (1840), several albums of popular songs with guitar accompaniment, duos for piano and guitar, and a set of variations (op.16) for solo guitar in an E major tuning. He eventually returned to Germany and lived at Günzburg, near Ulm.

VICTOR DE PONTIGNY/PAUL SPARKS

Euler, Leonhard (*b* Basle, 4 April 1707; *d* St Petersburg, 18 Sept 1783). Swiss mathematician, scientist and philosopher. He studied at Basle University under Johann Bernoulli. When he was 20, he took (at Daniel Bernoulli's suggestion) a post at the Academy of Sciences in St Petersburg; he held a post in Berlin (1741–66), then returned to St Petersburg. He won the Grand Prix of the Paris Académie des Sciences 12 times. The most prolific of scientists, he published some 800 memoirs and 50 books or pamphlets on various branches of mathematical science and some domains of engineering, music, philosophy and religion.

Euler contributed more to theoretical acoustics as the subject is now known than has any other man. At the age of 19 he wrote *Dissertatio physica de sono*, in which he divided sounds into three kinds (the tremblings of solid bodies; the sudden release of compressed or rarefied air; and oscillations of air, either freely or confined). Acoustics was one of his favourite subjects. His notebooks show that as a boy of 19 he planned to write a treatise on all aspects of music, including form and composition as well as acoustics and harmony. The only part of this project to come to fruition was his *Tentamen novae theoriae musicae, ex certissimis harmoniae principiis dilucidae expositae*, written about 1731 (St Petersburg, 1739); in this he presented a theory of consonance based upon mathematical laws and derived from ideas of the ancients. He also included the most complete system of scales or modes yet published, as well as a theory of modulation. To him acoustics owes the statement of many classes of fundamental problem through partial differential equations (or 'wave equations'), in terms of which the subject is taught today. An international edition of Euler's collected works, published by the Swiss Society of Natural Sciences, was begun in 1910. For a fuller account of his place in the history of acoustical studies, *see* PHYSICS OF MUSIC, §3.

CLIVE GREATED

Eunuch-flute (Fr. *flûte eunuque*). Vessel MIRLITON of the 17th and 18th centuries. It consists of a cylindrical tube of wood or metal widening into a bell at one end; the other end is closed by a membrane of thin parchment or onion-skin protected by a hollow, perforated sphere. The tube may have false finger-holes. The instrument is held like a transverse flute and the performer sings into a hole in the side of the tube, causing the membrane to vibrate; the resulting sound has a nasal buzzing quality, which is reinforced by the body of the instrument acting as a resonator.

The eunuch-flute is first mentioned in 1633, when C. de Villiers, a doctor from Sens, gave Mersenne information about such instruments, made of metal and in various sizes, brought from Flanders by a Jesuit. In his *Harmonie universelle*, Mersenne called the instrument a 'chalumeau ou fluste eunuques', the latter referring either to its phallic form or to its timbre, reminiscent of the castrato voices then becoming fashionable. It is possible that Shakespeare had already alluded to the name in *Coriolanus* (1608).

According to Mersenne, four or five eunuch-flutes were superior to any flute ensemble, and the instrument could imitate a 'concert of voices ... for it lacks only the pronunciation, to which a near approach is made in these flutes'. Francis Bacon had previously suggested that a 'Melioration of Sounds' might be obtained by singing vocal music in several parts into drums: 'And for handsomnesse and strangenesse sake, it would not be amisse to haue a Curtaine betweene the Place where The Drums are, and the Hearers'.

In 18th-century France the eunuch-flute was called a *flûte d'oignon* after the characteristic shape of its protec-

Eunuch-flute, German or Swiss, 18th century (Historisches Museum, Basle)

tive cap, as well as a *jombarde* and a *flûte à trois trous*. However, the *flûte brehaigne* in Machaut's *Remede de Fortune*, sometimes mentioned in this context, was probably a flute from Bohemia. The term *Narrenflöte*, frequently found in museum catalogues, arose in the 19th century from a misinterpretation of JESTER'S FLUTE, a name circulated with some copies of original eunuch-flutes. The BIGOPHONE and CANTOPHONE, also made in a whole series of ranges, are merely late descendants of the eunuch-flute. The significance of the eunuch-flute in the aesthetics of music of the 17th and 18th centuries has yet to be discovered.

Euphone. *See under* ORGAN STOP.

Euphonicon. A HARP-PIANO invented by John Steward.

Euphonium [euphonion, tenor tuba in B♭] (Fr. *basse, saxhorn basse, tuba bassse*; Ger. *Baryton, Tenorbass, Tenorbasshorn*; It. *baritono, bombardino, eufonio, flicorno basso*). (1) A valved brass instrument of widely conical profile, essentially a tenor tuba in 9′ B♭. The mouthpiece is cup-shaped and generally somewhat deeper than that preferred by trombonists playing instruments of similar pitch. The instrument was invented by Sommer of Weimar about 1843 as the 'euphonion'. Its name is derived from the Greek *euphonos* ('sweet-voiced'), appearing in Italian and Spanish as *eufonio*. The prototype of the euphonium was the *Tenorbasshorn* in B♭, known in Germany in the late 1820s. In 1838 Carl Wilhelm Moritz of Berlin built a tenor tuba of *Tenorbasshorn* pitch but wider bore, its four valves giving a larger range. This was superseded by Sommer's invention, initially called the *Sommerophone*, which received honourable mention at the 1851 London Great Exhibition. The *Hellhorn*, a similar instrument patented by Ferdinand Hell of Brno, was also exhibited.

The euphonium soon became the most important deep brass instrument in bands. In 1848 V.F. Červený of Hradec Králové introduced a model called the *Baroxyton* which became the first bass in Russian infantry bands. The same maker's *Phonikon* was a euphonium with a bulbous bell, like an english horn. During the 1880s Červený pioneered a 'Kaiser' range of instruments with particularly large bore which included a euphonium member called *Kaiserbariton*. These were later made also by German manufacturers.

Conventional shapes of euphonium follow tuba practice (*see* TUBA (i)). The right-facing instrument with top valves is most common and is the only type currently manufactured in Britain and France. The fourth valve may be in line or, more normally, positioned for left-hand operation in this shape of instrument. The left-facing oval-shape model with rotary valves is common in Germany, Austria and central Europe, while in the USA a version with side-valves and front bell is also made. The only known helicon-shape euphonium was a version of the *Baroxyton* mentioned above.

The twin-belled euphonium has been the most successful and enduring of the DUPLEX type of instrument (a single instrument that embodies the characteristics of two different instruments). Combining the characteristics of euphonium and valve trombone, it was offered in manufacturers' catalogues as late as the 1960s, although it was little used outside the USA. In 1996, following an investigation of extant instruments, Edmund K. Mallett produced an improved design in conjunction with Musical Instrument Services of Monroe, Michigan. In marching bands (*see* BAND (i), §III,4) a trumpet-shaped euphonium is found.

The euphonium usually has four valves (occasionally three or five). These give a potential range from *F*′ to above *b*′♭, depending on the player. High-quality right-facing euphoniums with top-valves use the 1874 Blaikley

Euphonium in B♭ with four valves, by Boosey & Hawkes (Besson model), London

compensating system (*see* TUBA (i), ex.1). It is possible on left- and forward-facing instruments to correct intonation by manipulation of the valve slides during performance. The instrument is distinctive in its strong, warm tone and fulfils a valuable role as both bass and tenor instrument, covering approximately the same range as the cello and ophicleide.

The German name *Tenorbasshorn* has been applied to the euphonium as to its predecessor with a keen awareness of the instrument's qualities. In English (and increasingly American) usage the term 'baritone' (*see* BARITONE (ii)) is correctly applied to the saxhorn of euphonium pitch with a less widely conical profile and only three valves. British brass band scoring calls for two baritones which contribute the lower notes in a fairly rich but not intrusive medium-register quintet which also includes three E♭ horns. The English term for the E♭ alto saxhorn is 'tenor horn'. In Italy the three-valved euphonium, and occasionally the four-valved, is termed *baritono* or *bombardino*; the baritone is termed *tenore*. The German *Tenorhorn* (as in, for example, Mahler's Seventh Symphony) is the baritone. The common German name for the euphonium is *Baryton*. It is possible that the adoption in the USA of the term 'baritone' for euphonium was the result of the immigration of large numbers of German musicians during the 19th century. Until recently the terms were interchangeable in the USA, manufacturers in some cases offering euphoniums and baritones of identical bore. In fact euphonium bore (through the valves) ranges between models from 14.3 to 16·6 mm (baritone bores are from 12·7 to 14·3 mm); bell diameters are 250·6 to 304·8 mm (219·1 to 279·4 mm for the baritone). A distinction between the two instruments is now more frequently drawn.

The instrument appears in a number of orchestral works, often as 'tenor tuba'. In the band, as the euphonium, it is sometimes played with vibrato; in the orchestra, as tenor tuba, it is played without, in the style of the other orchestral brass. English 19th-century light orchestral music frequently included a part for euphonium. Euphoniums have occasionally been used in jazz, especially by Rich Matteson (1929–93) and the trumpeter Maynard Ferguson.

The euphonium entered the symphony orchestra almost by accident. Richard Strauss had included a tenor WAGNER TUBA in *Don Quixote* (1896–7) and *Ein Heldenleben* (1897–8). While preparing the first performance of the latter, Ernst von Schuch substituted a *Baryton* with greatly improved effect. One of the consequences was the need for euphonium players to cope with a Wagner tuba notation. A euphonium usually plays the 'Bydlo' solo in the Musorgsky-Ravel *Pictures at an Exhibition*, and is sometimes used for Berlioz's high ophicleide parts. When scored orchestrally, as for instance in some of Havergal Brian's symphonies, the euphonium is normally treated as a higher tuba. Brian included two euphoniums and two tubas in his Symphony no.1, and, regularly, one of each instrument in later works. The role of the orchestral euphonium player is often filled by the fourth trombonist or a tuba player specializing in the higher register. Shostakovich includes an extremely demanding solo for *baritono* (euphonium) in his music for the ballet *The Golden Age* (1927–30).

There are innumerable solos for euphonium with band. Among these the Concerto for euphonium and brass band by Horovitz (1972) is outstanding. Hovhaness's *Diran* op.94 (1951) is a euphonium solo with string orchestra accompaniment. Amilcare Ponchielli's *Concerto per flicorno basso* (1872) was written while the composer was director of the municipal band of Cremona.

One of the most eminent euphonium players was Simone Mantia (1873–1951), who specialized in playing cornet solos on a twin-belled instrument. He was taught by Joseph Raffayola, a soloist in the bands of Patrick Gilmore and J.P. Sousa. Joseph DeLuca, also a member of Sousa's band, and Harry Whittier of the Gilmore band, both composed solos which are often performed. Alfred Phasey (1834–88), a prominent London freelance, began his career on ophicleide, later taking up euphonium. He appeared on both instruments (and bass trombone) until at least 1880 and was succeeded by his son, Handel (1862–1913), who also played euphonium and bass trombone.

(2) H.J. Haseneier's bass-euphonium, invented about 1850, is a late development of the upright SERPENT.

(3) The name 'euphonium' also refers to a type of tuning-fork instrument patented in 1885 by G.A.I. Appunn of Hanau. *See* TUNING-FORK INSTRUMENTS.

CLIFFORD BEVAN

Euresicchio [Eurisechio], **Antonio.** *See* AURISICCHIO, ANTONIO.

Eurhythmics. The art of rhythmic movement expounded by EMILE JAQUES-DALCROZE.

Euripides (*b* ?Athens, *c*485 BCE; *d* ?Aegae [now Vodena], Macedonia, *c*406 BCE). Greek tragic poet and major exponent of the 'new music' of the 5th century BCE. He first entered the dramatic competitions at Athens in 455 BCE (*Vita Euripidis*, 32). Of his tragedies, approximately 80 titles are known; 18 have survived together with extensive portions of a satyr-play, the *Cyclops*.

1. Euripides and music. 2. Later treatments.

1. EURIPIDES AND MUSIC. In the earliest extant play (if genuine), the *Rhesus* (?445–441 BCE), Euripides introduced or used in a new way a number of musical terms (393, *melōdos*; 550, *melopoios*; 651, *humnopoios*; 923, *melōdia*). In the *Alcestis* (438 BCE) praises of the heroine (424, *paian* may be a remarkably early use to denote the encomium of a mortal – *see* PAEAN) are to sound on the lyre and also 'in lyreless [*alyrois*] hymns' (the antithesis remains obscure; see Dale on 445–7). APOLLO is described charming wild animals with his lyre and piping 'shepherds' wedding hymns' (for the flocks) on his syrinx (570–87).

The nurse in the *Medea* (431 BCE) dismisses as pointless the singing of traditional poetry at social gatherings (190–203); the playwright knew that such texts were no longer thought an essential part of *paideia* ('culture').

The *Andromache* (?426 BCE) contains the first reference to collaboration between two poet-composers (476–8), as sure to produce discord; Aristophanes alleged that Euripides' slave Cephisophon helped him to write his monodies (*Frogs*, 944, 1048, 1408, 1452–3). The *Cyclops* (?425 BCE) contains predictable references to instruments associated with satyrs and Dionysiac worship – BARBITOS, tympanum (*see* TYMPANUM), CROTALA (40, 66, 205; also 443–4, the 'Asiatic kithara'). Manuscripts of this play have a stage direction, *ōdē endothen* ('singing within', 487), comparable with the AULOS interlude required after 1263 of Aristophanes' *Frogs*.

According to Adrastus in *The Suppliant Women* (?423 BCE), creating songs should give pleasure to the *humnopoios*, otherwise there will be no pleasure for the hearer (180–83). This new approach to the creative mood constitutes one of the very few references to music to occur in dialogue rather than in monody or choral lyric. The *Heracles* (?420 BCE) contains an extended choral passage (673–95) praising music and worship, and a description of Apollo as kitharode in which the LINUS song is represented as being of good omen (348–51) (contrast Aeschylus, *Agamemnon*, 121, 159).

In *The Trojan Women* (415 BCE) musical imagery intensifies the mood of mourning throughout. The *Iphigenia in Tauris* (?414 BCE) contains one striking image among many that are conventional: the chorus tells Iphigenia that she will go home on an Argive ship with Pan as boatswain accompanying the rowers on his syrinx (1125–7). In the *Electra* (?*c*417–413 BCE) 'the aulos-loving dolphin' is described leaping round the Greek ships (435–7); ARISTOPHANES used these lines for his mocking cento of choral lyric tags from Euripides mixed with nonsense phrases (*Frogs*, 1317–18).

In *Helen* (412 BCE) the title character imagines the Sirens as 'winged maidens, holding a Libyan aulos [*lōton*,

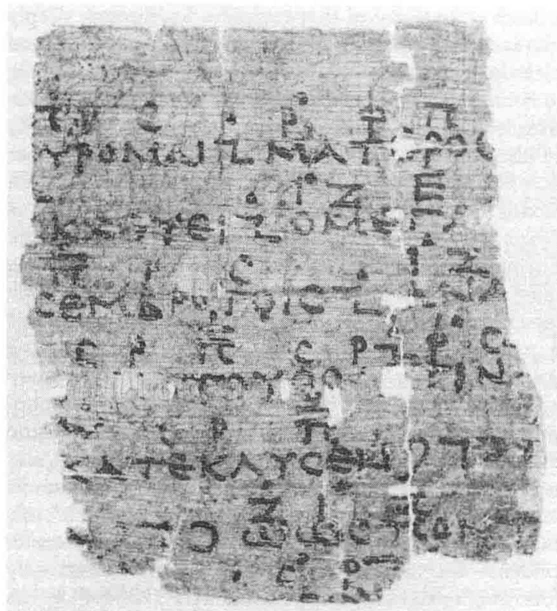
made of lotus-wood] or panpipes [*suringas*] or lyres [*phormingas*]' and joining their tears to her cries of lamentation (*ailinois*; 167–73); such early evidence for Greek conceptions of the Sirens is rare. An entire choric sequence (1301–68) is devoted to an account of the rites of Dionysus and the Mother of the Gods: the crotala sound, the bullroarer (*rhombos*) whirls in circles, and Aphrodite plays the cymbals and tympana and takes up the aulos.

In the *Ion* (*c*412 BCE) Creusa, whom Apollo ravished, speaks of the god with his 'seven-voiced kithara' who plays on, disregarding her grief (881–4, 905–6). The play contains a remarkable description of sky and moon joining in the dance during the all-night festival of Dionysus (1077–80), which must not be mistaken for a cosmic philosophy of music. A chance remark in the dialogue (1177–8) shows that at banquets the aulos players did not perform until after the meal. A minor tragedy, *The Phoenician Women* (?410 BCE), contains fine lines describing the walls of Thebes raised by the power of Amphion's lyre (822–4); and the *Orestes* (408 BCE) refers again to the Linus song, explaining its Asiatic origins in lines (1395–9) that read almost like a scholarly footnote.

Two posthumously produced plays, probably written in 407 BCE, yield some details about instruments. The *Iphigenia in Aulis* contains the claim that Paris imitated 'the Phrygian auloi of Olympus' on the panpipe (576–8) – a highly unlikely sequence of development. The *Bacchae* gives two varying accounts of the origin and history of the tympanum (58–61, 124–34; see Dodds). In this play there are many references to the tympanum, like the aulos a characteristic instrument of the Bacchanalian revel, and also to song: tranquil maenads are described as 'singing a Bacchic song against [*anti-*] one another' (1057), in other words antiphonally.

Among the fragments of Euripides' lost tragedies are references in the *Hypsipyle* to kithara music with vocal accompaniment and to elegies accompanied by the lyra (Bond, frags.I.iv.6–8 and I.iii.9). In better-known fragments from the *Antiope* Euripides made Amphion a symbol of culture, aptly represented by music (*see* AMPHION (i)).

The many musical references in the extant plays are not haphazard. Euripides, like Sophocles, used them to define a mood and to heighten the emotional tension by intensification or, often, by a contrast between the music of past joy and that of present sorrow (see Haldane, 1965). He showed far more concern than Sophocles for immediate effect. In the tragedies of Sophocles, the chorus plays a central role, but Euripides in his tragedies reduced the importance of the chorus, as Aristotle noted (*Poetics*, 1456a25–32).



Aristophanes parodied Euripides' lyrics in the *Frogs*, where he seized on certain features of Euripides' compositions – his repetition of words and his habit of setting a syllable to a melisma rather than a single note (see *Frogs*, 1314; and Euripides, *Electra*, 437, where *heilissomenos* must be lengthened to match *numphaias skopias* in the antistrophe, 447; for examples of repeated words, see *Frogs*, 1338, 1354–5, and *Orestes*, 140, 149, 163, 174). Generally he criticized bizarre and even indecent sources from which Euripides allegedly drew his monodies and choral lyrics (see *Frogs*, 1297–1307).

Such charges reveal that Euripides had become deeply involved in the late 5th-century reforms of rhythmic and melodic conventions known to modern scholars as the 'new music' (*see* TIMOTHEUS, with whom Euripides was friendly). While Euripides' many references to a variety of instruments do not prove that his plays had any other accompaniment than the customary single aulete, both Sextus Empiricus (*Against the Musicians*, 13) and the Byzantine treatise *On Tragedy* (see Browning) associate Euripides with the use of the kithara in tragedy. Tympana must have been used by the chorus of the *Bacchae*; moreover, the lost *Antiope* (Nauck, frag.182) contained a passage of hexameters sung to the lyre. Since the *Antiope* had as its central character the legendary kitharode Amphion, a lyre must have been used (Sophocles' *Thamyras* provides a close parallel), although little more may have been involved than the pretence of regular performance on the lyre. In any case, the famous 'tophlattothrattophlattothrat' refrain of the Aristophanic Euripides (*Frogs*, 1286–95) does not alone constitute evidence for its normal use, nor do the immediately following references to 'lyrion' and 'lyra' (1304–5) by the Aristophanic Aeschylus.

Various *tonoi* and genera were used for tragic composition (*see* GREECE, §I, 4). According to Pseudo-Plutarch (*On Music*, 1136a–37a), tragic authors used the Dorian, Lydian, Mixolydian and Ionian (Iastian). The Pseudo-Aristotelian *Problems* (xix.48) notes that the Hypodorian and Hypophrygian were reserved for the arias of solo actors; and the Byzantine treatise *On Tragedy* (Browning, 76) states that they were introduced by Agathon, a playwright contemporary with Euripides.

According to the Byzantine treatise (p.69), the older tragic poets had used either the pure enharmonic genus or a mixture of enharmonic and diatonic genera (see below, on the *Orestes* fragment), and none before Euripides had used the chromatic, specifically the soft chromatic genus. Both Euripides and Agathon (to whom the introduction of the chromatic was ascribed) may have contributed to the acceptance of this genus, which was suspect at that time and later (*see* HIBEH MUSICAL PAPYRUS). The introduction of the Hypodorian and Hypophrygian may also have been due largely to Euripides' advocacy.

Two fragments of papyrus, dating from the 3rd century BCE, preserve passages of text from two of Euripides' tragedies with accompanying musical notation: *PLeid Inv.510* records text from *Iphigenia in Aulis*, including a section in which Iphigenia and the chorus alternate every few lines (1500–09) and a choral section (783–94); and *PWien G2315* exhibits a few choral lines from *Orestes* (338–44; see illustration). Both fragments reveal rhythmic and metric anomalies, reduplicated vowels and short melismas on single syllables. A modulation from one *tonos* to another occurs in the *Iphigenia* papyrus, while the notation in the *Orestes* papyrus clearly indicates the chromatic or enharmonic Lydian *tonos*. In the absence of additional evidence, it is impossible to be certain whether the papyri preserve the music of Euripides, but they do accord with features of his style, as later parodied by Aristophanes and described by Dionysius of Halicarnassus

Papyrus fragment containing choral lines from Euripides' 'Orestes', c250 BCE *(A-Wn)*

in chapter xi of *On Literary Composition*. Quoting a passage from an earlier section of *Orestes* (140–42), Dionysius observes that Euripides regularly ignored the natural pitch accentuation and rhythm of the Greek text, characteristics markedly apparent in both of these musical fragments (see Pöhlmann; Richter, 1971; and Mathiesen, 1981).

Without doubt, Euripides was in the forefront of the 'new music', and this is substantiated by the identity of his associates, the comments and parodies of contemporaries and, above all, the libretto-like nature of many of his sung texts. His monodies demanded soloists with coloratura skills; his choral lyrics, too, would seem to have been musically demanding, and their vividness and range of emotion suggest a powerful use of rhythm and melody. In Euripides' tragedies, as in the kitharoedic *nomoi* of his friend Timotheus, 5th-century Greek music reached the climax of its development.

2. LATER TREATMENTS. 11 plays, including the doubtful *Rhesus*, have provided opera material from the 17th century to the present day. The stories of Alcestis, Hippolytus, Iphigenia (in Aulis and Tauris) and Medea have proved particularly fruitful, and the terrors of *The Bacchae* have appealed to a number of modern composers. For many librettists, Euripides has been filtered through the art of such French dramatists as Corneille (*Médée*, 1634), Racine (*Andromaque*, 1667; *Iphigénie en Aulide*, 1674; *Phèdre*, based on the *Hippolytus*, 1677) and Voltaire (*Oreste*, 1750).

WORKS BASED ON EURIPIDES' TEXTS

(selective list)

unless otherwise stated, dates are those of first performance

OPERAS

Alcestis: P.A. Ziani, 1660, as Antigona delusa da Alceste; Lully, 1674; Handel, 1727, as Admeto; Gluck, 1767 and 1776; P.A. Guglielmi, 1768; Anton Schweitzer, 1773; Boughton, 1922; Wellesz, 1924

Andromache: Francesco Feo, 1730

The Bacchae: Wellesz, 1931; Ghedini, 1948; Partch, 1961, as Revelation in the Courthouse Park; Henze, 1966, as The Bassarids; Buller, 1992

Electra: J.-B. Lemoyne, 1782

Hecuba: Martinon, 1956

Helen: Richard Strauss, 1928, as Die ägyptische Helena

Hippolytus: Rameau, 1733, as Hippolyte et Aricie; Gluck, 1745; Traetta, 1759, as Ippolito ed Aricia; Paisiello, 1788, as Fedra; Drysdale, 1905; W.H. Bell, composed 1910–14; Pizzetti, 1915, as Fedra; Bussotti, 1988, as Fedra

Iphigenia in Aulis: Domenico Scarlatti, 1 aria, 1713; Caldara, 1718; Orlandini, 1732; Porpora, 1735; Giovanni Porta, 1738; Gluck, 1774; Salari, 1776; Martín y Soler, 1779; Prati, 1784; Tarchi, 1785; Zingarelli, 1787; Cherubini, 1788; Franz Danzi, 1807; Pizzetti (radio op), 1950

Iphigenia in Tauris: Desmarets, completed by Campra, 1704; Domenico Scarlatti, 3 arias, 1713; Handel, 1734, as Oreste; José Nebra, 1747, as Para obsequio a la deidad; Traetta, 1763; Gian Francesco de Majo, 1764; Galuppi, 1768; Jommelli, 1771; Gluck, 1779 and 1781; Niccolò Piccinni, 1781; Carlo Monza, 1784; Tarchi, 1786

Medea: M.-A. Charpentier, 1693; Georg Benda (melodrama, 1), 1775; Cherubini, 1797; Simon Mayr, 1813; Giovanni Pacini, 1843; Lehman Engel, 1935; Milhaud, 1939

Rhesus, Gundry (school op), composed 1950–53, as The Horses of the Dawn

The Trojan Horse (Cecil Gray).

INCIDENTAL MUSIC, SOLO, CHORAL, ORCHESTRAL

Alcestis: C.H. Lloyd, 1887; C.F.A. Williams, *c*1900; Gustav Holst, 7 choruses, 1920; Koechlin, unison chorus, 1938

Andromache: George Kazasoglou, *c*1900

The Bacchae: Bruneau, ballet, 1888; Ernest Walker, Hymn to Dionysus, 1906; Holst, Hymn to Dionysus, 1913; Mulè, 1922; Pijper, 1924; Bantock, 1945

Cyclops: Pijper, 1925; Mulè, 1927

Electra: Mitropoulos, 1936

Hecuba: Evanghelatos; Milhaud, 1937

Hippolytus: Bantock, 1908; Mulè, 1936; Mitropoulos, 1937

Ion: Charles Wood, 1890; Karyotakis, 1937

Iphigenia in Aulis: Walter Damrosch, 1915; Mulè, 1930; Jolivet, 1949

Iphigenia in Tauris: Gouvy, dramatic scene, 1885; H.A. Clarke; Charles Wood, 1894; Mulè, 1933; Ghedini, 1938; Petridis, 1941

Medea: Wilhelm Taubert, 1843; Kazasoglou, *c*1900; Damrosch, 1915; Mulè, 3 choral pieces, 1927; Toch, radio music, 1930; Veress, 1938; Varvoglis, 1942; Krenek, dramatic monologue, 1951

Orestes: Kazasoglou, *c*1900

The Phoenician Women: Gnesin, Finikyankam, 1916

Rhesus: Ernest Walker, 1922

The Trojan Women: Holst, Hecuba's Lament, 1911; Coerne, 1917; Virgil Thomson, 1940

WARREN ANDERSON/THOMAS J. MATHIESEN (1), ROBERT ANDERSON (2)

Europa, Madama. Italian singer, sister of SALAMONE ROSSI.

Europe, James Reese (*b* Mobile, AL, 22 Feb 1880; *d* Boston, 9 May 1919). American bandleader and composer. A champion of black American music and musicians, he played a significant role in the transformation of orchestral ragtime into jazz. As a teenager in Washington, DC, Europe studied the violin, the piano and composition. After moving to New York in 1903, he continued his studies informally with organist Meville Charlton and singer/composer Henry T. Burleigh. By 1909 he had achieved considerable success as a composer of popular songs and as music director for several important theatrical productions, including *Red Moon* (1908–9) and *Mr Lode of Koal* (1909). The following year he organized and was elected president of the Clef Club, the first effective union for black musicians in the city's history. He also conducted the club's symphony orchestra. On 2 May 1912 Europe led his 125-member orchestra and chorus in a historic 'Symphony of Negro Music' at Carnegie Hall, the first appearance on that stage by a black orchestra. They returned to give concerts in 1913 and 1914. During this same period Europe became the musical director for society dancers Vernon and Irene Castle. Over the next three years the Castle-Europe partnership revolutionized American attitudes towards social dancing. Together they are credited with developing the most famous of the Castle dances, the fox-trot. Victor Records, offered Europe and his Society Orchestra a recording contract in 1913, the first ever given by a major label to a black orchestra.

In 1918, as bandmaster of the 369th US Infantry Regiment Band, Europe was sent to France where he introduced live ragtime, blues and jazz to European audiences for the first time. After returning from the war, he completed a series of recordings and had nearly completed a successful concert tour when he was fatally stabbed by an emotionally disturbed bandmember.

WORKS
(*selective list*)

Songs: My Heart Goes Thumping and Bumping for You, 1904; Obadiah (You Took Advantage of Me), 1905; On the Gay Luneta (B. Cole), 1906; A Royal Coon (J. Larkins), 1907; Likin' Ain't Like Lovin', 1907; Ada, My Sweet Potater (C. Hunter), 1908, collab. Cole; Picanninny Days (Cole), 1909; Pliny, Come Out in the Moonlight (Cole), 1910; I've Got the Finest Man, 1912, collab. H. Creamer; Someone is Waiting Down in Tennessee (C. Mack), 1913; What It Takes to Make Me Love You – You've Got It, 1914; Father's Gone to the War (Creamer), 1915; Rat-a-Tat Drummer Boy (Creamer), 1915; Good-bye My Honey, I'm Gone, 1918, collab. N. Sissle and H. Blake; Jazz Baby, 1919, collab. Sissle and Blake; On Patrol in No Man's Land, 1919, collab. Sissle and Blake; At That San Francisco Fair (S. Greene), collab. J. Kern, F. Dabney, 1915

Inst: The Clef Club March, 1911; Lorraine Waltzes, 1911; Castle House Rag, 1914; Castle Lame Duck Waltz, 1914, collab. Dabney; Castle Maxixe, 1914, collab. Dabney; Castles' Half and Half, 1914, collab. Dabney; Castles in Europe, 1914; Castle Walk, 1914, collab. Dabney; Valse Marguerite, 1914; Castle Doggy Fox Trot, 1915; Follow On (Creamer), 1915; Hi, There!, 1915; Monkey Doodle, 1915; Queen Louise, 1915; Hilo: Hawaiian Waltz, 1916

Principal publishers: Bloom, Stern, Ricordi, Witmark

REID BADGER

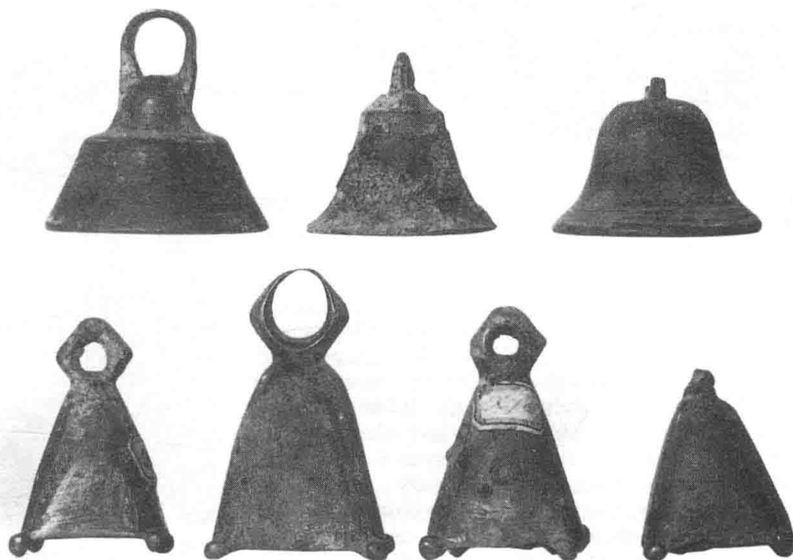
Europe, pre- and proto-historic.

1. Chronology. 2. Problems in research: (i) Early evidence (ii) Structural questions (iii) Sources. 3. Archaeological finds: (i) Idiophones (ii) Membranophones (iii) Aerophones (iv) Chordophones.

1. CHRONOLOGY. The following chronology is on a very approximate scale, intended merely to provide points of reference; only cultures cited in the ensuing text are mentioned. Prehistorians have discovered the existence of numerous 'local cultures' whose independent development entails considerable shifts in chronological sequence. The following subdivision of the eras known as the Stone, Bronze and Iron Ages is, therefore, only approximate.

The Stone Age comprises the Upper Palaeolithic (600,000–150,000 BCE), the Middle Palaeolithic (150,000–40,000) and the Lower Palaeolithic (40,000–8000, from which the earliest extant archaeomusicological evidence probably dates, with the Aurignacian, Solutrean, Magdalenian and Perigordian cultures); the Mesolithic or Middle Stone Age (8000–5000); and the Neolithic or Late Stone Age (beginning *c*6000 in southern, *c*5500 in central and *c*4300 in northern Europe, with the Tripol'e culture in southern Russia and the northern part of south-east Europe – late Neolithic to early Metal Age). The Eneolithic (Copper Age) denotes the transitional period between the Late Stone Age and the Bronze Age and is particularly well marked in the Near East and southern Europe.

The Bronze Age comprises the Early Bronze Age (2300–1600, north of the Alps; 1800–1000, in the north), the Middle Bronze Age (up to 1400, in the Danube region and more farflung areas north of the Alps), and the Late Bronze Age (1400–1200; in central Europe 1200–800, including the tumulus grave culture between the Rhineland and the Carpathians, the urn grave culture of central Europe and the Lausitz culture of eastern central Europe; 1000–500, in the north).



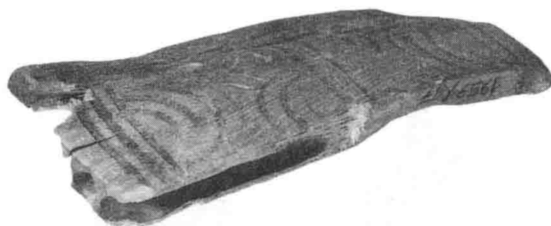
The Iron Age in central Europe began in about 800 BCE, with the pre-Roman Hallstatt culture, the Vysock culture in former East Galicia and the Villanova culture of Italy. The Celtic La Tène period (500–100 BCE) is contemporaneous with the Roman Republic and with nomadic peoples such as the Scythians and Sarmatians of eastern Europe, and is followed by the period of the Roman Empire and Roman expansion into the provinces (100 BCE – 400–500 CE) and then by the migration of peoples and the Merovingian period (500–800). Thereafter tribes and peoples (including the Germanic tribes, the Slavs, Avars, Alemanni, Franks, Vikings, Khazars, Ugro-Finns etc.) dispersed regionally. By this time music and musical practice are mentioned in writing, and this marks the end of the prehistory of European music.

2. Problems in research.

(i) Early evidence. The researcher is confronted with unusual problems in describing musical evidence from pre- and protohistoric Europe. He or she must examine not only actual finds relating to music but in particular their context, the circumstances in which they were made and the way in which they were used; and in this respect Europe does not present a unified picture. The literate Mediterranean cultures of classical antiquity (in the Aegean, Greece, Etruria and Rome) arose in the south-east of the continent and in many ways were derived from or stimulated by the highly developed ancient cultures of

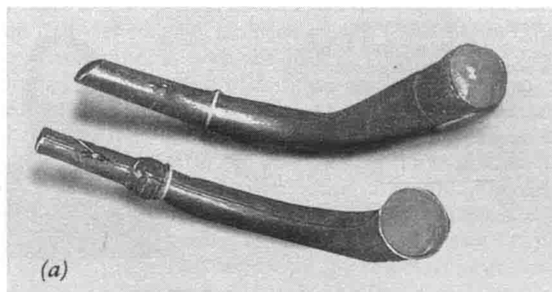
1. Upper Palaeolithic painting in the cave of Les Trois Frères, Ariège, France, showing a figure (right) interpreted as holding either an end-blown flute or a musical bow

2. Bells of different shapes: provincial Roman, height 3–5cm, excavated in the Netherlands, c2nd century CE *(Utrecht, University Museum)*

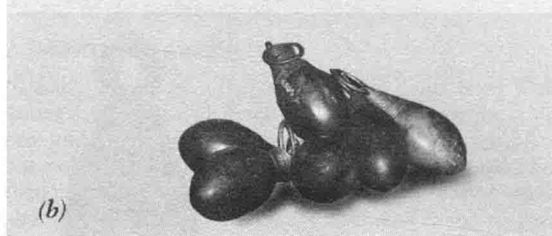


Mesopotamia, the Near East and Pharaonic Egypt. The cultural influence of these civilizations, which extended far into southern and eastern Europe and to some degree, through trade relations, into central Europe, are mentioned here only in passing.

In central, western and northern Europe, and in large parts of eastern Europe unaffected by classical antiquity, written traditions came considerably later, mainly with the activities of Christian missionaries. Accordingly, the prehistory of music ended at different times in different places, making way for protohistory and with it another group of sources deriving from the written tradition, seldom corresponding to the material remains of former musical cultures. Christianity did not permit the burial of grave goods with the dead, and it is as grave goods that archaeomusicological objects have often been found; that source is from this time often replaced by musical iconography.

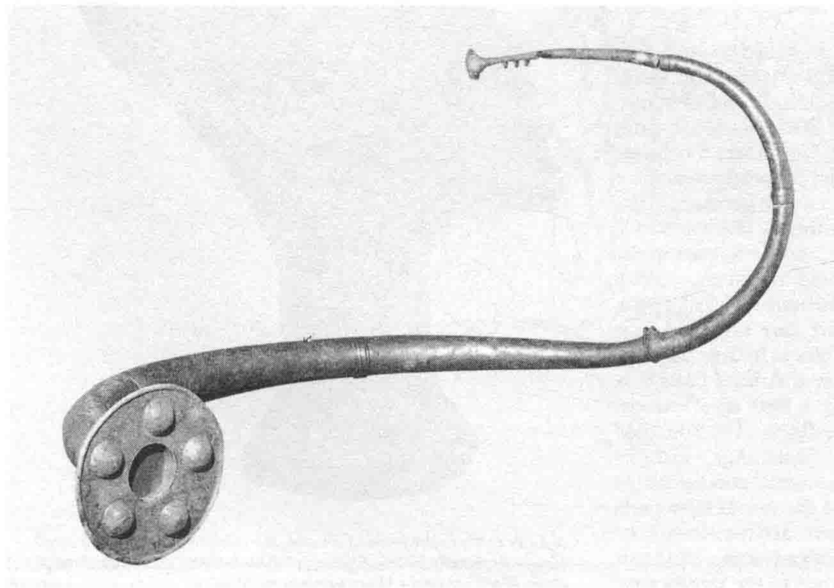


(ii) Structural questions. It is possible to see that European musical life was always marked by great diversity. The famous Lower Palaeolithic caves of southern France and northern Spain, with their animal paintings and drawings, may have been used for dance; footprints supporting such a theory have been found. It remains a matter for speculation whether places with good acoustics were specifically chosen for paintings (Waller, 1993; Allman, 1994) and whether stalagmites were used in the manner of gongs to produce sound (Dauvois, 1990). Pictorial representations of instrumentalists (Stockmann, 1984, et al.) in scenes of rock art cast little light on matters, and there are few such instances in cave painting (one, in the cave of Les Trois Frères at Ariège, France, is the masked animal dancer holding a flute or a musical bow, of the Magdalenian culture; fig.1). The so-called Neolithic Revolution of the Late Stone Age, with its obvious change in living and economic conditions as people became sedentary, involved the use of new tools and the development of different artistic forms of expression (Torbrügge, 1969; Müller-Karpe, 1968); it must also have induced a new attitude to the significance



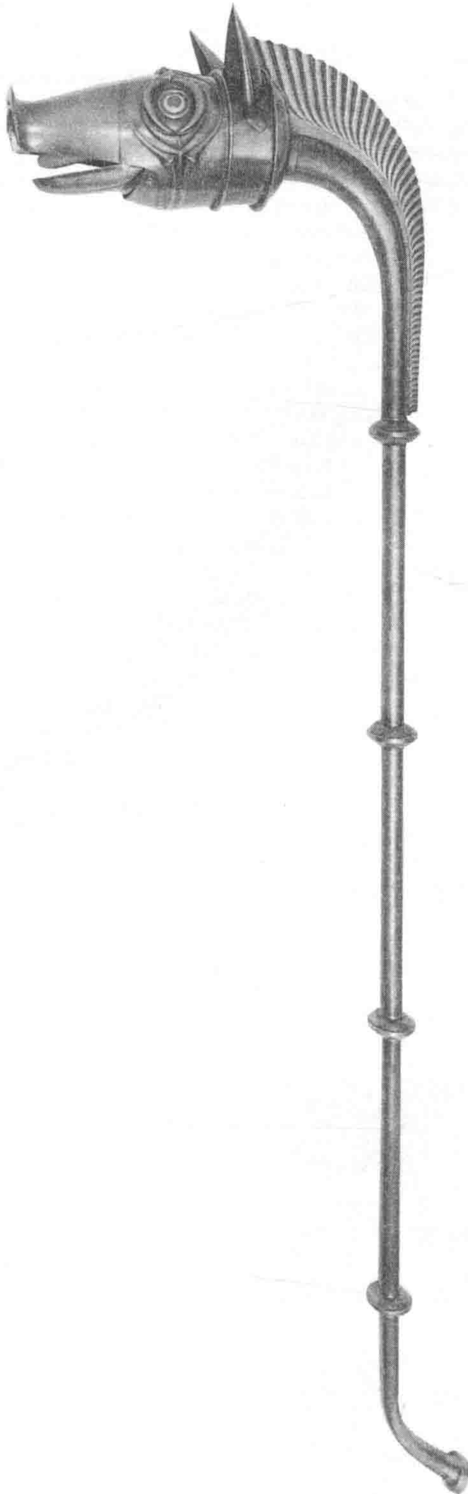
3. Clay rattle in the form of an owl, the rattling devices being small clay balls, height 10 cm, Cyprus, c1800–1600 BCE *(Middle Bronze Age). (Prähistorische Staatssammlung, Munich)*

4. *Wooden panpipes, Roman (or Celtic?), from Regensburg, c2nd century* CE *(Stadtmuseum, Regensburg)*



5. *Irish Bronze Age horns, side-blown and end-blown, and egg-shaped rattles, Ireland, length c60–100cm, c600–500* BCE *(late northern Bronze Age) (National Museum of Ireland, Dublin)*

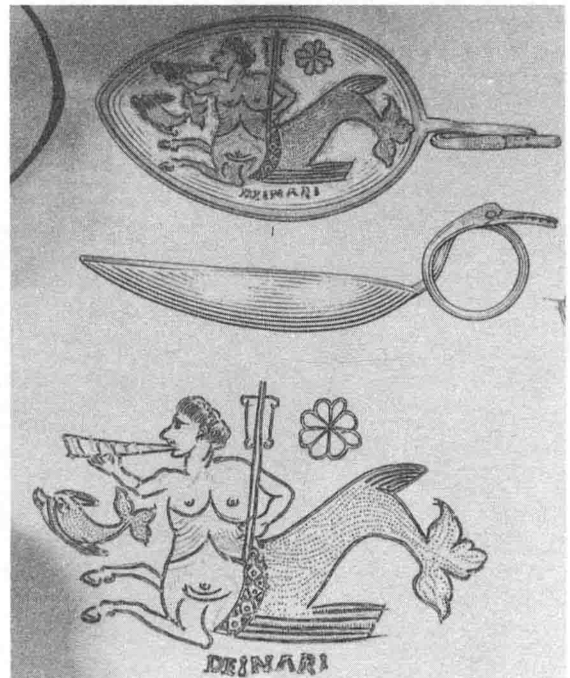
of music in daily life and to means of producing sound. Regrettably, nothing concrete is known about the process. More is much understood about the nature of musical life in the Metal Ages that followed the Stone Age (see *International Study Group ... I: Blankenburg, Harz, 1998*), with the obvious exception of musical practice in Mediterranean antiquity, characteristically organized in a hierarchic structure involving the division of labour. Written sources make it clear that music was played on many different kinds of occasion. Pictorial evidence also shows that musical instruments were reserved for certain groups of people or, in the ancient polytheistic religions, for certain gods. However, no written sources and little iconographic evidence of musical culture are found in central and northern Europe, and until the approach of the Middle Ages the interpretation of musical life and culture must depend on archaeological finds discovered more or less by chance.



(iii) Sources. The musical inheritance of the distant past therefore consists exclusively of archaeological artefacts, widely distributed across Europe and from different phases between the Stone Age and protohistoric periods. Detailed excavations have not been made all over Europe, and musical instruments have been found on a few sites only. Most of the instruments, as everywhere else in the world, will have been made of organic materials; because of the nature of the ground, they have either perished or are only fragmentarily preserved. Many extant items were not recognized by archaeologists as musical instruments and are not so classified. Moreover, many cannot be defined solely as musical instruments and may have had several functions (for instance, as decorative objects, utensils, cult implements etc.; see Koch, 1992; Hickmann, 'Anthropomorphe Pfeifen', 1997). Items that are undoubtedly musical instruments can be classified according to the accepted system (Hornbostel and Sachs, 1914), but a question mark must hang over many.

3. Archaeological finds.

(i) Idiophones. There is evidence from ancient Greece, Etruria and Rome, most of it iconographic, for the use of clappers and castanets that can be classified as idiophones

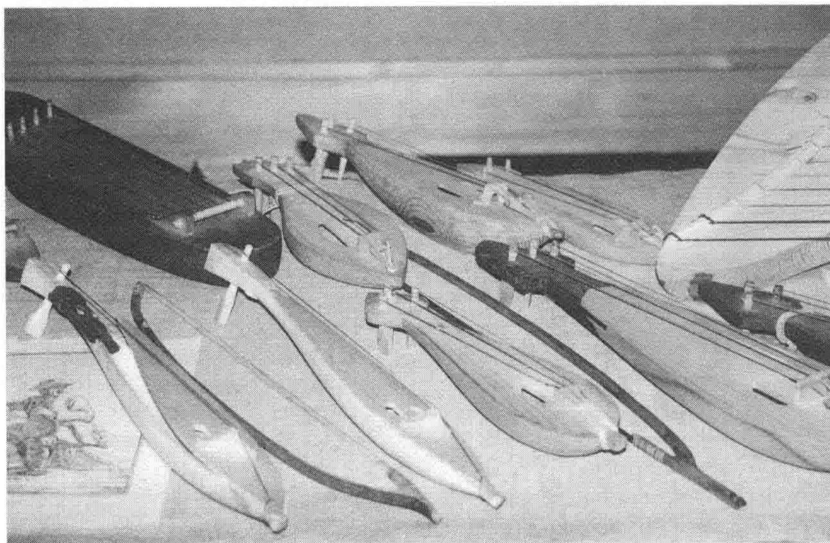


6. *Lur from Ulvkaer, Denmark, length c210 cm, c1000–800* BCE *(middle northern Bronze Age) (Nationalmuseum, Copenhagen)*

7. *Deskford carnyx: reconstruction from fragments excavated in Deskford, Grampian, bronze, length c200 cm, 2nd century* BCE *(Royal Museum of Scotland, Edinburgh)*

directly intended to produce sound, and for clappers worn on the feet, small bowls and handled bowls (Wegner, 1963; Fleischhauer, 1964). Such idiophones do not seem to have been part of the original range of musical instruments in central, western or northern Europe (see Lund, 1984), and neither were the small metal bells found in the west exclusively in former Roman provinces, where they occur in great numbers and in many varieties (fig.2). They are more common in the east, for instance, in the Iron Age cultures of the Scythians and Sarmatians, and perhaps as imports of the imperial Roman period in Poland. Small bells and jingles have been found among the Slavs, Khazars and Ugro-Finns, both sedentary and nomads, and were extremely common from the 1st century CE to the 14th century (Häusler and Hickmann, *MGG2*); they are also found in Bohemia and Poland in protohistoric times (Staššiková-Štukovská, 1984; Malinowski, 1984). Large angular handbells were used by Irish monks in post-Christian times (Bourke, 1980, 1983; Purser, 1992, and in *International Study Group ... I: Blankenburg, Harz, 1998*; Homo-Lechner, 1996; Hickmann, 1997). Bones with serrated rings round them or lower jawbones (for instance, of reindeer) containing teeth, and occasionally a horn with visible grooves (the Venus of Laussel in France, of the Perigordian period) have been interpreted as Lower Palaeolithic scrapers.

The largest group of pre- and protohistoric idiophones consists of rattles in many shapes, directly designed to generate sound. Perforated shells have been interpreted as Stone Age rattling jewellery (Lund, *Fornnordiska klanger*, 1984, on rows of rattling items). Many kinds of multifunctional metal objects of this nature are typical of the Villanova culture of Italy, the Hallstatt period of central Europe (Häusler and Hickmann, *MGG2*) and cultures of central and eastern Russia. Frame rattles appear in Greek



8. *Sea centaur with a triton: drawings of a late Roman duck-handled spoon, silver, length 10·2 cm, from the Thetford Treasure, c390–400* CE *(British Museum, London)*

and Roman music, comparable in shape to the sistrum, which originated in ancient Egypt (E. and H. Hickmann, *MGG2*). Scythian frame rattles were carried on the tops of poles; the rattling devices might be globular, drop-shaped or disc-shaped and could also have the form of small bells and jingles (Häusler and Hickmann, *MGG2*). From the Neolithic period onwards, pottery rattles in the form of vessels shaped like animals, globes, eggs, cubes etc. were common as grave goods in central and western, and occasionally in northern, Europe. In eastern Europe such instruments can be traced back to the 4th or 3rd millennium BCE as grave goods (in the Tripol′e culture). Many pottery rattles from the Lausitz culture of Poland have been found; analogous pottery rattles are known from several cultures of western Ukraine and Moldavia closely related to the Lausitz culture, particularly from the Vysock culture (Häusler and Hickmann, *MGG2*), and similar sound-producing items in various shapes date from the Iron Age cultures of central Russia and middle and south Europe, some of which, shaped like birds, still in use in the Old Slav period. Such objects were particularly common among the Celts as grave goods buried with women and children (*see* ARCHAEOMUSICOLOGY). Egg-shaped metal rattles of bronze, made in Ireland and thought to be connected with the native cult of the bull, date from the Late Bronze Age (Purser, 1992).

(ii) Membranophones. In Mediterranean classical antiquity, the frame drum was played by dancers, particularly women. It had a prominent role in the orgiastic cult of Dionysus, as depicted in much iconographic material. In the Neolithic Age pottery goblet drums or hourglass drums open at both ends occur as grave goods in an area covering Poland, eastern Germany and Hesse and the Lüneburg region, and were usually buried with men; the rim of the upper opening is surrounded with protuberances, sometimes bored with holes, to help fasten the drumhead. No drumheads are preserved, however, and it cannot be absolutely certain that these objects were in fact drums; the same can be said of some cylindrical wooden items from Scandinavia (Lund, *Fornnordiska klanger*, 1984).

(iii) Aerophones. Apart from the occasional Stone Age bone bullroarer, pipes, flutes and horns of various types make up the extant pre- and protohistoric aerophones. It is uncertain whether any double-reed instruments were among them, with the exception of Greek and Roman auloi and tibiae which are shown on vase paintings, reliefs, sarcophages and so on. Any single or double blowing attachments would have been made of blades of grass or of reeds and would obviously have perished. Among the extant pipes are pottery vessel flutes, found from the Neolithic period onwards. Panpipes, which are particularly early, have been found in southern Russia (4th century BCE), south-eastern Europe, the Volga and Ukraine and the Lausitz culture of Poland. From the wide distribution of such pipes made of individual bones, it has been argued that panpipes were common over a large area (Häusler and Hickmann, *MGG2*). In the west, depictions on situlas of the Hallstatt period show quite large panpipes (Eibner, 1987). A few panpipes of the Gallo-Roman period have been preserved (Alesia in Burgundy; Regensburg (fig.4); Holland and Belgium) and consist of a piece of wood with individual holes bored for the reeds (Homo-Lechner and Vendries, 1993–4; Häusler and Hickmann; Tamboer, 1999, *MGG2*). Viking panpipes were similarly made (Lund, *Fornnordiska klanger*, 1984). The ancient Greeks regarded the syrinx as the instrument of the god Pan (Haas, 1985; Jurriaans-Helle and others, 1999); the Romans adopted the instrument, changed its shape, made it larger and gave it a number of new functions, as iconographic and literary evidence shows. Bone pipes had a wide distribution as signal and decoy instruments (Lund, 1986), and pipes made of phalanges dating back to the Palaeolithic era, especially the Late Stone Age, have been found on various sites (Käfer, 1998). At an early date bones of animals and particularly birds were provided with finger-holes so that sequences of notes could be played (the so-called 'Neanderthal-flute' is doubtful and controversially discussed: see d'Errico and others; 1998; Holdermann and Serangeli, 1999). The two oldest known examples were discovered at Geissenklösterle and have been dated to 36,800 BCE (Hahn and Münzel, 1995); after sporadic finds from the Lower Palaeolithic era, there is no break in the occurrence of pipes in Europe up to the Middle Ages. However, many bone flutes seem to have been incorrectly dated too early

9. String instruments, including fiddles and rottas, 10th–14th centuries, the earliest being the fiddles in the foreground, from excavations at Novgorod: replicas by V.J. Povetkin

(Brade, 1975). The register of notes produced by the finger-holes, even if it can be ascertained, does not provide a point of departure for constructing a chronology.

Spectacular Metal Age horns have been found in Ireland, dating from the Middle and Late Bronze Age; they are conical, with curved segments and ending in a straight tube, 50 to 200 cm in length and made of an alloy of copper and tin. The longer horns were blown at the narrower end and could be extended by the insertion of a straight metal tube. There was also a mouthpiece, as the preservation of the necessary attachments for fitting one shows, but none has survived. The smaller instruments were blown laterally through a broad oval hole in the side; the upper end was closed off by a knob. The horns were made by casting metal in either one or two parts (Coles, 1963; Holmes and Coles, 1981; O'Dwyer and Purser in *International Study Group ... I: Blankenburg, Harz, 1998*).

The horns known as lurs and found in Scandinavia and northern Germany mostly date from the same period as these Irish horns; some are older. Of the 60 that have been found, 16 are well preserved, although these had been reconstructed several times (Broholm, Larsen and Skjerne, 1949; Lund, 1984; Schween in *International Study Group ... I: Blankenburg, Harz, 1998*). Lurs, so called from the much later sagas mentioning war-horns, consist of two winding curves fitted together. The instruments were made in several sections by the *cire perdu* metal-casting method and assembled later. A funnel-shaped mouthpiece is fitted to the narrower end of the conical tube, and the broader speaking end terminates in a large, flat disc (fig.6). These discs are said to have no acoustic function, though recent research has cast doubts on this (see Schween in *International Study Group ... I: Blankenburg, Harz, 1998*); it has often been suggested that they are sun symbols. Lurs were frequently buried in pairs or in larger numbers, and occasionally with other objects. It is difficult to derive any detailed information from the only pictorial records of the instrument, in contemporary (or rather later) Scandinavian rock carvings or drawings. They are often shown on board ship. It is also not clear how lurs were played: as solo instruments, in pairs, or in ensembles with other instruments. The many attempts at musical reconstruction have not led to any definite conclusions since no written records mention the instruments. Horns of the earlier Bronze Age found in northern Germany (in Bodin, Teterow and Wismar) have been described as precursors of the lur, but that theory is untenable.

Metal horns were typical of the Celtic La Tène culture. The carnyx is famous: it was a long instrument with a thin tube and a speaking end in the shape of an animal head. A carnyx has been reconstructed in Edinburgh from an animal-head bell of the 2nd century BCE discovered in Deskford (Hunter, 1994 and in *International Study Group ... I: Blankenburg, Harz, 1998*); the movable lower jawbone acts as a clapper (fig.7). Pictorial depictions of the carnyx date from the 3rd century BCE, for instance, on coins. Probably the best-known scene, showing three instruments, is on the Gundestrup silver cauldron of the 2nd to 1st century BCE, found in a Danish bog (Häusler and Hickmann, *MGG2*; Purser in *International Study Group ... I: Blankenburg, Harz, 1998*. Celtic Iberian pottery horns have been found in considerable numbers in Numantia in Spain. Few examples of the Greek and Roman horns known as salpinx, tuba, buccina, cornu,

10. Harp player on the Monifieth stone, (Royal Museum of Scotland, Edinburgh)

lituus and the triton of a large snail have been preserved; they are known principally from depictions on ancient Greek and Roman tombstones and other stelae, or from triumphal arches and other reliefs, but there is much written evidence for their function and use (Fleischhauer, 1964; Wille, 1967).

Wind instruments also include the organ. The earliest known instrument of this kind was the hydraulis, with a blowing mechanism operated by water pressure. Partly preserved archaeological examples from the Hellenistic period have been found in Aquincum (Hungary, CE228) and Switzerland (3rd century CE). Long, well-preserved pipes and fragments of the body of an instrument were excavated by Dimitrios Pandermalis in Dion at the foot of Mount Olympus in 1992 (for details of this sensational

find, which has been dated to the 1st century BCE, see Jakob, *MGG2*). There are pottery models of the water organ in the Musée Lavigerie, Carthage, and in the Nationalmuseum, Copenhagen. Depictions of the instrument appear in Roman mosaics, and references to and descriptions of the hydraulis occur from the 3rd century BCE into the Christian period (see Jakob, *MGG2*).

Little is known about the later history of the water organ in the West. In Europe, a pneumatic organ clearly existed side by side with the water organ for a while and then made its way into church music between 900 and 1200. No archaeological remains have been found either of these instruments or of the automatic water organs built by Arab and Byzantine makers (see H.G. Farmer: *The Organ of the Ancients*, London, 1931; Hickmann, 1936/*R*; on the early development of the instruments *see also* ARCHAEOMUSICOLOGY; ORGAN, §IV; WATER ORGAN).

(iv) Chordophones. String instruments do not make their appearance in Europe until the Christian era, apart from the lyres, harps and lutes of Mediterranean antiquity and their derivatives in southern Europe. A Scythian-Sarmatin harp from the 1st–3rd century CE was found in a Russian tomb (Bachmann, 1992). The Romans adopted the ancient Greek instruments, which also made their way into parts of eastern Europe (Häusler and Hickmann, *MGG2*); extant pieces are rare. It is not certain whether the lyres depicted on situlas of the East Hallstatt culture are from the same source (Eibner, 1987, 1990). There is sporadic evidence of the existence of lyres in Europe in the 6th century, a fragment from the 2nd century was recently discovered near Bremen. Instruments have been found in the burial places of high-ranking individuals (at Oberflacht, St Severin and Sutton Hoo). Such instruments occurred rather later in England, particularly the east of England, and about 1000 and later they were made and played by the Vikings (in Haithabu: see Lawson, in Lund, *Fornnordiska klanger*, 1984; and in Novgorod: see Povetkin, 1992; fig.9). No archaeological remains have been found corresponding to the harps depicted on 8th- and 9th-century stone reliefs and stone crosses in Scotland and Ireland (fig.10), which clearly refer to scenes from the life of David (Porter, 1983; Buckley, 1992; Purser, 1992).

Europe, traditional music of. For more detailed discussion of traditional music, see under separate country headings. *See also* EUROPE, PRE- AND PROTO-HISTORIC.

1. Introduction. 2. Research. 3. Historical contexts and forms. 4. Music and culture. 5. Style. 6. Texture. 7. Content. 8. Structure.

1. INTRODUCTION. Compared with the polyvocal rhythms of sub-Saharan Africa and the heterophony found in most of Asia, Europeans have evolved a rich density of harmonic and melodic structures in their traditional music, some of these derived from culture contact with Africa, the Americas or Asia but most nurtured within Europe itself. Some structures are almost pan-European in regional modifications (e.g. the ballad, calendrical songs, *moresca* dances), others unique to a region (e.g. Icelandic *rímur*, Andalusian flamenco, Romanian *doină*). Furthermore, the growth of art music and urban popular music over ten centuries reflects a dynamically changing set of social structures, each with its special view of music's purpose, from Plato's sanctions on certain modes in ancient Greek society, to the patronage systems of feudalism and capitalism celebrating heroic or bourgeois virtues, and to 20th-century Marxist concepts that contrasted traditional folksongs with songs of a 'progressive' character within a strictly controlled polity.

Ethnologists usually divide Europe into Mediterranean, Western and Eastern zones on the basis of language, religion and social structure. One factor in the east-west division has been an unstable zone of political change stretching from Finland to the Balkans, a zone that also marks a transition in the rate of historical change between east and west. But an equally important lateral division cross-cutting the Alps can be posited as a result of settlement by Ionians, Carthaginians, Moors and Ottoman Turks in the Mediterranean littoral, Iberia and the Balkans, and because of a shift north and west in centres of commerce, wealth and political power during the period of world exploration after 1500. Furthermore, one could argue for a 'central Europe' that includes the Czech Republic, Slovakia, Hungary and Poland on the basis of these countries' lengthy contact with western Europe and their mainly Catholic rather than Orthodox affiliation. The pattern of religion in eastern Europe proper is complicated, in any case, by historical ties to Rome or Vienna, notably in Croatia, Slovenia, Lithuania, Transylvanian Romania, Ruthenia and Ukraine. Islamic groups are also part of this complexity, in Bosnia, for instance, or Chechenia. Peoples who have been conventionally excluded from historical views of European culture (e.g. Armenians, Kazakhs, Sami) are likewise important for tracking stylistic influence from Asia.

Cultural analysts could reasonably propose, again, a horizontal segmentation of Europe into north, central and south in terms of climate, topography and vegetation, factors that affect not only animal husbandry, food production and occupation but also activities such as the making of musical instruments: the willow flute of the Norwegian shepherd (*seljefløyte*), for example, can be cut from the tree only at a certain time in spring, while the special type of cane needed to make the Sardinian triple clarinet (*launeddas*), for example, grows only in certain parts of Sardinia itself and nowhere else in the Mediterranean region. A lateral division of Europe is in many ways more helpful than a vertical one for understanding sonorities: the dominance of string textures (bowed or plucked) in northern Europe from the Baltic to Iceland; the rich harmonies of strings and winds in the central, circumalpine belt and Danube basin (where the symphony orchestra developed); the clashing vocal polyphonies and gritty or gleaming idiophones of the Balkans and Mediterranean. This picture is complicated, however, by such pan-European instruments as the bagpipe, fiddle, six-hole flute or accordion in their local and supraregional forms.

Similarly, vocal idioms cannot always be easily fitted into a lateral division since styles are spread across climatic regions. The Baltic countries and the Balkans, for instance, may share analogous polyphonic styles because of ancient trade routes. A freely melismatic line, idiomatic to the westernmost Hebrides and south-west Ireland, may stem from pre-18th century bardic practice or quite possibly from contact with the Mediterranean over long stretches of time. 'Fringe' areas such as the Baltic, Balkans or Britain and Ireland, as well as evolving distinctive styles of their own, have conserved or transformed musical ideas imported from elsewhere, although as a principle this could also be extended to Europe as a whole in its historical debt to west Asia and Saharan Africa. But styles are also shaped by tonal structures: wide-ranging, modally inclined melodies predominate in northern Europe; in central Europe, the sharpened leading note and a harmonic underpinning systematize tonal schemes; while in eastern Europe and the Mediterranean a darker, drone-based tonality of narrow range, with links to ancient Byzantine or Islamic practice, has evolved alongside pentatonic tunes.

The diffusion of singing styles, song genres, dance types and instruments has been in progress, of course, since before the Roman Empire. Early modern imperial powers

such as Austria-Hungary, Russia or the Ottomans, by facilitating contact among their peoples until World War I, perpetuated a mosaic of popular urban and rural styles that continued to interact into the 20th century. Radical political change, however, such as the Bolshevik Revolution of 1917 seriously damaged the traditional culture of Russia and especially the Ukraine under Stalin in the 1930s. But the interest, beginning around the ferment of the Napoleonic period, in traditional and national forms of expression in Europe, especially music, dance and song, is still evident. This interest was extended by the invention of the phonograph in 1877 and by a burst of collecting activity just before World War I and again shortly after World War II. The revitalization of traditional materials, resulting from ideological goals, scholarly curiosity, or reassertion of cultural identity emerges most obviously today in the folk festivals that proliferate in towns and villages from Ireland to Finland and from Iceland to the Black Sea.

Europe, bounded geographically by the Atlantic, Mediterranean, the Caucasus and the Urals, in commonly thought of as a unified culture area. But it is also an agglomeration of regions and nation states that are linked, often loosely, by history, politics and culture. These regions, with their border areas in which culture contact is most pronounced, can be subdivided as follows: 1. Britain and Ireland (Northern Ireland); 2. Scandinavia (Arctic, Baltic); 3. Germany and the Low Countries; 4. France and francophone areas (Belgium, Switzerland); 5. Iberia and the Atlantic islands (Azores, Madeira); 6. Italy and the Central Mediterranean islands (Malta, Sardinia, Sicily); 7. East-central Europe; 8. The Balkans and Greek islands (Cyprus); 9. Baltic countries and Finland; 10. Russia, Belarus and Ukraine (Caucasus). These divisions overlap at obvious points and some contain diverse languages. Using the analogy of a 'Balkan' region, again, one could argue for a musically-distinct 'Alpine' or 'Caucasus' region in which peoples share a lifestyle less wholly dependent on language or ethnicity. On the other hand, forced migrations and shifting populations have affected musical life, and supranational groups such as Gypsies (*see* 'GYPSY MUSIC' for information on Gypsies, Roma, Gitan and related terms), Jews and Travellers have played significant roles as performers and disseminators. Europe's regions, in any case, contain within them conflicts of class, ethnicity and gender that are mirrored in musical expression, as in the case of minorities (children, criminals, deviants, the urban poor), whose musical life 'national' collections have often neglected. An analysis, therefore, that accounts for differences as well as similarities within regional divisions allows for a more balanced, ethnographic view of Europe's musical traditions as a whole.

2. RESEARCH. In the late Renaissance a new consciousness of history spurred interest in traditional music. Given the central position of the Alps, it is not surprising that the cowherd's song known as *ranz des vaches* or *Kühreihen* figures early in the literature (RISM 1545[6]). A song collection in which many items are traditional folksongs is Georg Forster's *Frische teutsche Liedlein* (1539–56). Energetic publishing of European songs and dance tunes continued in Britain and Ireland with such compilations as Playford's *English Dancing Master* (1651–1728), D'Urfey's *Wit and Mirth, or Pills to Purge Melancholy* (1719–20), John and William Neale's *A Collection of the Most Celebrated Irish Tunes* (1724), and William Thomson's *Orpheus Caledonius, a Collection of the Best Scotch Songs* (1725, rev. 2/1733). In France, songs of urban entertainment began to be gathered in compilations such as J.-B.-C. Ballard's *La clef des chansonniers, ou Receuil des vaudevilles depuis cent ans et plus*, which appeared in 1717. Allan Ramsay's Scottish pastoral, *The Gentle Shepherd* (1725), included songs and became a ballad opera following the huge success of John Gay's *The Beggar's Opera* (1728). This vogue for ballad opera and for 'Scotch' tunes in Britain marked a reaction to the dominant Italian style of urban classical music and stimulated the discovery of older song materials: the impact of James MacPherson's Ossianic *Fragments of Ancient Poetry* (1760) and Thomas Percy's *Reliques of Ancient English Poetry* (1765) was felt in European literature, art and music throughout the 19th century.

A pivotal figure at this point in the study of musical traditions was J.G. Herder (1744–1803), who early in his career as critic, philosopher, theologian and leading figure in the *Sturm und Drang* literary movement became acquainted with Latvian folksongs in Riga. Herder felt that the soul of a people (*Volk*) was most readily perceived in its songs. He coined the word *Volkslied* in the early 1770s, and his best-known compilation, *Volkslieder* (1778–9), influenced collections such as Arnim and Brentano's *Des Knaben Wunderhorn* (1806–8). By this time, interest in native song had accelerated across Europe: James Johnson, aided by Burns, published *The Scots Musical Museum* (1787–1803); L'vov and Pratsch brought out their compilation of Russian folksongs (1790, 5/1955); and the material for Kirsha Danilov's collection of Russian epic songs was being gathered in the 1780s, mostly in south-west Siberia (1804, 2/1818 with melodies). 'National' compilations began to proliferate: in Sweden (e.g. Geijer and Afzelius, C1814–18), Austria (Tschischka and Schottky, F1819), Germany (Erk and Irmer, D1838–45), Bohemia (Erben, F1842, 2/1862–4, enlarged 3/1886–8) and elsewhere. Meanwhile, Herder's interest in language had launched the field of comparative philology, which established affinities among European languages derived from the parent language, Sanskrit. At this time, comparative folklore studies noted similarities in European tales and songs, and later students of myth and religion identified common patterns of social organization in early European communities.

Field collecting of songs and music grew proportionately with this disciplinary expansion. As the 19th century progressed, scholars of musical traditions began to withdraw from idealism and to replace armchair compiling with field research. Massive ethnographic collections that included songs or music were undertaken by scholars such as Oskar Kolberg in Poland (*Pieśni ludu polskiego* ('Songs of the Polish people'), 1857/*R*), Evald Tang Kristensen in Denmark (*Jyske folkeminder* ('Folklore from Jutland'), 1871–97), or the Czech painter and writer Ludvík Kuba, who assembled a vast collection of Slavonic music he had begun to publish privately (*Slovanstvo ve svych zpevech* ('The Slav world in its song'), 1884–1929). Compilations of this sort naturally had political aspects to them: Kolberg's work, for example, was undertaken while Poland was still partitioned (in the period 1795–1914); Kuba's folksong collecting was encouraged by President Masaryk after Czechoslovakia became a republic in 1918.

The major impact on scholarship during the later 19th century, however, was the invention of the phonograph (1877), which not only expanded the possibilities of field research but allowed greater accuracy in transcribing music. Capitalizing on the phonograph's ability to play back music as well as speech, pioneers in the recording of traditional music and song at the turn of the 20th century were Béla Vikár (Hungary), Yevgeniya Linyova (Russia), Humbert Pernot (Greece), Hjalmar Thuren (the Faeroes), Karol Medvecky (Slovakia), Kodály and Bartók (Hungary), Grainger (England), Otakar Zich (Bohemia) and Matija Murko in Bosnia-Hercegovina. At this time, the phonogram archives in Vienna (1899) and Berlin (1900) were founded, the latter becoming especially important for the study of traditional music worldwide. Later national archives were the Discoteca di Stato, Rome (1928), the BBC Gramophone Library (1931), the Phonothèque Nationale, Paris (1938), International Archives of Folk Music, Geneva (1944) and the British Institute of Recorded Sound (1948).

With his editions and studies of folk music from Hungary, Romania, Slovakia and Yugoslavia, Bartók's centrality to comparative musical folklore (as it was then known) is not in dispute. No other scholar accomplished as much in field research and analysis, which is astonishing when his brilliance as a composer is also considered. Yet the influence of Bartók's methods, developing from a context of late 19th-century evolutionism in which natural science was the model, has not always been positive, especially in eastern Europe. Academies of science emphasized structural analysis and classification to a degree that resulted in abstraction from the texture of real music-making. An argument could be made that Bartók's best analyses are often to be found, as a synthesis of musical elements, in his arrangements of folk music. The Romanian scholar Constantin Brăiloiu (1893–1958) extended Bartók's methods to specific genres (G1951, Eng. trans., 1984). Meantime, Stalinist policies in the Soviet Union had created difficult conditions for the study of traditional music in its context, though the field research of Klyment Kvitka (1880–1953), on instruments, performers and the distribution of Slavonic songs, is significant. Of the same generation, Vasil Stoin (1880–1938) solidified a research tradition in Bulgaria, collecting over 9000 melodies, and Adolf Chybiński (1880–1952), a noted historian of Polish music, carried out ethnomusicological studies of the Tatra mountain people.

In Austria, Josef Pommer (1845–1918) founded the influential journal *Das deutsche Volkslied* (1899), through which his work on the yodel became widely known; Robert Lach (1874–1958) also studied the genre in 1928. The German scholar John Meier (1864–1953) initiated the German Folksong Archive at Freiburg in 1914 in order to study German folk music, especially ballads. But the theory that led Meier to posit the idea of *Kunstlieder im Volksmund* ('art songs in the mouth of the people') followed that of the folklorist Hans Naumann (1922), who offered the notion of 'sunken culture' (*gesunkenes Kulturgut*) to explain the origins of folk culture in the culture of the upper classes. This concept, which naturally tended to underestimate the extent of folk creativity, was known as *Rezeptionstheorie*, a doctrine also adopted in France by Patrice Coirault (1875–1959) in contradistinction to the ideas of Julien Tiersot (1857–1936) and others who followed, in the main, Herder's original idea of collective creation by 'the people'.

The English scholar Cecil J. Sharp (1859–1924) was something of a rival to Bartók, at least in terms of initial influence. While Bartók later in life took a more positive stance about urban music and music of Roma groups in Hungary, Sharp's conception of folk music as essentially rural remained constant. Carried into a larger arena by his disciple, Maud Karpeles (1885–1976), Sharp's definition was officially adopted by the International Folk Music Council in 1954 (though quietly abandoned by 1980). The tripartite process delineated by Sharp consisted in continuity (of melodies over time), variation (by individual singers) and selection (of aesthetically pleasing songs by the community), a Darwinian view of folksong that idealized the rural context from which it was supposed to spring but ignored the influence of popular street literature. Sharp's concept was allied to his desire to educate children in musical taste and to stimulate a school of English composition. The latter goal bore fruit in Holst, Vaughan Williams and others. But Sharp was less meticulous than Bartók (or Grainger) in transcribing and publishing texts and tunes. His idealism, though it energized the Folk-Song Society (*see* ENGLISH FOLK DANCE AND SONG SOCIETY) and influenced concepts of folk music far beyond England, finally gave way after the death of Maud Karpeles to more perceptive studies of traditional and popular music-making.

The founding of the International Folk Music Council (IFMC) in London in 1947 was an attempt to coordinate the interests of researchers, most of them working in Europe. In this development Maud Karpeles was central as honorary secretary from 1947 to 1965. The Council's first president, Vaughan Williams, was later succeeded by Jaap Kunst and Zoltán Kodály, all figures involved with regional musical traditions in Europe. The body was renamed the INTERNATIONAL COUNCIL FOR TRADITIONAL MUSIC (ICTM) in 1980 as the term 'folk' was considered inappropriate for many societies outside Europe, as well as for its overtones of romanticism. This followed a general trend in west and central Europe to purge the terms 'folklore', 'folksong' and 'folk music' and to substitute 'traditional', 'popular' and 'vernacular' or, for the study of the subject matter, 'music ethnology' or, more prominently, 'ethnomusicology'.

The methods for studying the totality of music in Europe are rapidly developing, even for prehistory. Curt Sachs (A1939) adumbrated the problems of European musical prehistory which from the 1980s were taken up by the ICTM Study Group on Music Archaeology. Werner Danckert (F1939, 2/1970) had categorized European musical idioms on the basis of language groups, using the rather static, historically derived *Kulturkreis* (culture circle). In a similar vein, though without the *Kulturkreis* perspective, Walter Wiora postulated unity in melodies he believed to be genetically related over time (A1952), also pointing to the fertile use of folk melody by composers (A1957). Scholars in Hungary, stimulated by their unique Finno-Ugric language island, eagerly pursued comparative studies: Bartók's essay on the music of Hungary and its neighbours (F1934) led the way, while Bence Szabolcsi (F1950) attempted a history of melody, like Marius Schneider (D1934–5) reaching beyond Europe to Asia to explain the presence in Europe of *maqām*-like structures or pentatonicism. Influenced by the Marxist philosopher

Gyorgy Lukács, János Maróthy (F1966) used social rather than historical or geographical determinants to analyse the history of European song. Alan Lomax (A1968) tried a novel approach to global musical idioms based on behavioural anthropology, employing factors of singing style rather than structure to identify an 'old European' (central, eastern), a 'north-western' and an 'old high culture' (Mediterranean) singing style (A1974), though his hypotheses are often based on uneven samples from each country or region.

The work of the ICTM Study Groups has improved both ethnographic and comparative methods in studying the traditional music of Europe. The group on folk music instruments (founded 1962) has, from 1969, produced volumes of proceedings of its annual meetings. The group has also sponsored a handbook series of regional instruments (*Studia instrumentorum musicae popularis*). The study group's aims were to build a typology of European folk instruments and to solve problems of documentation. These aims were taken up by other groups, the first by the Study Group on Analysis and Systematization of Folksong Melodies (Elschek, A1991) and the second by the Study Group on Historical Sources of Folk Music (Suppan, A1991). The impetus to classify melodies originally came from Bartók and Kodály and was implemented by Hungarian scholars (e.g. Járdányi and others, F1961) within the framework of a national collection that grouped music into genres (*Corpus musicae popularis hungaricae*, 1951–). Another early ICTM Study Group with a partial focus on Europe was that an ethnochoreology; members set forth a 'European' approach to the holistic analysis of traditional dance (Giurghescu and Torp, A1991). The first groups of the 1960s were joined in the 80s and 90s by others on a range of subjects.

In these developments, which under the influence of anthropology tended to assign less prominence than before to the technical analysis of musical structure, central and eastern Europe remained somewhat apart. Here analytical methods reflect a diversified perception of elements and their relative importance. Classification, for example, has depended on conflicting systems developed in the various regions: the use of melodic structure as a basis in Hungary, for example, or that of metro-rhythmic features in Moravia, Poland and Slovakia. The Ukrainian scholar V.L. Hoshovsky evolved a system to compare regional styles that would lead, in his view, to an international catalogue of melodic types (H1975). In cross-cultural research, Nikolai Kaufman has sought common Slavic elements in Bulgarian and east Slavic folk music (G1968), and Anna Czekanowska (G1972) has analysed narrow-range melodies in the Slavic countries using a taxonomic system (*dendrite*) developed in Wrocław. Scholars in the Soviet orbit have also researched important single genres such as calendar songs (Zemtsovsky, H1975; Mozheiko, H1985).

Current research, which is pursued by North American scholars as well as Europeans, is balanced between quantitative and qualitative patterns. Quantitative research, now often computer-driven, tends to engage entire musical genres, though computers have also been used to analyse vocal timbre. A 'systematic' orientation links this field to comparative study and the sociology of music on the one hand and to biological, perceptual and acoustical investigation on the other. Large-scale comparative studies are offset by field research in villages; such studies complement a parallel focus on families or individual musicians, latterly locating performers within a process of 'endofolklorization' that is a response to tourism or a crisis in personal or regional identity (Lortat-Jacob, E1982). As a consequence, facets of gender, power, ideology and metaphoric explanation have marked a new phase in uncovering conceptions of music and how these might be considered 'personal', 'regional', 'national' or even 'European'. The shift of focus is significant for methodology: a result has been to narrow the social and communicative gap between scholar and performer that had, in any case, been lessening since World War II. Until more information is available, cross-cultural method is limited to broad features such as history, content and style, structure and texture. Mediation of various sorts must also be taken into account: who provided the evidence, and why, are important clues to its nature.

3. Historical contexts and forms. Although 'traditional' musical forms, styles and behaviour in Europe largely crystallized in the 17th century with the growth of cities, trade and exploration, some older historical traits are worth noting. Classical writers such as Tacitus, Strabo and Diodorus Siculus cite music in connection with warfare, the latter two mentioning the function of the bard among the Celtic peoples encountered by the legions of an expanding Roman Empire. Later, Hilary of Poitiers (*c*315–67) and Augustine of Hippo (354–430) mention the melismatic *jubilus*, the wordless song of peasant labourers that could have a numinous significance, as in accompanying ritual punishment. A Tyrolean martyrology of 397 cites the *tuba* (possibly some kind of alphorn) exorcising evil, summoning the people to worship and sounding the alarm for battle. Bells of various kinds had similar functions. Somewhat later, chordophones were used for eulogistic purposes: the Roman lyre, 'barbarian' harp and British rotte (the last of these cognate in name at least with the early medieval Irish 'cruit', Welsh 'crwth' and English 'crowd') and other northern types of plucked or bowed instrument. The bow was used in west Asia in the 9th century and seems to have reached Europe fairly quickly. The Muslim invasion of Iberia (711) created an important watershed for the introduction of Arab musical concepts.

Another stream of influence came about through the Celtic-inspired sequence (*c*850–*c*1150), a sacred chant set syllabically with a Latin text that was often tied to a saint's feast day. The assimilation of pre-Christian practices by the Church, however, was not entirely successful. Dance and drama continued to reflect central moments in the seasonal and life cycles with music playing a part. Pre-Lenten carnivals had their popular, often ribald songs, as did the Feast of Fools, a 15th-century record of which accuses the lower Paris clergy of singing bawdy songs in church. Under the banner of religion pilgrims, Crusaders and flagellants sang or danced to music on their way to Rome, Santiago de Compostela or Canterbury, picking up songs and tunes or diffusing them as they passed through towns and villages. Itinerant minstrels and *jongleurs* also carried secular songs and dance to much of Europe: German minstrels were playing in Estonia and Lithuania in the 14th century and could also be found, with Croatian, Serbian and Greek colleagues, in the cities of the Adriatic in the 14th and 15th centuries. Venetian influence allowed French and Italian musicians to visit the Greek islands, where they introduced

Ex.1 Harvest-home song from Zobor, Hungary, and Passiontide alleluia from which it derives (Kodály, 1971)

Alleluia

Ben po de San - ta Ma - ri-a Guar-ir de to - da po - çon Pois mad - re do que tril - lou O ba-si-lis-que o dra-gon.

Harvest-home song

Ne a-lugy el két szë - mëm-nek vë-lá - ga, Majd fël-kél már pi - ros haj - nal csil-lag - ja.

ballads which are still sung. Church music could also find its way into secular life: a ceremonial harvest-home song from Zobor, Hungary (now western Slovakia), derives from a Passiontide alleluia that belongs originally to the repertory of Gregorian chant (ex.1).

A borrowing process among church, popular and learned forms is evident in monody (*caroles*, *estampies*, *pastourelles*) and in the melodies of penitential *laudi* or *Geisslerlieder*. Later *contrafacta* and parodies show the same tendency. Oddly, the French musical theorist Johannes de Grocheio (*fl c*1300) does not mention *laudi* or *Geisslerlieder* in his concept of *musica vulgaris* (vernacular music), possibly because of a papal edict against popular motets. His term covered, rather, orally transmitted vocal genres (rural and urban), professional genres influenced by folk practice and the growth of towns, didactic or school songs and artistic genres for the wealthy and privileged. Polyphony or multi-voiced singing may well have existed in some kind of developed form before the notation of organum in the 9th-century *Musica enchiriadis*, but whether this resembled the parallel organum-like Icelandic *tvisöngur* (twin-song) practised into the 20th century, or the apparent heterophony in Welsh and northern English singing described by Gerald of Wales in the 12th century, is uncertain. It is possible that examples of partsong such as the 12th-century *Hymn to St Magnus* in the Orkney Islands or the 13th-century English round *Sumer is icumen in* reflect practice at a popular as well as a cultivated level.

Traditional instruments in the Middle Ages are documented by such scholars as Odo of Cluny (*d* 942), who describes the *organistrum*, a predecessor of the hurdy-gurdy, while John Cotton (*c*1100) and the Anglo-Norman poet Wace both mention the bagpipe. The bagpipe also appears in the *pastourelle* drama *Jeu de Robin et de Marion* (1283) by Adam de la Halle, the French trouvère poet and composer. The instrument of the *jongleurs*, the itinerant entertainers, was the *vièle* (fiddle) and wandering musicians created a vogue for pipe and tabor, a solo combination still found in scattered patches of Europe (Basque region, Provence and a revived form in England). *Skomorokhi* (buffoons) were noted in Russia for their humorous or comic songs. The guitar, which accompanied lyric song in the Mediterranean region, appears pictorially for the first time in the glorious *Cantigas de Santa Maria*, commissioned by King Alfonso el Sabio (1221–84), along with some contemporary instruments. Somewhat earlier, the short-necked lute had already been introduced by the Moors, who in other respects were spreading urban music of Arab-Persian origin over much of southern Europe.

The transition from feudalism to capitalism in the West in the later Middle Ages saw the decline of epic songs such as the older *Hildebrandslied* or *Beowulf* and the rise of compact, rounded forms such as the ballad (from about 1200), which suited a newly confident bourgeois class more interested in trade than in heroism, wars and territorial gain. Towns began to hire musicians in official capacities, and the secular theatre, firmly established in France, Spain and Italy during the 15th and 16th centuries, included songs as part of the action. In Germany, musically educated classes affected music-making through the use of printed materials, while artisan guilds (e.g. Meistersinger) practised individualistic composition rather than folksongs of the older, anonymous style. With the ascendancy of the Franco-Flemish school in learned music, the significance of the Low Countries as the matrix for musical activity of all kinds became apparent, and the Netherlands, not surprisingly, also became a cultural mediator between north and south.

Upheavals between the 14th and 16th centuries were mirrored in topical and satirical songs. A growing cultural bias toward the values of the bourgeoisie can be found in songbooks such as the Lochamer Liederbuch (1455–60) and the *souterliedekens* (1540), the latter a compilation of Dutch Reformation tunes in everyday use. In Spain, the Cancionero Musical de Palacio (*c*1500), besides containing common European elements, includes songs of the ordinary people alongside those of the aristocracy. The exchange and transformation of musical material among different social strata that this implies continued on two levels: in the widespread use of popular tunes by church and court composers, and in the formation and diffusion of popular melodic models. Kodály notes how a song from the Zobor region (now in Slovakia), for example, used for keeping spinners awake at night, borrows a 13th-century tune from a Spanish manuscript that probably came to Hungary through the medium of a Czech hymnbook of 1576 (1971, p.107).

The evolution of a widespread melodic model is exemplified by the tune first printed around 1470 as the *basse danse* melody *Le petit roysin*, later transformations of which have been noted as far apart as England and Romania (ex.2). The Spanish *vihuelistas* (lutenists) drew

Ex.2 *Le petit roysin*, basse danse *c*1470 (Wiora, 1952)

on folktunes and English virginal composers borrowed melodies such as the Irish *Callino custurame* (*Cailín ó chois tSiúire mé*: 'I am a girl from the Siur-side'), although the garbled title indicates that they probably had no idea what it meant. Roma and Jewish migrations also prompted melodic and harmonic fertilization as well as the diffusion of popular tunes. By the 16th century, supranational features co-existed with regional ones, and extensive cultural contact gave rise to melodic formulas modified by local performing styles. The impact of Islam reinforced the division of Mediterranean Europe into a northern and a southern zone and solidified elements in Balkan song that were already present as a result of the region's crossroads position. The Ottoman conquest of

the Balkans and Hungary (14th–16th centuries), however, had a decisive effect on peasant genres in those areas by suspending their natural development.

From 1500 to 1800 the most striking cultural and musical differences were religious ones. The Jews of Spain had their own minstrels and folksongs, taking their ballads from the host culture but adapting the content to free them of Christian references. Iberian Muslims also retained their cultural identity after forcible conversion, continuing to practise their religion in secret. In spite of the edicts of their own clergy, Moriscos danced the *zambra* and sang their ballads in which the Muslim hero always won. Jews and Moriscos were ethnic as well as religious minorities, as were the Roma groups who flooded into Europe from the 14th century onwards. The importance of Roma as performers, with their essentially oral culture, make them central figures not only in the diffusion of musical materials but also in the adaptation and transformation of popular musical forms among those peoples from whom they found acceptance or at least a temporary home. Balkan Roma also acted as a bridge between Turkish and native forms. Having formerly played for Turkish occupiers, they took their repertory to the villages when they changed patrons (Balkan music had in any case displayed eastern influence long before the Turks arrived in the 14th century).

An important mechanism for the diffusion of popular culture and music during these centuries, both in northern and southern Europe, was the broadside sheet containing folk and popular song texts, often sung by balladmongers or bench-singers (German: *Bänkelsanger*; Italian: *cantimbanchi*) who might accompany themselves on the hurdy-gurdy (French *vielle*; German: *Drehleier*), show off illustrations of their ballads and sell them afterwards. In Italy, the *cantastorie* (singers of tales) wandered from one piazza to another, earning a living by relating heroic songs and accompanying themselves with a one-string fiddle rather like the Yugoslav *guslar*. Street cries, too, became popular in 16th- and 17th-century German and Italian quodlibets. Singers and entertainers sought out places of congress, such as squares and bridges, and the Pont-Neuf in Paris became such a cultural crossroads after 1600, to the extent that *pont-neuf* came to mean no more than 'song'.

Social strife gave rise to song: political songs developed in Russia and Germany before the Peasant Wars of 1524–5. While feudalism lasted in some parts of eastern Europe until the 20th century, colonialism, despite its negative political basis, did not always impede musical interaction. Yet world exploration in the 16th century coincided with continuing political conflict: the Jacobite period (1688–*c*1750) gave rise to partisan songs in Britain while the Duke of Marlborough's victories in the War of the Spanish Succession (1701–14) spread songs about him as far as Canada. Meanwhile, the eradication of the Celtic clan system in Wales, Ireland and Scotland (16th–18th centuries) made the itinerant harper a familiar if down-at-heel figure, one who had become a relic of the past, in Ireland at least, by the time of the notable Belfast Harp Festival of 1792. By the time of the French Revolution, Europe was a musical complex in which traditional songs and instrumental styles had both expanded and come under strong urban influence. This in turn resulted from economic forces that, on another plane, were leading Europeans to probe cultures beyond their own shores.

The 17th and 18th centuries saw a continued growth of urban culture and entertainments, not least popular musical comedies with characters derived from the *commedia dell'arte*, and the songs in these puppet or marionette plays reflected the popular musical taste of the day. Ballad opera, which arose in Britain in the early 18th century as a reaction against the florid arioso style of Italian opera and the demands of urban fashion, picked up folktunes as well as popular tunes of the day and incorporated them into the play. John Gay's *The Beggar's Opera* (1728) showed how easily remembered, singable and older (as well as more recent) tunes could be incorporated into urban theatre. By 1733, 70 ballad operas had been staged in London. A little later, Mozart's *Singspiel Die Zauberflöte* (1791) effectively employed folklike tunes as part of its appeal, also mirroring a popular tradition of music theatre in Vienna. Rural traditions, in the craze for pastoral culture influenced by Rousseau's 'return to nature' philosophy, were rapidly taken up by fashionable society, as in the cult of the *vielle à roue* (hurdy-gurdy) among French aristocrats.

During the French Revolution and its Napoleonic aftermath, the Romantic movement derived a great deal of its strength from consciousness of 'national' traditions. This awareness inspired the partitioning of Europe after the Congress of Vienna (1815). With the great revolutions of 1848, European empires were threatened by peoples who saw the right of self-determination as a logical extension of their cultural heritage. Composers such as Chopin and Smetana incorporated folklike tunes into their compositions in an expression of national feeling that differed in scope and purpose from Haydn's, Beethoven's, Schubert's or Schumann's Ossian- or Burns-inspired settings of folksongs. Mid-century agitation was frequently in the form of political songs and theatre. In another 70 years, World War I finally swept away the illusion of progress, bringing to the fore the demands of the exploited and powerless. The Bolshevik Revolution of 1917 came on the heels of 19th-century recording of the epic *bïlinï* with plots, mostly set in medieval Russia, which were remembered and sung by peasants. It was at this juncture that the invention of the phonograph allowed scholars influenced by theories of cultural evolution to 'discover' and 'rescue' songs and music more effectively from the old, pre-1914 Europe. Bartók, Janáček and Stravinsky, all of whom saw folk music materials as a means of freeing themselves from 19th-century Romanticism, captured the spirit of peasant art in their compositions written between 1900 and, in Bartók's case at least, World War II.

4. Music and culture. A long history of documentation in Europe means that musical culture must be interpreted in historical terms. Distinctive strophic song forms developed in Europe in the later Middle Ages, for example, and styles of performing song and dance accompaniment were shaped by individuals caught in changing social structures and values. The old world dominated by the Church and its festivals (e.g. carnival, in which both upper and lower classes mingled) continued on a popular level in the carnivals of Paris, Florence, Nuremberg and countless smaller cities, and there is evidence that poets and aristocrats in the 15th and 16th centuries delighted in popular culture and music. These upper classes began to note down folksongs in great numbers by the 16th century, even though they may at

the same time have felt ambivalent about the cultural systems of the lower classes. Aristocrats were able to participate in popular traditions such as the Lenten carnival, but the reverse was rarely true. This suggests that the creative stream of tradition flowed from popular sources towards the élite rather than the other way around.

The end of feudalism meant new audiences in the towns and cities and urbanization, which met the new demands of capitalism, began soon after 1200. But differences in language, ideology and territorial ambition ensured that the more populous peoples, still governed by autocratic rulers, would attempt to overpower smaller nations (culturally as well as politically). In the British Isles, for instance, Plantagenet and Tudor monarchs attempted to suppress the Gaelic- and Welsh-speaking peoples in Ireland, Scotland and Wales. As a result there is a sizeable body of political protest song, especially in Ireland, that marks the struggle for autonomy. The borrowing and exchange of styles of dance, poetry and song across cultural boundaries, on the other hand, could defy old antipathies: Swedish dances imitated those of Poland in the rhythms and tunes for the *polska* dance, the English adapted the French *carole*, and border zones such as Alsace-Lorraine, south Tyrol, Thrace or Ulster acted as conduits for musical idioms as well as for specific song genres. In this process of borrowing and transmission itinerant craftsmen or journeymen, pilgrims, shepherds, soldiers, sailors and thieves, as well as minstrels and professional beggar-musicians grinding the hurdy-gurdy, played a part.

The shape of the land is significant in shaping musical expression. Heroic songs and leaping dances, for example, are common to mountainous regions such as the Basque country, Norway, the Scottish Highlands, Albania and the Carpathians. In the far north, too, isolation or rugged terrain ensured the continuity of older localized practices: narrative dance-song in the Faeroes is an idiom that has remained vigorous, even allowing for recent revival. The singing of heroic *rímur* in Iceland still draws adherents. Norway has promoted its folk music mainly through the Hardanger fiddle as an emblem of national identity; the instrument also communicates complex cultural codes by musical means. Like the deep glacial valleys of Norway and Sweden, pastoral areas of the Alps have high-pitched and wide-ranging forms such as the yodel, which evolved from signalling over a distance. These calls have also been linked to apotropaic or religious ideas associated with herding and have been better preserved in Catholic than in Protestant areas, where 18th-century pietism outlawed many folk practices. The formation of national and regional yodel clubs and tourism, most of all in Switzerland, have affected these styles since the 19th century, most noticeably by modifying 'irregular' or non-tempered pitches to make them more acceptable.

The distinction between herders and farmers, too, has shaped musical production. The culture of shepherds, for instance, involves a migratory life, special clothes and instruments (the flute or bagpipe). Freer than most, shepherds were often the envy of peasants, evolving a rich complex of festivities in central Europe. St Bartholomew's Day (24 August) marked the transition from summer to winter quarters, and towns like Markgröningen, Rothenburg and Urach in southern Germany were the site of festivals to elect their king and queen and to dance their special dances. In Italy and Spain, they acted out the adoration of the shepherds in nativity plays, or crowded (as they still do) into the streets and alleyways of southern towns like Naples, playing the *piffero* (oboe) and *zampogna* (bagpipe), believing their temporary movement to echo that of the shepherds in the Christmas story. Further east, in Slovakia or Thrace, their pastoral life spread the 'Valachian' and related musical styles over Ukrainian, Bulgarian, Greek and Turkish territory.

Industrialization made its impact more rapidly on the northern continental lowlands, although in pockets of rural France older styles of music-making exist. Urban workers also have their songs: in German carnivals the butchers' guild played a prominent part, sometimes performing a weapon-dance with their carving knives; in France, the unions known as *compagnons* still sing their group songs. These guilds often had initiation rites and were particular about who was admitted: in Germany the sons of shepherds, beggars, hangmen, gravediggers or even minstrels might be excluded because they were *unehrliche Leute* ('dishonourable people'). Miners developed their distinctive culture in part because they were feared by the general population, possibly through the nature of their task and their appearance, which sometimes involved wearing hoods. They had their own chapels, plays, dances and songs (*Bergreihen*, *Bergmannslieder*). The printed songbook tradition of German miners, in fact, stems from the 16th century (Heilfurth, D1954).

Craftsmen such as weavers, carpenters or tailors had their occupational songs as well as songs to accompany physical movement such as (in the case of the weavers) the rhythm of the loom. Many of these songs were recorded in the 19th century, from England to Germany, at a time when handloom-weaving was in decline. As in the case of the miners, weaver culture transcended national boundaries. Shoemakers, too, were in the forefront of political or religious change and were known for heretical attitudes in general in the 16th and 17th centuries. They appear as heroes in folksongs (as in the French *Le petit cordonnier*) and their work songs have survived in Scandinavia, Germany, Poland and elsewhere. Soldiers, like miners or sailors, were perforce deprived of women's company; it was a soldier's song of farewell that inspired Achim von Arnim to compile the collection *Des Knaben Wunderhorn* ('The Youth's Magic Horn'). Sailors' shanties, while a distinctive part of sailing culture, were often kept alive by fishermen or other occupations once sail had become a thing of the past. Beggars and thieves, though, who tended to reject the world around them, composed bitter satirical or parodic songs that reflected an urge to overturn the existing order. Stylistically, however, these songs reinforce rather than contradict the norms of purely musical behaviour.

Women, as well as singing songs in common with men, had their own repertories, or were called on for special kinds of song, such as lamenting: the lamenting of post-menopausal women, who were regarded as having special powers, is well documented in Finland, Greece, Hungary, Ireland and elsewhere. Male attitudes to gender roles and social mores were traditionally more conservative in the Mediterranean, where women who sang in public were poorly regarded by men. But even in northern Europe guilds historically excluded women, as did the more dubious world of the tavern. The women of French

villages, like their counterparts at spinning bees in Bulgaria and Yugoslavia, gathered in the evening for *veillées* to spin, tell stories and sing. The evidence of music connected with women's domestic tasks and the labour involved, such as milking songs, butter-making songs, or waulking songs for fulling cloth in the Scottish Highlands suggest that women's culture was more conservative and at the same time less literary than that of men. Women often tended to become the guardians of more traditional musical forms.

In the end, however, traditional culture and music are essentially regional (even though they can be understood at a more general European level) because of a complex process of diffusion. Rural people think of themselves as belonging to a region rather than a nation (an overlay which intensified during the Romantic era) or a class (especially after the Soviet Revolution of 1917). But 'regional culture' can signify various levels or types: village culture, defined by the expressive forms and artistic creations of a small, bounded community; ecological culture, influenced by the shape of the land and its cultural ecosystem; or religious culture, characterized by intense devotion, such as evening prayers sung to local saints in the Alps. Hostility towards those in a neighbouring village (one factor suggested by the Swedish folklorist Carl von Sydow as a barrier to learning) is balanced by knowing and speaking the same language, though it is language-group that has been proposed as the true boundary in Europe in the transmission of items such as ballad plots. Tunes on the other hand travel easily, separated as they often can be from their original words.

Regional culture, as a construct arising out of regional identity, includes a complex set of notions representing gender, ethnicity, occupation or religion, all variable depending on context. Comparisons can be made on all these levels to determine how they affect music-making in any one of the broad cultural zones of Europe, whether split laterally or vertically. The music of a Breton fishing village has a number of levels on which it can be understood as culture: Catholic, maritime, Celtic or French, depending on whether its *département* is upper or lower Brittany. But even this runs the risk of seeing more homogeneity than heterogeneity, especially when women, children or ethnic minorities are omitted from the picture as a whole. For persecuted minorities such as the Roma or the Jews of eastern Europe, singing in the ghettos and concentration camps of World War II was a vital way to survive as a people and as a distinct culture. European folk and popular music is as much a matter of vastly differentiated and subjective experiences, consciousness and perception, by insiders as well as outsiders, as it is of 'objective' description.

5. STYLE. Song style, as a concept involving the manipulation of form and content, was first characterized by such scholars as Curt Sachs and Bartók who tended to view songs in dualistic terms. Sachs's 'tumbling strains' and 'one-step melodies' may be contrasted with Bartók's 'parlando rubato' and 'tempo giusto' as extreme points on a spectrum of forms. In Bartók's view, formed by his familiarity with Hungarian practice, parlando rubato veers toward domination by the verbal content of a song, tempo giusto by the musical, strictly metrical, dance-like aspects. Some scholars feel that the freely ornamental parlando rubato song is the mark of an older style, though this is difficult to prove given the lack of records and the functions associated with the two singing styles. They most likely existed side by side for a long time, although the notion of areas of recession (i.e. remote regions where older styles linger on) has raised the possibility of an archaic style co-existing with a newer, post-18th century one.

The development of cross-cultural or comparative studies of melody was undertaken by Mieczyslaw Kolinski, an assistant to Hornbostel at the Berlin Phonogramm-Archiv, who has used melodies from Europe and elsewhere to work out a system of melodic shapes determined by 'tint affinity' derived from the circle of 5ths. In his study of the melodic structure of the English-language ballad *Barbara Allen*, Kolinski uses as comparative material French, Polish, Hungarian, Croatian and Slovak folksongs (B1968 and B1969). His later study of seven Canadian versions of *Malbrough s'en va-t-en guerre* analyses melodic contour, rhythmic structure, metric structure and pulse (E1979). George List, similarly, has used a well-known melodic formula (*Ah! vous dirai-je, maman*) to raise the issue of diffusion or polygenesis in the distribution of tune structures (A1979). By the 1970s, however, the importance of transcription as a means to understanding traditional music was on the wane and its limitations evident. Studies of structure, melodic or metro-rhythmic, had tended to dominate research on style, especially since Bartók and the Berlin group led by Hornbostel emphasized the internal organization of melodies rather than singing as communication or as cultural activity.

A bold attempt to describe European song styles from the latter point of view was made by Lomax in 1968 and 1974, using sound recordings to identify three main styles: 'old European', 'modern European' ('north-western European') and 'Eurasian' ('old high culture'). His hypothesis is that each culture has a dominant style determined by such factors as means of subsistence, organization of the sexes and social structure. The 'old European' style he considers typical of societies where the agricultural cycle, country dance and music-making are linked; this zone stretches from eastern Europe through southern Germany, northern Italy and Spain to north-eastern France and Wales, using a style that integrates its materials of text and music closely in performance, is often polyphonic, and reflects 'the communal, complementary character of the region'. The 'modern European' style Lomax finds characteristic of northern Europe, where shepherds, woodsmen and isolated farmers evolved the solo narrative song performed in an impersonal manner. His 'Eurasian' style is found mainly in the Mediterranean region, where a 'complex system of irrigation is supported by specialized pastoralism, centralized political systems, and a multi-layered social stratification'. These aspects are mirrored, he asserts, in ornate texts and long, through-composed, non-strophic melodies ornamented by elaborate techniques of vocal production.

Lomax's conclusions are based on limited samples of each culture, and these samples are, by definition, unable to reveal the totality of song style in the region. That members of a society sing in only one generalized way is hard to substantiate, even when broad, cross-cultural comparison rather than ethnographic detail is the goal. While Lomax's picture is possibly useful at a simple level of predominant song style, it is unable to provide an accurate picture of all the styles in a given area, especially in eastern Europe where the monophony of Romania, for

instance, is surrounded by a sea of Slav polyphonies. The ornamental Irish *sean-nós* style or Hebridean psalm-singing, for example, have more in common with the 'Eurasian' style of the Mediterranean, perhaps as a result of early, continuous contact, than with the so-called north-west European style based on the tendency of the Germanic languages to allot one note to a syllable.

Cross-cultural influence in musical style is admittedly difficult to determine, especially in the northern and southern Mediterranean zones. The songs of northern Spain and Portugal share more features, at least in terms of general stylistic drift, with those of Provence or even northern Italy than with those of Andalusia, where the latter has been embellished with Byzantine, Moorish and Romani elements. Strident, ornamental singing in the islands of the Mediterranean seems to indicate prolonged Islamic influence or at least similar cultural imprinting over long periods. The singing style of Sicilian tuna-fishers, according to one view, displays encroaching African elements (Lomax, E1955–6). In the music of the Spanish Basques, a few remaining idiosyncratic features such as the 5/8 *zortzico* metre have not prevented a general move in style towards the more 'popular' idioms of northern Spain as a result of mass communication.

In any case, mass-produced popular music from North and South America has affected traditional repertory and performance styles alike. But regional music in Europe in the 20th century has retained more features of traditional style than might be expected: this is due to strategies of performance organization (e.g. folk festivals, folk revival), recreative techniques such as parody, the expanding or borrowing of instrumental styles and repertories (often on 'exotic' or period instruments, e.g. banjo or hurdy-gurdy) and the production of songs and music to meet the needs of fragmenting social groups. On top of these are laid the still-growing effects of tourism and political ideology, the latter ironically contributing to the maintenance of traditional musical behaviour as well as reinforcing cultural patterns.

6. Texture. The tone-colour and density of traditional music in western Europe vary according to environmental conditions, particular settings for performance and aesthetic preferences. In northern Europe singers prefer unforced vocal qualities in narrative and lyric song, though some Irish, Scottish and Traveller singers cultivate a nasal tone. Though in traditional and revival contexts most singing is unaccompanied, informal performances allow the use of instruments such as the guitar, harp (Ireland, Scotland, Wales) or fiddle, concertina and melodeon (England). Other types of singing may imitate instruments, such as *canntaireachd* (vocables employed to teach the idioms of the Highland bagpipe), as well as derivative, non-didactic vocables for dance music when instruments were lacking. There is relatively sparse use of idiophones and membranophones, but both are evident in the types of drum found in flute or bagpipe marching bands (e.g. Lambeg drums of Northern Ireland) and in domestic utensils such as spoons. Of the three extant types of bagpipe in Britain and Ireland, the Northumbrian small-pipes and uilleann pipes, as bellows-blown, indoor instruments with a mellow, clarinet-like tone, contrast with the incisive, bellicose reedy sound of the outdoor Highland bagpipe. *Céilidh* (evening social) or dance bands dominated by fiddles and accordions (sometimes also including flutes) are common in Scotland and Ireland.

A similar restraint in ballad and lyric song in Scandinavia contrasts with the tense intonation of Icelandic *rímur* or the high tessitura of cattle-calls. Solo singing with the fiddle occurs in Sweden, but the greatest range of tone-colour in Scandinavia occurs in the purely instrumental traditions: rattles, clappers and bullroarers persist as children's toys, while the ancient *lur* (a wooden or animal horn) with whistles and flutes of bark all suggest a preoccupation with the sounds of nature. Above all, the rich string sonorities of such instruments as the Hardanger fiddle with its sympathetic strings (Norway), *nyckelharpa* or keyed fiddle related to the hurdy-gurdy (Sweden), *langeleik* (ancient Norwegian folk zither) and the revived *langspil* (bowed zither) in Iceland indicate a deep-rooted preference for resonant textures based on the vibrating string, bowed or plucked, and often played by large groups of amateur players.

Vocal textures in the continental lowlands further south vary from the monotone unisons of French village singers to the glottal stops of Breton sailors and the vibrato of drovers in the Nivernais. Idiophonic textures are represented by spoons, wooden clappers, bells and carillons in parts of the Netherlands. Membranophones such as the friction drum (*rommelpot* or, more revealingly for the symbolic, fertility associations of the instrument, *fockepot*) accompanied children's song in Flanders. Aerophones in use include shells and earthenware whistles, duct flutes, bark, wood and metal trumpets (such as the famous *midwinterhoorn* of Drenthe in the Netherlands), bagpipes of various sizes, jew's harps and accordions. Chordophones are represented by hurdy-gurdies, dulcimers (*pinet*, *épinette des Vosges*) and fiddles, even shoe-fiddles similar to the Swedish *träskofiol*. Ensembles consist of traditional combinations such as the rustic shawm (*bombarde*) and small Breton bagpipe (*biniou*) and the equivalent *piffero* and *zampogna* in southern Italy, clarinet and violin in Charente (western France) and the clarinet with accordion and hurdy-gurdy in Burgundy. Whether these combinations will survive as sonic preferences is open to question, though the kinds of texture that have evolved, in town and country alike, display a feeling for aerophonic or mixed timbres of strings and woodwind, often with a drone effect. The music produced by such combinations is often intentionally polyphonic, the players favouring multiple drones.

The triadic structures of the Alpine regions in central Europe are recognizable in the alternating head and chest vocal production of the yodel, a genre which has undergone transformation through the various yodel clubs formed since the 19th century; the 'neutral' intervals are now often modified to fit notions of diatonic harmony. In the Swiss region of Appenzell the solo yodel is supported by an improvised vocal harmony enlivened by shaken cowbells, and a comparable accompaniment is found in the *Talerschwingen*, the singers circling a coin in a basin as they sing. Rattles, clappers and (in French and Italian areas) carillons are adjuncts to the many holidays of the Catholic church calendar. Drums accompany marching and hunting activities, as do pairs of *Seitenpfeifen* (six-hole wooden transverse flutes) in Austria, while the accordion and melodeon dominate Alpine ensembles alongside the zither, guitar, fiddle and dulcimer (*Hackbrett*).

In Iberia and the Mediterranean islands rattles, castanets, domestic utensils and bells all accompany singing.

The idiosyncratic glottal shake of Ibizan singers, for instance, is accompanied in Christmas Eve songs by castanets and the beating of a suspended sword with a nail. North of Madrid, in Segovia, small brass pestles and mortars provide a background for serenading male groups. The *pandero* (frame drum, with or without jingles) is frequently played in groups, while the *zimbomba* (friction drum) and side drum are also popular membranophones, the small tabor sometimes accompanying the *gaita* (pipe, or bagpipe such as the Galician *gaita gallega*). Other aerophones of note are the *pito* (Basque *txistu*, a three-hole flute), *xirimía* (Basque *alboka*, an oboe with animal-horn bell) and the Sardinian *launeddas*, a triple clarinet of ancient lineage. Chordophones include the guitar and its relatives, the *zanfona* (hurdy-gurdy), *rabel* (one-string fiddle) and the *salterio* (hammered dulcimer).

Richly analogous textures can be found in Italy and its islands. The south is noted for players of the *zampogna* (bagpipe), an instrument in modern times progressively displaced in the north by the *fisarmonica* (accordion), which like other tempered instruments has supplanted the characteristic intonation of the bagpipe and older conceptions of tonality. But the south also includes triangles, castanets, jew's harps and the *ghittarra battente* (rustic plectrum guitar) of Apulia in the south-east. The choral textures of the Sardinian *su tenore* and the multi-part *trallalero* of Genoese longshoremen (once a genre extending further inland in Lombardy) appear to be related to a single polyphonic style, possibly archaic, that extends through the central Mediterranean region into the Balkans.

There, in Bulgarian Thrace, forced nasal singing is the aesthetic norm; in the neighbouring Rhodope region a gentler, more mellifluous vocal style is preferred. In Albania, all singing north of the Shkumbin river is homophonic, whereas in the south almost all songs except lullabies and funeral laments are polyphonic. All along the Carpathian chain and into Bulgaria, shepherds' cries and vocal signals emerge from these mountainous regions, utterances that are often halfway between speech and song or, like the Alpine yodel, alternate between head and chest voice. Projected over a distance, vocal signals could inform about flocks, local events or even manoeuvres of an invading enemy. They also appear, stylized, in songs as interjections or entire refrains and may be the origin of one sort of refrain type in European song. The polyphonic songs of Vlach shepherds in Albania, Bulgaria, Greece or the Dobrogea region of Romania include signal dialogues that can be embellished with a yodelled top line. Command calls, used by foresters and barge-haulers on the rivers of Russia, range from musical yells to more shaped melodies.

Laments and their characteristic vocal texture flourish across eastern Europe. Found in Albania, Finland, Greece and Hungary (though less so than formerly), the lament genre has receded in Celtic and Baltic areas, Poland and Slovakia. Once a major force in Russian peasant life, the lament was sung not only at weddings or funerals but also, for instance, on the departure of a recruit to army service. Wedding laments in Russia were often closely related to funeral laments: at the crucial moment the bride would fall to the ground and lament 'in the voice of the dead' (i.e. using the funeral lament melody). The vocal tone in such laments is one of sobbing or crying, the words distorted and the articulation halfway between speech and song. In Moldova the lament may be accompanied by an endblown flute into which the player growls a drone as he plays, a practice that is characteristic of pastoral communities and may well be ancient.

The six-hole shepherd flute, end-blown or with a duct, is common throughout eastern Europe. The large alphorn can be found along the Carpathian chain, although its wooden construction is now giving way to zinc versions. This type of alphorn demands virtuoso performance. Romanian shepherds produce compositions for the instrument that contain flourishes based on the harmonic series; these melodies, which are used as signals as well as funeral music, have affected the vocal styles of the Carpathian region. A more widespread instrument is the oboe (*zurla*, *zurna*) that reaches from the Adriatic to China. Usually found in train with the large drum (*davul*, *tapan*), its strident tone is still heard at village dances and weddings. Roma, known throughout the region for their skill as instrumentalists, are the usual executants.

The bagpipe, both bellows- and mouth-blown, appears in a variety of types. The lighter-sounding, bellows-blown *duda*, found in Czech, Polish and Ukrainian regions, is seen now in folk festivals rather than as an integral part of village life. The mouth-blown *gaida* (Albanian *gajdë*, Greek *tsambouna*) extends from Albania through the former Yugoslavia to Bulgaria, where at least three types are known, while five different types of bagpipe (*cimpoi*) are found in Romania. Until the 1870s the bagpipe in Poland (*kozioł*) were usually accompanied by *mazanki*, small three-string fiddles, tuned a 5th higher than normal and playing an octave above the bagpipe. Bagpipe-like sounds are a special effect that extend the textural range of instruments, especially in Romania. Here, leaves or pieces of birch bark are blown like a reed, accompanying midwinter ceremonies, when masked dancers file through the villages, sometimes with cowbells round their waist and playing the raucous friction drum (*bika*, 'bull'). Albanian weddings also feature the friction drum, along with rattles and the rhomboid wooden bullroarer that is now rare in Europe.

Few Roma, however, play the shepherd instruments in south-eastern Europe, and few peasants play violins or lutes. But in Bulgaria and Greece, peasants play the rebec-like fiddle (*gadulka*) and, as in Albania and the former Yugoslavia, the long-necked lute (*tambura*, *çifteli*). In Romania the violin gradually displaced the Turkish type of fiddle during the 19th century. The usual accompaniment to the fiddle was the *kobza*, a short-necked lute with bent-back pegbox, with the *kobza* providing a rhythmic framework. Normally found with fiddle and *kobza* is the cimbalom, the trapezoid zither which, in the large version on legs developed by the Budapest maker Schunda in the 1870s, is much cultivated by Hungarian and Slovak Roma bands. Romanian players have a portable type, suspended by straps from the neck. Urban Roma bands in Romania add the *nai* (panpipes), now rare in the rest of Europe. Folk ensembles are based on one or two fiddles, a viola and cello or string bass, as in Moravia or the Tatra mountain region of Poland. In the Tatra bands the first fiddle plays a decorated version of the tune while the second fiddle and three-string viola mark the rhythm by playing chords across the strings. High-sounding fiddles with a thread bound across the strings one-third

of the way along the neck form the standard ensemble in southern Poland.

7. Content. The most striking feature of content in European traditional songs is the separability of musical and verbal elements. The style of the vocal line can even be at odds with the sense of the text because a certain impersonality of delivery is the aesthetic norm. This is the case in genres such as the ballad, which extends from north-western Europe into the northern Mediteranean zone and the Balkans. Ordinarily the ballad singer, who may identify deeply with the events of the narrative, attempts to maintain a distance from these events as he or she sings, allowing the 'story' to become the object of the audience's attention rather than vocal technique or personality. The tunes of ballads, like those of other strophic or stichic songs, are shaped more in terms of repetitive pattern or memorability than as reflections or reinforcement of the semantic content.

As a pan-European song that arose in the late Middle Ages, the ballad embodies a narrative interest in domestic, love-related topics rather than the warlike themes of the feudal epic. While ballads may occasionally celebrate a battle or other historical or legendary event, the bulk concern human relationships and are usually couched in strophes varying in number from a handful to several dozen stanzas. The traditional ballad of western Europe was affected in its development by street literature and the broadside industry (*c*1550–1850), when orally transmitted ballads were supplemented and often rewritten or modified by printed versions and by new ballads that relayed current events or popular protest. These newer ballads tended to introduce a personal tone against the objective cast of the older type. The European ballad is not a unified genre, in any case, and is known by different terms (e.g. *romance*, *vise*, *ballata*) that represent regional developments. In south-eastern Europe and Russia, as elsewhere, the ballad can share musical content with other song forms.

In Britain and Ireland, older work songs that were integrated into a pastoral or agricultural life are now rare or have been adapted for dancing. On the other hand, songs with themes derived from urban industrial life now appear in the repertory of both traditional and revival singers with the religious songs or carols that grew out of an agricultural past. Special or professional genres still exist, however, such as Welsh *penillion*, in which a lyrical idea is realized by means of a vocal counter-melody improvised against a harp tune. Medieval French influence on the Gaelic love song in Ireland resulted in elaborate imagery and reinforced an ornate melodic style. The lyrical elegy, also sung in this style, is to be marked off generically from the obsolescent keen (*caoine*), the ritualized lament with analogues in southern and eastern Europe.

Thematic links with balladry in Scandinavia are evident in the content of the older Norwegian *stev*, most of the surviving tunes being also variants of the medieval dream-ballad *Draumkvedet*, which tells of the terrors of Judgment Day. The lyrical *nystev* (new *stev*), on the other hand, has gradually acquired an archaic 'tumbling-strain' character. Many present-day narrative and satirical songs in central and northern Europe derive from 19th-century broadsheets published in the towns and sold in the streets or at country fairs. Religious songs have also been an important part of a tradition that Scandinavia shares with northern countries. Those melodic traditions founded, for example, on Thomas Kingo's *Gradual* (1699) have developed a melismatic style that can be compared with the Hebridean psalm-singer's absorption in a religious text or mood. Similar traits can be found in the devotional singing of Germans settled around the Volga river from the 18th century. Religious fervour in 19th-century Scandinavia, the Netherlands and Highland Scotland outlawed instruments, especially the fiddle, on the grounds that it was the Devil's work. In modern times, though, fiddle bands have flourished all over northern Europe.

Transfer of function has often affected content. In French folk music, for example, magical songs have become children's songs or dance tunes in a modern environment. Urbanization in the Netherlands, too, has given rise to street songs with humorous or satirical subject matter, though whether these songtypes enter tradition has depended on many factors: a memorable tune, catchy words and popular acceptance are fundamental conditions as well as basic factors in this process. Older, rarer types of Dutch music and song in some North Sea offshore islands (e.g. Terschelling) have still, despite the dense population of the mainland, been recorded this century by such scholars as Jaap Kunst (D1916 and D1918–19).

In Germany, prolonged opposition by Church and State since the Reformation eroded the use of satirical songs, though some exceptions have been found in the *Legendenlieder* of German colonists in eastern Europe. Music composed 'in folk style' has been a continuing phenomenon in central Europe since the 18th century, and some scholars have interpreted the refurbishing of folk material to meet new conditions (e.g. tourism) as a 'second existence' of folk music or as 'musical folklorism'. In contrast to staged performances, religious, vocational or other songs connected with entertainment are now more common in Switzerland than pre-18th century types like the *Betruf* (prayer call) or the *Viehlöckler* (cattle call, in French-speaking regions *lyoba*), though these are observed in a few cantons (Bolle-Zemp, E1992).

In the less affluent areas of southern Europe, singing to accompany labour, such as the Corsican *tribbiera* (threshing song), is still found, many of these songs overlaid with a Christian interpretation. The Spanish lullaby, known in various provinces as *nana*, *arrorro* and *lo-lo*, belongs to a type widespread in the Mediterranean region and has a religious theme; the *villancico* (carol) too is often addressed to the Christ-child. Such themes dominate the Spanish *romerias* (pilgrimages), and feast days are often the occasion for begging songs with amorous or sarcastic content. Intense emotion characterizes certain kinds of song: the solo *saeta* (rehearsed rather than, as formerly, improvised) sung in Holy Week in Seville, or, in Portugal, the secular urban *fado* that now shows strong signs of Latin-American influence. Reflective, symbolic imagery stands out in Sephardi wedding songs of Hispanic origin and in the *alborea* of the *gitanos* celebrating the bride's virginity. In the narrative *romance* the historical or legendary encounters of Spaniards and Moors reveal it, rather than the ballad, to be the true successor of the older European epic song tradition. The association of instruments such as the friction drum with calendrical events such as Christmas may be compared with the arrival, at Advent, of bagpipers in the towns of southern Italy.

As the rate of change increases, or as a sense of cultural and economic value intensifies, the fusion of melody, text and ritual setting in traditional folk music is becoming less frequent. Newer rituals generate their own traditions, of course, but events such as the Italian *maggi* (May plays), which have texts by Dante and other poets and a rustic style of recitative, are now performed outside their original context. Older customary songs have been recorded in recent times among the ethnic Albanians of Calabria, Lucania and Sicily, but these too may be on the verge of being immersed in a more sweeping process of urbanization. Wider thematic links have been noted between some Italian songs and Jewish tradition: the Piedmontese *La cavra* has been interpreted as a paraphrase of the Passover song *Chad Gadya*, which is otherwise known among Italian Jews as *Un capretto* ('One kid'). In the north the narrative *canzone* is closely related in substance to the European ballad but now often fuses traditional story material with a modern, more lyrical singing style. By contrast the southern *storia* (stichic narrative song) is replete with colourful textual detail and a more dramatic, personalized type of presentation.

Calendrical and life-cycle songs are rife in eastern Europe, as well as charms, lullabies and laments sung by women. Laments were often sung for the bride as she left her parents' home, or for a recruit leaving for army service. Calendar songs fall into genres in Russia: winter, New Year, Lent, spring, Easter, St George's Day, Trinity, summer solstice and harvest songs. Elsewhere, luck-wish processions with maskers sing carols (some of them Christian) recounting apocryphal events. Others are heroic, such as the Romanian carol of the brothers transformed into stags that Bartók used for his *Cantata profana* (1930). Bartók also noted the warlike character of these carols, especially when they are accompanied by *dubă*, small double-headed drums. Such songs make for contrast with the spring carols sung by groups of girls who deck themselves with vegetation, or the rain-making songs (*paparuda*, 'rain-caller') still performed in Romania by boys or female Gypsies, who dress themselves in green leaves and go from house to house to be splashed with water (the term *paparuda* is said to derive from an invocation to Perun, the ancient Slavonic god of thunder).

Songs and dances of occasion, in fact, mark the perpetuation of ancient content in folk tradition. So, too, do heroic epics and ballads, which recount not only legendary tales but also the exploits of heroes such as Digenis Akritas in Greece or Marko Kraljevic in the south Slavic area. Such epics were sung in both Muslim and Christian areas, and skilled singers could often extend songs that were already thousands of lines long through techniques of formulaic composition. Those who resisted the Tatars or Ottoman Turks are similarly celebrated, as are outlaws (e.g. the Slovak Jánošík) who challenge the existing social order. Jánošík songs are usually in strophes, and resemble west European ballads, whose topics are echoed in the more recitative-like ballads of, for instance, Bulgaria or Romania. Russian narrative song encompasses the epic *bïlinï*, spiritual songs, songs of the medieval buffoons, and historical songs and ballads. Epic themes there have existed at various times and differ in local performance traditions; distinctions by content, therefore, are difficult to apply. Pre-Revolutionary *bïlinï* (the peasant term was *starini*) have no specially definitive musical content, but in semantic content they recount the deeds of the *bogatiri* (heroes): Il'ya Muromets, Dobrinya Nikitich, Alyosha Popovich and others, reflecting the popular aspiration for a unified, independent homeland in the feudal period.

8. Structure. The traditional music of western Europe is mainly strophic, being arranged in patterns of two, three, four or more lines or phrases. Interaction with literary poetry and the country dance seem to have brought this about in western Europe by the end of the 17th century when printers first published popular music. In song, the repetition of a rounded melody in stanza form had displaced the stichic form of epics that were performed in eastern Europe into the 20th century. But non-strophic melodies, with polyphonic forms, cries, laments, yodels and melismatic or partsong types based on imitation or a drone are still to be found, especially in rural or remote areas. Diatonic, though not necessarily equal-tempered, schemes predominate and this feature seems to have accompanied the development of church and 'composed' forms in medieval times. Narrow-range melodies of two, three or four notes commonly occur in ritual, children's and play songs, though the assumption that these are somehow 'older' than five- or seven-note structures is unprovable. Both types existed side by side for different contexts and purposes.

In the English-speaking regions of Britain and Ireland, the four-line stanza, often in ballad metre and with an intercalary or separate refrain, is possibly the most popular song structure, the non-recurrent melodic type *ABCD* predominating. Gaelic songs often begin with the refrain, and ornamentation of the melodic line in Ireland is more the norm than the syllabic style of English-language songs, whether in Ireland or elsewhere. Irish singers also tend to decorate the text syllables as well as the tune, though this has also been noted in England. In both England and Ireland the heptatonic C mode is the preferred tonal framework, though D, G and A modes co-exist with the hexa-forms (Bronson, A1969). These also occur in Scotland and Wales where the penta-modes (Scotland) and the D mode (Wales) are also common. Modal ambiguity is a common feature of Goidelic music (e.g. in the melodic sequences on triads a tone apart). Irish fiddlers and pipers often inflect the fourth, sixth and seventh degrees. Ambivalence in these and other notes led some to posit the existence of a 'neutral mode' in British and Anglo-American folk music, but such 'natural tones' are also found in Norwegian traditions.

Ballad stanzas in Scandinavia usually consist of two or three lines. The tune, however, is not necessarily the same length as the text. The Norwegian *nystev*, for example, has four lines of text but only two of melody. Rhythmic symmetry is often combined with tonal complexity in the anhemitonic heptatonism of melodies played on the *langeleik* (Norwegian zither). Similar combinations of rhythm and tonality occur in instrumental music: the additive patterns of Hardanger fiddle tunes or the modal transformations of Icelandic song, especially the *tyísöngur* ('twin-song') where two voices often sing in parallel 5ths, suggesting connections (to some) with medieval plainchant. Structural variation is especially striking in the two-bar motifs of Hardanger tunes as opposed to the four-bar patterns of ordinary fiddle melodies in Norway and Sweden. As in the Alps, the F mode appears in vocal and instrumental music alike and other tonal systems are found alongside diatonic schemes.

Ex.3 *Polubavno*, cited in V. Hadzimanov, 'Les mélodies funèbres du séisme de Skopié', *Studia musicologica* (1965), 71–77

Of, zošt' os - ta-nav-me zoš-to - o da ži-ve-e-mo, ho,

Na-ša ču-de - si - ja, do-bro, ho, nigde ja ne-ma, ho,

Le-le Jov-cě, le-le, ra - no mla-do, če-do - o ho.

Until World War I some French regions had song forms built on older styles and techniques (e.g. the *briolée* chanted by the ploughman as he drove his horse over the furrows, now obsolete, or the *tribbiera* in Corsica). In general, melodic formations tend to match corresponding verbal forms, and the tripartite structure *ABA* is the principal one. Some song types are combined with acceptable kinds of melodic organization (e.g. a narrow range for lullabies, a wide range for the romance, the A mode for satirical and wedding songs). As elsewhere in Europe, the modes are occasionally influenced by stress patterns or instruments. Further north in Belgium there are clear differences between the Walloon songs, which combine Romance and Teutonic linguistic and musical patterns, and the straightforward syllabic style of Flemish songs.

The most striking feature of post-Reformation German folk music is regularity of strophic form, melodic shape, rhythm and tonality. This is offset to some extent by the older practices of German colonists in eastern Europe, many of whom have been recorded by the Institut für Ostdeutsche Volkskunde in Freiburg. Special forms such as the *Zwiefacher* with its changing 2/4 and 3/4 metres, however, have remained popular in Bavaria. In some German-language regions of Switzerland (such as Schwyz and Appenzell) there is a preference for the sharpened *Alpenfa* (11th harmonic of the Alphorn, probably derived from the vocal intonation of the yodel). More modern or revived forms of the yodel are distinguished by partsinging and by replacement of the original vocalization by words. Alpine polyphonic music in general tends to use parallel part movement and triadic harmony, now mostly in a 'major' tonality.

Whereas melodic phrases, metres and rhythms in northern and central Europe are the norm, songs of the west Mediterranean area, both north and south, often show a freer treatment of poetic and melodic ideas, with melismas and a syllabification suitable for both duple and triple rhythms, as well as principles of organization akin to Arabic *maqām*. A variety of strophic types exist: Portuguese quatrains and Spanish *correntia* types with lines of seven syllables, the Galician 'bagpipe verse' shaped by the regional dance known as *muñeira* and the varied construction of Andalusian *seguidillas*. The strophic *villancico* with its device of the initial refrain has been transformed throughout its history, from the dance songs of its origin in Galician-Portuguese *cantigas de vilhao*, through the popular religious songs stemming from the *Cantigas de Santa Maria* of Alfonso el Sabio, to the later literary form. Irregular metre is common in Andalusian songs (not only flamenco), and Basque song structures can be asymmetrical, even within such well-known types as the *zortzico* and its apparent 5/8 time. In the peninsular north, in fact, a variety of modes occurs, including the modern major and minor, while in the south Islamic and *gitano* influences introduced, modified, or reinforced certain 'oriental' modes. Flamenco sub-genres are categorized according to tonal range (e.g. *jondo*, *grande*, *liviano*) and microtonal inflections are frequent within these ranges, which are in any case usually confined to the compass of a 6th or less.

The *ballata* of northern Italy is related to Provencal and Castilian types of narrative song, and provides a structural as well as a thematic contrast to the *storia* of the south, which is founded on a traditional 11-syllable line within strophes of three, six or eight lines. The *ottava rima* of eight 11-syllable lines is the main vehicle for improvisation in central Italy, whether the words derive from Renaissance or modern writers. Polyvocal songs of Sard shepherds and Genoese longshoremen, on the other hand, retain older techniques of song-building on short texts, and a similar practice forms the basis of lullabies, laments and various types of labour song. Laments in Sicily, such as those sung on Good Friday, owe a great deal to the impact of styles from the east Mediterranean region. This influence, at times Byzantine, Greek, Arab or Roma, has left its traces all over the southern Mediterranean, especially in narrow-range melodies (ex.3).

Narrow-range melodies, both ceremonial songs and lyrical tunes, are the norm in eastern Europe: Serbian luck-wish songs in spring often use a melody of two adjacent notes, and Romanian lyrical songs celebrating spring use three notes and non-lexical syllables. Such melodies extend through the entire Slavonic area. Laments are both strophic and freely extemporized outpourings; a metrical recitative forms the basis for this extemporization in the Balkans, with breaks caused by excess of emotion. Non-strophic melodies, in fact, are plentiful, and the text strophe is unknown in most of the south. The notion of strophe can be absent in Balkan ballad performance, with irregular breaks that often lend the singer breathing space; regular breaks occur in the heroic ten-syllable line (6+4) of the older epic style in Bosnia. Structured melodies are mostly from one to four lines and within the range of a pentachord, especially the lower pentachord of the minor mode. Narrow range melodies are complemented by pentatonic melodies (Hungary, southern Albania, Rhodope mountains in southern Bulgaria) and the F mode. Tunes based on chromatic intervals are found usually in the cities, where urban popular styles display Turkish influence.

Unlike Slav village songs and their variety of line lengths, Romanian songs reveal two syllabic systems, an earlier six-syllable line and a later eight-syllable version. Either can be used for the semi-improvised melodic styles such as ballad recitatives. The *doina* is a lyrical improvisation with more or less invariable melodic elements and opening and closing formulaic recitatives. Ballads partly resemble the *doina* in their melodic and scalic structure. Romanian homophonic structures as a whole contrast strikingly with Slav polyphonic types, which proliferate in Albania, Bosnia, Bulgaria, Greece, Macedonia and Serbia, usually based on the drone called *ison*. Most are in two-part, diaphonic style within a restricted compass of up to a 5th. The characteristic interval is the 2nd, which is regionally regarded as a consonance: to performers within the group singing known as *ganga* in Hercegovina both tones of the final (a 2nd apart) are equally important. A three-part or four-part multivoice style is found in southern Albania, and there may be historical links in Balkan polyphony with those types in Sardinia or the Baltic, such as the Lithuanian *sutartines* with their parallel 2nds.

Hungarian music is homophonic, with an older layer of pentatonic tunes that descend, many of them with the typical shift of a 5th: these have been traced to different areas of west Asia. But they have now been supplanted by newer-style melodies in the D, G or A modes with the structures *AA′A′A* (where *A′* involves a shift of a 5th) or *ABBA*, and in the 2/4 or 4/4 metre now prevalent across eastern Europe. Slovak songs also have 5th displacement in the mainly tetrachordal four-line melodies (*A′A′AA*) of older dance tunes. The tunes of the Carpathian shepherd culture have a descending pentachordal shape in the F mode that accounts for more than 60% of those collected. In terms of rhythm, the asymmetric metres that Bartók called 'Bulgarian rhythm' are now termed *aksak* ('limping') after Brăiloiu's usage (1951) since they are found in other areas, such as Albania and the former Yugoslavia. The Bulgarian seven-beat *rachenitsa* (2+2+3) and the Greek *kalamatianos* (3+2+2) are examples of rhythmic cells composed of either two or three beats. The system is rare in Romania but common elsewhere, especially in refugee communities in Macedonia.

JAMES PORTER

European American. American firm of music publishers and distributors. It was established in New Jersey in 1977 under the joint ownership of Schott and Universal Edition, which purchased the American music publisher and dealer Joseph Boonin, Inc.; it incorporated the existing music catalogue and distribution operation into the newly renamed company European American Music Distributors Corporation. Since 1984 it has been located in Valley Forge, Pennsylvania. As a comprehensive serious music publisher, the firm distributes sheet music to dealers, hires works to orchestras, licenses opera and ballet productions and assumes administrative and artistic functions on behalf of the parent companies and their composers. The firm also operates two American publishing companies whose composers include Joseph Schwantner, Christopher Rouse, Bernard Rands, Tobias Picker, Robert Beaser and Stephen Paulus: European American Music Corporation (for ASCAP members) and Helicon Music Corporation (for BMI affiliates). In addition to representing Schott and Universal Edition, the firm is the sole US agent for Deutsche Verlag für Musik (performance catalogue only), Eulenburg Miniature Scores, Philharmonia Pocket Scores, Franz Lehár's Glocken Verlag, Vienna Urtext Edition, Haydn-Mozart Presse, Moeck Verlag (contemporary works only), Zen-On (contemporary works only) and Schott Frères of Brussels. European American Music Corporation is also the agent for the Kurt Weill Foundation for Music and represents most of Weill's works, publishing the complete edition in association with the Weill Foundation. The firm publishes a monthly newsletter and performance calendar, *Monthly Events*.

COREY FIELD

Eury, Jacob (*b* Mirecourt, 6 April 1765; *d* Versailles, 7 Oct 1848). French bowmaker. Wrongly identified as Nicolas Eury for some years, Jacob Eury was perhaps the creator of some Mirecourt bows, made around 1790–1800, long attributed to his father, François (*d* 1 May 1786), a luthier and instrument dealer. After the completion of eight years of military service, Eury may have associated with the bowmaker Jean Adam in Mirecourt before moving to Paris in about 1805. He worked at several addresses in Paris before settling in Versailles in 1826.

Eury was one of the four great Parisian makers of his time, along with François Tourte, Jean Persoit and François Lupot, and technically he was the most fluent. Some of his bows resemble those of Persoit and Lupot, being octagonal, slightly short, and made of rather plain, straight-grained pernambuco; others are close in style to the bows of Tourte. At its best, Eury's work is original

though sometimes stylistically extravagant. His bows are sometimes branded EURY and occasionally bear a second brand, A PARIS, on the opposite brand-facet.

PAUL CHILDS

Eurythmics. British pop group. After varying degrees of success as The Tourists in the late 1970s, and an unsuccessful single released under the name 'The Catch', The Eurythmics was formed in 1981 by Annie Lennox (*b* Aberdeen, 25 Dec 1954) and Dave Stewart (*b* Sunderland, 9 Sept 1952), and became one of the most successful groups of the 1980s. Along with such bands as Soft Cell, Yazoo, Erasure and the Pet Shop Boys, they were part of the wave of synthesizer duos indebted to Sparks and other 1970s bands. Their first album, *In the Garden* (1981), was produced by Krautrock stalwart Conny Plank, suggesting an experimental approach. With *Sweet Dreams (Are made of this)* (1983), the band successfully moved into the mainstream: Lennox's rich, white-soul vocals were set against Stewart's spartan, economical but melodic synthesizer figures on early hits such as *Love is a stranger* and *Who's that girl*. Lennox presented herself as a pop androgyne, sporting carrot-coloured, cropped hair and sharp suits, and causing the American authorities to demand documentary evidence of her gender on a promotional trip to the USA in 1983. Later albums such as *Be yourself Tonight* (1985) and *Revenge* (1986) saw the band enter orthodox rock and soul territories (Aretha Franklin performed with the group on the 1985 hit *Sisters are doin' it for themselves*), but *Savage* (1987) was an intriguing return to the austere and emotive synthesizer music which was their trademark. Quintessentially of the 1980s in their pop sensibility, the band made a series of theatrical videos, such as the Louis XIV period setting for their only UK number one single, *There must be an Angel (Playing with my heart)* (1985). The charm of much of their back catalogue was confirmed by the huge commercial success of their *Greatest Hits* compilation (1991), which stayed in the UK album charts for 91 weeks.

After the duo disbanded in 1990, Lennox moved even further towards mainstream ballad styles on *Diva* (1992) and a covers album *Medusa* (1995), while Stewart's career lost some momentum after a string of commercially unsuccessful albums. However, Stewart also made a name for himself in the 1980s and 90s as a rock producer, working with Bob Dylan, Mick Jagger and Tom Petty. Ten years after their final album, *We Too are One* (1989), the duo re-united in 1999 for Peace; a major European tour in support of Greenpeace and Amnesty International.

All their albums were first released on the RCA label.

DAVID BUCKLEY

Eustache Le Peintre de Reims [Eustache de Rains] (*fl* 1225–40). French trouvère. An envoi surviving in only one reading of *Amours, coment* addressed to a Count of Forez provides the only biographical information concerning Eustache. Reference was presumably intended to Guigues IV, Count of Forez and Nevers, who joined Thibaut IV, Count of Champagne and Brie, King of Navarre, in the crusade of 1239 and who died in 1241. 'Le Peintre' may either designate the trouvère's profession or constitute a family name, such names appearing in Reims records as early as the 13th century. The seven poems attributed to Eustache appear fluent, but none is distinguished, not even *Force d'Amours*, which is designated as a *chanson couronnée*. All comprise isometric, decasyllabic strophes; all but *Ferm et entier* contain eight-line strophes; and all but *Tant est Amours* use two rhymes per strophe. The melodies are simple with few flourishes and with clearly defined note centres. The *chanson couronnée* remains within a 4th for the first five phrases, while attaining the compass of an octave in the last three. All others move more freely, three spanning an 11th. While *Amours, coment* and *Tant est Amours* combine authentic and plagal ranges, all others are cast in authentic modes. Each poem is cast in standard bar form; there is a tendency for material from the *pedes* to return in the cauda, whether in strict or varied repetition or merely in motivic form. No clear evidence of rhythmic symmetry is present.

THEODORE KARP

Eustachio Romano (*fl* 1st quarter of the 16th century). Italian composer. The one volume of music devoted entirely to Eustachio's work, *Musica duorum* (Rome, 1521; ed. in MRM, vi, 1974), calls him 'Eustachius de Macionibus Romanus', so he must have been a member of the Macione (or Maccione) family. Most sources describe him as a Roman, presumably to distinguish him from Eustachius de Monte Regali Gallus, who also worked in Rome at about the same time. Eustachio seems to have been a gentleman composer; he is important as the first known composer of instrumental duets in the new imitative style of Josquin des Prez and his contemporaries.

Musica duorum is the first known publication of G.G. Pasoti, the only music book known to have been published by him without assistance, and the earliest printed book of music for instrumental ensemble. The 45 melodically inventive duets in the volume are distinguished by their contrapuntal excellence and their exuberance of spirit. In addition eight or possibly nine frottolas by Eustachio survive in Petrucci's *Frottole libro undecimo* (RISM 1514[2]) and in *Canzoni sonetti strambotti et frottole libro quarto* (1517[2]). Eustachio's frottolas in Petrucci's book are almost all settings of Petrarch sonnets in the recitative-like style characteristic of many compositions in the anthology. Eustachio's shorter and more schematic settings of diverse poetic forms in the *Canzoni* were probably used either as a starting-point for embellished performances or to declaim the poetry as simply as possible.

HOWARD MAYER BROWN

Eustachius de Monte Regali [Gallus] (*d* ?Rome, ?1527). French singer and composer, active in Italy. His birthplace

is unknown (there are many candidates for 'monte regali') but a Vatican document describes him as a cleric of the diocese of Arras. The appellation 'Gallus' was used to distinguish him from his contemporary Eustachio Romano. Monte Regali may or may not be the Eustachio who was in the Cappella Giulia in 1514, but he was a member of the papal chapel by 1519. In 1520 he moved to Modena as *maestro di cappella* of the cathedral, leaving that post in 1524. By 1525 or 1526 he was back in Rome in the chapel of Clement VII. He may have died during the Sack of Rome in 1527.

In his sacred works Eustachius concentrated on specific liturgical genres (the Magnificat, *alternatim* psalms and *alternatim* hymns), although he also wrote four motets, two of which set entire psalm texts. The *alternatim* works are like many others in the way they mix fidelity to a cantus firmus (psalm tone or hymn melody) with various contrapuntal techniques. The psalm motets are quite long and freer in their elaborations, while the motet *Regina coeli* makes use of canon at the 5th to create its five-voice texture. Like his Roman colleague Eustachio Romano, Monte Regali preferred good poetry to bad for his frottola settings, which are rather more metrically regular and homorhythmic than most. The most widely disseminated setting of Italian verse attributed to Monte Regali, *Si v'osassi di dir*, belongs to the world of the early madrigal both in its pattern of distribution and in its musical style.

WORKS

Magnificat, 4vv, *I-Bsp* A.XXXXVI, *MOd* III, ed. in Crawford

Hymns, 4vv, *MOd* III: Ad cenam agni, ed. in Crawford; Ave maris stella; Christe redemptor; Exultet caelum; Hostis Herodes; Iste confessor; Jesu corona virginum; Jesu redemptor omnium; O dator vite, ed. in Crawford; Sanctorum meritis; Urbs beata Jerusalem

Alternatim psalm settings, 4vv: Beatus vir, *MOd* III; Confitebor tibi Domine, *MOd* III; Credidi propter quod locutus sum, *Fn* 232, *MOd* III, ed. in Crawford; De profundis clamavi, *MOd* III; Dixit Dominus Domino meo, *MOd* III; In convertendo Dominus, *Fn* 232; In exitu Israel, *MOd* III; Laudate Dominum omnes gentes, *MOd* III; Laudate pueri Dominum, *MOd* III; Memento Domine David, *MOd* III; Quam dilecta tabernacula, *MOd* III

Psalm motets, 4vv: Benedic anima mea, 1519[1], ed. in SCMot, v (New York, 1992); Omnes gentes plaudite, 1519[1], *I-Pc* 17, ed. in SCMot, v (New York, 1992)

Motets: Regina coeli, 5vv, *I-Rvat* C.S.46; Salve crux digna, 4vv, *MOd* III

Frottole, 4vv: Chiare fresche e dolci acque, 1514[2]; Di tempo in tempo, 1514[2]; O bella man, 1514[2], ed. in MRM, vi (1974); O gloriosa colonna, 1514[2]; Si v'osassi di dir, 1521[6] (attrib. 'Eustachi'), *I-Bc* 21, *Fn* 111, *Rvat* 571, *Vc* B32, *US-NH*, Misc.179, ed. in MRM, vi (1974); Voi mi ponesti in foco, 1514[2]

RICHARD SHERR

Eustachius Gallus. *See* EUSTACHIUS DE MONTE REGALI.

Eustacius Leodiensis (*fl* ? 14th century). Franco-Flemish composer. He is now known only by a three-voice motet *Monstrant hii versus an/Ius plectas leges/Ut queant laxis*, transmitted in the early 15th-century manuscript *A-SPL* 264/4, ff.68*v*–69. Its peculiarity, as described by Koller, is that it is based on Guido of Arezzo's method of composing with vowels. The work is not notated in the manuscript, but a canon explains: 'Hic modulus non notatur sed scribitur et vocalibus canitur'. Thus, where the text has the vowel 'a', the note is *fa*, where 'e', *re*, and so on. The vowels also produce time values, so that 'a' has one beat, 'e' two beats, etc. Finally, the three voices are related in the proportions 2:3:4. Thus, where the triplum has *c′*, the motetus will have *g* and the tenor *c*.

GILBERT REANEY/R

Euterpe. The Muse of lyric, represented with the double aulos. *See* MUSES.

Evacuatio (Lat.). In music of the late 15th century and the 16th, the substitution of a void note head for a full one; it usually involved black notes, but could also affect red ones. A void quaver meaning a crotchet, and a void semiquaver meaning a quaver, are found in French keyboard music from Attaingnant to Couperin. The device could also exemplify an orthodox use of coloration in the medieval mensuration system, meaning 'three in the time of two'; or it could signify a halving of values. *See* NOTATION, §III, 3(vii), 4(ii).

Evangelary [evangeliary, evangelistary] (from Lat. *evangelarium*, *evangeliarium*, *evangelistarium*). A liturgical book of the Western Church containing in the order of the liturgical year the complete texts (pericopes) of the Gospel readings chanted at Mass. The covers of the evangelary were often sumptuously adorned with precious metals and gemstones. *See also* LITURGY AND LITURGICAL BOOKS, §II, 2(ii).

Evangelicalism. There is no consistent historical thread to the music of Evangelicalism. The word 'Evangelical' (i.e. 'of the gospel') has been used at different periods by groups that returned to the gospels in search of a truer or more authoritative version of Christianity. At the Reformation it was largely synonymous with 'Protestant' ('evangelisch' continues to mean that in German-speaking areas and among Lutherans). In the 18th century it covered the revival movement that affected most Protestant sects in Great Britain and North America and whose most typical expression was Methodism. Evangelicalism continued to evolve in the English-speaking countries during the 19th century as a missionary movement, independent of denominations. Later, especially in America, it took on a new connotation of theological conservatism or even of Fundamentalism. 'Evangelical' is also used to refer to the process of conversion or rebirth. In some times and places there has been a distinction between evangelical music, for revivals and missions, and service music, for the regular worship of those already converted. The Evangelical party in the Church of England is a descendant of the Calvinist branch of Methodism.

For the treatment of musical aspects of evangelicalism *see* ANGLICAN AND EPISCOPALIAN CHURCH MUSIC; CONGREGATIONAL CHURCH MUSIC OF THE; METHODIST CHURCH MUSIC; PENTECOSTAL AND RENEWAL CHURCH MUSIC ; REFORMED AND PRESBYTERIAN CHURCH MUSIC; and SALVATION ARMY, MUSIC OF THE. *See also* BAPTIST CHURCH MUSIC, and LUTHERAN CHURCH MUSIC.

NICHOLAS TEMPERLEY

Evangelista, José (*b* Valencia, 5 Aug 1943). Spanish composer. He began his musical training at the Valencia Conservatory, where he studied harmony and composition with Asencio (1960–63; diploma in composition, 1967), and he also obtained an MS in Physics from the University of Valencia (1967). He was also taught by the composers Ernesto Halffter and Luis de Pablo. In 1969 he moved to Canada, settling in Montreal in 1970, and he later acquired dual Spanish and Canadian citizenship. He took the MMus in composition with André Prévost (University of Montreal, 1973) and a DMus in composition with Bruce Mather (McGill University, 1984). Since 1979 he has taught on the music faculty of the University of Montreal. He has been guest composer at the Darmstadt summer courses (1986), Soundcelebration Two, Louisville Orchestra (Kentucky, 1992), the Huddersfield Festival (1994) and Musiques en Scène (Lyons, 1997 and 1999), and he was resident composer of the Akademi Musik Indonesia (1986) and of the Montreal SO (1993–5). He was also a founding member of 'Les Evénements du Neuf' (concert cycles of new music, Montreal 1978–82), president of 'Traditions Musicales du Monde' (concert cycles of music from different cultures, Montreal, 1979–84), and founder and coordinator of the Balinese Gamelan Workshop (University of Montreal, 1987–94). He has won several prizes, such as the 'Arpa de Oro' (1974, for *En guise de fête*), the Juno Award (Canada, 1997, for *Airs d'Espagne*), and the SOCAN Prize (Canadian Performing Rights Society, 1997).

Evangelista has specialized in Asian music, and the melodic style of his works reflects his study of the Javanese gamelan (Surakarta, 1980), Burmese piano (Rangoon, 1986) and Balinese gamelan (Montreal, 1987–92). Melody is the point of departure in his music, and he has developed a personal aesthetic and a broadly based compositional style in which the Spanish tradition, the Indonesian gamelan, and Western avant-garde and modal elements are all combined.

WORKS
(*selective list*)

DRAMATIC AND VOCAL

Music theatre: La porte (monodrama, A. Nouss), 1987; Alice and Friends (L. Carroll), 1991; Exercises de conversation et de diction françaises pour étudiants américains (E. Ionesco), 1991–8; Bukowski Stories (C. Bulowski), 1992

MARTA CURESES

Evangelisti, Franco (*b* Rome, 26 Jan 1926; *d* Rome, 28 Jan 1980). Italian composer and theorist. In 1948 he abandoned his engineering studies for music, taking lessons in composition with Daniele Paris and the piano with Erich Arndt. His move to Freiburg in 1952 led him to complete his cultural and musical education in a German context at the city's university under Genzmer, to attend the Darmstadt summer courses until 1962, to work in the WDR studio in Cologne (1956–7) and, above all, to become a point of contact between new German music and musical life in Rome. On his return to Italy, he became a key figure in the Rome-based group Nuova Consonanza, whose stated aim at its inception in 1960 was to 'revive' contemporary music. He also contributed to the organization of the Settimane Internazionali di Nuova Musica in Palermo (1960–68), founded the Gruppo d'Improvvisazione di Nuova Consonanza in 1964 and helped to set up both Studio 7 for electronic music in Rome (1968–73) and, in 1970, a study group on 'sound phenomenon', co-ordinated by the engineer Lorenzo Viesi. He taught an experimental course in electronic music first at the Accademia di S Cecilia (1969) and then, on a permanent basis, at the Rome Conservatory (from 1974), where, at the time of his death, in 1980, he was a lecturer in composition.

Evangelisti's scientific background undoubtedly determined an approach to composition which started from a detailed theoretical examination of the sound matter itself. From *Ordini* (1955) until *Die Schachtel* (1962–3) his music was organized by means of 'structures', which formalized internal compositional rules and controlled all aspects of the musical material – from timbral combinations to aleatoric processes, and eventually even to silence. In *Die Schachtel* the idea of structure is also used to regulate the various elements of a multimedia performance. Evangelisti's concept of aleatoricism – a union of precise thought (with rules, systems of reference and structures) and the immediacy of improvisation – was still to lead to work with the Gruppo d'Improvvisazione di Nuovo Consonanza, the first group of its kind that required its members to be composers. Yet from 1963 onwards, he took the radical decision to cease composing fully notated music (although he continued with experimental improvisational composition), a silence he only broke in 1979 with *Campi integrati* no.2, composed for UNICEF's Year of the Child. He was prompted by a strong desire not to repeat outmoded formulas and to escape the academicism into which, as he saw it, the avant garde was becoming locked. But his was an active,

reflective silence, as he tried to construct a new musical system, a new world of sound, drawing on scientific disciplines and focussing on new ways of transmitting and perceiving sound events. Until 1980 he devoted himself to exploring the limits of this utopian vision, which he described in *Dal silenzio a un nuovo mondo sonoro*, now an important record of one of the most radical minds of the Italian postwar avant garde.

WORKS
(*selective list*)

Stage: Die Schachtel (pantomime, F. Nonnis), 1962–3; Davis, CA, 1966; concert excerpts

Orch: Ordini, 16 insts, 1955; Random or Not Random, 1956–62; Condensazioni, 1960–62; early concertante works

Vocal: Spazio a cinque, vv, 5 perc, elecs, 1959–61; early works

Chbr and solo inst: 4!, pf, vn, 1954–5; Proiezioni sonore, pf, 1955–6; Proporzioni, fl, 1958; Aleatorio, str qt, 1959; Campi integrati no.2, gioco per 9 strumenti, 1959–79

Tape: Incontri di fasce sonore, 1956–7

Evanghelatos, Antiochos (*b* Lixourion, Kefallinia, 25 Dec 1903; *d* Athens, 17 Dec 1981). Greek composer and conductor. In 1928 he graduated in composition (under Ludwig) and conducting (under Kofler) from the Leipzig Conservatory; he then studied conducting in Vienna (1928–9) and Basle (1931) under Weingartner. From 1933 he taught composition and counterpoint at the Hellenic Conservatory, Athens, becoming its co-director in 1937 and sole director in 1967. He was elected president of the Union of Greek Composers in 1957. One of Kalomiris's principal followers, Evanghelatos takes his thematic material from folklore, using it in an essentially contrapuntal, while broadly Romantic, manner.

WORKS

GEORGE LEOTSAKOS

Evans, Anne [Lucas, Anne Elizabeth Jane] (*b* London, 20 Aug 1941). English soprano. She studied at the RCM, London, and then in Geneva, where she made her début in 1967 as Annina (*La traviata*) and sang Countess Ceprano (*Rigoletto*) and Wellgunde. In 1968 she joined Sadler's Wells Opera (later the ENO), making her début as Mimì and singing Countess Almaviva, the Marschallin and Penelope Rich (*Gloriana*). With the WNO (1974–89) she sang Senta, Chrysothemis, the Empress and the Dyer's Wife (*Die Frau ohne Schatten*), Leonore in *Fidelio*, Donna Anna and Brünnhilde in a complete *Ring* cycle, also given at Covent Garden (1986). Having sung Ortlinde and Third Norn at Bayreuth (1983), Evans returned as Brünnhilde (1989–92), a role she has also sung in Berlin, Paris and with the Royal Opera (1995–6), and recorded under Barenboim. Her Wagner repertory, to which her strong, clear voice is particularly suited, also includes Elsa, Eva, Kundry, Elisabeth (the role of her Metropolitan début in 1992), Isolde, which she first sang with the WNO (1993), and Sieglinde, which she sang in San Francisco in 1995.

ELIZABETH FORBES

Evans, Bill [William John] (*b* Plainfield, NJ, 16 Aug 1929; *d* New York, 15 Sept 1980). American jazz pianist. He attended Southeastern Louisiana University and served in the army before beginning his jazz apprenticeship in earnest. Evans's first recording with a group of his own was made in 1956. Soon thereafter he recorded with Charles Mingus, and in 1958 joined Miles Davis. He played a significant role in the pivotal recording session the following year that produced Davis's album *Kind of Blue* (1959, Col.), by which time his distinctive style had largely crystallized. His development from 1960 may be traced by examining the work of his various trios of piano, double bass and drums. Despite personal difficulties and health problems, Evans appeared in public and recorded with some regularity until shortly before his death.

Evans was one of the most influential jazz musicians of his generation, and the pianist who most successfully assimilated and developed a bop language based on the style of Bud Powell. He brought exceptional refinement and freshness to the jazz harmonic idiom, and this, together with his insistence on a more independent, quasi-polyphonic role for his accompanists, his sensitive, well-modulated touch and an often introspective, lyrical personality, had a lasting influence on many musicians, including Chick Corea, Herbie Hancock, Keith Jarrett and Steve Kuhn.

Evans acknowledged a debt to most of the prominent figures of the bop era, and his early work bears the obvious stamp of Powell, Lennie Tristano and – strikingly – Horace Silver. His relatively aggressive attack and strong links to the bop style in this period gradually receded in favour of a more lyrical approach including

idiosyncratic melodic figures of irregular lengths and subtle voice-leading and harmony (ex.1). Still, his basic bop orientation never changed, and he showed little interest in the experiments of the 1960s and 70s; even the use of the electric piano remained somewhat foreign to him.

Relationships with a few key double bass players (and, to a lesser extent, drummers) were important in Evans's career. Perhaps the most significant of these bass players was Scott LaFaro, who worked with Evans and the drummer Paul Motian from 1959 to 1961. LaFaro's light sound, extraordinary facility and melodic imagination were a fine foil for Evans, and the two evolved contrapuntal textures distinguished by rhythmic complexity and an elusive relationship to the pulse. This interplay was less in evidence in Evans's work with LaFaro's successor, Chuck Israels, though it re-emerged in his later recordings with Gary Peacock and Eddie Gomez. A similarly complex interaction may be heard in his duo recordings with the guitarist Jim Hall (for example *Intermodulation*, 1966, Verve), a performer whose capacities and temperament had much in common with Evans's. Here, too, Evans excels as an accompanist, combining discretion with rhythmic flair, an inexhaustible invention in the voicing of chords and a wide variety of touch.

Evans chose his repertory of tunes carefully: over the years he increasingly emphasized his own compositions (*Waltz for Debby*, on *New Jazz Conceptions*, 1956, Riv.; *Comrade Conrad*, on *The Bill Evans Album*, 1971, Col.) and standard numbers unlikely to interest most other jazz musicians (*Beautiful Love*, on *Explorations*, 1961, Riv.; *Some Day my Prince will Come*, on *Portrait in Jazz*, 1959, Riv.). In his own tunes the progression of chords is often elaborately chromatic, though the tonality is always evident. Evans also favoured irregularities in phrase length (*Show-type Tune*, on *How my Heart Sings*, 1962, Riv.) and metrical shifts (*Peri's Scope*, on *Portrait in Jazz*). His recasting of familiar melodies was exceptionally resourceful: in *My Foolish Heart*, for example (on *Waltz for Debby*, 1961, Riv.), by the careful placement of a few substitute bass notes and non-harmonic tones and a sensitive use of register, he produced a striking transformation of the original tune. Among Evans's last recordings, *We Will Meet Again* (1979) surveyed tunes from all phases of his career in what was for him an unusual instrumental grouping (trumpet, saxophone and rhythm section), perhaps intimating a new stage in his development. A volume of transcriptions of Evans's performances has been published (*Bill Evans*, Fort Lauderdale, FL, 1965).

EDWARD MURRAY

Evans, David Emlyn (*b* Newcastle Emlyn, Dyfed, 21 Sept 1843; *d* London, 19 April 1913). Welsh music critic, teacher and composer. He earned his living as a draper and travelling salesman. Apart from taking lessons with John Roberts in 1858, he was self-taught in music, yet he became an influential figure in Welsh musical life. A prolific composer of vocal music, he was reputed to have won more than 60 prizes at eisteddfods but only his hymn tunes have lasted, notably 'Glanceri', 'Eirinwg', 'Trewen', 'Gorffwysfa' and 'Bryndioddef'. In his 20s he began adjudicating in smaller eisteddfods and from 1879 appeared regularly at the National Eisteddfod of Wales, where his sound critical judgment and sincerity were valued by competitors. His concern to temper musical enthusiasm with a high standard of skill led him to produce an enormous number of articles aimed at educating his countrymen. Besides his weekly columns in the *Cardiff Times* and the *South Wales Weekly News*, he edited a number of Welsh music journals (with and without assistance): *Cronicl y Cerddor* (1880–83) and *Y Cerddor* (1889–1913). He published a harmony book in Welsh, edited and harmonized some 500 Welsh melodies collected by Nicholas Bennett in *Alawon fy Ngwlad* (1896), and assisted in editing hymn tunes for *Y Caniedydd Cynulleidfaol* (1895), *Y Salmydd* and *Llyfr Tonau y Wesleyaid*. Among the more sizable of his published compositions are the cantatas *The Christian's Prayer* and *The Fairy Tribe*. He also orchestrated Edward

Stephen's oratorio *Ystorm Tiberias*. Following his death in London, he was buried at Llandyfriog near Newcastle Emlyn.

OWAIN EDWARDS/A.F. LEIGHTON THOMAS

Evans, Edwin (*b* London, 1 Sept 1874; *d* London, 3 March 1945). English critic, son of the organist and writer Edwin Evans (1844–1923). Music critic of the *Pall Mall Gazette* (1912–23) and the *Daily Mail* (from 1933), he was an important promoter, through writings and lectures, of contemporary English and French music, and was a pioneer in making the music of Debussy better known and appreciated by British audiences. From 1907 to 1917 he played a key role in the work of the committee of the Société des Concerts Français, which presented the first British performances of 240 French chamber works. He wrote a notable series of articles on modern British composers, including Bridge, Bax, Ireland, Holst and Vaughan Williams, in the *Musical Times* (1919–20); a second series, in progress at the time of his death, included Walton and Rubbra. His special interests led in 1923 to his becoming chairman of the British section of the ISCM, succeeding Dent as president of the main body in 1938. He knew Diaghilev and Stravinsky well and wrote a booklet on Stravinsky's ballets *Firebird* and *Petrushka* for the Musical Pilgrim series in 1933. For many years he wrote programme notes for London concerts and contributed to the third, fourth and fifth editions of *Grove's Dictionary*. He was also the editor of the short-lived periodical *The Dominant* (1927–9). His valuable library of books and scores devoted to his special interests forms the nucleus of the London Central Music Library.

H.C. COLLES/FRANK HOWES/ROSEMARY WILLIAMSON

Evans, Sir **Geraint (Llewellyn)** (*b* Cilfynydd, 16 Feb 1922; *d* Aberystwyth, 19 Sept 1992). Welsh baritone. He studied with Theo Hermann in Hamburg and later with Fernando Carpi in Geneva and at the GSM, London. He joined the Covent Garden company in 1948, making his début as the Nightwatchman (*Die Meistersinger*). In his second season he sang Mozart's Figaro (his début role at La Scala in 1960 and at the Vienna Staatsoper a year later). His repertory widened to include Escamillo, Lescaut, Marcello, Papageno, Balstrode, Sharpless, Dulcamara and Bottom (Britten). At Covent Garden he created Mr Flint (*Billy Budd*, 1951), Mountjoy (*Gloriana*, 1953) and Antenor (*Troilus and Cressida*, 1954). He sang at Glyndebourne, 1950–61, in Mozart roles and as Abbate Cospicuo (*Arlecchino*), the Music-Master (*Ariadne auf Naxos*) and Falstaff, the role of his Metropolitan début in 1964. Evans sang regularly at Salzburg from 1962 as Figaro, Leporello and Wozzeck and with the leading American companies, having made his début at San Francisco in 1959 as Beckmesser. He first appeared at the Paris Opéra in 1975 as Leporello. He was knighted in 1969 and in 1973 celebrated the 25th anniversary of his Covent Garden début, as Don Pasquale. In 1984 he made his farewell appearance at Covent Garden, as Dulcamara, and in the same year his autobiography, *A Knight at the Opera*, was published in London. His voice, while lacking an italianate richness (his Rigoletto and Scarpia were unsuccessful), was resonant and carefully trained, but it was above all for his resourceful and genial wit that he was admired, notably as Don Pasquale, Beckmesser and Falstaff and as Mozart's Figaro, Leporello and Alfonso. He recorded all these roles, along with Balstrode and Mr Flint, and made inimitable contributions to several Gilbert and Sullivan recordings.

HAROLD ROSENTHAL/R

Evans, Gil [Green, Ian Ernest Gilmore] (*b* Toronto, 13 May 1912; *d* Cuernavaca, Mexico, 20 March 1988). American jazz arranger, composer, pianist and bandleader. A self-taught musician, he led his own band in southern California from 1933 to 1938. When the singer Skinnay Ennis then took over the band, Evans stayed on as arranger. In 1941 he joined Claude Thornhill's orchestra in the same capacity, contributing in 1946–7 such outstanding arrangements as *Donna Lee* (1947, Har.), *Anthropology*, *Yardbird Suite* and *Robbins' Nest* (all 1947, Col.). In these works and others of the period Evans used two french horns and a tuba (in addition to the standard swing era big-band instrumentation); this, along with a restrained vibrato in the saxophones and brass, produced a rich, dark-textured, 'cool' orchestral sound, foreshadowed only by Duke Ellington and Eddie Sauter. Emphasizing ensemble over improvised solo, Evans's scores for Thornhill were far from being straightforward arrangements – they were in essence 'recompositions' and 'orchestral improvisations' on the original materials (for example, lines borrowed from Charlie Parker, popular songs and classical works such as Musorgsky's *Pictures at an Exhibition*).

From 1948 to 1950 Evans contributed prominently to Miles Davis's nonet recordings for Capitol (later issued as *Birth of the Cool*). In his memorable scores *Boplicity* (1949) and *Moon Dreams* (1950), Evans captured the essential sound and texture of the Thornhill band with a smaller ensemble. Oddly, his work for both Davis and Thornhill was ignored by critics and jazz audiences alike. After a period of relative obscurity, during which he worked in radio and television, Evans returned to jazz with three notable albums for Columbia, all written for and featuring Davis: *Miles Ahead* (1957), *Porgy and Bess* (1958) and *Sketches of Spain* (1959–60). In these, as well as in *New Bottle, Old Wine* (1958, WP), Evans extended

his earlier orchestral concepts to larger instrumental forces (up to 20), often achieving a distinctive synthesis of varied timbral mixtures in which opaque, almost cluster-like voicings alternate with rich polyphonic textures, the whole being couched in an advanced harmonic language.

From the early 1960s Evans made several attempts to form permanent orchestras, but these were unable to establish themselves, although they occasionally produced such excellent recordings as *The Individualism of Gil Evans* (1963–4, Verve), *Blues in Orbit* (1969–71, Ampex) and *Priestess* (1977, Ant.). He also turned increasingly to composition, writing such notable works as *Flute Song*, *Las Vegas Tango*, *Proclamation*, *Variations on The Misery*, *Anita's Dance* and (in collaboration with Miles Davis) *Hotel Me* and *General Assembly*. Later Evans incorporated electrified instruments (piano, bass guitar, synthesizer, etc.) into his ensembles, and tended to leave more space for solo improvisation in his arrangements and compositions. This led to a considerable loosening of his style in both form and texture compared with the more compact structures and veiled sonorities of his earlier arrangements.

Although he was at first influenced by the middle-period works of Duke Ellington, Evans developed a style wholly his own, memorable especially for its richly chromatic, though always tonally oriented, harmonic language and its seemingly inexhaustible variety of timbral blendings; no mere colouristic effects, these are often the very substance of his art, providing imaginative frameworks for his soloists in ways equalled in the history of jazz only by Morton, Ellington and Mingus. Even in his most elaborate scores Evans succeeded in preserving the essential spontaneity and improvisatory nature of jazz, achieving a rare symbiosis between composed and improvised elements.

GUNTHER SCHULLER

Evans, Lindley (*b* Cape Town, 18 Nov 1895; *d* Sydney, 2 Dec 1982). Australian pianist. He was a boy singer in the Cape Town cathedral choir and played the organ for silent films in Cape Town in 1911. In 1912 he moved with his family to Australia. He studied with Hutchens at the NSW State Conservatorium, Sydney, from 1915, and from 1919 he taught classes in a girls' school and piano at Palings, Sydney. In 1922 he went to England as Melba's accompanist, taking lessons with Matthay. Returning to Australia the following year he joined the NSW State Conservatorium staff, continued touring with Melba (1924, 1927–8), and was organist and choirmaster at the Presbyterian church, Randwick. He formed a duo with his former teacher Hutchens, which gave two-piano recitals and broadcasts for over 40 years. He broadcast 'Adventures in Music' for the ABC (1932–9), and was 'Mr Melody Man' on the ABC children's hour (1941–69).

A sensitive, exquisitely musical pianist and energetic teacher, his students included Richard Bonynge, Winsome Evans and many others who made notable careers, and he was involved with the national music camps from 1953. He also composed, his rather functional works including choral, vocal and chamber music, an *Idyll* for two pianos and orchestra (1942) and music for the films *40,000 Horsemen* (1940) and *Rats of Tobruk* (1944). He was honoured with the OBE in 1963.

WARREN BEBBINGTON

Evans [Crozier], **Nancy** (*b* Liverpool, 19 March 1915; *d* Suffolk, 20 Aug 2000). English mezzo-soprano. She studied in Liverpool with John Tobin, then with Maggie Teyte and Eva de Reusz. She made her début in recital in Liverpool (1933), singing for the first time in London a year later, accompanied by Gerald Moore. Her stage début was in Sullivan's *The Rose of Persia* (1938, London); in 1939 she sang small roles at Covent Garden. During the war she sang widely for the Entertainments National Services Association. Joining what was to become the English Opera Group in 1946, she alternated with Ferrier in the title role of Britten's *The Rape of Lucretia* at Glyndebourne; in 1947 she created Nancy in *Albert Herring*, and later sang Polly in Britten's version of *The Beggar's Opera*, Purcell's Dido, and Lucinda Woodcock in Arne's *Love in a Village*. On stage her lively presence enhanced her warm-toned singing. In 1968 she created the Poet and seven other characters in Malcolm Williamson's *The Growing Castle*. A noted concert singer, she was the dedicatee and first performer (at the 1948 Holland Festival) of Britten's *A Charm of Lullabies*; in recital she specialized in the French and 20th-century British song repertory. She married first Walter Legge, then Eric Crozier. Evans's recordings, all showing her innate sense of style, included Purcell's Dido, Britten's Lucretia and English songs.

HAROLD ROSENTHAL/R

Evans, Peter (Angus) (*b* West Hartlepool, 7 Nov 1929). English musicologist. He studied with Arthur Hutchings and A.E.F. Dickinson at Durham University from 1947 to 1951 (BA 1950). After gaining his FRCO in 1952, and teaching in Salisbury, he was appointed a lecturer at Durham University in 1953. He graduated with a BMus from Durham in that year and took the MA with a dissertation on 17th-century chamber music manuscripts in Durham Cathedral Library. He was awarded the DMus by the university in 1958. From 1961 to 1990 he was professor of music at Southampton University. After his early studies of viol music, in particular that of John Jenkins, Evans has worked mainly on the 20th century and especially on the music of Britten, bringing to that subject an acute analytical mind coupled with an approach in which musical values are firmly assigned first place.

DAVID SCOTT/ROSEMARY WILLIAMSON

Eve [Heve, Heffe], **Alphonse** [Alphonsus] **d'** (*b* Brussels, bap. 20 Aug 1666; *d* Antwerp, bur. 10 Oct 1727). Flemish composer. His father, Honoreus Eugenius d'Eve, was successively a singer (1652), *lieutenant de musique* (1662) and *maître de musique* (1664) at the royal chapel in Brussels. Alphonse became known about 1700, when his op.1 was announced, he composed an opera and was singing bass at the church of St Andries, Antwerp. He then worked as choirmaster at St James in Ghent (1703–18) and held the same post (on probation) at the church of Our Lady, Antwerp (1718–25), where he was succeeded by Willem de Fesch.

Music inventories at Aalst, Antwerp, Ghent, Huy, Lier, Oudenaarde and Tongeren show that Eve's sacred music circulated freely in the southern Netherlands. The mass in his op.1 was for long mistakenly attributed to Arne. His sacred music is in a concertante style and ranges from solo motets with modest instrumental accompaniment to a mass in B minor (1719), dedicated to the Antwerp chapter, for seven-part choir and soloists with nine instrumental parts. Eve's style is markedly Italian (for example in its Corellian harmonies, sequential figuration and increasingly sectional structure, including da capo arias) but sometimes also decidedly French (for example in his five-part writing and in the Suite in D). His works are conceived with a strong feeling for rhetoric, and polyphony and homophony alternate. A particularly remarkable work is *Exsurge psalterium*, a dialogue between Christ (bass) and the Soul (soprano).

WORKS

Genius musicus, op.1 (Amsterdam, *c*1700) [Mass (D); Alma redemptoris; Ave regina; Carpite frondes; Festivis ignibus; Fugite fastus; Litania B.V.M.; Qui in hoc saeculi; Quis es tu Domine; Salve regina; Tantum ergo]
Philomela delectans, op.3 (Antwerp, 1708) [Mass (G); Exsurge psalterium; Gaudete, cantate; O Domine; Quam dilecta; Quam gloriosus]
Mass (b) (Ky, Gl, Cr), *B-Ac*; Mass (A), *Bc*
Motets: Exsurge Deus, *Bc*; Gloria sempiterna, *Bc*; Intonuit de coelo, *Bc*; O acerbi, *Bc*; Quam dilecta (from op.3), *Bc*; Sursum corda (inc.), *Br*; Venti valide, *Br*
Suite (D), str, *GB-Lbl*
Pièces en trio, vns, recs, fls, obs, lost (pubd before 1725)
Het Gouvernement van Sancho Pança (op, G.I. Kerricx), *c*1700, lost (lib pubd)
Ovs., sonatas, lost, cited in *MGG1*

EUGEEN SCHREURS

Evelyn, John (*b* Wotton, Surrey, 31 Oct 1620; *d* London, 27 Feb 1706). English amateur musician and diarist. As a musician, he admitted 'to some formal knowledge, though to small perfection of hand'. He began the study of music at Oxford in 1639, and though mention of the art obtrudes less in his diary than in that of Pepys, his objective reporting affords an invaluable insight into 17th-century musical life. His long continental journey (1641–7) yields disappointingly little information, though in Italy he enthused about opera, castratos, and music at the Chiesa Nuova in Rome. He received theorbo lessons from 'one Signor Alessandro' in Rome late in 1644. He probably brought from Italy numerous printed sets of Italian madrigals and manuscripts. The Evelyn Collection at the British Library includes motets by Carissimi, Dering and Alessandro Grandi (i), together with his own attempt at an alman which he called *The Worme*.

Evelyn's diary (ed. E.S. de Beer, Oxford, 1955), written between 1641 and 1706, is less continuous than Pepys's and probably records only the more noteworthy musical events with which he was associated; domestic trivia are largely omitted. At court and at musical gatherings in the homes of the well-to-do (including his own and Pepys's), he heard and applauded many of the musicians who dominated English musical life after the Restoration. His thirst for knowledge drew him naturally to membership of the Royal Society and is reflected in entries such as those in 1664 concerning 'a new-invented instrument of music' or on Birchensha's 'mathematical way of composure very extraordinary, true as to the exact rules of art, but without much harmony'. He owned Charles Butler's *Principles of Musik* (1636). A devout churchman, he disapproved of the introduction of strings into Chapel Royal services 'after the French fantastical light way, better suiting a tavern, or playhouse, than a church'; and he recorded that some organs were moved from churches to taverns during the Commonwealth. In 1687, when he was Commissioner of the Privy Seal, he praised the psalm singing of the children of Christ's Hospital; a volume of their psalms was also in his library. His piety caused him some misgivings when visiting the opera, but there is no doubting his enjoyment of the Italian style of performance, which is frequently mentioned in the diary.

Evelyn possessed several volumes of English music, including madrigals by Morley, Wilbye and Ward, instrumental music by Holborne and Locke, and several volumes published by Playford.

ANDREW ASHBEE

Everding, August (*b* Bottrop, 31 Oct 1928; *d* Munich, 26 Jan 1999). German director and administrator. He studied the piano, philosophy, theology and dramaturgy at the universities of Bonn and Munich. From 1963 to 1973 he was director of the Münchner Kammerspiele while

starting his career as an opera director, his work including the première of Searle's *Hamlet* at Hamburg in 1968. From 1973 to 1977 he was resident director at the Hamburg Staatsoper and in 1977 he moved to the Staatsoper in Munich, where he became General Intendant. He worked regularly in a number of international houses, directing admired stagings of *Der fliegende Holländer* (1969) and *Tristan und Isolde* (1974) at the Bayreuth Festival. He was responsible for the 1979 *Zauberflöte* at Covent Garden produced after the Munich original. He also directed opera on television. In 1983 he took charge of the restoration of the Prinzregententheater in Munich, which reopened in 1988. The stage areas were restored and returned to service with *Tristan und Isolde*, directed by Everding, in 1996. Although he employed the full panoply of modern stage techniques, Everding's productions were fundamentally traditionalist; his concepts and methods have been gradually discounted and viewed as old-fashioned.

ALAN BLYTH/R

Everest. American record label, founded in New York in 1958 by Harry Belock as the recording division of Belock Instrument Co. His purpose was to pursue state-of-the-art stereo technology using such conductors as Boult, Goossens and Stokowski conducting the LPO, the LSO and the New York Stadium SO (members of the New York PO). Arnold, Arthur Benjamin, Carlos Chávez, Copland and Villa-Lobos also conducted their own works, and Josef Krips recorded Beethoven's symphonies. Markevich conducted Lili Boulanger's music, and Susskind, Schwarz, Ferencsik, Sargent, Ludwig, Hannikainen, Fistoulari, Rignold, Jorda and Robert Irving were other conductors on the label. There was also a popular music series. Belock built a recording studio in New York and equipped it with custom-designed recorders: sprocket-driven motion picture film coated with iron oxide passed over three recording heads laterally separated, yielding unequalled signal-to-noise ratio. The first issues were marketed in late 1958 on mono and stereo discs and open-reel stereo tape, the last duplicated in Everest's own facility. By spring 1961 Belock could not justify the losses suffered by the parent firm and the studio and recording equipment were sold to Fine Recording, a New York firm that provided engineering services to Mercury, Command and other labels; the film recording technology was immediately adopted with enthusiasm by these two labels. The Everest label was sold to Bernard Solomon. A wide variety of European labels was licensed, and material of varied origin and quality was reissued on the Everest label. In 1993 the original Everest masters were acquired by Vanguard and CD reissues that recaptured the quality of the original recordings came on the market.

JEROME F. WEBER

Everett, Asa Brooks (*b* Virginia, 1828; *d* nr Nashville, TN, Sept 1875). American composer, teacher and tune book compiler. He and his brother L.C. Everett (*b* Virginia, 1818; *d* Elmira, NY, April 1867) studied music in Boston. After a brief period as a teacher in Virginia he went to Leipzig to study for a further four years. On his return he and his brother developed the 'Everett System' for elementary class instruction in music. R.M. McIntosh became associated with them in the L.C. Everett Company, which was located first in Richmond, Virginia, and later in Pennsylvania; before the Civil War the firm employed more than 50 teachers of vocal music in the southern and middle Atlantic states. A.B. Everett was assisted by another brother, Benjamin Holden Everett, in the compilation of his most significant collection; unlike most contemporary southern tune books, *The Sceptre* (New York, 1871) was published in round- rather than shape-note notation. A.B. Everett's most popular tunes include those of the hymns *Footsteps of Jesus* and *Who at my door is standing*. L.C. Everett's best-known collection was *The Wesleyan Hymn and Tune Book* (Nashville, 1859), and his most popular hymn tunes 'Bealoth', 'Spring', 'Mattie', 'Beaufort', 'Schumann', 'Solitude' and 'Wyanet'.

HARRY ESKEW

Everist, Mark (Egerton) (*b* London, 27 Dec 1956). British musicologist. He studied music at Dartington College of Arts (BA 1979), King's College, London (MMus 1980), and Keble College, Oxford (DPhil 1982). From 1992 he lectured in music at King's College, London (reader in musicology from 1994), and in 1996 became reader in music and then professor at the University of Southampton. Everist's areas of research are diverse and embrace European polyphony 1150–1330, French opera 1815–48, including the reception of German and Italian opera in France and the operas of Meyerbeer, the historiography of music, reception theory, and the analysis of music before 1600. His publications include source studies and editions of early European polyphony, and a monograph on the 13th-century French motet which challenges previous classifications and offers an alternative theory of the genre that builds both on Russian formalist and medieval concepts. His later writings exhibit an awareness of the changing intellectual environment of the last decades of the 20th century and pay attention to the continuing viability of musicology and music theory.

ROSEMARY WILLIAMSON

Everly Brothers, the. American singing and songwriting duo. The sons of radio stars Ike and Margaret Everly, Don Everly (*b* Isaac Donald Everly, Brownie, KY, 1 Feb 1937) and Phil Everly (*b* Philip Everly, Chicago, 19 July 1939) first performed on their parents' radio show, cutting their début disc in 1956. *Bye bye love*, recorded at RCA's Nashville studios in 1957, was their first success, both in the USA and Britain. Like the following *Wake up little Susie* it was written by Boudleaux and Felice Bryant, the songwriting team responsible for numerous Everly hits, including *All I have to do is dream*. Until 1963 the brothers were rarely out of the charts and their album *A Date with the Everlys* (WB, 1961) remains a milestone in pop history: it featured their biggest selling single, *Cathy's clown* (written by the brothers themselves), among material unusual at the time for its consistent quality. They split up in 1965, later reuniting only to break up acrimoniously during a 1973 concert in California. As solo performers neither enjoyed great success, although their reunion tours, begun in the 1980s, were met with enthusiasm.

The brothers had absorbed a wide variety of music in their childhood: their plaintive close-harmony style, supported by the sound of their matching Gibson acoustic guitars, was both a throwback to the work of the Louvin Brothers in the 1930s and an influence on future pop performers, including the Beatles, the Beach Boys, the Mamas and the Papas, and Simon and Garfunkel. Part of a well-established country tradition, they were soon marketed as a rock and pop act, their clean-cut good looks in stark contrast to such other chart-topping crossover artists as Jerry Lee Lewis. On their live album *The Reunion Concert* (Passport, 1983) the combination of Don's tenor and Phil's higher, lighter voice still retains the distinctive character which first brought them success.

LIZ THOMSON

Evertz, Theodor (*fl* c1550). Flemish composer. Three pieces by him are in Jacob Baethen's anthology *Dat ierste boeck van den nieuwe duytsche liedekens* (for three to six and eight voices; RISM 1554[31]) and another song was printed in *Een duytsch musyck boeck* (four to six voices; 1572[11]). Evertz's melodies undoubtedly have a popular origin. He used his limited materials imaginatively; his songs, which aim above all at simplicity, with a minimum of discreet figuration giving the harmonic background, are closer to Isaac than to Josquin in a field in which Senfl excelled.

PAUL-ANDRÉ GAILLARD

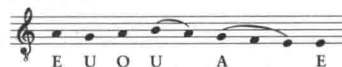
Evesham, Walter. *See* ODINGTON, WALTER.

Evette & Schaeffer. French firm of woodwind instrument makers formed by Paul Evette and Ernest Schaeffer, who bought BUFFET-CRAMPON from Pierre Goumas in 1885, and whose name continues to be used as a trademark by Buffet-Crampon.

Evirato. *See* CASTRATO.

Evovae [Euouae]. A technical pseudo-word formed from the vowels of the last six syllables of the doxology – 'seculorum. Amen' – and used in medieval office-books as an abbreviation when, at the close of an antiphon, it is necessary to indicate the psalm tone with its appropriate ending (*differentia*) to be used for the following psalm or canticle. Ex.1, indicating the first ending of the first tone,

Ex.1



is taken from a 14th-century English monastic choir psalter, *GB-Cu* Ee.5.13. A readily available series of examples may be found in the *Liber usualis*: the endings for the psalms sung at the Little Hours on Sundays.

Some scribes wrote the last clause in full, 'seculorum. Amen'. Others wrote 'S. Amen', or simply 'Amen', or 'S. A. E.'. It is customary, however, always to make provision for the last six syllables, whatever the abbreviation used. When, for liturgical reasons, the verses 'Gloria Patri' and 'Sicut erat' are omitted, for example, in the psalms sung at the Office for the Dead, the psalter quoted above still indicates the ending by giving the notes for the last six syllables; but beneath them appear the opening words of the psalm itself. Ex.2 shows three ways of indicating the

Ex.2

Vowels of 'seculorum, Amen':

Final word only:

Opening words of psalm itself:

second ending of the 4th tone, all taken from *GB-Cu* Ee.5.13. F.M. Böhme mistook *Evovae* for a familiar Greek word, and was greatly exercised at the admission

of a 'Bacchanalian shout' into the office-books of the Church: 'Statt *Amen* der bacchische Freudenruf, evovae!' (*Das Oratorium*, Leipzig, 1861).

MARY BERRY

Evstatie of Putna (*fl* ?early 16th century). Romanian *domestikos*, *prōtopsaltēs* and composer. He was active at the monastery of PUTNA in Moldavia (now Moldova). Two extant manuscripts copied by him, *RUS-Mim* Shchiukin 350 (dated 1511) and *SPan* 13.3.16, which originally formed one akolouthia (the 'Evstatie songbook'), show him to have been a remarkably competent scribe, skilled in Greek and Church Slavonic and in the late Byzantine musical tradition. He was also a prolific composer, whose chants (*trisagia*, *chēroubika*, *koinōnika* and *stichēra*), with both Greek and Slavonic texts, were sung at Putna during the 16th century. Most of the 24 works bearing his name were widely copied in Moldavia, and many other, anonymously transmitted chants in similar style are also considered to be by him.

Evstatie's compositions betray a strong allegiance to contemporary Byzantine musical practice, although certain distinctive personal features are also evident. He appropriated familiar melodic devices, made use of textual tropes and *teretismata*, and occasionally applied kalophonic techniques (*see* KALOPHONIC CHANT) that make great demands on the singers. He also employed ciphers (including Glagolitic numbers) for certain rubrics, titles and marginal notes, making his material difficult of access, and he delighted in experiment and scholastic jokes.

Ewaldt. *See* HINTZ, EWALDT.

Ewart [née Donaldson], **Florence Maud** [Maude; Aldon, Sonia] (*b* London, 16 Nov 1864; *d* Melbourne, 8 Nov 1949). Australian composer. A musically gifted child, she received early training through a scholarship to the National Training School for Music, London (diploma 1882). She went on to study at the Leipzig Hochshule für Musik, where her teachers included Adolph Brodsky and Gustav Schradieck. She also studied with Joseph Joachim in Berlin. On her return to Birmingham, she became established as a performer and conductor. Her compositions from this period include a lieder cycle, several solo songs and most of her first opera, *Ekkehard* (completed around 1910).

After emigrating to Melbourne in 1906 with her husband, a distinguished botanist, and their sons, Ewart began a long period of compositional activity. She gained early success with the ode *God Guide Australia*, composed for the 1907 Exhibition of Women's Works. She pursued further study on several visits to England and Europe, working with Giacomo Settacciole and Ottorino Respighi in Italy between 1924 and 1927. By 1931 most of her works had been performed in Melbourne and several songs had been performed in London. Despite continued efforts to secure performances for her larger works, however, only her second opera, *The Courtship of Miles Standish* (1930), and her String Quartet in D minor were performed in full. A rich variety of literary sources and musical quotations can be found in her operas and instrumental music. The songs, which include settings of Australian poetry, are characterized by finely wrought textures. When signing her compositions, she used various combinations of her names and sometimes employed the pseudonym Sonia Aldon.

WORKS

Stage: Ekkehard (op, 4, Ewart, after J.V. von Scheffel), *c*1910, excerpts, Melbourne, 23 Nov 1923; Audifax and Hadumoth (ballet, after von Scheffel), *c*1916, unperf.; The Courtship of Miles Standish (op, 3, Ewart, after H.W. Longfellow), 1930, concert perf., Melbourne, May 1931; Mateo Falconé (op, 2, Ewart, after P. Mérimée), 1933, unperf.; Nala's Wooing (after the Mahābhārata), 1933, unperf.; Pepita's Miracle (after A. Bridge), *c*1945, unperf.; A Game of Chess (after G. Giacosa), 1949, unfinished

FAYE PATTON

Ewen, David (*b* Lemberg [now L'viv], 26 Nov 1907; *d* Miami Beach, FL, 28 Dec 1985). American writer on music and editor of Polish origin. He attended the City College of New York and took courses in musicology at Columbia University, studying the piano and music theory privately. After working as music editor of *Cue* (1937–8) he was a gramophone record critic for *Stage* (1938–9), editor of *Musical Facts* (1940–41) and director of Allen, Towne and Heath, publishers of books on music (1946–9). In 1965 he was appointed associate professor of music at the University of Miami.

Ewen conducted research in all areas of music, both serious and popular. He contributed to musicological publications in the USA and England, newspapers such as the *New York Times* and magazines with national circulations. Many of his more than 80 books have been widely translated. He was particularly noted for his reference works on American musical theatre and the history of American popular music.

PAULA MORGAN

Ewer. English firm of music importers, sellers and publishers. The firm was established in London about 1823 by John Jeremiah Ewer. A year or so later the bookkeeper Julius Johanning (*b* ?1795–6; *d* Manchester, 26 Dec 1859) joined Ewer in partnership as Ewer & Johanning; this continued until about 1829 when Johanning withdrew from the firm. It then continued as J.J. Ewer & Co., until 1867, when it merged with NOVELLO & CO to become Novello, Ewer & Co. The name of Ewer was finally withdrawn in 1898.

In 1839 the firm acquired the stock of Gustavus Andre, a London publisher and importer of foreign music, and about this time ownership passed to Edward Buxton, who was also active as a wool merchant. Buxton was responsible for the firm becoming the principal English publisher of Mendelssohn's works from about 1840, and enjoyed an amicable relationship with the composer. Buxton retired from the firm about 1859 when William Witt, his manager since 1852, became proprietor. Ewer & Co. also had an exceptionally large circulating library, a catalogue of which was published in 1860.

WILLIAM C. SMITH/PETER WARD JONES

Ewing, Alexander (*b* Old Machar, Aberdeen, 3 Jan 1830; *d* Taunton, 11 July 1895). Scottish composer. After studying law at Marischal College, Aberdeen, he went to Heidelberg to study German and music. During the Crimean War he joined the army (1855), in which he continued to serve, mostly abroad, until he retired in 1889 with the rank of Lieutenant-Colonel. Ewing was recognized in his lifetime as an accomplished amateur musician, but his many compositions, both sacred and secular, remained practically unknown until in 1954 the manuscripts were acquired by the National Library of Scotland. They won high praise from H.G. Farmer, who did his best to make them known, particularly his anthems and partsongs.

His best-known tune, 'Ewing', written in 1853, was originally in 3/4 time, set to words by St Bernard, translated by John Mason Neale as 'For thee, O dear, dear country', and published as a hymn-sheet. In 1861 it was selected for *Hymns Ancient and Modern*, but printed in 4/4 time, to the hymn beginning 'Jerusalem the golden'.

JEAN MARY ALLAN

Ewing, Maria (Louise) (*b* Detroit, MI, 27 March 1950). American mezzo-soprano and soprano. She studied at the Cleveland Institute (1968–70) with Eleanor Steber and in later years with Jennie Tourel and O.G. Marzolla. But the decisive encounter of her student days was with James Levine; under his direction she made her début in 1973 at the Ravinia Festival. After appearances at Miami, Boston, Cologne, Chicago and Santa Fe, in 1976 she sang Cherubino at Salzburg, then made her Metropolitan début in the same role. She then sang there Rosina, Mélisande and Blanche (Poulenc's *Dialogues des carmélites*), Zerlina, Dorabella, the Composer, Carmen and Marie (*Wozzeck*). In Europe her roles included Cenerentola, Dorabella, Offenbach's La Périchole and Katerina Izmaylova (*Lady Macbeth of the Mtsensk District*), which she sang to acclaim at the Opéra-Bastille, Paris, in 1993. She appeared in Peter Hall's productions at Glyndebourne as Carmen, Dorabella and Poppaea. She made her Covent Garden début as Salome (1988), returning as Carmen (1991). In Los Angeles she sang Tosca (1989) and Butterfly (1991). From 1997 her career was confined to occasional concert appearances. Her bewitching stage presence and magnetic acting were seconded by a vibrant, wide-ranging voice which was not always under perfect control. Her Carmen (at Glyndebourne and at Covent Garden) and her Salome (Covent Garden), preserved on video, reveal her artistry at its most compelling.

Exaquier (Sp.). *See* CHEKKER.

Exaudet [Exaudé, Exaudée], **André-Joseph** (*b* Rouen, ?*c*1710; *d* Paris, 1762). French violinist and composer. The January 1744 issue of the *Mercure de France* announced the publication of six violin sonatas, mentioning that Exaudet was then first violinist of the Académie Royale de Musique de Rouen. He is also listed in the Paris Opéra archives as a violinist at the Foire St Laurent and the Foire St Germain that year. Through the generosity of his patron, the Marquis de la Vaupalière, Exaudet was able to maintain a second residence in Paris; in gratitude, Exaudet dedicated to him his op.2 (for which he was

granted a *privilège général* on 20 December 1751). His name is among the Opéra orchestra in 1749 and the Concert Spirituel orchestra in 1751, and he remained a violinist in both until his death. In 1758 he became an *ordinaire de la musique de la chambre du roi*, and Vente listed him in 1759 (in the periodical *Etat actuel de la musique du roi et des trois spectacles de Paris*) in the personnel of the Concert de la Reine. Exaudet also served as *maître de violon* in the court of the Prince of Condé, to whom he dedicated his op.3 (*c*1760).

As a composer, Exaudet is best remembered by a celebrated minuet (op.2 no.1, finale). Within a year of its publication Vadé had added a text and incorporated it into his opera *Suffisant*. On 1 October 1763 the *Mercure de France* announced an orchestral arrangement by Berton and a year later another appeared by L'Abbé *le fils*. Its popularity was kept alive with a variety of texts; it even became the tune for a revolutionary song, *Arbre heureux*. It appeared in innumerable collections of airs and instrumental method books, often with variations. Magny used the minuet with dance notation in his *Principes de choréographie* (1765).

Exaudet was highly regarded as a violinist and his works for violin contain both technical and formal innovations. Extensions of a 9th and 10th, double and triple stops, double trills and complex bowing patterns pervade his works. Each of the sonatas for solo violin op.3 is followed by an *intermède* in three movements for two violins.

JULIE ANNE SADIE

Excetre, J. (*fl* *c*1410). English composer. Identities have been suggested, but none is certain. One possibility is that he may be the J. Oxonia referred to in the motet *Sub Arturo plebs* (*see* ALANUS, JOHANNES) as active in Canterbury; one candidate is a monk active at Christ Church from the 1350s to the 1370s (Bowers, 1995, p.418), but the Old Hall composer's style is hard to reconcile with a composer active by the early 1370s. His Sanctus setting, however, uses a plainchant melody known only from a Canterbury source. His three known compositions are preserved in the Old Hall Manuscript, and the lowest voice of the Sanctus occurs also as a square in *GB-Lbl* Lansdowne 462. His Gloria and Credo (both notated in parts) make extensive use of duet sections, and the Gloria carries its plainchant melody in the upper voice. These and other forward-looking traits may place him among the younger composers of the original layer of the manuscript.

Exerea [Exereo]. *See* HURTADO DE XERES.

Eximeno (y Pujades), Antonio (*b* Valencia, 26 Sept 1729; *d* Rome, 9 June 1808). Spanish theorist. He studied grammar, rhetoric, philosophy and theology in the Jesuit colleges in Valencia and Zaragoza, and mathematics in Madrid. In 1745 he joined the Jesuit Order and was ordained priest in 1763. He became professor of rhetoric and poetry at the Seminario de Nobles de San Ignacio in Valencia and directed the pupils' theatrical performances, which were regarded as an important part of the Order's didactical method. In 1763 Eximeno was appointed professor of mathematics and general coordinator of the Nueva Academia de Artillería in Segovia, recently founded by Charles III to modernize the commanding ranks of the Spanish army. He was valued as an orator, scholar and organizer, and he maintained steady contact with the élite and the Spanish crown. In 1767, as a result of the expulsion of the Jesuit Order, he left Spain for Italy, where he became a secular priest. There he began the study of music, in the belief that his knowledge of mathematics would be helpful. In 1771 he announced the impending publication of his book *Dell'origine e delle regole della musica*. He requested, but failed to obtain, Padre Martini's approval. The book, which appeared in 1774, consists of a thorough condemnation of the mathematical and contrapuntal foundations of music. Eximeno derived his theory from his studies of Condillac, and proposed a system based on the 'natural' adaptation of melody to spoken language. He thought that the value of music should be determined by the good taste of the listener, and not by the critical examination of professionals. This theory provoked furious reactions, by Padre Martini among others, accusing Eximeno of ignorance. On the advice of his friends, Eximeno gave up writing on music, devoting himself to other subjects. However, *Dell'origine* was translated into Spanish in 1796 by F.A. Gutiérrez, director of the chapel of Toledo, and its publication again unleashed a polemic.

When Eximeno returned to Spain in 1798, he had the opportunity to compare Spanish musical life with Italian. This resulted in a new book that was published in 1872–3, *Las investigaciones músicas de Don Lazarillo Vizcardi*. Here he returned to the themes already treated in *Dell'origine*, now stating his ideas from the perspective of Spanish amateurs rather than that of the professional musician working within the traditions of church music. Although it is a work of fiction, the plot and the characters of this novel are taken from real life, and thus the book becomes an important source for sociological observations on Spanish musical taste during the decline of the Enlightenment. Eximeno's writings have wrongly been invoked by Spanish musical nationalists as precursors of their own defence of national song, whereas it was the extensive mathematical reasoning in the first book that

made Eximeno's work famous. The principal value of his writings lies in their consideration of music as an art of eloquence, and their regard for the musical amateur as superior to the professional musician.

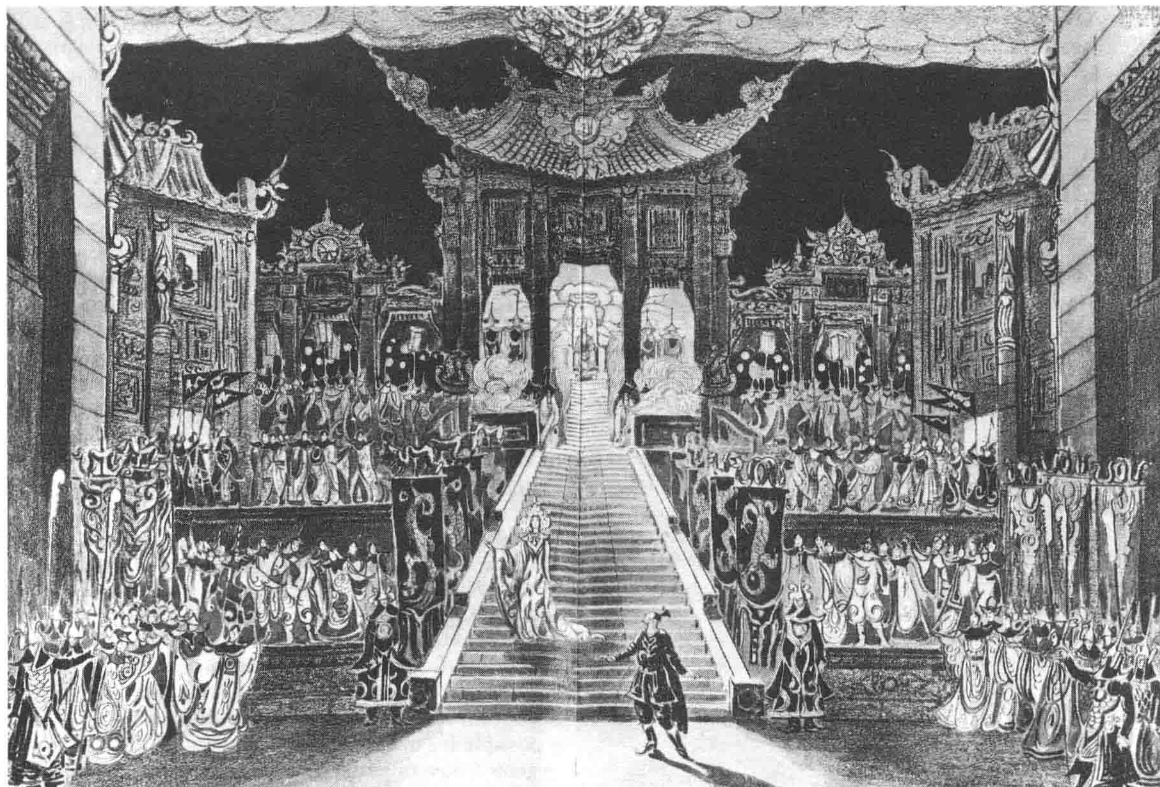
CARMEN RODRÍGUEZ SUSO

Exō. Sign paired with the *apesō* in Byzantine EKPHONETIC NOTATION.

Exoticism (Fr. *exotisme*; Ger. *Exotismus*; It. *esotismo*). The evocation of a place, people or social milieu that is (or is perceived to be) profoundly different from accepted local norms in its attitudes, customs and morals. Exoticizing tendencies can be found in many musical cultures; the present article deals primarily with instances in Western art (and to a lesser extent popular) music.

The exotic locale that is evoked may be relatively nearby (e.g. a rural French village, in an opera composed for Paris) or quite distant. It is usually suggested by a descriptive title (e.g. in an instrumental work), a sung text (e.g. in a song) or sets and costumes (e.g. in an opera). These extra-musical features are often reinforced by musical features typical of, or considered appropriate to, the people or group in question. In Western music of the past few centuries, the following have been widely used to suggest an exotic locale: modes and harmonies different from the familiar major and minor (such as pentatonic and other gapped scales); bare textures (unharmonized unisons or octaves, parallel 4ths or 5ths, drones and static harmonies); distinctive repeated rhythmic or melodic patterns (sometimes deriving from dances of the 'other' country or group); and unusual musical instruments (especially percussion) or performing techniques (e.g. pizzicato, double stops, vocal portamento).



Western art music, after having flirted occasionally with the exotic during the Middle Ages and Renaissance, began cultivating it actively in the 16th to early 18th centuries, for example in *musettes* and other rustic peasant dances (François Couperin), polonaises (Bach and Telemann), 'Turkish' and 'Hungarian' dances (in Hungarian lutebooks; *see* STYLE HONGROIS) and scenes featuring singing and dancing 'Chinese' people or New World 'savages' (the latter in Rameau's *Les Indes galantes*, 1735). Despite the title and other extra-musical signals, many of these are musically indistinguishable from non-exotic compositions of the day. Others use distinctive, even startling features, often concocted by the composer and having little to do with the cultures depicted (see Whaples, in Bellman, 1998). The late 18th century produced a flourishing of Turkish pieces (*see* TURCA, ALLA) based on Europeans' distant recollections, or published accounts of JANISSARY MUSIC.

In the early 19th century, perhaps as a result of the success of this 'Turkish' vogue or through the writings of Herder and other early folklorists, exotic dialects began to proliferate in Western music. This burgeoning interest in the exotic was related to a more general interest in bringing 'local colour' of all kinds into music (see Becker, 1976) or in exploiting 'characteristic styles', nowadays sometimes called musical *topoi* or 'topics' (e.g. pastoral, martial or 'ancient' traits; see Ratner, 1980). The growing interest in the musically exotic is also related to the trends of PROGRAMME MUSIC and musical NATIONALISM and to various non-musical phenomena from around the same time: paintings (e.g. of pensive Italian shepherd boys or of naked women in Middle Eastern harems), poems (Goethe and Marianne von Willemer's *West-östlicher Divan*, 1819, and Victor Hugo's *Les orientales*, 1829) and clothing and furniture imitating Chinese, Japanese, ancient Egyptian and other styles.

In the 19th century improved methods of transport and communications and increased colonization of the non-European world, notably by the British and French, made it possible for musicians and members of their audiences to get to know different peoples and cultures by travel (or by reading travellers' reports) and for performers from other cultures to perform in Western theatres and world's fairs: as early as 1838 dancers and musicians from India gave eight weeks of public performances in Paris (see Guest, 1986). By the 1870s numerous Europeans, including composers such as Saint-Saëns, were taking winter vacations in North Africa and the Middle East or even settling there. As a result of this increased contact, various exotic dances and musical styles had their moment of fashion, from the (purportedly) Scottish ECOSSAISE, Spanish BOLERO and Italian TARANTELLA to the Bohemian POLKA, Hungarian CSÁRDÁS, syncopated (African-influenced) rhythms from Louisiana and the Caribbean (as in the music of Gottschalk) and florid, drone-accompanied Middle Eastern melodic lines (as in works by Félicien David and Bizet).

The two most favoured exotic settings for western European operas and ballets throughout the 19th century and into the 20th were Southern Spain, as in Bizet's *Carmen* (see Parakilas, in Bellman, 1998), and what might be called the 'greater Middle East', extending from Morocco to Persia, as in Saint-Saëns's *Samson et Dalila* (*see* ORIENTALISM). Since about 1855 a recurrent international vogue for East Asia can be seen in operetta and musical comedy (Sullivan's *The Mikado*, Rodgers and Hammerstein's *The King and I*), opera (Puccini's *Madama Butterfly* and *Turandot* (see illustration), Britten's *Curlew River*, Adams's *Nixon in China*) and symphonic music (Mahler's *Das Lied von der Erde*).

In many of these and other exotic works, Western composers take the opportunity to use foreign (or invented) styles as a means of expanding and refreshing their own musical language (for example, Bizet's *Les pêcheurs de perles*, with Leïla's incantation, or Verdi's *Aida*, with its music for the ancient Egyptian priests and

Scene from Act 2 of the first production of Puccini's 'Turandot', La Scala, Milan, 1926: sketch by Mario Vellani-Marchi after the set design by Galileo Chini (Museo Teatrale alla Scala, Milan)

priestesses and for night-time by the Nile). Since the late 19th century this trend has become more pronounced, especially in the work of composers of a innovatory or modernist bent. Debussy, for instance, often used non-Western styles (including echoes of Indonesian gamelan music) in such a way as to minimize their specific geographical and cultural associations. Florid melodic lines and non-tonal modes (e.g. octatonic, from Russian music) permeate his works, often giving them a timeless quality. Analogous 'submerged' borrowings are the elements of Indian music (notably rhythmic formulae, often gleaned from ancient treatises) in Messiaen and Boulez and of sub-Saharan African drumming in Steve Reich (see Chou, 1971; Boulez, 1986; and Morris, 1995).

Not all 20th-century exoticism has been 'submerged'. Certain works of Ravel, Eichheim, Poulenc, Cowell, McPhee, Lou Harrison, Cage and Britten use gamelan style as an explicit signal; in Britten, gamelan style can also signal homosexual desire (see Brett, 1994, and Cooke, 1997). Light concert music (Ketèlbey's *In a Persian Market*), operetta (Lehár's *Das Land des Lächelns*, Romberg's *The Desert Song*), popular song (e.g. French *chansons coloniales*), Broadway (Rodgers and Hammerstein's *The King and I*) and film (e.g. imitations of Native American music; see Pisani, in Bellman, 1998) have continued to use a limited but familiar collection of exotic styles to add variety or set a scene. (Accompanists of silent-film music relied heavily on such anthologies as Rapée, 1924.) A related phenomenon was the wave of 'exotic' pop-orchestral numbers by Martin Denny and others in the 1950s and 60s (including Hawaiian, Middle Eastern, 'African safari' and other standard types) and also the occasional vocal number, for example by the singer of supposed 'Incan' music, Yma Sumac (see Juno and Vale, 1993–4).

Particularly interesting examples of 'consciously multicultural' musical composition come from composers with feet in two very different cultures, and who thus may arguably treat neither as, strictly, exotic, for example Paul Ben-Haim, Ernest Bloch, Halim el-Dabh, Aminollah Hossein, Alan Hovhaness, Alexina Louie, Toshiro Mayuzumi, Fela Sowande, Kevin Volans and Isang Yun.

An almost collage-like use of non-Western sound sources within a Western context has been facilitated in recent decades by the rapid development of tape technology and electronic sampling. An early instance, the *African Sanctus* (1972) of David Fanshawe, juxtaposed taped excerpts from African field recordings and a British chorus singing Fanshawe's settings of Catholic liturgy. Analogous appropriations in recent Western popular music raise complex ethical issues of ownership and commodification (see Feld, 1994 and 1995, and Zemp, 1995).

These developments form only a stage in a long and complex history of appropriation and 'borrowings' within American and European popular music. This process has often focussed on black Americans. In the 19th-century American minstrel show, for example, white performers in dark make-up presented highly stereotyped portrayals of slaves or former slaves through music, dance and parodistic dialect, revealing both distaste for and attraction to this 'other' group (see Lott, 1993, and Gubar, 1997). In the 1920s early jazz and other repertories with black American roots (for example dances such as the

shimmy) held a particularly exotic appeal for Europeans. Since about 1950 various distinctive black American genres (including rural blues, rhythm and blues, gospel and doo-wop) and their associated performing styles have exerted a formative influence on white American and British pop-music figures, including rock and roll performers, 'blue-eyed soul' artists (Laura Nyro, Hall and Oates) and 'folk' and rock musicians (Bob Dylan, Mick Jagger, Janis Joplin, Eric Clapton, Billy Joel). Many of these post-1950 white musicians and their listeners have thereby hinted at an identification with black Americans, whom they perceived as peculiarly vital and expressive (see Denisoff, 1971, and Marcus, 1975).

The exotic in popular music can allude to other groups. Jazz has found a favoured 'other' of its own in Caribbean and Brazilian music; sometimes the effect is exotic but superficial (as in costumed 'tropical' numbers by big bands of the 1940s), other times the result is a deeper creative synthesis (Dizzy Gillespie, Stan Getz). Geographically and stylistically more distant borrowings in the popular realm include Indian sitar playing in British and American rock songs in the 1960s (e.g. by the Beatles and the Kinks; see Bellman, 1998) and Japanese influences in the jazz-fusion music of the 1970s group Weather Report.

Conversely, certain musical styles or genres (such as rap) that are of primarily African-American origin have been adopted wholesale, or creatively reshaped according to local tastes, by pop musicians in distant regions, from francophone Africa to the southern Pacific (see Nettl, 1985, and Lipsitz, 1994). Some pop-music critics see such non-Western borrowings as weak and undistinctive echoes of the cultural expressions of America's minority population; others, as valid, varied and vibrant (see Mitchell, 1996).

RALPH P. LOCKE

Expert, (Isidore Norbert) Henry (*b* Bordeaux, 12 May 1863; *d* Tourrettes-sur-Loup, Alpes-Maritimes, 18 Aug 1952). French musicologist. Through Reyer, who overcame his parents' initial resistance, he was able to attend the Ecole de Musique Religieuse et Classique, founded by Niedermeyer, where his teachers included César Franck, and where he himself later taught (1902–5). From 1902 he also taught at the Ecole des Hautes Etudes Sociales; he was also employed at the Bibliothèque Ste Geneviève (1905–9), and then succeeded Weckerlin as second librarian of the Paris Conservatoire library. In 1920 he replaced Tiersot as senior librarian, a post he held until his retirement in 1933. During his period at the Ecole Niedermeyer he was first attracted to French music of the 15th and 16th centuries, to which he subsequently devoted himself unremittingly. In 1894 he began to publish his monumental series Les Maîtres Musiciens de la Renaissance Française; he was compelled to abandon it for lack of money in 1908, but was later (1924) able to resurrect it, under the title Monuments de la Musique Française au Temps de la Renaissance, through the generosity of an Alexandrian industrialist, Négib Sursock. This series, together with the later Florilège and Maîtres Anciens de la Musique Française, contains some of the earliest editions of vocal music by several important Renaissance composers, including Brumel, Goudimel, Janequin, Mouton and Lassus. Expert was a skilled choirmaster and not only edited music of the French Renaissance, but also performed it with his two choirs Les Chanteurs de la Renaissance and La Chanterie de la Renaissance, and he founded with E. Maury the Société d'Etudes Musicales et de Concerts Historiques. After his death the Association des Amis d'Henry Expert et de la Musique Française Ancienne was founded (1952) to bring out his unpublished works and to further the study of France's musical heritage.

MALCOLM TURNER/JEAN GRIBENSKI

Expilly, Gabriel (*b* c1630; *d* ?Paris, *c*1690). French bass viol player and composer. In 1664, following the death of Jean Veillot, he joined Du Mont, Gobert and Pierre Robert as one of the *sous-maîtres* of the royal chapel at Versailles. He held this post until 1668, when he became a bass viol player in the royal household; he resigned in 1689 (the warrant appointing his successor, Antoine Forqueray, is dated 31 December in that year). He wrote a large amount of religious music to Latin and French texts which was held in high esteem during the second half of the 17th century, but he seems to have published none of it except possibly *Les motets et élévations ... pour le quartier de juillet, aoust et septembre 1666*, of which only the texts, some of them by Pierre Perrin, survive.

GUY BOURLIGUEUX

Explicit (Lat., from *explicitus* [*est liber*]: '[the book is] unrolled'). The concluding words of a text. For medieval theoretical writings the *explicit*, together with the INCIPIT, is essential for the purposes of identification.

Exposed fifths, exposed octaves. Hidden 5ths or octaves occurring between the outer parts of a contrapuntal structure. *See* HIDDEN FIFTHS, HIDDEN OCTAVES.

Exposition. In a composition or movement, the section at or near the beginning during which one or more themes on which the rest of the movement or piece is to be based are first presented according to a particular plan. The term has two principal uses, in fugue and in sonata form.

The exposition of a fugue is the opening section in which the voices enter one by one, each stating the principal theme, or SUBJECT, of the fugue, followed by the

COUNTERSUBJECT if present. Normally all voices after the first wait to enter until the preceding voice has completed its statement of the subject. The initial statement of the subject is most often unaccompanied, and the second entry, called the ANSWER, is normally at the interval of the fourth or fifth and may be slightly altered to preserve the tonality of the piece. (For further detail *see* FUGUE, §1). In German the word *Durchführung* is used to refer to all groups of thematic entries in the body of the fugue, after the opening *Exposition*. Because there is no equivalent word so used in English, English speakers sometimes, but by no means universally, apply the word 'exposition' to these later thematic groups as well.

In sonata form the exposition is the first part of the movement (preceded in some cases by an introduction), in which the main thematic material is presented. It opens in the tonic and invariably concludes in a new key, by convention the dominant in major-key movements and the relative major in minor-key ones. The exposition is followed by a DEVELOPMENT, in which the thematic material is manipulated and the tonality moved further afield from tonic, and the RECAPITULATION, which signals a return to tonic and a restatement, often with reinterpretation, of the themes. *See* SONATA FORM, §3(i)–(iii).

PAUL WALKER

Expression. In its simplest sense, the term 'expression' is applied to those elements of a musical performance that depend on personal response and that vary between different interpretations. In this sense a piano teacher may enjoin a pupil to 'put in the expression', i.e. to play a piece with a certain articulation, tempo and phrasing. It is not clear how this use of the term relates to the concept that occurs in music criticism (as when a piece of music is said to express some emotion, outlook or idea). What does it mean to say of a piece of music that it has expression, or that it expresses, or is expressive of a certain state of mind? The question is a philosophical one, and reflects the profound uncertainty in contemporary aesthetics over the most important concept bequeathed to it by the Romantic movement.

For expression marks, *see* TEMPO AND EXPRESSION MARKS

I. History of the concept of expression. II. The nature of musical expression.

I. History of the concept of expression

1. Before 1800. 2. After 1800.

1. BEFORE 1800. The Aristotelian doctrine of art as imitation of nature was fundamental to both artistic creation and evaluation until the late 18th century. Although the objects of imitation and its exactitude varied with the artistic media and different periods, the mimetic view of art long maintained a position as aesthetic dogma. Its modification and subsequent rejection for an expressive theory of art were caused by changes in ideas concerning both the relationship of nature to art and the nature of art itself.

Elaborating on the mimetic theory, the doctrine of the Affections related music to rhetoric in both its means and its end (*see* RHETORIC AND MUSIC, §1, 4, and AFFECTS, THEORY OF THE). It was thought that music could imitate both animate and inanimate nature, the inflections of speech, and the emotions. This imitation was accomplished by rhetorical method, and its aim was to arouse the listener. Such ideas are found in the *Réflexions critiques sur la poésie et sur la peinture* (1719) of Jean Dubos (1670–1742). He regarded art as a means of arousing moderate passions in men through imitation and thereby keeping them from boredom. In music, this could be accomplished by either a literal imitation of nature, such as tone-painting, or a higher type reflecting man's inner nature, his passions. For the latter 'one must ... know how to copy nature without seeing it'.

In Dubos' theory, imitation was merely a means to an end; a few decades later, however, Charles Batteux (1713–80) declared it to be the very purpose of art. In his *Les beaux-arts réduits à un même principe* (1746), he asserted that the one principle common to the arts, and indeed their goal, was the imitation of nature. Relying heavily on Aristotle, Batteux advocated copying not mere reality but rather 'la belle nature', a composite of perfections which enabled one to see the ideal behind nature.

For the next few decades, Batteux's system was virtually unchallenged as the basis for French aesthetics. In England, however, some dissenting voices were heard. Charles Avison in his *Essay on Musical Expression* (1752) saw the perfection of a composition as arising from melody, harmony and expression, which, when combined, had 'the Power of exciting all the most agreeable Passions of the Soul'. Imitation was no longer seen as the goal of music. Indeed, in his essay *On Poetry and Music, as they Affect the Mind* (1776), James Beattie (1735–1803) declared that with no disrespect to Aristotle nor to music, he 'would strike it off the list of imitative arts'. The pleasure derived from music resulted not from its resemblance to nature, but from its power to affect the listener. Thus 'if we compare Imitation with Expression, the superiority of the latter will be evident'.

William Jones (1746–94) made the definitive distinction at the conclusion of his 'Essay on the Arts, Commonly Called Imitative' (1772) (*The Works of Sir William Jones*, viii, 1807): 'it will appear, that the finest parts of poetry, musick, and painting, are expressive of the *passions*, and operate on our minds by *sympathy*; that the inferior parts of them are *descriptive* of natural *objects*, and affect us chiefly *by substitution*'. Expression of the passions was now the most worthwhile aspect of art, while imitation was but a lower, technical skill. While Dubos believed that music could imitate the passions – that is, create in sound something resembling them – Jones credited music only with being expressive of the passions. There was intimated here a new function for the artist: no longer did he merely select from reality, seen or unseen; he now put into his work an element of interpretation. It was but a short step from such 'interpretation' to romantic subjectivity.

In France, the imitative view of art persisted, but its deficiencies came to be acknowledged. In his essay 'De l'expression en musique' (*Mercure de France*, 1771; written 1759), Abbé André Morellet (1727–1819) outlined an aesthetic philosophy directly descended from that of Batteux. Yet there was a recognition of the limitations of imitation, at least with regard to music. While acknowledging weaknesses in the mimetic theory, Morellet could not bring himself to abandon it. His observations, however, served as the catalyst to just such a renunciation.

Michel de Chabanon treated the problem of imitation most thoroughly in his *De la musique considérée en elle-même et dans ses rapports avec la parole, les langues, la poésie et le théâtre* (1785). He believed it was a fallacy

that the arts, born of nature, devoted all their powers to 'retracing her immortal image'. He concluded that music 'does not imitate, and does not attempt to imitate'. When music did seek to imitate, it was unconvincing even in 'reproducing' the sounds of nature, such as birdsong. Unlike the natural model, the imitation was bound by both the laws of its art and the limitations of its medium. Imitations of outer reality were unsatisfactory because sounds, which were directed to the ear, had to detour by way of the mind and its concepts. In addition, the musical devices used for imitation were so unspecific that they could be used for a variety of interpretations, all equally valid. It was the unavoidable deviation from reality that was central to Chabanon's argument. Attempts at imitation of inner reality, the emotions, were according to Chabanon equally futile. In denying that music was a language of the emotions, he rejected an entire philosophy based on the alliance of music and rhetoric. He believed that music was neither a derivative nor an imitation of speech, but a language in itself, independent of all others.

Despite its independence of signification, however, music could affect the emotions. This phenomenon Chabanon explained by a very subtle and original theory of analogy:

> The melody which we shall call *tender* perhaps does not really place us in the same condition of body and of spirit in which we would be in actually feeling tenderly for a woman, a father, or a friend. But between these two conditions, the one actual, the other musical ... the analogy is such, that the mind agrees to take the one for the other.

In the philosophies of Dubos and Batteux, the artistic imitation of passion aroused in the listener diluted versions of the same emotion. Jones, who did not subscribe to the mimetic theory, believed that the arts affected us by means of sympathy. The listener's reaction was here a 'feeling with' and would seem to imply an element of volition; this was response rather than mere reaction, and the emotion need not be weaker than the artistic stimulus. Nevertheless, as in the earlier theories, the feeling of the listener was the same as that portrayed by the music; in a sense, the imitative process was merely relocated in the psyche of the listener.

Chabanon's explanation by analogy, however, broke with even this vestige of imitation. The sensations of sound created aesthetic feelings in the listener, and these he could compare to emotional feelings. But, first, they had no relationship in terms of cause and effect; second, they were different in nature, the one aesthetic, the other affective; and third, they were separate from each other. The relationship was that of an analogy and nothing more.

The aesthetic feeling was a sensation more vague and comprehensive than specific sentiments. This was, in a way, a theory of meta-feelings, for to each aesthetic sensation could be joined many different particular emotions. Illustrating this versatility of music, Chabanon cited the duo from Grétry's opera *Silvain* (1770), in which the same melody served texts of widely differing character. Thus the aesthetic sensation, conveying a general idea, was a kind of synthesis that could represent emotional contraries. The content of music was no longer an imitative interpretation of reality, but transcended it and was itself capable of many different interpretations. With this view, the relationship between art and the world was, in a way, inverted; the realm of art was now infinite in its possibilities compared with the limited world of appearances which it formerly had endeavoured to imitate. Chabanon's conception of music as independent of all signification and imitation was basic to much subsequent thought. Ideas such as his led to the idealistic view of music that developed in the 19th century.

The economist Adam Smith (1723–90) concerned himself not only with the wealth of nations but also with the problem of mimesis. In an essay entitled 'Of the Nature of that Imitation which Takes Place in What are Called the Imitative Arts' (*Essays on Philosophical Subjects*, 1795), he expressed ideas often strikingly parallel to those of Chabanon, although the theory of analogy was missing. He believed that 'whatever we feel from instrumental Music is an original, and not a sympathetic feeling: it is our own gaiety, sedateness, or melancholy: not the reflected disposition of another person'.

See also PHILOSOPHY OF MUSIC, §§II and III.

2. AFTER 1800. A fundamental change in the status of music in relation to the other arts occurred in the years around 1800, the emergence of a new concept of musical expression coinciding with the rise of autonomous instrumental music as a serious art form. Whereas as late as 1790 instrumental music was considered by Kant (*Kritik der Urteilskraft*) as a mere divertissement of no serious importance, it now came to be regarded as the most elevated of the arts, capable of expressing feelings and ideas beyond the limits of rational knowledge. Music's new status thus constituted a complete inversion of its lowly ranking among the arts during the Enlightenment period. What had previously been seen as a disadvantage – that music without words could not convey definite meanings – now came to be perceived as its greatest advantage over all other forms of art.

W.H. Wackenroder, in his *Phantasien über die Kunst, für Freunde der Kunst* (1799), played a key role in the shaping of this new sensibility, asserting in these highly romantic and fragmented texts that musical material itself is endowed with mysterious expressive potential, and that 'between the individual, mathematical tonal relationships and the individual fibres of the human heart an inexplicable sympathy has revealed itself, through which the musical art has become a comprehensive and flexible mechanism for the portrayal of human emotions'. This enthusiasm for heightened emotional states, which used music as the vehicle for rapture, as an art expressive of infinite and insatiable longing and indefinable feelings leading to ecstatic mystical revelation, is seen in the writings of numerous artists, poets, composers and critics of the period, notably in Herder's *Kalligone* (1800), in E.T.A. Hoffmann's novels, stories and music criticism, in the music journalism of Weber, Berlioz and Schumann, and in the novels of Jean Paul. Music was elevated to an art-religion, and was seen as the ultimate language of the emotions.

Among the most notable German Idealist philosophers of the period who attempted to incorporate the concept of musical expression into a large systematic philosophy are F.W.F. SCHELLING, GEORG WILHELM FRIEDRICH HEGEL and ARTHUR SCHOPENHAUER. Hegel, in *Vorlesungen über die Ästhetik* (1835, from his lecture courses given between 1820 and 1826), regarded music as an aspect of the self-realization of *Geist* ('spirit', 'mind'), and, because of its intimate relation to 'inwardness' (*Innerlichkeit*), as the expression of the whole range of emotions that surround

the soul. But at the same time, Hegel favoured vocal music and, like Kant, remained sceptical about instrumental music, seeing a certain futility in its retreat into 'sounding inwardness'. Schopenhauer, perhaps the most important and influential figure in the mid-19th century aesthetics of expression, took a very different position. In *Die Welt als Wille und Vorstellung* (1818) he argued that music is the most direct representation or expression of the Will, and is the art form most immediately capable of conveying this revelatory power and of freeing us from the force of the Will. His influence, particularly through the second edition (1844) of *Die Welt als Wille und Vorstellung*, was decisive for Richard Wagner, and is found both in Wagner's music dramas (most notably *Tristan und Isolde*) and in many of his theoretical writings on music, in particular the essay *Beethoven* (1870). Wagner's writings of the period 1849–51 (i.e. before his discovery of Schopenhauer in 1854) are themselves important landmarks in the aesthetics of expression – for example, in their anchoring of music's expressivity and articulation to the physical and gestural dimension of the drama itself in ways that are distinctly positivistic in character. In the later writings, however, the influence of Schopenhauer clearly predominates, notably in Wagner's statement that 'music does not present ideas taken from everyday phenomena, but is rather itself a comprehensive idea of the world, automatically including drama'. The position of FRIEDRICH NIETZSCHE relates both to Schopenhauer and to Wagner. In *Die Geburt der Tragödie aus dem Geiste der Musik* (1872), Nietzsche argued that the ecstatic, 'Dionysian' aspect of music is held in balance by the ordering, structuring, reflective 'Apollonian' aspect, and that the expressive power of music, and thereby its value, emerges from the tension between these two extremes. The paradigm for this theory of expression was, of course, Wagner's music.

There is a sense in which the theories of expression of Schopenhauer and Wagner, and to an extent of Nietzsche, come full circle, so turning into a version of the theory of imitation. But what is being imitated or represented now is not the outer world of nature. Instead it is inner nature, the force of the Will itself which, through this transfiguring power of music, gives immediate access to the world of Ideas behind the world of appearance, in a distinctly Platonic sense, but also in the sense of a form of 'cognition without concepts'. This extreme version of the theory of expression as mimesis of the inner world of feelings also tips over into what is sometimes mistakenly regarded as its opposite, formalism. Eduard Hanslick offered a critique of the theory of expression in music that itself led to a position in some ways reminiscent of that of Batteux in the 18th century, in that the form of the work 'expresses' nothing but itself. In *Vom Musikalisch-Schönen* (1854), Hanslick set out to refute the expression theory of music, arguing that music traces the dynamic motion of a feeling, and that this is not the same as expressing an indefinite emotion, for to represent an indefinite emotion is a contradiction in terms. The first problem of music, therefore, is to give form to such dynamic motion. Thus he concluded that music expresses neither definite nor indefinite emotions; if it expresses anything it is the shaping of the musical idea, in purely musical terms. Because this is a dynamic process, it appears also to evoke the dynamic character of the emotions.

The influence, direct and indirect, of Schopenhauer's and Hanslick's theories in the later 19th and early 20th centuries was profound. It is seen in cross-fertilizations across the arts at the end of the 19th century. Symbolism can be understood as an exteme refinement either of the expression aesthetic or of the formalist, autonomy aesthetic, but is probably closest to Hanslick's notion of music as the dynamic shaping of processes that are analogous to the shifting experience and elusive character of the emotions. Yet at the same time Symbolism in the literary and visual arts and its equivalent in music, Impressionism, owe much to Schopenhauer's influence, particularly as filtered through Wagner. Early 20th-century EXPRESSIONISM can be seen as the expression aesthetic taken to its ultimate extreme. But here too there is a paradoxical interaction of apparent opposites. On the one hand, Expressionism is the end point of Schopenhauer's notion of music as the direct expression of the Will, by way of the powerful influence of the Freudian concept of the unconscious (itself influenced by Freud's reading of Schopenhauer). 'Expression' in Expressionism is no longer the stylized representation of the emotions, or even the idea of the expression of the individual composer's emotions; instead, it is regarded as the direct expression of the overwhelming power of the unconscious. On the other hand, Expressionism itself was the extreme expression of *Innerlichkeit*, the withdrawal into the self (albeit a self in the process of disintegration). This withdrawal also indicated a move towards extreme abstraction and non-representation, and to this extent the influence of Hanslick can still be sensed.

Following the explosive culmination of the expression aesthetic in the Expressionist movement, the 20th century was largely dominated by an anti-expression aesthetic, epitomized in Stravinsky's aggressive rejection of Wagner (*Poétique musicale*, 1942) and in the Darmstadt School composers' rejection of the Expressionist residues in the music of Schoenberg and the Second Viennese School. The notion that music is about the expression of emotions nevertheless retains a powerful hold on the music-loving public, and the concept continues to provide a focal point for musical and philosophical aesthetics. The writings of Meyer, Cooke and Adorno represent three very different ways in which the theory of expression continued to be addressed in the second half of the 20th century. Each of these theories is also a theory of musical meaning and of music's similarity to language.

In Emotion and Meaning in Music (1956) Meyer set out a psychological theory of expression based on the idea of degrees of tonal tension and release, proposing that expression is the result of 'disturbances in the goal-oriented tendencies of a musical impulse' within a world of stylistic and syntactical probability. Meyer's theory also addressed the relation of uncertainty, instability and incompleteness to notions of teleology, syntactical probability and the expectation or anticipation of completion, of gaps being filled. Thus, as well as offering a theory of expression, Meyer in effect also put forward a theory of form. Cooke, in *The Language of Music* (1959), made an appealing if somewhat naive argument that it is possible to construct a lexicon of the expressive gestures of music's vocabulary. He itemized the range of 'elements of musical expression' as a system of tonal tensions, emphasizing that these can be understood both melodically and harmonically. For example, the ascending pattern

5–1–(2)–3 with a major 3rd stresses 'joy pure and simple by aiming at the major third', whereas the same pattern with a minor 3rd 'expresses pure tragedy by aiming at the minor third'. He argued that such musical gestures are valid for all time, outside any historical or social context, and claimed a natural correspondence between musical 'figures' and feeling. In a sense, therefore, Cooke's theory of musical expression is also a mimetic theory. Adorno, in contrast, firmly contextualized the concept of expression, and proposed that the inscrutable character of autonomous musical works is the result of the contradiction between the logicality and rationality of musical structures and the apparent irrationality of expression. Adorno's position clearly owes something to Hanslick as well as to Hegel. He argued in *Ästhetische Theorie* (1970) that the previously mimetic, gestural and magical aspects of art are retained residually in the material of the work of art, but are now integrated into the work's 'law of form' through the powerful historical tendency towards rationalization. These opposing aspects interact, and 'expression' is seen as the result of tension between them, as what Adorno called an 'interference phenomenon'. In this way, Adorno brought together mimetic and formalist theories to construct a Modernist theory of expression.

II. The nature of musical expression

1. Understanding of the term 'expression'. 2. The impossibility of rules. 3. Idealism. 4. Expression, understanding, emotion. 5. Criticism, analysis. 6. Language, reference, information theory. 7. Conclusion.

1. UNDERSTANDING OF THE TERM 'EXPRESSION'. In every age it has been accepted that there is some relation between music and the passions – a relation, say, of instruction (Plato), of imitation (Aristotle), of arousal (Descartes, Mersenne), of 'fusion' (Santayana) or simply of some mysterious 'correspondence' about which nothing further can be said (St Augustine). It was from a sense of the emotional power of music that the Greek philosophers debated its political significance, that the Council of Trent considered how to subdue its influence in the liturgy, and that Calvin warned against its appeal in his preface to the Geneva Psalter. Yet the relation between music and emotion has remained obscure, and even when, partly under the influence of Rousseau and Diderot, the term 'expression' began to be preferred as the proper name for this relation, philosophers remained baffled as to its detailed character.

'Expression' must be distinguished from 'evocation'. To say that a piece of music expresses melancholy is not to say that it evokes (or arouses) melancholy. To describe a piece of music as expressive of melancholy is to give a reason for listening to it; to describe it as arousing or evoking melancholy is to give a reason for avoiding it. Some kinds of popular music, being musically blank, express nothing, but still arouse melancholy. Expression, where it exists, is integral to the aesthetic character of a piece of music, and must not be confused with any accidental relation to the listener. For similar reasons 'expression' must not be confused with 'association', despite the strong arguments for the confusion given by the 18th-century followers of John Locke (among them Alexander Malcolm, J.F. Lampe and Joseph Addison).

It may be said of a performance that a certain passage is played 'with expression'. When it is said of a piece of music (say, of Schubert's *Erlkönig*) that it has 'expression', it seems natural to ask: what does it express? There is thus a presumption that expression in music is transitive: to have expression is to express something (in this case a feeling of terror). The piano teacher (or the critic), however, seems to be talking of expression in some intransitive sense, that is, in a sense which forbids the performer's question: 'what am I expected to express?'. That there are these two senses of the term 'expression' is made clear by the example of a face: a face may bear an expression of anguish, grief etc., or simply the 'particular expression' visible in its features. Two faces with an expression of anger would, in the transitive sense, have the same expression, since they express the same thing; but in another sense they might have a quite different expression, and in this intransitive sense it is impossible to give rules of expression. It is impossible to say which physical features in a face are responsible for its expression. If any feature is responsible then all are.

2. THE IMPOSSIBILITY OF RULES. This feature of expression – that similarities in expression do not follow physical similarities in any easily specifiable way – can also be observed as a feature of 'expression' in music. Consider ex.1, from the last movement of Beethoven's Ninth

Ex.1

Ex.2

f *sf*

etc

(b) *8va*

cresc.

etc

Symphony. Often one may hear the fourth and fifth quoted bars hummed or whistled as on the lower staff: a very small change, but one that destroys the expression of the melody – its character (for example, as an answer to the passionate voices that had preceded it) is lost in such a rendering. Conversely, there may be similarities in expression between passages radically different in their physical character as sound: compare, for example, the passage from the 'Eroica' Symphony (ex.2*a*) with that from Stravinsky's Symphony in Three Movements (ex.2*b*).

One fact might seem to become apparent from such examples: that there are no definite rules of expression in music, no rules of the form 'if the music has features A, B, C then it will be expressive'. For to be expressive is to have a certain character, and that character is not determined by any one physical feature of the music but rather by the totality of its features operating together. It is therefore difficult, perhaps impossible, to say, in advance of the particular case, which features can be altered with impunity and which are vital to the effect. Sometimes the opposite seems true. Consider, for example, the 'Todesklage' from Wagner's *Ring* (ex.3*a*). This theme contains a tense, tragic and yet questioning expression. One might wish to attribute that expression to the accumulated suspensions, together with the final chord of the 7th which gives to the whole an air of incompleteness. And it might seem that in so diagnosing the effect one has made reference to rules: suspensions introduce tension, 7ths uncertainty, and so on. Remove the suspensions, as in ex.3*b*, and the tension goes. Alter the final cadence and we have (changing the rhythm slightly) the serene introduction to Mendelssohn's 'Scottish' Symphony (ex.3*c*). Could one really have predicted that expressive transformation outside the context provided by Wagner's melody? And could one have known, in advance of the particular case, that, in removing Wagner's suspensions, one would arrive at an effect of serenity rather than insipidity, or that in adding suspensions to Mendelssohn's theme one would arrive at an effect of tragic tension rather than, say, cluttered portentousness? Clearly not. By all the 'rules' of composition a descending scale, for example, ought not to wear any particular expression; it ought to be an emotional blank, as in the banal theme from Beethoven's Trio in E♭ op.1 no.1 (ex.4*a*). But consider the slow descent of an E minor scale (changing to A minor) in the third movement of Bruckner's Eighth Symphony (ex.4*b*). Here, because of the context provided by the cello theme that precedes the passage, the effect is of sublime tranquillity. A detail that could never have acquired expression because of any rule gains it from its context.

3. IDEALISM. Insistence on the distinction between transitive and intransitive notions of expression naturally risks the question: why use the term 'expression' if there is not something important in common between them? This raises one of the most plausible of the Romantic theories of art, that of the Idealist Hegel. For Hegel, art could only be expression, on account of its character as an embodiment of the human mind. Art derives aesthetic, and indeed moral, significance from its relation to the

vn

'Idea', from the fact that it can be understood only as a characteristically human product, as something that gives embodiment to mental life and conceptions. In some such way, Hegel might have argued, the expression on a face is understood, and even if the face is not associated with any particular state of mind, one is still justified in describing it as having an expression. For it must be treated as a representation of mental possibilities: there is no other way of seeing it, and the idea of studying the geometry of a face and disregarding its character as a revelation of mental life is intrinsically absurd.

Such a view helps to explain how it is that, even when referring to an expression in the intransitive sense, one may still go on to describe that expression in mental terms without implying the existence of any particular state of mind. For example, a face might be said to have a sad or a puzzled expression without any implication that it expresses sadness or puzzlement. Similarly, even in the case of the critic's or the teacher's concept of expression – which is clearly intransitive in the sense we have been considering – one may go on to describe the expression, saying, for example, that a particular passage should be given a mysterious or a melancholy or a wistful air.

All that seems to suggest a close connection between the transitive and the intransitive notions of expression. And indeed it has been characteristic of the Idealist tradition in philosophy that it has attempted to run together the transitive and the intransitive concepts, claiming, for example, that even if art does express feeling, the feeling expressed can be defined only through the expression, so that feeling and expression are inseparable and, being inseparable, incapable of being joined by any contingent relation. If there were such a relation, then expression would be governed by rules, rules which state how to express feeling A, how to express feeling B and so on; and that, as we have seen, contradicts one of our deepest intuitions about the nature of art. The argument belongs to the Italian Idealist Benedetto Croce. It was borrowed by the English philosopher R.G. Collingwood in formulating his celebrated distinction between art and craft, according to which craft is a means to an end and must therefore be conducted according to the rules laid down by that end, whereas art is not a means but an end in itself, governed by no external purpose. But since art is also, for Collingwood, essentially expression, expression cannot be construed as the giving of form to separately identifiable feelings or ideas. The feeling must reside in the form itself and be obtainable exclusively in that form. If it were otherwise, art would be simply another kind of craft, the craft of giving expression to pre-existing and independently identifiable states of mind.

It was Wittgenstein who first pointed to the distinction between the transitive and intransitive senses of the term 'expression'. Obscurely, however, an awareness of that distinction underlay much of the 19th-century dissatisfaction with Romantic aesthetics. For the Romantic theory – according to which music was an expression of something, of the Idea (Hegel), of the Will (Schopenhauer), of 'intuitions' (Croce) or of feelings (Collingwood) – seems to try to have it both ways, saying that there is indeed something expressed by music, something which would perhaps explain the value of music, and yet, at the same time, refusing to allow that this thing could be identified except in terms of the particular piece of music that embodies it. In other words, it seems to want artistic expression to be both transitive and intransitive at once. In doing so it comes close to self-contradiction. In reaction to the Romantic theory Edmund Gurney attempted to re-establish the view of musical expression as essentially intransitive, and indeed as equivalent to the critic's or the teacher's concept. He wrote (1880, p.313):

> we often call music which stirs us more *expressive* than music which does not; and we call great music *significant*, or talk of its *import*, in contrast to poor music, which seems meaningless and insignificant; without being able, or dreaming we are able to connect these general terms with anything expressed or signified.

Gurney went on to emphasize the teacher's concept of expression, arguing that one does not look for passion in music in order to know how it is to be played; an understanding of expression is constituted by a desire to play in this way or that way, and it is that which must be taught. Such a thought comes close to a view that may (with some hesitation) be attributed to Wittgenstein: the view that a theory of musical expression is primarily a theory of the understanding and appreciation of expressive music.

4. Expression, understanding, emotion. It seems wrong to imagine that one could give an account of meaning in language while saying nothing about understanding language. Similarly, to follow Wittgenstein, it would be wrong to give a theory of expression in music which was not a theory of understanding musical expression; and that requires a total theory of understanding music. There is an essential connection between grasping the expression of a passage and understanding the passage, and, in a performer, 'understanding' means 'playing with understanding'. A consideration of what that involves entails, for example, considering what it would be to play the violin theme of Bach's aria 'Erbarme dich' (ex.5) with understanding. A player who understands puts the right emphasis on the slide at the beginning of bar 1, lingers just slightly on the D, perhaps leaves a breath at the end of the second bar. Such a player does not necessarily possess knowledge of some emotion, intention or idea that the music is purporting to communicate. The player's knowledge is essentially a practical knowledge, not a species of theoretical insight. A grasp of expression is no more than part of the complex activity of understanding music, an activity that has as its aim not the insight into particular states of mind but rather the performance and enjoyment of music.

Ex.5

Such a view of musical expression accommodates readily the sense, which many people have, that there is never only one way of describing musical expression, that every piece is open to new interpretation, and that no critic can fix for all time the meaning or expressive value of a particular musical work. For there will be, on this theory, as many 'expressions' to a piece of music as there are ways of understanding it, and just as a present-day way of understanding the Bach example need in no way correspond to the way in which it was understood by his contemporaries, so also may the 'expression' that the music wears today differ from that which was familiar to listeners in early 18th-century Germany.

However, despite all the scepticism that has been heaped on Romantic aesthetics, the popular view remains essentially that of Rousseau and Diderot: music evokes emotion because it expresses emotion. Music is the middle term in an act of emotional communication, and it is by virtue of that role that music acquires its value. Nor is this view – which involves a commitment to a transitive theory of expression – the exclusive property of Romanticism. It was foreshadowed, for example, in the *Musurgia* of Athanasius Kircher (1650), and to a certain extent even earlier in the works of Zarlino and Galilei. Moreover, while the influence of French 18th-century thought is certainly apparent in Romantic music, it could hardly be said that any true break in the actual practice of composition was brought about by these theories. Whatever might provoke descriptions of Beethoven's late quartets in terms of the expression of feeling must surely provoke similar descriptions of the music of Josquin, Victoria or Dowland. And there is ample evidence that in all ages composers themselves have wished to characterize their music in mental and emotional terms. This we can see, for example, in the titles given by Lully, Couperin and Rameau to their keyboard pieces, or in the letters of Mozart and Beethoven; even Bach is said to have admired Couperin for the 'voluptuous melancholy' of his themes. Of course, there have been exceptions. The most notable was that great devotee of the 'classical', Stravinsky, who regarded the treatment of music as expression as nothing short of a conspiracy to subvert true musical values by measuring music against a standard extrinsic to its aims and inspiration. But Stravinsky, eloquent as he was, did not succeed in establishing his view of the total autonomy of musical practice, and his severe 'classicism' sorts ill with the deeply expressionist tendency of 18th-century aesthetics, the aesthetics of that period when music, according to Stravinsky, existed in its purest and least adulterated form.

5. CRITICISM, ANALYSIS. Can the popular view answer the challenge in §4? That is, can it be incorporated into an acceptable theory of musical understanding? If not, then it will lead to a concept of expression that plays no part in the appreciation or evaluation of music, a concept that is musically irrelevant.

In fact, musical criticism may provide an understanding of music and yet never mention expression. Consider, for example, the criticism of Tovey, the thematic analysis of Réti, or the structural analysis of Schenker and his school. Such criticism and analysis leads to understanding by drawing attention to musical relations, thematic similarities, or, in the case of Schenker, a 'deep structure' which allegedly generates the musical surface. It is true that structural criticism may also refer to the 'mood' of a piece; and it is also true that, since the work of Tovey and (more recently) Charles Rosen, critics will describe the structural axioms of Classical music in 'dramatic' terms. However, each of those ideas seems rooted in a firmly intransitive notion of musical significance. The 'mood' and the 'drama' are there, in the notes, and cannot be described in terms extraneous to the musical movement. Among the works of Romantic criticism, the most valuable passages are not those where the critic attempts to diagnose an emotional state but those where he reflects on musical structure. And surprisingly, not only in E.T.A. Hoffmann, but even in Wagner, emotional diagnosis is only a part, and often a very small part, of the critical description.

But the argument is inconclusive. There has been important musical criticism of a wholly expressionist nature: perhaps Kierkegaard's long essay on *Don Giovanni* provides the most striking example. Moreover, it could be that the relative silence of critics on the subject of emotion merely reflects the truth of another Romantic dogma – that emotions are in any case difficult to describe in words, and are more properly the subject of manifestation than analysis.

There are further difficulties for the popular view. The first, though not serious, deserves mention on account of its frequent occurrence in the literature. To speak of music as expressing states of mind might seem to imply that those states of mind must be attributed to the composer, in which case the judgment becomes open to refutation from the facts of the composer's life, facts that would normally be considered irrelevant to an understanding of the music. (Thus it would be wrong to describe the first movement of Mozart's Symphony no.41 as an expression of joy when we come to learn how unhappy the composer was at the time of writing it.) Such an objection would be misguided. Dramatic poetry, for example, is bound to be expressive of emotion in some transitive sense, and yet it would be absurd to say that it expresses the emotions of the poet. We cannot think that Shakespeare shared the sentiments of Iago or Racine those of Phaedra. In dramatic poetry the words express the imagined feelings of an imaginary character, and the poet attempts to create for his audience both the feeling and the personality who suffers it. Why should the same not be true of music?

A more serious objection may be found among the many relevant points raised by Hanslick. This objection asks: what are the objects of the feelings expressed by music? Most forms of art said to express emotion are also representational: they describe, depict or refer to the world. It is indeed difficult to see how emotions can be expressed in the absence of representation. For every emotion requires an object: fear is fear of something, anger is anger about something, and so on. Any attempt to distinguish emotions one from another must be in terms of their characteristic objects and in terms of the thoughts that define those objects. It would seem to follow that an artistic medium which, like music, can neither represent objects nor convey specific thoughts about them is logically debarred from expressing emotion. Such was Hanslick's argument, and it is marked, like the rest of his short but influential treatise, by a philosophical seriousness and competence that have few rivals in the field of musical aesthetics. It is the inability of music to describe and represent the world – its narrative incompetence, as it were – that has most of all given rise to misgivings over the concept of expression in music, misgivings seldom felt in the discussion of poetry or representational art. For, when the objection is made, that the feelings conveyed by music can never be put into words, and so no serious agreement can ever be reached as to their quality or nature, the point is really that, since nothing can be said about the objects of musical feeling, nothing can be said about the feeling itself. To say, as Mendelssohn did (letter of 5 October 1842), that musical emotion is indescribable because it is too precise for words, is not an answer to Hanslick's objection. Precision of emotion is always and necessarily consequent upon precision of thought. In

other words, a precise emotion requires a precise situation, and that in turn requires a precise representation. Moreover, the complementary view – espoused by Mahler when he asserted that the need to express himself in music, rather than in words, came only when indefinable emotions made themselves felt – risks once again a return to the intransitive notion of expression: how can one distinguish music's having an indefinable 'expression' from its being mysteriously related to an indefinable thing?

6. LANGUAGE, REFERENCE, INFORMATION THEORY. It is perhaps an awareness of this last difficulty that has led musical theorists to seek for ways of construing music as a vehicle of discursive thought. The most popular suggestion has been to interpret music as a language. Among those to have attempted such an interpretation is Deryck Cooke, who drew up a kind of 'lexicon' for classical music, citing examples of correspondences, persisting over a prolonged period of musical history, between particular shapes of phrase and particular kinds of expression. In terms of this musical lexicon he offered interpretations of entire movements, interpretations which attribute a narrative development to the music and offer a continuous 'meaning' to the movement as a whole. Such a theory is open to serious objections. For example, it is not clear how one is supposed to discover that the descending minor triad signifies, as Cooke says, 'a passive sorrow'. The examples given suggest that the connection be discovered through the study of vocal music, by understanding a common reference in the accompanying words. In that case, one may object, the rules of 'meaning' are derived extraneously, and not from any linguistic capacity of the music. It may be that the descending minor triad is appropriate to the setting of certain feelings; but does that relation of appropriateness have to be described in linguistic terms? After all, black is the appropriate colour to wear at a funeral, burgundy the appropriate thing to drink with roast duck, anger the appropriate response to an insult. Does every human practice, then, amount to a language? To accept that would be to remove from the idea of language everything that is distinctive of it. In particular, meanings can be assigned to the words of spoken language only because what is said can be interpreted in terms of the true and the false. But the concepts of truth and falsehood, even on Cooke's view, are not properly attributed to music. Some such objection can be raised against philosophers (the most striking example among contemporaries being Nelson Goodman) who have attempted to describe the 'language' of art in terms of such concepts as reference or denotation. There are powerful arguments, derived from Frege, which tend to show that, if the connection between reference and truth is severed, then it is not reference in any genuine sense that is being discussed. William Crotch had some inkling of Frege's insight when, writing in 1831, he complained that music could not be a language since, if it were so, it would have to be a language without substantives – a language, therefore, in which nothing could ever be said.

Perhaps, however, music could be interpreted in some such way, as a language just in the sense that English is a language, a system of signs which both refers to objects and describes them. It would still not follow that music – as commonly understood – is an expressive idiom. In other words, the objection of §4 remains. For until the kind of understanding proper to actual musical experience can be shown to be already and intrinsically an understanding of music as a language, it will not be clear how the possibility of a linguistic interpretation enables one to appreciate, as a part of musical experience, the expressive character of works of music. The listener could find the music beautiful, and understand its character as art, and yet not dream that it is also a code that could be given independent meaning. Nobody has yet shown that ordinary musical understanding is linguistic in form, and it is doubtful that it could be shown.

Some philosophers have attempted to develop notions of reference which allow for the possibility of 'reference without description', in other words which break the connection between reference and truth. One such is Susanne Langer, who attempted to generalize the 'picture' theory of meaning given by Wittgenstein in the *Tractatus* to cover the special kind of meaning characteristic of musical works. Music, for Langer, consists of 'non-discursive' or 'presentational' symbols; it stands in direct logical relation to human feelings while at the same time saying nothing about them. This theory has been criticized, not only because the 'picture' theory of meaning has been thought (by Wittgenstein himself among others) to be fundamentally mistaken, but also because it seems that no theory of meaning could admit, as Langer wishes to admit, the possibility of a medium in which reference occurs continually but description never. Furthermore, in common with many philosophers who have discussed these matters, Langer assumes a view of the emotions as private, introspectible states of mind, consisting essentially of 'dynamic' episodes of an internal nature, which seems inconsistent with the acceptance of the general belief that an emotion is a motive to act, based on a perception and understanding of the world. One's emotions no more consist in internal tremors and fluctuations than do one's beliefs, intentions or desires (on this point see, for example, Ryle).

The failure of the linguistic view of music might seem to spell the doom of the transitive theory of expression. But there is another transitive view which attempts to escape the consequences of the objection attributed above to Hanslick. This view asserts that music expresses thoughts and emotions, but that such thoughts and emotions are 'purely musical'. In other words, it asserts that the emotions or thoughts expressed by music cannot be characterized independently. In listening to music, the tensions, resolutions and developments that are characteristic of music are experienced, and while music has an effect on the emotions it is an effect that is peculiar to it and of which it is the sole proper object. Such a view will of course be merely empty until some means are found of describing the musical 'thought'. Those drawn to the view have therefore attempted to give general theories of musical tension, and of the significance of tension in music, so as to be able to describe the logic of musical development and its emotional significance. A notable example is Hindemith; but perhaps the most ambitious attempt in this area has been that of Leonard Meyer, who has sought to characterize the meaning of music in terms of 'information theory', that is, in terms of the general theory of the predictability of successive phenomena. A musical event has meaning, according to Meyer, because it points to and makes us expect another musical event. The more predictable a particular note, for example, then

the higher its 'redundancy', and the lower the tension that it adds to the musical line. By the analysis of redundancy, Meyer hoped to describe the progress of musical emotion, relating emotion to the development of tension in the musical structure.

While such a theory has an ingenious aspect, it is hard to know what it proves. Meyer's account of 'emotion', like his theory of 'meaning', depends on premises that many philosophers would wish to reject. The least that can be said is that Meyer does not make it clear why such terms as 'expression' and 'emotion' should be used in describing the movement of the musical line. It may be an interesting fact that, looked at in one way, the 'redundancy' of classical music tends to maintain a certain constant figure; but that does not reveal anything important about ways of understanding classical music.

7. CONCLUSION. A return to the intransitive concept of expression does not dispose of the philosophical difficulties. Consider again the example of a face. A face can be said to bear an expression, in the intransitive sense, only, surely, because it sometimes expresses (transitively) the states of mind of its owner. It is because the face is the sign of independent thoughts and feelings that it can be called an 'expression' at all. Can the same be said of music? The considerations discussed seem to imply that it cannot. But what, then, entitles one to describe music as having expression even in an intransitive sense? If it has no expression in any sense, it is difficult to explain the role of music in song, dance and drama, or to explain such remarks as that of Saint-Evremond, who asserted that Lully's operas were successful because their composer 'knows the Passions and enters further into the Heart of man' than the writers of the librettos. What Saint-Evremond said is clearly true; and it is evident too that much can be learnt about the 'passions' and about the 'heart of man' from music, as from poetry, painting or prose. Until there is an adequate theory of musical understanding it will not be possible to show how that can be.

NANCY KOVALEFF BAKER (I, 1), MAX HALLE PADDISON (I, 2), ROGER SCRUTON (II)

Expressionism. A term applied to prominent artistic trends before, during and after World War I, especially in the visual arts and literature in Austria and Germany. By analogy it may apply to music of that time, or more generally to any music, in which an extravagant and apparently chaotic surface conveys turbulence in the composer's psyche.

1. Definitions. 2. The term. 3. Meaning. 4. Application. 5. The end of Expressionism?

1. DEFINITIONS. In a narrow sense Expressionism in music embraces most of Schoenberg's post-tonal, pre-12-note output – that of his 'free atonal' period, roughly from 1908 to 1921. Certain works from this time by his pupils Berg and Webern also qualify. This 'pure' Expressionism communicates as a kind of psychogram (Einstein, 1926); its musical language takes Wagner's chromatic melos and harmony as its starting-point (notably Kundry's music in *Parsifal*) but largely avoids cadence, repetition, sequence, balanced phrases and reference to formal or procedural models.

The term is often used more broadly to include other music from the same period with shared characteristics. Indeed, it is almost impossible to frame a definition of musical Expressionism in terms of style or aesthetic which would include the 'central' free-atonal music of the Second Viennese School and exclude near contemporary works by Mahler, Skryabin, Hauer, Stravinsky, Szymanowski, Bartók, Hindemith, Ives, Krenek and others. Furthermore, a number of important stage works of the 1920s, especially some by Weill, Hindemith and Krenek, have proved problematic to commentators because they retain strongly expressionistic textual and visual aspects while their musical language has moved on to different aesthetic principles.

A still broader application of the term, especially in the adjectival forms 'expressionistic' and 'expressionist', is in common journalistic use, often implying disapproval, denoting music of almost any era in which intense self-expression appears to override demonstrable coherence and to flout convention.

2. THE TERM. The word 'Expressionism' appears sporadically in late 19th-century English commentaries on the visual arts, but in its current art-historical and aesthetic sense it was coined in 1909 by the English art critic Roger Eliot Fry, to form a contrast with the passivity of IMPRESSIONISM (Werenskiold, 1981). By 1911 it was established in Germany and applied to the French *fauves*, headed by Matisse. Almost immediately its application widened to include virtually all contemporary non-traditional painting. In the same year it appeared in discussions of contemporary German literature, especially poetry, again in explicit contrast to Impressionism. From 1914 it gained a more restricted application to contemporary Austro-German visual art, and it became retrospectively attached to the communities Die Brücke (Dresden, 1905–13) and Der Blaue Reiter (Munich, 1911–14).

Although isolated, less formal, early uses have been traced (Troschke, 1987), it was not until 1918 that the term was applied in discussions of music, in the first instance by Heinz Tiessen (published 1920), and a little later by Arnold Schering (1919). This came about through lectures given in German literary societies, though at this stage analogies with painting were just as important as those with literature. Initially the word was coined in a general sense to supplant its German near equivalent 'Ausdrucksmusik', and emerged in discussions about the aspiration of all the arts to the supposedly non-referential, purely expressive, condition of music, an aspiration reinforced by a concurrent upsurge of interest in the psychology of the unconscious. Some writers on music used the concept of Expressionism as a reminder that music too should, in effect, aspire to its own condition, by throwing off extraneous impulses, whether from the other arts or the humanities, which were threatening to debase it. Soon Expressionism became co-opted as a slogan for or against modern music in general, and a war of words was waged around it in 1920–21 in the periodicals *Allgemeine Musikzeitung* and *Melos* – the first of many debates about its 'healthiness'. Paradoxically, most of the now accepted classics of expressionistic music were hardly known until the late 1920s, nearly 20 years after their composition, by which time the intellectual drive that had given rise to them had already been supplanted by less individualistic impulses. Though many composers continued to write occasionally in something resembling an expressionist manner, the eruptive immediacy of pre-war Expressionism was never recaptured.

1. Cover, designed by Vasily Kandinsky, for the 'Almanach der Blaue Reiter' (Munich, 1912), which included music by Schoenberg, Berg and Webern

Attempts to define Expressionism in music have always thrown up more questions than answers. But this slipperiness may be salutary if it reminds us that the terms of musical aesthetics are necessarily fluid and ill-defined. At least Expressionism is a term never likely to be used over-confidently.

3. MEANING. In 1933 the main section of the *Oxford English Dictionary* did not include 'Expressionism', though it gave the noun 'expressionist', defined as 'an artist whose work aims chiefly at "expression" '. The supplement defined Expressionism as 'the methods, style, or attitude of expressionists, esp. in artistic technique', citing a succinct and resonant definition: 'Expressionism . . . is a violent storm of emotion beating up from the unconscious mind' (MacGowan and Jones, 1923). Practically every early discussion of Expressionism has stressed its provenance in the world of the unconscious, and the word seems to have met the need for a neat epithet for the new spiritual and artistic freedom so ardently acclaimed by artists and critics from the turn of the century on.

This 'inner reality', as Kandinsky was fond of calling it, was associated in the expressionists' minds with 'truth', a truth that demanded emancipation from the 'lie' of convention and tradition. Schoenberg's version of the same fundamental idea, with its roots in Greek philosophy and a prolific flowering in 19th-century German idealism, set 'truth' as a principle opposed to the cult of 'beauty' in post-Wagnerian music. It was in this sense that Schoenberg claimed his 1908–9 song cycle *Das Buch der hängenden Gärten* broke with previous aesthetic norms: the work is one of his earliest commonly regarded as expressionist.

An important corollary of this attitude to 'truth' was the emphasis placed on inner compulsion, which supposedly rendered redundant any criticism on grounds of professional skill, beauty or indeed traditionally accepted values of any kind. Schoenberg could thus justify his amateur paintings, many of them from his years of personal crisis in 1908–11, which communicate by virtue of strength of inner vision rather than refinement of painterly technique. In his music he could already take technical accomplishment more or less for granted, but, in parallel fashion, he now felt emboldened by his inner vision to cast off most means of support from traditional musical language. He summed up his attitude in 1910 with the maxim 'Art comes not from ability but from necessity', which was something of a commonplace at the time, and which was influentially promulgated by Paul Fechter in the first book-length study of Expressionism (1914).

Musical Expressionism was fostered by the intense intellectual atmosphere in turn-of-the-century Vienna, a city summed up by Karl Kraus as 'an isolation cell in which one was allowed to scream' (quoted in A. Comini: *Gustav Klimt*, New York, 1975, p.13). Indeed, the scream was a central expressionist topos, the outer manifestation of inner suffering: 'Man cries for his soul, the whole era becomes a single cry of pain. Art too cries, into the deep darkness, it cries for help, it cries for spirit: that is Expressionism' (Bahr, 1916). Essential to the artistic projection of such experience was the shunning of inherited conventions as false comforters. Precisely where the border lies between extensions of tradition and its destruction can never be defined, and Expressionism's distinctive features of distortion and exaltation can also be identified in much Austro-German late Romantic art. Nevertheless it is widely agreed that expressionists crossed this border, whereas *Jugendstil* artists such as Klimt and late Romantic composers such as Strauss, Schreker, Zemlinsky and Rudi Stephan turned back.

This crossing of borders is inevitably perceived, though it may not always have been so intended, as anti-establishment in tone, in particular anti-bourgeois. The expressionists 'proclaim the universality of suffering in transcendent negation of the professed values of their society' (Schorske, 1980). As such, musical Expressionism was either celebrated for its truthfulness to inner realities, by Hegelian, sociologically minded commentators such as Adorno, or stigmatized as 'unhealthy', generally by lesser-known critics. The anti-bourgeois element and the emphasis on inner transformation could lead expressionists to either political extreme in the ideologically charged world of the 1920s. Most inclined to the left, but Paul Joseph Goebbels, later to become Hitler's propaganda minister, was also a self-proclaimed expressionist. At the same time, however, the overt politicization of the arts was supplanting the individualism which had been at the heart of pre-war Expressionism.

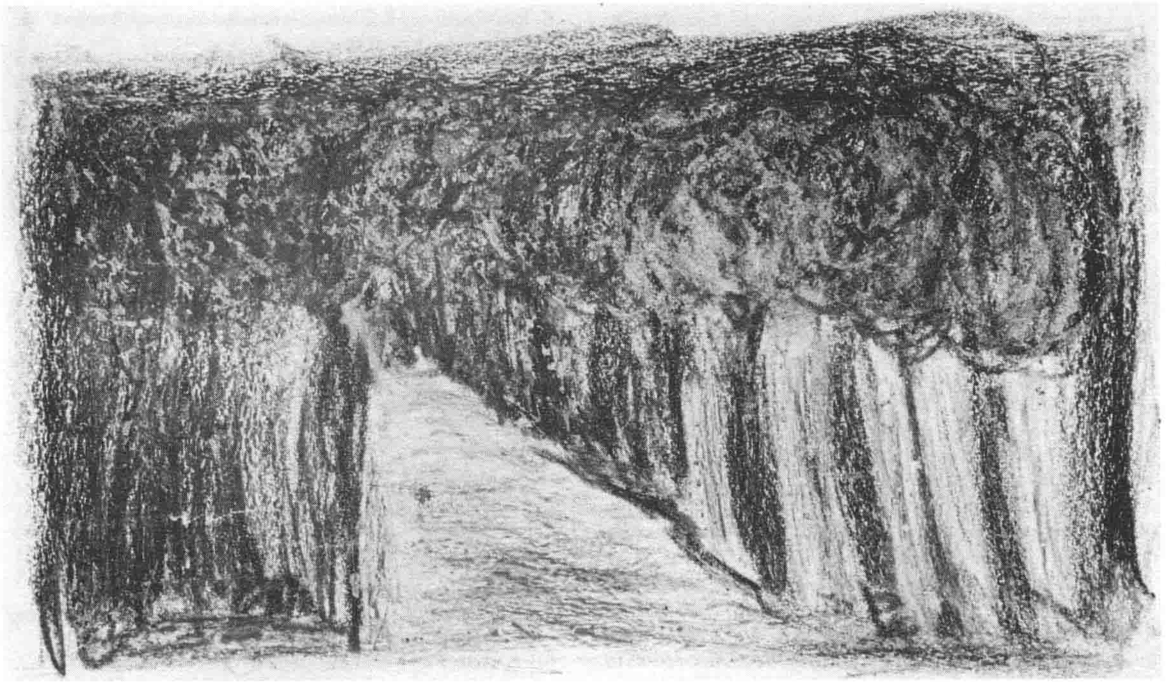
In literature, Expressionism's disdain for concrete meaning and narrative meant that it flourished in poetry and theatre rather than in the novel (Sokel, 1959). This disdain came naturally to music. Indeed, many composers and writers recognized the broad aesthetic problem that music by most definitions was already expressionist in its essence, and that expressionist music was therefore something of a tautology. Not surprisingly, then, composers rarely used the word and almost never proclaimed themselves expressionists. In music, even more than in literature and the visual arts, Expressionism was 'not a school, . . . [but] a state of mind which . . . has affected everything, in the same way as an epidemic' (Richard,

2. *Title-page, designed by Lovis Corinth, of the first edition of the vocal score of Richard Strauss's 'Elektra' (Berlin: Adolph Fürstner, 1908)*

1978). In 1919 Schoenberg had wondered whether he should devise an expressionistic programme (Troschke, 1987). But in 1928 he noted that while works of his like *Die glückliche Hand* were called expressionistic, he himself preferred to refer to the 'Art of representing inner occurrences'. In 1932 he essayed a more elaborate definition in his Frankfurt Radio talk on his Four Orchestral Songs op.22: '*Thus, and not otherwise*, did so-called Expressionism arise: that a piece of music does not come into being out of the logic of its *own* material but guided by the feeling for internal or external processes, bringing these *to expression*, supporting itself on their logic and building on this'.

4. APPLICATION. Though surface elements of Expressionism are traceable in much of Schoenberg's early work, it was a long time before he was composing in such a way as to exemplify his own definition. A watershed in his output is the Second String Quartet of 1907–8, whose four movements become progressively more emancipated from traditional late Romantic language and form. The introduction to the finale, in free-floating chromaticism representative of the soprano's words 'I feel the air of another planet', is sometimes taken as the first true atonal music, though the coda eventually resolves, somewhat factitiously, to an F♯ major tonic. The voice-writing in the preceding slow movement is expressionist at a gestural level, in its extended range, angular contours and chromatic freedom; yet this movement is strictly constructed using five thematic cells, themselves all focussed on notes of the E♭ minor triad. Here is an early example of the symbiosis of anarchy and control, and of atonality and late Romantic harmony in expressionist music. The anguished tone of this quartet is generally assumed to reflect Schoenberg's state of mind following his wife's elopement with the painter Richard Gerstl and the latter's subsequent suicide when Mathilde returned to Schoenberg. In fact much expressionistic music can be shown to have arisen in response to overwhelming personal crises (Crawford and Crawford, 1993).

1909 was Schoenberg's expressionist *annus mirabilis*, the highpoint being *Erwartung*. The story of this one-act monodrama – that of a woman searching for her lover in a forest at night, finding his dead body, and in the course of her dementia virtually confessing to his murder – is again understandable on one level as a kind of personal catharsis. Schoenberg composed the music in a torrent of inspiration in 17 days, barely enough time to write down the notes of the extremely dense and refined score. The musical language is quintessentially expressionist in its avoidance of repetition and denial of stability in all parameters, including tempo. Harmony is chromaticized to the point where it forms a more or less static backdrop, in a constant state of flux and only occasionally falling back on more tonally reminiscent formations when the woman is in a state of emotional regression. By contrast, more immediately active elements are to be found in the texture, which is polarized between paralysis and anxious hyperactivity (Adorno, 1949). Initially the texture closely shadows the text in its flux between relatively impressionist and expressionist styles; later it takes on more autonomous, form-shaping power.



Further central expressionist compositions from the same year are Schoenberg's violently eruptive Piano Piece op.11 no.3 and the first and last of his Five Orchestral Pieces op.16. These co-exist, however, with more euphonious late Romantic lyrical studies and more strictly composed or impressionist ones, confirming that even in this arch-expressionist phase Schoenberg was never far removed from late Romantic instincts.

The alienated figure of the artist becomes the subject of his next stage work, *Die glückliche Hand*. The tableaux that symbolize the central character's inner turmoil are influenced by the expressionist dramas of Kokoschka and Strindberg. However, the large-scale structural framework represents a significant move away from the stream-of-consciousness style of *Erwartung*.

Although Berg was fanatically devoted to *Erwartung* and heavily influenced by its musical language, expressionist impulses in his music had to compete with his instincts for a sensuously beautiful surface and a selfconsciously concealed constructivist core. His comparatively aphoristic and atypical Clarinet Pieces op.5 are cited by Adorno (1982) as his only true expressionist work, though the surrounding works (the *Altenberglieder* op.4 and the Three Orchestral Pieces op.6) also have strong claims. The success of his first opera, *Wozzeck*, from 1925 on helped popularize Expressionism; but that very success was a symptom of the opera's sensational and ultimately consoling aspects, which fall outside the stricter definition of Expressionism.

Webern's music, by contrast, having been close to the spirit of Schoenbergian expressionism around 1909–13, became increasingly constructivist on the surface and increasingly concealed its passionate expressive core. This represented one of several possible routes away from Expressionism.

5. THE END OF EXPRESSIONISM? Expressionism flourished at the end of an era that had systematically

3. Sketch by Schoenberg for the setting of his monodrama 'Erwartung'

emancipated itself from patronage. 'The idea that the true purpose of art was to express personality could only gain ground when art has lost every other purpose' (Gombrich, 1950, p.398). By the same token the movement tottered as soon as artists began to realize that their autonomy had been bought at the cost of their own impotence and their audience's indifference. Exhilaration in freedom gradually gave way to a bad conscience over relevance.

Kandinsky had noted the socio-political dimension in the rise of Expressionism: 'When outer supports threaten to fall, man turns his gaze from externals in onto himself'. When, however, the outer supports actually did fall, with the calamity of World War I, the overriding priority seemed to be to create new, more reliable supports. The inner psychic processes of alienated, suffering, hypersensitive artists hardly seemed to qualify.

There was a more banal reason for the demise of Expressionism. As Georges Braque put it, 'you cannot remain in a perpetual paroxysm' (Richard, 1978). Moreover, each of the arts found itself in a crisis of technique. In music the effective taboos on inherited form and on the bases of formal construction (not only tonality but repetition, sequence, homogenous timbres, patterning of any kind) left Schoenberg without musical means for creating large pieces. He was temporarily confined either to aphoristic outbursts (the incomplete chamber orchestra pieces of 1910 being the most extreme example) or to structures predicated on texts. The way out of this *impasse* was necessarily a way out of Expressionism. More subtly, as Adorno noted, the conscious negation of traditional means and of confinement to any style involved principles of selection which paradoxically led back to style and thus again to self-destruction; hence his characterization of musical Expressionism as an 'unstable chemical element'.

Schoenberg's quest was increasingly for a musical language that would re-establish elements of comprehensibility to replace the abandoned props of tonality. *Pierrot lunaire* had already combined examples of classically expressionist eruptive anarchy (no.14) with pieces whose expressionist gestures concealed tightly controlled motivic proliferation (nos.8, 17 and 18), and thereby pointed forward to 12-note technique. As Schoenberg moved in that direction he was moving too beyond the psychological truths of Expressionism to transcendent religious truths (notably in *Die Jakobsleiter*).

Some of the textural features and the violent discontinuity of Schoenberg's expressionist music survived in his initial 12-note works (for instance the very first, the Prelude of op.25) and returned from time to time in later works, such as the String Trio of 1946. The psyche and the intellect were never wholly incompatible to expressionists, because their central tenet was the exploration of inner processes at the expense of the senses and of any reference to the outside world: 'The World is out there . . . it would be absurd to reproduce it' (Kasimir Edschmid, cited in Richard, 1978, p.187).

By 1922 a growing number of voices could be heard claiming that Expressionism was more part of the problem than the solution. Former supporters of musical Expressionism, such as the young but already influential critic Hans Heinz Stuckenschmidt, were lamenting its excesses, which seemed the more egregious for the new modesty of means favoured by the postwar Zeitgeist. Alongside Germany's revulsion against rampant individualism, other forces were gathering. Parisian intellectuals, spearheaded by Cocteau in his *Rappel à l'ordre*, had been advocating a return to Apollonian order and a wholesale rejection of Romanticism and its satellite movements. The German variety of this trend crystallized into NEUE SACHLICHKEIT, a form of neo-classicism that retained a squared-off version of expressionist mannerisms within a more sober aesthetic outlook.

One outward sign of the new ethos was the cultivation of parody. Here again *Pierrot lunaire* was an early example, but in the 1920s not even the once-sacrosanct suffering artist was immune. In Krenek's *Jonny spielt auf*, the first words sung by Max, an effete composer, are 'Du schöner Berg'. This one phrase neatly sends up all three members of the Second Viennese School, including the mountain-loving Webern.

After World War II it was the neo-classicism of the 1920s and 30s that in turn fell under a taboo, this time pronounced by the shrillest voices of the central European avant garde; on the other hand any art movement that had been stigmatized by the Nazis, such as Expressionism, was sympathetically reconsidered. Expressionist music was reincarnated, either in fairly pure post-Schoenbergian guise (Henze) or fused with post-Webernian serial controls (Boulez). Maxwell Davies showed the continuing potential of expressionist gestures to revitalize music theatre, as did Rihm and Zimmermann in German opera. Now even more than before, however, Expressionism was only one among many competing trends and could hardly claim to be a leading force.

In its least intellectualized form Expressionism from the mid-1950s on has supplied many composers east of the former Iron Curtain with a non-élitist, ready-to-serve musical dissidence, which has allowed audiences to read their own social agony into the music; but with few exceptions (such as the best works of Schnittke) it has been applied in these countries with a naivety of technique which makes it difficult for Western audiences to respond without embarrassment. At the other intellectual extreme Expressionism lives on in the work of, for example, Finnissy. Perhaps its most valuable legacy has been as a vital ingredient in an internationally communicative, progressive style, less militantly dehumanized than the 1950s avant garde yet still untainted by proximity to the entertainment industry. In this sense Expressionism has been embraced by countless composers. As an onomatopoeia of the emotions, as a subversive corrective force to complacency or academicism, musical Expressionism seems likely to live on and reappear in limitless, unforeseeable new guises.

Expression marks. *See* TEMPO AND EXPRESSION MARKS.

Expression piano [semi-reproducing piano]. An electrically driven PLAYER PIANO which is capable of automatically producing limited degrees of expressive effects in imitation of a 'human' performance. Further refinements led to the development of the REPRODUCING PIANO.

Exsequiae. *See* NENIA.

Exsultet. *See* EXULTET.

Extemporization. *See* IMPROVISATION.

Extension organ. 20th-century term for an organ in which the principle of 'extension' (making one row of pipes available at different octave or overtone pitches) is applied to a major degree. Praetorius (*Syntagma musicum*, ii, 1618, 2/1619/*R*) drew a table-positive in which the chest of a single row of pipes was so grooved and palletted that it could supply each key with three tones (2′, 1⅓′ and 1′); a few larger examples are known to have been made over the next two centuries or so, but clearly the non-mechanical actions of the late 19th century gave greater opportunities for the system, since they made it easier for key-action and chest-construction to be designed for this purpose. Audsley (*The Art of Organ Building*, 1905) used the terms 'borrowing' for a rank extended beyond the keyboard compass in order to make it available at another octave (e.g. 116 pipes could provide stops at 32′, 16′, 8′, 4′, 2′ and 1′, each to a compass of 56 notes) and 'duplicating' for using a rank of pipes on two or more keyboards, manual or pedal, called 'communication' by English builders from about 1650 to 1800. Marcussen's organ at Siseby (Schleswig, 1819) used both systems; the electric 'unit organ' of 1930 took it a step further by giving each pipe its own action playable by any key desired. The principle is quite different from that of the COUPLER, which unites whole keyboards.

See ORGAN, §VI, 4.

Extrasino (Sp.). *See* ORNAMENTS, §2.

Extravaganza. A hybrid word, derived from the English 'extravagance' but taking its ending from the Italian *stravaganza*, applied to works that depend for their interest on extravagant fancy of one kind or another.

It has been used for instrumental works that either deliberately violate the conventions of contemporary style or are designed in the spirit of burlesque or caricature (*see* STRAVANGANZA). Mozart's *Ein musikalischer Spass* K522 has been quoted as the classic instance of instrumental extravaganza. Stanford's *Ode to Discord* (1908) was an attempt to caricature the apparent liberties taken by composers of his day.

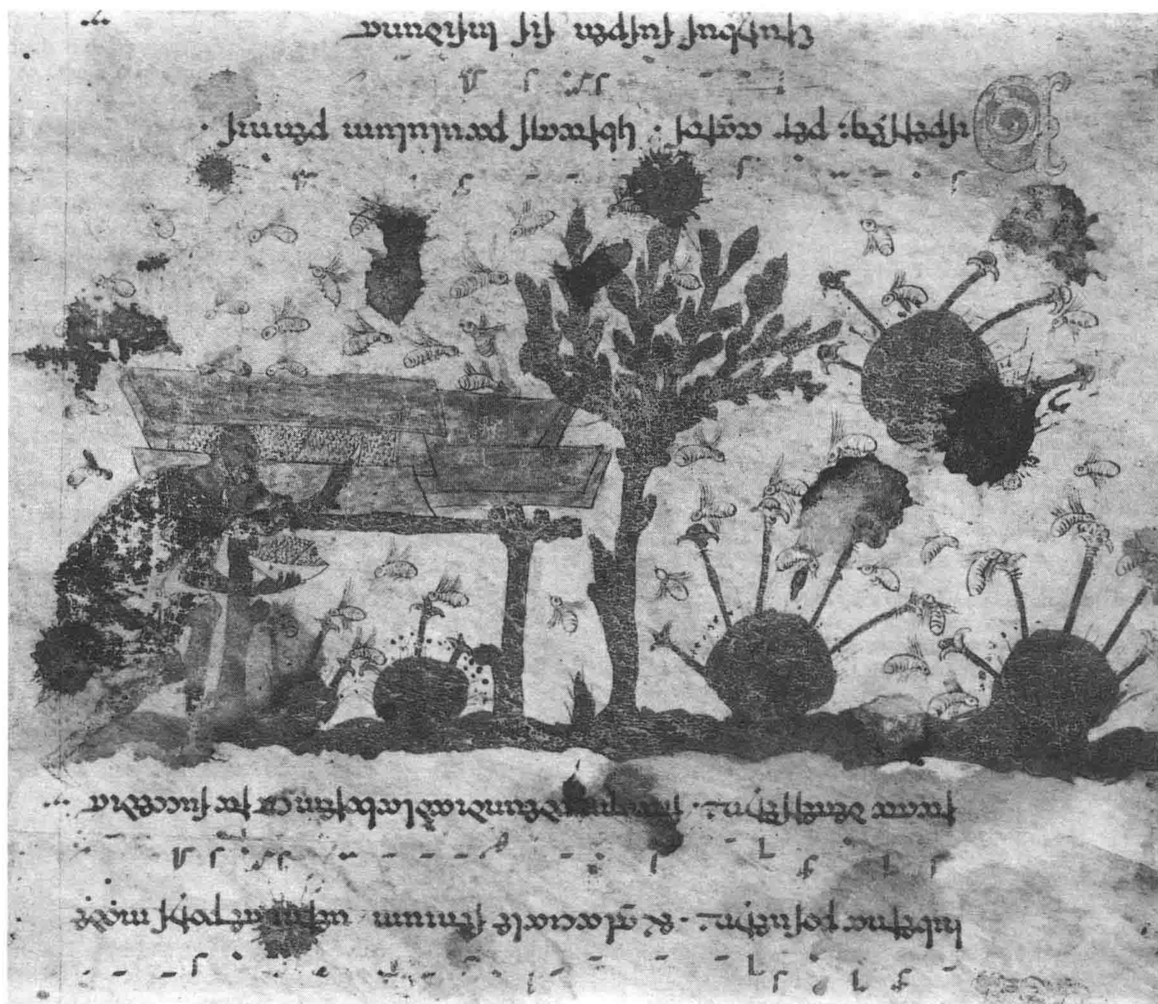
The term is also applied to a genre of light theatrical entertainment with music, a form of BURLESQUE, popular in England during the 19th century. The term and the genre may be said to have been invented by James Robinson Planché, who described it as 'the whimsical treatment of a poetical subject' as distinct from 'the broad caricature of a tragedy or serious opera, which was correctly termed a "Burlesque"'. Planché's most characteristic and significant extravaganzas were his fairy plays, beginning with *Riquet with the Tuft* (1836).

Extravaganzas tend to be less strongly bound to a model than burlesques and were often based on classical stories. Distinctions between the two genres were often subtle, if not arbitrary; but the best extravaganzas were characterized by more consistent stories rendered more delicately than in burlesque, and in some instances the music tended to be more highly developed. A 'Chinese Extravaganza' by Hale and Talfourd called *The Mandarin's Daughter* (1851) was one of many exotic extravaganzas and may well have influenced Gilbert and Sullivan in works like *The Mikado*. Gilbert used the term more than once as a subtitle, e.g. *Trial by Jury: an Extravaganza.*

For bibliography *see* BURLESQUE.

MICHAEL TILMOUTH/FREDRIC WOODBRIDGE WILSON

Exultet [Exsultet]. A lyrical prayer, chanted by a deacon once a year during the Easter Vigil, to bless the Paschal candle and to celebrate its symbolism. It is called *Exultet* (the first word of the text), *Laus cerei*, *Benedictio cerei* or *Praeconium paschale*.



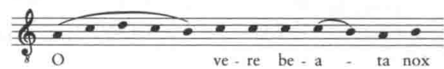
The text of the *Exultet* has formed part of the Roman rite from the Middle Ages, but its remote ancestry goes back to the ancient Gallican liturgy. It appears first in the *Missale gothicum* of Autun (8th century), and the *Missale gallicanum vetus* (second half of the 8th century). From there it passed into the Frankish Gelasian sacramentaries, then into the Gregorian sacramentaries; lastly it entered the Roman liturgy, like many other Gallican chants and rites.

In central and, especially, southern Italy, where the *Exultet* text was different from the Gallican version, the *Benedictio cerei* was inscribed on long rolls which the deacon placed on the ambo from which the Gospel was normally read in the Mass (see illustration). On these rolls the miniatures appear upside down, relative to the text, illustrating the themes celebrated in the *Exultet*: the night, the world, the crossing of the Red Sea, Christ's resurrection and so on

The literary structure of the *Exultet* falls into two distinct parts: the introduction, *Exultet jam angelica turba*, in an exhortatory style comparable to that of the invitatory or Preface which preceded prayers in the Gallican liturgy; then the Preface consecrating the candle, formerly improvised or composed by the deacon. The text of this Preface subsequently crystallized in different forms in different regions.

The introduction, *Exultet jam angelica turba*, seems to have originated in the 4th or 5th century. It was already known in Pavia in the time of Ennodius and it became obligatory in all those liturgies that had adopted the principle of a Preface to consecrate the Paschal candle. In it there are several expressions characteristic of the Gallican liturgies, such as the apostrophe *fratres carissimi* or the couplets *Rex aeternus* and *divina mysteria* (a faulty reading for *ministeria*). The concluding doxology of this invitatory introduces the opening dialogue of the Preface.

The Preface consecrating the candle begins with a set phrase normally found in the Gallican liturgies: 'Dignum et justum est, vere quia dignum et justum est'. In the Roman sacramentaries this became shortened to: 'Vere dignum et justum est', as in the other Prefaces. The text then treats the essential themes in lyrical vein; their exact treatment was formerly left to the discretion of the individual deacon. It was even permitted to use verse. St Augustine quoted three lines from a *Benedictio cerei* he had composed in his youth, when he was still a deacon,



Exultet roll, Italian, 12th century, in Beneventan script and neumes (GB-Lbl Add.30337): the text appears upside down relative to the illustration which refers to that part of the text likening the chaste but fecund bee to the Virgin mother

and an Escorial manuscript contains a metrical benediction (see G. Mercati: *Un frammento delle Ipotiposi de Clemente Alessandrino: paralipomena ambrosiana, con alcuni appunti sulle benedizioni del cereo pasquale*, Rome, 1904, p.40) whose attribution to him rests, no doubt, on this quotation. The deacon had then to expand on the themes that naturally came to mind on Easter eve: the miracles wrought at the first Passover when the Jews were freed from their captivity in Egypt, and the redeeming work of Christ in atoning for the sin of Adam and freeing the faithful from the bondage of the Devil. In fact there are some differences between the ancient versions at this point: some stress Christ's redemption of the faithful, whereas others sing of the return of spring and the rebirth of nature; all, however, draw on the *Georgics* of Virgil, with his mention of the bees and their virginal manner of reproduction.

Borrowings from Virgil are, moreover, not limited to this theme, and are often introduced very skilfully, in a way that recalls the literary habits of St Ambrose. This fact, and certain idiosyncratic expressions, have led some literary critics, following Honorius of Autun, to attribute the composition of the Gallican *Exultet* to St Ambrose; but there is no solid evidence to support their theory. The similarities between the works of Ambrose and the *Praeconium paschale* may be explained by the simple fact that his writings form one of the general sources of the Gallican liturgy, which is made up of all kinds of borrowings. The similarities in style between the *Exultet* and Easter prayers in the Gallican rite, and the analysis of the biblical quotations (and so on) in the *Exultet* suggest merely that the composer of the *Exultet* was a member of the Gallican Church who was familiar with the writings of St Ambrose and Virgil, and who lived, no doubt, in the 6th century.

It is thus possible to reach fairly definite conclusions concerning the text of the *Exultet*. The question of the melody, however, is more complicated. If a single melody for the *Exultet* had been preserved in the traditions of different regions, musical criticism might be able, by analysis alone, to determine if it could be contemporaneous with the 6th-century text: this is, indeed, possible with the *Te Deum*, also Gallican in origin. But, in fact, several different versions survive for the introduction and sometimes even for the Preface of consecration.

According to a Roman-Frankish *ordo* of the 8th or 9th century, the deacon is required, after the dialogue following the introduction ('Dominus vobiscum. Et cum spiritu tuo. Sursum corda' and so on), to chant the consecration of the candle to the tone of the eucharistic Preface that opens the Canon of the Mass: *Inde vero [diaconus] accedit in consecrationem cerei decantando quasi canonem* (M. Andrieu: *Ordines romani*, Leuven, 1931–56, iii, 404, Ordo XXVIII). This pattern is followed in the vast majority of *Exultet* sources: the second, or consecratory part, is chanted as a solemn recitative. As in all recitatives of this type, this consists of an intonation, a recitation on one note and a final cadence. In longer phrases, an intermediary cadence followed by a second intonation interrupts the recitation on the single note. Naturally, this recitative is fitted to the text according to the rules of the cursus and of accentuation (see PalMus, iv, 171–96). The only departure from this basic musical scheme is found in the lyrical embellishment decorating the exclamation in admiration of the Easter night, as shown in ex.1. Occasionally, manuscripts give an even more extended development at this point.

This extremely simple recitative, identical with that of the eucharistic Preface, is, however, not universal. Some sources contain far more ornate melodies, with melismas at the intonations and cadences. Examples of these are to be found in *Exultet* rolls from southern Italy (PalMus, xiv, 390ff) and in printed missals from Spain, where the melody is adapted from the ornate recitative of the *Oratio Jeremiae*, read at the Office of Tenebrae on Holy Saturday.

In Milan, the melody of the Ambrosian *Praeconium paschale* is mixed: its introduction is chanted as a syllabic recitative, but its Preface is sung to a melody with embellished cadences. This is a unique tradition, both melodically and textually: in Milan, the *Exultet* Preface differs from the accepted text of the Roman Missal.

Although most sources of the *Exultet* thus present the second part, or Preface, as a recitative, identical with that of the eucharistic Preface, the melody for the first part, or introduction, varies considerably according to region. This observation is all the more surprising since it is precisely this 4th- or 5th-century introduction (held in common by all the churches) which adopted the custom of blessing the Paschal candle, whereas the Preface, which follows, is the variable element, textually speaking. Thus it is difficult to determine which of the three main types of recitative listed below is the earliest:

(1) A two-note recitative covering a major 3rd (C to E, F to A or G to B♭), with the recitation on the central note (D, G or A respectively); the upper note of the recitation is used for accentual decoration, and the lower note for the cadences. This very austere and sober melody was used at Lyons, Chartres, St Bénigne, Dijon, and a few of the Norman monasteries reformed by Guillaume de Volpiano, abbot of St Bénigne (*d* 1031).

(2) A melody covering a minor 3rd (D to F) found in most manuscripts from the west of France and those of the Cistercians. It is also found in Paris, but with accentual decoration on the G.

(3) The melody given in the *Missale romanum* of Pius V, which consists of two types of intonation (G, A–C, C and D–A, A, C) and two types of cadence, an intermediary cadence on the A and more important cadences on the E. The antecedents of this melody are to be found in manuscripts from Germany and north-eastern France, and above all in Anglo-Norman manuscripts. The *Exultet* melody was, however, rather more developed in the Salisbury rite than it was in Normandy (*GS*, pl.105). This melody, which had been adopted by the Dominicans and Franciscans, was introduced to Rome, probably in the late 1250s, in the official Franciscan *Missale romanum*; and even in an earlier Franciscan missal from Salerno (*I-Nn*, vi.G.38), from about the mid-13th century, the Beneventan melody has been deleted and replaced by a Norman melody. The Franciscan missal of the 1250s was the direct ancestor of the Roman missal of Pius V (1570), which includes the official Roman melody, now edited more accurately in *Officium et missa ultimi tridui majoris hebdomadae* (Solesmes, 1923).

MICHEL HUGLO/THOMAS FORREST KELLY

Eybler, Joseph [Josef] **Leopold,** Edler von (*b* Schwechat, nr Vienna, 8 Feb 1765; *d* Vienna, 24 July 1846). Austrian composer. He received his first music lessons from his father, a choir director and schoolteacher in Schwechat. By the age of six he was able to perform a piano concerto for a visiting Viennese official, who recommended him for musical training to the choir school at the Stephansdom (where his distantly related cousins Joseph and Michael Haydn had studied). From 1776 to 1779 he also took lessons in composition from Albrechtsberger. In 1782 the choir school was temporarily dissolved and Eybler began legal studies at the university, but when a fire destroyed the home of his family later that year he was left without financial support, and had to earn his living as a musician. During several difficult years of apprenticeship Joseph Haydn helped him as a friend and teacher; in 1787 Haydn recommended three of Eybler's piano sonatas to the publisher Artaria. Eybler was also befriended by Mozart, who commissioned him to help coach the singers for the first performance of *Così fan tutte*. On this occasion Eybler experienced the intrigues of the opera house, which, he later confessed, determined him against a career as a theatre composer. Towards the end of his life Mozart came into even closer contact with Eybler, and seems to have greatly valued his honesty, modesty and devotion. Eybler later wrote: 'I had the good fortune to keep his friendship without reservation until he died, and carried him, put him to bed and helped to nurse him during his last painful illness' (*AMZ*, 1826). After Mozart's death his widow commissioned the completion of his Requiem to Eybler. However, after completing the instrumentation of large parts of the Sequence he was apparently hindered by respect and awe from continuing the 'Lacrimosa', and having added only about ten notes to the soprano part he gave up the task, which then passed to Süssmayr. He later presented the Court Library with those parts of Mozart's autograph which were still in his possession.

In 1792 Eybler was appointed choir director at the Carmelite church in Vienna, and then in 1794 went in the same capacity to the more famous Schottenkloster, retaining the post for 30 years. In 1801 he was also appointed court music teacher, possibly on the recommendation of Joseph Haydn and his special patroness, the Empress Maria Theresa. At her request Eybler wrote in 1803 his Requiem in C minor. It was perhaps the success of this work which led to his appointment in 1804 as deputy Hofkapellmeister under Salieri. In 1810 he was commissioned by the emperor to compose the massive oratorio *Die vier letzten Dinge*, the text of which Joseph Sonnleithner had originally written for Haydn.

With Antonio Salieri's retirement in 1824 Eybler succeeded him as Hofkapellmeister. His later conservatism is reflected in his refusal in 1825 to allow the performance of the mass in A♭ by Schubert (he afterwards remarked that he had found the work interesting but too difficult and not to the emperor's taste). In 1833 he suffered a stroke (ironically while conducting Mozart's Requiem) which left him unable to continue his duties at court. In his final years, which he spent with his family, he received numerous honours from foreign academic bodies, and in 1835 was raised to the nobility by the emperor.

Eybler's early works show throughout his attachment to traditional styles and his respect for Haydn and Mozart. His Requiem resembles in many respects the late works of Michael Haydn, though with fewer commonplace motifs and less routine repetition. The vocal parts are simple and easily performed, while the parts of the large orchestral setting are surprisingly independent and often technically demanding. *Die vier letzten Dinge*, though remarkably successful when first presented, is now largely forgotten, and probably rightly so, since its innate musical value only doubtfully justifies the great efforts necessary to perform it. Eybler's chamber music has attracted a rising interest, and several of these works have been reprinted. The string quintets deserve special mention for their particularly beautiful viola parts. His only opera, *Das Zauberschwert*, a *romantische Komödie* in three acts, was given at the Theater in der Leopoldstadt in 1802.

WORKS

unless otherwise stated, all works are in MS, and all prints were published in Vienna; for thematic catalogue, with fragmentary and lost works and with list of sources, see Herrmann (1976); suppl. in RISM A/II (1996)

EVA BADURA-SKODA with HILDEGARD HERRMANN-SCHNEIDER (work-list)

Eyck, Jacob van (*b* ?Heusden, nr 's-Hertogenbosch, 1589/90; *d* Utrecht, 26 March 1657). Dutch carillonneur, bell expert, recorder player and composer. He inherited the noble title of 'joncker', and was blind. He spent his early years in Heusden, and in 1623 visited Utrecht, where he was appointed carillonneur of the Domkerk in 1625. Three years later he became director of the Utrecht bellworks, having technical supervision of all the parish-church bells. Later he also became carillonneur of the Janskerk, the Jacobikerk and the city hall. It was he who discovered the connection between a bell's shape and its overtone structure, which enabled bells to be tuned properly. In this he had the cooperation of the famous bellfounders François and Pieter Hemony. His work gained the attention of such prominent intellectuals as Isaac Beeckman (1588–1637), René Descartes and Constantijn Huygens (a distant relative, and dedicatee of van Eyck's *Der Fluyten Lust-hof*). He was charged with carillon improvements all over the northern Netherlands and had several pupils.

In 1649 his salary at the Janskerk was increased, 'provided that he would now and then in the evening entertain the people strolling in the churchyard with the sound of his little flute', a practice that was first mentioned in a poem of 1640. His two-volume *Der Fluyten Lust-hof*, which was reprinted several times, contains almost 150 pieces for solo soprano recorder in C. The original prints contain many errors, mainly due to van Eyck's blindness. A few of the pieces are free compositions (preludes and fantasias), but the majority consist of variations on melodies popular at the time. Although most of these melodies have Dutch titles, many originate from the French *air de cour* repertory, and some are Italian (from Giulio Caccini, Gastoldi), English (Dowland), German and Dutch; 16 were borrowed from the Genevan Psalter. The process of composing variations was called 'breecken' (breaking): the notes of a theme were broken into notes of smaller values, each reprise becoming increasingly elaborate. Although van Eyck's ornamental style shows many features of Italian improvised *passaggi*, his pieces are to be considered as true compositions. *Der Fluyten Lust-hof*, i (1649) includes five duets that make use of some of the monophonic variations; these arrangements are not by van Eyck and can be attributed to his publisher Paulus Matthysz.

THIEMO WIND

Eye music (Ger. *Augenmusik*). Musical notation with a symbolic meaning that is apparent to the eye but not to the ear (e.g. black notes for words such as 'darkness' and 'death'). Since its effects are derived from notation it is the concern of composers and performers rather than listeners. In eye music the performer derives two simultaneous interpretations from the signs on the page, one purely musical and the other symbolic. In the light of this it is worth listing at the outset certain features that are not really examples of eye music: the use of musical signs for decorative or cryptographic purposes, since their musical significance is thereby completely destroyed; the complicated cross-rhythms of, for example, the English

1. *Lilliputian chaconne (above, including final line of previous minuet) and part of the Brobdingnagian gigue from Telemann's 'Der getreue Music-Meister' (1728–9)*

2. Baude Cordier's three-voice rondeau 'Belle, bonne, sage', c1400 or later, in the form of a heart (F-CH 564 (olim 1047), f.11v)

virginalists, designed for the eye rather than for the ear – this use of notation has little or no symbolic meaning; puzzle canons, where the musical meaning becomes apparent only after the symbolism has been unravelled; and the private asides to the player of music by, for example, Satie, for these do not use the signs of musical notation.

It is difficult to establish a precise dividing-line between WORD-PAINTING and eye music, but the former is usually audible as well as visible (as in musical depictions of words such as 'rise', 'fall', 'step', 'pace', 'crooked', 'slope', 'scatter', 'wave', 'hover' and so on). The most common type of eye music proper is confined almost entirely to the 16th and early 17th centuries, a period characterized on the one hand by a great deal of thought and discussion about the matching of words with suitable music and on the other by an unusually rich variety of notational signs (though the intended effects are often lost in transcription into modern notation). Most note shapes existed in two forms, black and white, the duration of a white symbol usually differing from that of a black. Thus the blackness or whiteness of a note had primarily a musical significance, but it could also have a symbolic one if words such as 'black', 'shade', 'death', 'blind', 'colour', 'night' and 'darkness' were associated with black notes, and words such as 'white', 'day', 'light', 'pale' and 'open' with white notes. A mourning song – for instance, one on the death of the Emperor Maximilian (1519) – may be written in black notation throughout, even though the other songs in the same manuscript are in white. Josquin used black notation in his lament on the death of Ockeghem, *Nymphes des bois*, where it appears as a visual image to support the aural one provided by the introit of the *Requiem aeternam* plainchant used as cantus firmus.

Other kinds of eye music may involve a variety of notational devices. The 'Gulliver Suite' for two violins in Telemann's *Der getreue Music-Meister* includes a Lilliputian chaconne and a Brobdingnagian gigue, the one in absurdly small note values (3/32), the other in ridiculously large ones (24/1), charmingly apt to their titles and clear instances of eye music, since only the performers see the point of the joke (fig.1). The same is true of Benedetto Marcello's cantata *Stravaganze d'amore* (extract in C. Parrish: *A Treasury of Early Music*, 1958, no.49), in which one of the 'extravagances' is the absurd extent to which the continuo part is notated in terms of enharmonic equivalents to the notes of the voice part. Another type of eye music involves writing out the music of a love-song on a staff bent into a heart shape (fig.2), or that of a perpetual canon on one bent into a circle. There is more than one instance of the symbolism of the Crucifixion illustrated by means of a set of notes in the form of a cross.

Eye music received the support of a theorist such as Cerone in his *El melopeo y maestro* (1613/*R*) and was endorsed by Zarlino inasmuch as he employed black notation in his motet *Nigra sum sed formosa*, but it was certainly not universally accepted and was opposed by, for example, Vincenzo Galilei in his *Dialogo della musica antica et della moderna* (1581). Eye music was a mannerism, confined above all to two kinds of composer: mystics and madrigalists, mainly Italian ones active from about 1550 to 1625, but also, to a much smaller extent, italianate English ones. In the hands of the best of them, used with restraint, it retains a spontaneous charm.

Eyser, Eberhard (Friedrich) (*b* Marienwerder, Germany, 1 Aug 1932). Swedish composer. He studied composition (1952–7) with Fritz von Bloh, himself a pupil of Hindemith, at the Hanover Akademie für Musik und Theater. He also attended the Salzburg Mozarteum summer academy and the Accademia Musicale Chigiana in Siena in 1965. He has also been strongly influenced by the composition teachings of Alois Hába, Hauer, Jelinek and Rufer, and by seminars with Xenakis, Maderna, Scherchen and Kertész. He played the viola at the Hanover Opera (1956–7), and in the Stuttgart RSO (1957–61) and then at the Stockholm Opera.

He has composed about 250 works including around 25 stage works, although some are of only a few minutes' duration. *Der letzte Tag am Erden* is written for six silent roles. *Abu Said* was awarded the first Weber Prize at Dresden in 1978. With three commissioned and performed operas (*Drömmen om mannen*, 1972; *Sista resan*, 1974, *Hjärter Kung*, 1973), and minor contributions to even more productions, he is the most performed new composer of the Vadstena Academy. Several of his operas have also been very successful in Stockholm, while *Charlie McDeath* has been performed as a television opera. Among his other works the chamber music dominates, with a striking element of music for saxophone, including seven saxophone quartets. His music often has an ironic touch and is distinguished by clarity and directness.

However, only a fraction of his non-operatic output has been performed.

WORKS
(*selective list*)

ROLF HAGLUND

Eysler [Eisler], **Edmund** (*b* Vienna, 12 March 1874; *d* Vienna, 4 Oct 1949). Austrian composer. At the Vienna Conservatory he studied with Anton Door (piano), Robert Fuchs (harmony and counterpoint) and J.N. Fuchs (composition). He gave piano lessons and conducted in the summer theatre in the Prater before he gained overnight fame in 1903 with the operetta *Bruder Straubinger*. For this work he used some themes from an opera *Der Hexenspiegel* which he had composed to a libretto originally intended for Johann Strauss as *Schelm von Bergen*. Several of his later operettas were performed abroad, but he was generally overshadowed by Lehár, Fall, Straus and Kálmán. Though later making use of more modern elements, he was most valued for a homely, more old-fashioned Viennese style which he was able to use to good effect in the most successful of his later works, *Die gold'ne Meisterin* (1927).

WORKS

(*selective list*)

Over 50 operettas (pubd in vocal score in Vienna at time of original production) incl.: Bruder Straubinger (3, M. West, I. Schnitzer), Theater an der Wien, 20 Feb 1903; Pufferl (3, Schnitzer, S. Schlesinger), Theater an der Wien, 10 Feb 1905; Die Schützenliesl (3, L. Stein, C. Lindau), Carltheater, 7 Oct 1905; Künstlerblut (2, Stein, Lindau), Carltheater, 20 Oct 1906; Vera Violetta (1, Stein), Apollo, 30 Nov 1907; Der Frauenfresser (3, Stein, Lindau), Bürgertheater, 23 Dec 1911; Der lachende Ehemann (3, J. Brammer, A. Grünwald), Bürgertheater, 19 March 1913; Ein Tag im Paradies (3, Stein, B. Jenbach), Bürgertheater, 23 Dec 1913; Die gold'ne Meisterin (3, Brammer, Grünwald), Theater an der Wien, 13 Sept 1927; Ihr erster Ball (3, Herling, Tintner), Bürgertheater, 21 Nov 1929

Other works: Schlaraffenland, ballet, 1899; Der Hexenspiegel, opera, 1900; Hochzeitspräludium, opera, 1946; songs, dances, pf pieces

Faà di Bruno, Giovanni Matteo [Horatio, Orazio] (*fl c*1570). Italian composer. He was a member of one of the leading aristocratic families of Casale Monferrato, well connected to the Gonzagas of Mantua, who ruled the duchy. These connections are reflected in his publications: his first book of madrigals is dedicated to Duke Guglielmo Gonzaga and his second to Vincenzo, Guglielmo's son and heir. The *Primo libro* was assembled by Andrea Botta, *maestro di cappella* of the cathedral at Casale, whose dedicatory preface to the second edition of 1573 describes Faà's residence as a centre of musical activity in the city and also reports that Faà's music for vespers, written for the cathedral some years earlier, had now been published. This book, the *Salmi di David*, also of 1573, contains a number of motets (one for eight voices) as well as a sequence of vespers psalms (in a simple and largely homophonic style) together with alternative settings of the *Magnificat*. For his second edition of 1587, the Brescian printer Bozzola duplicated the vespers music, omitted the motets and included a number of fresh pieces by Antonio Mortaro, then at the start of his career and presumably resident in the city.

IAIN FENLON

Fabbri, Anna Maria. Italian singer. *See* FABRI, ANNIBALE PIO.

Fabbri(-Mulder), Inez [Schmidt, Agnes] (*b* Vienna, 26 Jan 1831; *d* San Francisco, 30 Aug 1909). American soprano and impresario of Austrian birth. She studied in Vienna, making her début in the title role of *Lucrezia Borgia* in Kassa (Kaschau), Hungary (now Košice, Slovakia), in 1847. She was prima donna of the Stadttheater in Hamburg in 1857, and that year was engaged by the impresario Richard Mulder (1822–74), whom she married, to tour the Americas, Canada and the Caribbean islands. Her 25 appearances at the Winter Gardens, New York, in 1860 in a publicity 'war' with Patti secured her international reputation. For the next two years the Fabbri-Mulder Troupe toured North America. She returned to Europe in 1862, becoming prima donna of the Frankfurt Stadttheater in 1864, where she remained for seven years. On the outbreak of the Franco-Prussian War, she and Mulder returned to the USA. In 1872, the year after which Fabbri appeared at Covent Garden, they joined forces with another company to present an opera season in New York. In winter 1872–3 Fabbri and Mulder produced 43 operas at the California Theater, San Francisco, and in 1874 they staged the first performance in the city of *Die Zauberflöte*. Fabbri alone produced a remarkable season (1875–6) in which she directed and sang in 60 operas. Her repertory included at least 46 different roles as well as appearances at many special concerts. She retired from the stage in 1880 and undertook several unsuccessful operatic ventures. Her musical memorabilia are in the music library at the University of California at Berkeley.

JOHN A. EMERSON/R

Fabbri, Mario: Writings (*b* Florence, 7 Jan 1931; *d* Florence, 12 June 1983). Italian musicologist. He studied the piano with Scarlino, composition with Frazzi (1949–56), the organ with Bützler, early instruments with Rapp, and palaeography at the University of Parma (1958). He worked initially in Perugia, as professor of music history and librarian at the conservatory (1959–62) and as a lecturer at the Università per Stranieri (1960–62). Subsequently he taught at Florence Conservatory (1962–82), where he was also chief librarian (until 1970) and director of the museum of early instruments; he was appointed to a teaching post at the Graduate School of Fine Arts in Villa Schifanoia (1969–75). He was professor of music history at Florence University (1969–82), artistic director of the Accademia Musicale Chigiana (1963–9) and guest lecturer at Duke University, North Carolina (1968). He was editor of *Chigiana* (appointed 1964) and president of the Accademia Nazionale Luigi Cherubini (1972–80). Fabbri's numerous publications indicate a wide range of interests; his work on the music history of Tuscany from the 15th to the 18th century is particularly valuable.

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Fabbri, Paolo (*b* Ravenna, 15 Oct 1948). Italian musicologist. After graduating in humanities at Florence University (1971), he undertook postgraduate study in musicology at Bologna University (1976). He has taught music history at the school of music in Ravenna (1980–87), and was appointed professor of music history and musical aesthetics at the universities of Udine (1987–91) and Ferrara (from 1991). During 1992 he was the visiting professor at the University of Chicago. He has been a member of the administrative and editorial board of the journal *Rivista italiana di musicologia* (1977–85), and a committee member of the Società Italiana di Musicologia (1989–91) and the IMS (1992–7). Fabbri's main area of research is Italian music from the 16th century to the 19th. In 1989 he joined the editorial board for the complete edition of the works of Rossini, and he is also on the advisory committee for the complete edition of Andrea Gabrieli. He was vice-director of the Fondazione Rossini in Pesaro (1994–8) and co-director of the journal *Bollettino del Centro rossiniano di Studi* (1996–8). He is also one of the musical directors of the Istituto di Studi Rinascimentali in Ferrara and the Fondazione Donizetti in Bergamo. In 1989 he was awarded the Dent medal.

TERESA M. GIALDRONI

Fabbri, Stefano. *See* FABRI, STEFANO (i) or (ii).

Fabbrini [Fabrini], **Giuseppe** (*b* ?Siena; *d* Siena, 20 Nov 1708). Italian composer and organist. Since he is represented in a collection of motets dedicated to St Ignatius Loyola (RISM 1695[1]), he was presumably a Jesuit. Documents exist (in *I-Sd*) showing that he received payments as organist of Siena Cathedral from November 1671 until 1685, when he was appointed *maestro di cappella*. He held this post until 1704. In 1705 and 1706 he again acted as organist but was *maestro* from 1707 until his death. Dedications and prefaces to the librettos he set to music show that he taught music and singing at the Collegio Tolomei, Siena, a famous institution open only to the nobility. The writings of Gerolamo Gigli, one of the best-known literary figures of the period, contain many references to musical activities at the college during Fabbrini's years there. His operas to librettos by Gigli were all written for the college theatre which opened in 1685. The preface to the libretto of the version of Alessandro Scarlatti's *L'honestà negli amori* performed in the theatre of the Accademia dei Rozzi, Siena, in 1690, for which Fabbrini wrote the prologue, all the intermezzos and some additional pieces, shows that he was a member of the academy with the name 'L'Armonico'.

WORKS

OPERAS

music lost; first performed at Siena, Collegio Tolomei, unless otherwise stated

La Genefieva (G. Gigli), 1 Feb 1685, lib *US-Wc*
La forza del sangue e della pietà (Gigli), 15 Feb 1686, lib *Wc*
Lodovico Pio (Gigli), 3 Feb 1687, lib *Wc*
La fede ne' tradimenti (Gigli), 12 Feb 1689, lib *Wc*
Prol and addns to A. Scarlatti: L'honestà negli amori (G.F. Bernini), Siena, Accademia dei Rozzi, 24 May 1690, lib *I-Bc*
La forza d'amore (Gigli), 1690, lib *US-Wc*, tentatively attrib. Fabbrini by Sonneck
L'Eudossia (Gigli), carn. 1696, lib *Wc*, tentatively attrib. Fabbrini by Sonneck
Coriolano (?Gigli), carn. 1706, lib *Wc*, tentatively attrib. Fabbrini by Sonneck

ORATORIOS

Il cielo, la terra, l'abisso, prostrati al nome ineffabile di Giesù (G.B.F. Lupi), 4vv, insts, Vienna, 1680 (?orig. intended for Siena), *A-Wn*
La madre de' Maccabei (Gigli), 1688, described by Allacci as an orat, anon., pubd lib of performance in Florence, 1694, Brompton Oratory, London
La glorie del nome di Giesù (Lupi), Vienna, 1689, mentioned in *RicordiE* (?identical with Il cielo, la terra, l'abisso)
Il martirio di Sant'Adriano (Gigli), 1690, mentioned as anon. and without date in Allacci; attrib. Fabbrini in *LaMusicaD*

OTHER SACRED VOCAL

Motet, 1v, 2 vn, bc, 1695[1]
Masses, introits, sequences, vesper psalms, compline psalms, antiphons for Vespers for all the saints, responses for the Office of the Dead, hymns, 1644–1708, *I-Sd*
Ricercari a 2 soprani, *D-Bsb* (according to Eitner)

FABIO BISOGNI

Faber Music. English music publisher, based in London. The firm was established in 1965 as an offshoot of the book publishers Faber and Faber, for the prime purpose of publishing Benjamin Britten's music after his withdrawal from Boosey & Hawkes in 1964. In 1988 Faber Music separated from Faber and Faber and became an independent company. In addition to Britten's output from 1964 and many of his previously unpublished earlier works, Faber Music publishes and promotes the works of an outstanding group of English composers including Vaughan Williams, Holst, Frank Bridge, Robert Simpson, Malcolm Arnold, Nicholas Maw, Jonathan Harvey, David and Colin Matthews, Oliver Knussen, George Benjamin and Thomas Adès, and the Australian composer Peter Sculthorpe. Its constant underlying philosophy is to identify and support talented young contemporary composers.

Faber Music also issues concert works by Paul McCartney, the music of a growing number of composers working principally in film and television, most notably Carl Davis, and a number of music theatre works including Lloyd Webber's *Cats*.

It publishes a wide range of printed music, and has developed an extensive education catalogue and a strong and varied list of choral publications. It has issued important performing and scholarly editions including John Dowland's *Collected Lute Music*, operas by Monteverdi and Cavalli, early keyboard music, masses and other large-scale choral works by Haydn, Mozart, Schubert, Weber, Purcell and others. Other publications include Brian Newbould's realization of Schubert's Tenth Symphony and Deryck Cooke's performing version of Mahler's Tenth Symphony.

ALAN POPE/R

Faber, Benedikt [Benedictus] (*b* Hildburghausen, Lower Franconia, 1573; *d* Coburg, 28 April 1634). German composer. Research has yet to be undertaken on his life and work. He seems to have been a fellow student of Melchior Franck at the choir school at Augsburg in the 1590s. He probably went to Coburg about 1600; on title-pages of works that he published between 1607 and 1631 he described himself as a musician at the Saxe-Coburg court chapel. A few of his occasional compositions were printed together with a number of similar pieces by Franck, who had become Kapellmeister there and for whose wedding in 1607 he composed a motet. His music is often similar in style and technique to Franck's. He did not adopt the basso continuo, and he favoured essentially

homophonic double-choir settings for eight voices. These two features indicate the conservative nature of his music.

WORKS

pubd in Coburg

Der 118 Psalm, 8vv (1602)
Harmonia sup. Psalm 148, 8vv (1602)
Sacrarum cantionum, 4–8vv, editio prima (1604)
Canticum gratulatorium in solennitatem nuptiarum Dn. Melchioris Franci (Ego flos campi), 8vv (1607)
Der 51 Psalm, 8vv (1608)
Adhortatio J. Christi ad genus humanum directa, 5vv (1609)
Cantio nuptialis (Ps xxxii), 6vv (1609)
Colloquium metricum (Quis puer), 8vv (1609)
Triumphus musicalis in victoriam resurrectionis Christi, 7vv (1611)
Gratulatorium musicale (Ps ix), 8vv (1620)
Christliches Memorial order Valet Gesänglein Simeonis (Im Frieden dein), 4vv (1622)
Laudes musicae, infantis Jesuli nati, das ist, Neue gantz fröliche deutsche Weyhnacht Gesang, 4, 6vv (1625)
Neues fröliches Hochzeit Gesang (Das ist vom Herrn geschehen), 4vv (1629)
Natalitia Christi, 8vv (1630)
Neuer Freuden-Schall (Vom Himmelhoch), 4/4vv (1630)
Gratulatorium musicale, 6vv (1631)
Compositions in the following works of M. Franck (all pubd in Coburg): Cantica gratulatoria (1608), Gratulationes musicae (1609), Gratulationes musicae (1610), Vincula natalitia (1611), Gratulationes musicae (1611), Concentus musicae (1613), Musicalische Glückwünschung (1614), Zwey neue Hochzeitgesänge (1614)
Herr Gott durch deine Güte, 4vv; Exultate justi, 6vv; both *D-Bsb*

ADAM ADRIO/DOROTHEA SCHRÖDER

Faber, Gregor (*b* Kützen, nr Merseburg, *c*1520; *d* after 1554). German music theorist. In 1545 he entered the University of Leipzig and in the following year he received the baccalaureate degree. After becoming a magister in 1547 he enrolled in 1549 at the University of Tübingen, where in 1554 he was awarded the degree of doctor of medicine. Meanwhile he had become a music teacher at the university and had published the treatise on which his fame rests, *Musices practicae erotematum libri II* (Basle, 1553).

Faber's treatise exhibits both conservative and progressive traits. It follows the format of Sebald Heyden's *De arte canendi,* for it also consists of two books, the first on the elements of music and the second on the intricacies of mensural notation. Faber's book 1, however, discusses at length the philosophy of music, an appropriate subject for a university textbook. He borrowed numerous music examples from Heyden, including Ockeghem's well-known *Prenez sur moy* and the Kyrie II from Isaac's *Missa 'Quant j'ay au cueur'*. He was one of the few theorists who followed Heyden's theory of a single *tactus* that could be applied to all mensurations. Although Faber praised Glarean's theory of 12 modes, he still adhered to the eight-mode system. His progressive thought is shown in comments on *musica ficta* and particularly on an outstanding example of it, Matthias Greiter's *Passibus ambiguis* for four voices. This extraordinary composition contains written-out accidentals and modulates by a downward circle of 5ths from F to F♭, the chord on which the composition ends.

CLEMENT A. MILLER

Faber, Heinrich [Lichtenfels, Hainrich] (*b* Lichtenfels, before 1500; *d* Oelsnitz, 26 Feb 1552). German music theorist and composer. Under the name of Hainrich Lichtenfels he may have been a singer from 1515 to 1524 in Copenhagen at the court of King Christian II of Denmark (see Peters-Marquardt). In 1538 he was a teacher at the Benedictine monastery of St George in Naumburg. He entered the University of Wittenberg in 1542 and three years later received the Master of Arts degree. Meanwhile he became rector of the cathedral school of Naumburg in 1544, but his advocacy of Lutheran doctrines brought him into conflict with Catholic authorities and in about 1549 he left the city. He lectured on music in 1551 at Wittenberg, and at the time of his death he was rector at Oelsnitz.

Faber's musical renown rests on three theoretical works. His *Compendiolum musicae* (Brunswick, 1548), a textbook for beginners in music, was the most popular music treatise in Lutheran schools during the 16th and 17th centuries. It had more than 30 editions, the last appearing in 1665; several German versions of the treatise were printed, and such well-known composers as Melchior Vulpius and Adam Gumpeltzhaimer edited it. The work is a model of clear and concise musical definitions and an important source of bicinia, because in order to develop the musical skill of his students Faber included some of his own two-voice compositions. For additional practice he recommended the bicinia of others, such as those in George Rhau's *Bicinia* (Wittenberg, 1545). Another work, *Ad musicam practicam introductio* (Nuremberg, 1550), follows a typical format of the time in being divided into two parts, the first on the elements of music and the second on mensural notation. Its conservative nature is shown by its frequent reliance on Gaffurius's *Practica musicae* (Milan, 1496). The work contains many polyphonic examples, some by Faber and some by Josquin and others of his generation. (Other compositions by Faber are found in *D-Dl* 1/D/4, *Rp* A.R.940/41 and *H-Bn* Bártfa 23.)

In addition to treating practical music Faber wrote a *Musica poetica* (1548, in *D-Z*). Besides its discussion of the more humanistic aspects of music it is valuable for a comparison of *sortisatio* (improvised singing) and composed music. As a conservative Lutheran schoolteacher Faber strongly supported composed music, saying that improvised singing in Germany was practised only by labourers and mechanics. In his examples of *sortisatio* the cantus-firmus tenor and the counterpoint sometimes formed parallel 5ths and unisons, a procedure unacceptable in music written according to his rules of composition. Other German school musicians, such as Gallus Dressler (*Praecepta musica poeticae,* 1563), followed Faber's lead

in rejecting improvised song. Adrianus Petit Coclico also confirmed Faber's contention, saying that in Germany at the mention of improvised song 'they rail at you with greater aversion than at a dog' (*Compendium musices*, Nuremberg, 1552, f.I/iv). But in contradistinction to Faber, Coclico advocated improvised song as a beautiful art in which other nations excelled.

CLEMENT A. MILLER

Faber, Johann Christoph (*fl* early 18th century). German composer. An entry for a violinist of the same name in the list of orchestral personnel at the Oettingen court in 1689 (see Nettl) may be a clue to the identity of a composer otherwise known only through five manuscripts in the Herzog August Bibliothek in Wolfenbüttel. In one of the manuscripts homage is paid to Duke Ludwig Rudolph of Brunswick-Lüneburg, ruler of the duchy of Blankenburg from 1714 to 1731, who then succeeded his brother at the Wolfenbüttel court, where he remained until his death in 1735. Faber may have been part of the musical establishment at these courts.

The curious content of four of the five manuscripts attributed to Faber engenders interest in the composer, even though the music itself is of such poor quality as to raise the question that he may have been an amateur. Except for *Parties sur les fleut dous à 3*, each manuscript contains a musical puzzle, a cryptographic message and its solution provided by the composer. Faber inserted into the two *Compositio obligata* and the *Invention* a text to be read by assigning a letter of the alphabet to each note of the staff. A crotchet on the first staff line becomes *a*, on the first space *b*, to *m* on the space above the first leger line. The alphabet is completed with quavers, on the bottom line as *n*, to *z* on the space above the first leger line (a 24-letter alphabet without *i* or *v*). Three special pitches and rhythmic values represent the umlauts *ä*, *ö* and *ü*. By this means, in the first *Compositio obligata*, the notes of the viola part in the second (Vivace) movement spell out 18 different foods, and their initial letters also add the advice, *Geld her vors Essn* ('pay money before eating'). The second *Compositio obligata* uses much the same method, although the note values in the alphabetical scale become minims and crotchets, and the viola part of the opening movement gives an encomium to Duke Ludwig Rudolph: *Ludwig der angenehmst, das Deutschlandes Zier . . .* ; a second 'mystery' appears in the oboe part, where Faber assigned note values to various monetary denominations, such as groschen, heller, batzen, dukaten etc. from which one can apparently determine the composer's payment for the work. In the fifth manuscript, a concerto for double string ensembles, which may be performed separately or simultaneously, the secret message is a two-line verse again hidden in the viola part. Finally, in the *Neuerfundene obligata Composition*, written for Ludwig Rudolph's name day, the clarino part for each of the nine movements contains exactly the number of notes representing each letter in *Ludovicus*. The letters are represented by assigning each in the Latin alphabet with a number equivalent (see below). This form of *gematria* was not new in literature, where cryptographic meanings have often been derived from equating letters of the alphabet with numbers. In the Baroque period, particularly, both poets and theologians used *gematria* for symbolic interpretations. Although there have been many demonstrations of *gematria* in the music of Bach, for example, such as his delight in the number 14 representing the name Bach (see Smend), substantiation of the practice by composers has been rare. Faber's manuscripts, despite their musical inferiority, are therefore valuable.

GEORGE J. BUELOW

Faber, Nicolaus (i) [Schmidt, Nickel] (*b c*1490; *d* Leipzig, 1554). German printer. Records show that he became a citizen of Leipzig on 5 October 1510. His printing and publishing business, begun in 1521, included a book bindery and a retail bookshop. Since no publications bearing his name are dated later than 1545, he probably devoted the last years of his life to the sale rather than to the printing of books. After his death the firm was taken over by his son, Lorenz, but apparently with little success.

One of the first Protestants in Leipzig, Faber maintained close business ties with Georg Rhau in Wittenberg. His book production was largely confined to school texts and grammars and theological writings, beginning with the works by Reformation authors and later turning to those of the Catholic Church. In music he is known for a single publication, *Melodiae Prudentianae et in Virgilium magna ex parte nuper natae* (1533), which contains four-voice metric settings by Lucas Hordisch and Sebastian Forster of hymns by the 4th-century Latin poet Aurelius Clemens Prudentius. Simple note-against-note settings of antique metres, often of Horatian odes (*see* ODE (ii)), were fairly frequent in Germany in the early 16th century and showed the influence of the contemporary humanistic movement. The quantitative rhythms of the hymns in this collection are notated in semibreves and minims with no general time signature; one note is allotted to each syllable of the text. The metric scheme is indicated at the beginning of each setting. The music is printed in choirbook format, using the old-fashioned system of block printing. Faber published the complete texts in a separate volume, *Aurelii*

Prudentii ... liber kathemerinon (1533), since only the first strophe was given with the melodies.

MARIE LOUISE GÖLLNER

Faber [Wolzanus], **Nicolaus** (ii) (*b* Bolzano; *fl* Bavaria, 1516). Tyrolean musician. He was a Kantor and priest at the court of Duke Ernst (youngest brother of Wilhelm IV of Bavaria) and may be identical with a Nikolaus Georg Fabri who served as court chaplain to Ludwig IV. Faber has frequently been cited as the author of the treatise *Musicae rudimenta* (Augsburg, 1516), but all evidence points to Johannes Aventinus as its true author. Faber is mentioned on the title-page, but only in the capacity of a musical authority recommending the treatise. The first ascription to Faber in a primarily musical work is in J.G. Walther's *Musicalisches Lexicon* (1732). Many subsequent reference works (e.g. *FétisB* and Forkel's *Allgemeine Geschichte der Musik*) have carried double entries, as though both Aventinus and Faber had written separate treatises, or have ascribed authorship to Faber and considered Aventinus either the editor or publisher (e.g. *MGG1*, RISM).

Faber Stapulensis, Jacobus [Lefèvre d'Etaples, Jacques] (*b* Etaples, *c*1460; *d* Nérac, 1536). French theologian, scholar and music theorist. He matriculated at the University of Paris, possibly in 1474 or 1475, and received the BA in 1479 and the MA probably in 1480. He taught in the Faculty of Arts at the Collège du Cardinal Lemoine, University of Paris, until 1508 and was afterwards active as a scholar at the abbey of St Germain-des-Prés outside Paris. There he prepared a French translation of the New Testament and Psalms, which provoked the Parlement of Paris to summon him on suspicion of heresy. Clearly in sympathy with the Reformation, he fled to Strasbourg in 1525, but in 1526 he was recalled by François I, who appointed him librarian of the royal collection and made him tutor to his children. Faber completed his translation under royal protection; it was published in 1530. He spent his last years at the court of Queen Marguerite of Navarre.

During his lifetime Faber's writings and editions were printed more than 350 times. Apart from his theological interests, which included medieval mystical writers such as Hildegard of Bingen and Raymundus Jordanus, his chief intellectual efforts were directed towards Aristotelian philosophy (especially logic and moral philosophy) and mathematics, which he promoted in a programme of educational reform. In this context he wrote his *Musica libris demonstrata quattuor* (also internally titled *Elementa musicalia* or *Elementa musices*), which was printed together with a treatise on arithmetic, an epitome of Boethius's arithmetical treatise and a *Rithmimachie ludus* in Paris in 1496. In this treatise, Faber propounded the traditional tonal system and arithmetical reckoning of the proportions of intervals. However, on the basis of Euclid's *Elements*, he also offered a new geometrical method by which intervals represented by superparticular ratios (e.g. the tone, 9:8) might be divided into two equal parts. In so doing he opened up a new approach to questions of tuning and temperament; his treatment was quoted up until the 18th century.

MICHAEL FEND

Faberton (?Ger.). *See under* ORGAN STOP.

Fábián, Márta (*b* Budapest, 27 April 1946). Hungarian cimbalom player. She began playing at the age of eight. She studied at the Budapest Conservatory (1960–64), and later with Ferenc Gerencsér at the Liszt Academy of Music (where the cimbalom faculty was created for her) graduating in 1967. She was a member of the Budapest State Dance Ensemble (1967–73) and a soloist with the Budapest Chamber Ensemble from 1969. In 1968 she played for the Wuppertal Opera, and made her first appearance as a soloist in Darmstadt. She has been a guest performer at the Darmstadt, Zagreb, Graz, Lucerne, Witten and Warsaw festivals, with the ensemble Die Reihe, and in Paris. Her playing combines great artistry with an impressive rhythmic vitality, and she has invented several new effects for the cimbalom. She is a specialist in contemporary music and has recorded many of the works dedicated to her by contemporary composers, among whom are György Kurtág, Emil Petrovics, István Láng, László Sáry, Endre Székely and Sándor Szokolay. The cimbalon part in Boulez's *Eclat/Multiples* (1970) was also composed for Fábián.

PÉTER P. VÁRNAI

Fabini, (Félix) Eduardo (*b* Solís de Mataojo, Lavalleja, 18 May 1882; *d* Montevideo, 17 May 1950). Uruguayan composer and violinist. He studied the violin at the Conservatorio Musical La Lira, Montevideo, and attended the Brussels Conservatory (1900–03) as a pupil of Thomson (violin) and De Boeck (composition). At the end of his studies he was awarded the first prize in violin before returning to Montevideo. He gave concerts in Europe, Argentina, Brazil and Uruguay, and in 1910 he joined the Asociación Uruguaya de Música de Cámara. Together with Broqua and Cluzeau-Mortet, Fabini founded a new nationalist style in Uruguay. The best-known work in this style is the symphonic poem *Campo* (1913), first performed in Montevideo by Vladimir Shavitch on 29 April 1922 and again in Buenos Aires in 1923, with Richard Strauss conducting. *Campo* and *La isla de los ceibos* (1924–6), another symphonic poem, were recorded by RCA Victor in the USA. He wrote further orchestral pieces: *Melga sinfónica* (1931), *Mburucuyá*(1933) and the ballet *Mañana de reyes* (1937). Next in importance are several *tristes* for piano and voice and piano. He also composed other vocal and choral works, chamber music and pieces for guitar.

SUSANA SALGADO

Fabordon [fabordón, fabourden, fabourdon]. *See* FABURDEN; FAUXBOURDON; and FALSOBORDONE.

Fabre d'Olivet, Antoine (*b* Ganges, 8 Dec 1767; *d* Paris, 27 March 1825). French writer and musician. The son of a Protestant merchant family, he devoted himself mainly to literature, studying music as a hobby. During the French Revolution he made his name by writing songs and hymns, as well as the libretto of *Toulon sauvé*, set to music by Jean-Baptiste Rochefort (1794). He wrote the libretto for a fairy opera (*Le miroir de la vertu*) and several *tragédies lyriques* (*Cornélie et César*, *Alcée et Sapho*, *Hermione*). He wrote both the text and the music of a philosophical drama *Le sage d'Indostan* (1796), which was intended for performance by the handicapped. His quartets for two flutes, viola and cello were published by Ignace Joseph Pleyel in 1800. In the same year he became a theosophist and turned to the study of classical ideas. Inspired by an article in Rousseau's *Dictionnaire de musique*, he took up Charles-Henri de Blainville's theories of the 'third mode', and in 1804 composed *Hymne à Apollon* and an ode, *Les souvenirs mélancoliques*, in the 'Greek mode'. He re-used the mode in some passages of an oratorio sung on 25 December 1804 at St Louis-du-Louvre, Paris, on the occasion of Napoleon's coronation. Many of his articles were published posthumously in *La musique expliquée comme science et comme art*.

For Fabre d'Olivet the function of music was not simply aesthetic but above all moral, spiritual and magical. Musical laws, laid down by the initiated for the uplifting of humanity, expressed the harmony of the cosmos (hence the numerical connotations of harmonies and the relationship between musical sounds and the planets). For this reason he held the music of ancient cultures (Egypt, India, China and Greece) to be vastly superior to that of modern Western civilization.

JACQUES REBOTIER/MANUEL COUVREUR

Fabreti, Bartolomeo. *See* FAVERETTO, BARTOLOMEO.

Fabri, Adam. French singer. He may be identifiable with the French composer ADAM.

Fabri [Fabbri], **Annibale Pio** ['Balino'] (*b* Bologna, 1697; *d* Lisbon, 12 Aug 1760). Italian tenor and composer. A pupil of Pistocchi, he sang female parts in intermezzos performed between the acts of three operas at the Ruspoli Palace, Rome, in 1711, and probably made his public début at Modena during Carnival 1714 in *La fede tradita e vendicata* (composer not named, but probably Francesco Gasparini). In 1716 he sang in G.B. Bassani's *Alarico re dei Goti* at Bologna and in five operas at Venice (two of them by Vivaldi). He appeared again in Bologna, and also in Rome and Mantua, in 1718. In Bologna, where he was admitted to the Accademia Filarmonica as a composer, he produced oratorios in 1719 and 1720. By that time he was in constant demand all over Italy, singing in Rome (1720–21), Venice (1720–22, 1727–8), Milan (1721, 1726, 1728), Genoa (1722), Naples (nine operas in 1722–4, two of them by Vinci), Bologna (1724, in Alessandro Scarlatti's *Marco Attilio Regolo*) and Florence (1725–7, 1729, 1732, 1737). Handel engaged him for two seasons in London (1729–31) and he made a successful début in *Lotario* (Berengario) at the King's Theatre. Handel also composed the parts of Emilio in *Partenope* and Alexander in *Poro* for him, and he sang in *Giulio Cesare*, *Tolomeo*, *Scipione*, *Rinaldo* and *Rodelinda*.

In 1732 Fabri sang in Vienna (Caldara's *Adriano in Siria*) and received the title of virtuoso to the Emperor Charles VI, who on 23 February 1733 stood godfather to one of his sons. Fabri went on to appear in Bologna (1734–5), Modena and Venice (1735), Genoa (1737 and 1748), Madrid (1738–9), where he enjoyed great success in seven operas (three by Hasse), Florence (1744–5, in Porpora's *Ezio*) and Brescia (1749). He composed operas for Madrid and Lisbon, including a setting of *Alessandro nell'Indie*. After retiring from the stage he was appointed to the royal chapel at Lisbon.

Fabri was one of the leading singers of his age and did much to raise the status of the tenor voice. Swiney, in recommending him for London (1729), wrote that he 'sings in as good a Taste as any Man in Italy'. Mrs Pendarves described his voice as 'sweet, clear and firm'

Annibale Pio Fabri: caricature by Marco Ricci, pen and ink over pencil, before 1730 (Royal Library, Windsor Castle)

and called him 'the greatest master of musick that ever sang upon the stage'. The parts Handel composed for him have a compass of nearly two octaves (B to *a'*) and require 'great abilities' and 'considerable agility', according to Burney, who declared that 'the merit of this tenor was often sufficient in Italy to supply the want of it in the principal soprano'. Fabri's wife, Anna Bombaciara (Bombaciari, Bombasari), was also a singer (contralto); she appeared in four operas by L.A. Predieri at Florence (1718–19). Venice (1720), Milan (1721) and Naples (1722). She is often identified, probably incorrectly, with Anna Maria Fabbri (*fl* 1708–24), who sang in Bologna, Naples, Genoa and Venice, where she was particularly associated with Vivaldi, taking part in the premières of his *Orlando finto pazzo*, *Arsilda regina di Ponto* and *L'incoronazione di Dario*.

WINTON DEAN

Fabri [Fevre, Schmidt], **Joducus** [Josquin] (*fl* ?Basle; early 16th century). Swiss composer of uncertain origin. A 'Joducus Fabri de Leittenberg' matriculated at the University of Vienna on 14 April 1500, but there is no proof that this is the same Fabri whose music survives today exclusively in Basle autographs dating from the first quarter of the century. Fabri's autograph copy of a three-voice *Magnificat* is of particular interest in that it represents the earliest known draft and subsequent fair-copy of a composition in European music (*CH-Bu* F VI 26d, ff.4*r*–5*r*; facs. of 4*r* in Owens, 143 and in Kmetz, 411). Aside from documenting the genesis of a composition from start to finish, this autograph demonstrates that Fabri used pseudo-scores (i.e. without bar lines or exact vertical alignment of the voices) when writing in an imitative style, yet relied on separate parts for those sections of the *Magnificat* that lacked prevailing imitation. Two untexted compositional drafts (*CH-Bu* F VI 26h, ff.3*r*, 4*v*; facs. of 3*r* in *MGG2*, i, col. 1267), both of which can be attributed to Fabri on palaeographic evidence, further demonstrate his reliance on pseudo-scores for sorting out the vertical and horizontal relationships inherent in imitative writing.

JOHN KMETZ

Fabri, Martinus (*d* The Hague, May 1400). North Netherlandish composer. In 1395 he became a singer at the court of Holland at The Hague, where he died. He also appears in the records of St Donatian, Bruges, though without dates (see *StrohmM*). Several books of polyphonic music left by him were bought by the Count of Holland for use in the court chapel. His music is known from four compositions in the Leiden fragments. The form in all cases seems to be that of the ballade, though two works are in French and two in Dutch. The French pieces use the complex style of late 14th-century composers such as Senleches and Trebor, employing coloured notes and proportions. The Dutch works are quite different, with their syllabic parlando settings.

GILBERT REANEY

Fabri, Petrus (*fl c*1400). Composer. His name appears only attached to the triplum voice of the (otherwise anonymous) Latin virelai *Laus detur multipharia* (*F-CH* 564,

f.16*v*) in honour of St Catherine. The triplum, marked 'triplum: laus detur: petrus fabri' was the last of the work's four voice-parts to be copied and it seems likely that, as with similar identifications elsewhere in the manuscript, the ascription serves to identify the author of the piece to which the triplum is to be added, rather than the composer of the added triplum. The virelai employs red minims somewhat unusually to achieve *sesquitertia* proportion in both cantus and triplum. The most recent modern edition, in PMFC, xviii (1981), erroneously transcribes a flat sign as a rest, causing the cantus part to be incorrect (bars 3–17), while Apel's edition in CMM, liii/3 (1972), is correct. The use of hocket, short imitative passages and *sesquitertia* proportion is reminiscent of the so-called 'realistic' virelai, suggesting that the Latin text may be a contrafactum.

ANNE STONE

Fabri [Fabbri], **Stefano (i)** (*b* Orvieto, *c*1560; *d* Loreto, 28 Aug 1609). Italian composer, father of STEFANO FABRI (ii). His Flemish father, Francesco, was *maestro di cappella* of Orvieto Cathedral, where the young Stefano served as singer (1568–85), organist (1580–81) and trombonist (1582–3). From 11 May 1590 until March 1591 he was *maestro di cappella* of the Collegio Germanico, Rome, and from 1 May 1599 to 30 September 1601 he held the same position at the Cappella Giulia in the Basilica di S Pietro. From October 1607 to August 1608 he was *maestro* of S Giovanni in Laterano, Rome, and on 23 September 1608 he became *maestro* of the Santa Casa, Loreto; he died less than a year later.

As a composer Fabri is known by only two pieces, a five-part madrigal (RISM 1604[8]) and a six-part motet (1613[2]).

Fabri [Fabbri], **Stefano (ii)** (*b* Rome, *c*1606; *d* Rome, 27 Aug 1658). Italian composer, son of STEFANO FABRI (i). A pupil of G.B. Nanino, he was *maestro di cappella* of the Seminario Romano, 1638–9, and of S Giovanni dei Fiorentini until 1644. While at the Seminario Romano he presided over music for seven choirs of voices and instruments at the centenary celebrations of the founding of the Jesuit order at the church of the Gesù in 1639, organized by Cardinal Antonio Barberini. On 7 October 1644 he became *maestro di cappella* of S Luigi dei Francesi. This position, to which Romano Micheli hoped to be appointed, should have been assigned by competition, but the papal singers, who had already refused to sing under Micheli because of his hostile attitude to the papal chapel, sought and obtained the abolition of the competition and the appointment of Fabri, who held the post until December 1656. On 25 February 1657 he was appointed *maestro* of S Maria Maggiore but died 18 months later.

Like his father, Stefano (ii) seems to have published no collection of his music, though a volume of psalms in the concertato style appeared posthumously, and he is well represented in anthologies of the time devoted to sacred music, again by pieces for small forces.

ARGIA BERTINI/NOEL O'REGAN

Fabri, Thomas [Tomas] (*fl* *c*1400–15). Franco-Flemish composer. On 23 June 1412 he was appointed succentor at the church of St Donatian in Bruges, where he remained until 1415. Earlier he had been a pupil of the Parisian composer JOHANNES TAPISSIER (*d* *c*1410), since a Gloria by him in *I-Bc* Q15 describes him as 'scolaris Tapissier' (ed. in CMM, xi/1, 1955, p.78). Three other compositions by him survive: an incomplete antiphon, *Sinceram salutem care mando vobis* (which mentions his associations with Bruges), and two three-voice secular songs, *Die mey so lieflic wol ghebloit* (ballade) and *Ach vlaendere vrie* (?rondeau). All three are in *A-HE* and are edited in *StrohmM*.

CRAIG WRIGHT/R

Fabrianese, Tiberio (*b* Fabriano, early 16th century). Italian composer. His works appeared in anthologies from the mid-16th century onwards. They include two madrigals for four voices in Antonio Gardano's 'true third' volume of madrigals *a note nere* (1549[31]; ed. in CMM, lxxiii/4, 1978) and 'The song of the hen' (*Canzon della gallina*), a work anticipating the animal imitations of the madrigal comedy, in Baldassare Donato's first book of four-part *Canzon villanesche alla napolitana* (1550[19]). The popularity of the latter piece is apparent from its reappearance in the five later editions of the collection, all dating from the 1550s.

DON HARRÁN

Fabricius, Albinus. *See* FABRITIUS, ALBINUS.

Fabricius, Bernhard. *See* SCHMID, BERNHARD (i).

Fabricius [Goldschmidt], **Georg** (*b* Chemnitz, 23 April 1516; *d* Meissen, 15 July 1571). German poet. He studied at the Leipzig Thomasschule in 1535 and at Wittenberg in 1536. From 1536 to 1538 he taught in Chemnitz and

in 1539 he was deputy headmaster in Freiberg. From 1539 to 1543 he was in Italy; he matriculated at Bologna University in 1541. After a period as private tutor at Schloss Beichlingen, Thuringia, in 1543, and in Strasbourg in 1544, he became rector of the Landschule of St Afra, Meissen, at which Michael Vogt and Wolfgang Figulus were Kantors from 1549 to 1551 and from 1551 to 1588 respectively. On 7 December Fabricius was crowned Poet Laureate by Emperor Maximilian II at the Reichstag in Speyer and raised to the aristocracy.

Although Fabricius was not himself a musician he actively encouraged music at his school. Some of his own hymns and odes were set to music by composers including Martin Agricola, Johann Walter, Le Maistre, Scandello, Reusch and Figulus. Reusch set not only hymns and odes (*Melodiae odarum Georgii Fabricii*, Leipzig, 1554) but also some of Fabricius's occasional poems: funeral songs for several members of the Rhau family (*Epitaphia Rhavorum*, Wittenberg, 1550) and wedding songs for various prominent people (*Carmina nuptialia*, Leipzig, 1553). Fabricius's *Elogium musicae* was set to music for two voices by Joachim Heller (RISM 1549[16]) and for four voices by Wolfgang Figulus (*Precationes aliquot*, Leipzig, 1553). Most of Fabricius's writings were published in *Poematum sacrorum libri XXV* (Basle, 1567). He also edited works by the classical Latin writers and wrote commentaries on works by such early Christian poets as Prudentius and Sedulius.

HEINRICH HÜSCHEN

Fabricius, Jakob (Christian) (*b* Århus, 3 Sept 1840; *d* Copenhagen, 8 June 1919). Danish administrator, music critic and composer. A banker by profession, Fabricius remains best known for his many practical initiatives in Danish musical life. In 1871 he founded the Samfund til Udgivelse af Dansk Musik (Society for the Publication of Danish Music), whose president he was from 1887 until his death. This society is today the principal organization for the publication of contemporary Danish music. He was the founder of the choral society Vega (1872) and a founder-member of the Copenhagen Concert Society (Koncertforening; 1874), a progressive musical society which existed until 1893. It was chiefly due to him that the first regular concert hall, the Koncertpalae, was built in Copenhagen during 1884–8. As a music critic his writings stand out from the generally poor music criticism of his time.

As a composer, Fabricius has never been highly rated in Denmark, perhaps chiefly because his practical enterprise overshadowed his musical activities. His early *En vaarnat* ('A Summer Night') for choir and orchestra, and a symphony (1880) were performed in Copenhagen; but the major part of his works were for many years far better known abroad, as a result of successful performances in Berlin and Paris of his vocal compositions, especially three-part madrigals, *a cappella* madrigals and other choral works (Berlin), and solo songs, accompanied by piano and cellos, which were composed for concerts in Paris and published there.

BO MARSCHNER

Fabricius [Fabritius], **Petrus** [Schmidt, Peter] (*b* Tondern, Schleswig [now Tønder, Denmark], 1587; *d* Warnitz, nr Apenrade, Schleswig [now Åbenrå, Denmark], 1651). German lutenist and composer. He matriculated at Rostock University in 1603, where he studied mathematics and astronomy and later theology. A commendatory poem by him prefaces Joachim Burmeister's *Musica poetica* (1606), an important source of musical rhetoric. In 1608 he took the degree of Master of Theology, and in 1610 was assistant to the Lutheran pastor at Bülderup (now Bjolderup, near Tinglev, Denmark). From 1617 until his death he was a minister at Warnitz.

Fabricius's most notable musical achievement is his compilation of the bulk of the manuscript *DK-Kk* Thott 841 (a small part of the manuscript is attributed to Petrus Lauremberg, his friend when he was a student). It contains 152 leaves and was compiled in 1605–7 (though it was possibly not completed until 1608); several poetic supplements may also have been Fabricius's work. The manuscript is an excellent source for both Low and High German song texts and their music, especially from student circles. Most of the pieces are in several parts and are intabulated, in German tablature, for the six-course lute. Many others, however, are solo songs in staff notation, some of which reach well back into the 16th century; they include German polyphonic songs, Lutheran melodies, popular art songs and genuine folksongs. Fabricius's wide knowledge of the foreign repertory is clear from the number of English, French, Italian and Polish compositions that he included in addition to his own pieces. The composers of pieces that he intabulated he named as Hausmann, Meiland, Zangius, Lechner, Spatz, Friderici, William Brade, Scandello and 'H. K.', and it can be demonstrated from concordances that Jacob Regnart, Henning Dedekind, Melchior Franck and Staricius are also represented. Some pieces appear in no other sources. All are accurately copied. His manuscript is also important for the literary history of the song tradition of northern Germany, though less so than for its musical contents.

WOLFGANG BOETTICHER

Fabricius, Werner (*b* Itzehoe, Holstein, 10 April 1633; *d* Leipzig, 9 Jan 1679). German organist and composer. He

studied at Flensburg with the Kantor Paul Moth, and at the age of 12 was precocious enough to be admitted to Thomas Selle's Kantorei at Hamburg; in Hamburg he also studied with Heinrich Scheidemann. In 1650 he began to study philosophy, law and mathematics at the University of Leipzig; after graduating he practised law as a 'notarius publicus Caesareus'. He became organist and director of music at the Leipzig university church, the Paulinerkirche, in 1656 and also served as organist from May 1658 at the Nikolaikirche (the organ of which was probably the finest in Leipzig); his pupils there included J.F. Alberti. In 1662 Fabricius presented Schütz with the manuscript of his *Geistliche Arien, Dialogen, und Concerten*, acknowledging which Schütz wrote (in Latin):

> You ask me, Werner, if your work pleases me? So I say: who would criticize when Apollo himself praises you? Continue thus, and you will brighten with sweetest song not only the world but the firmament of the stars.

In 1663 he was one of seven candidates considered for Selle's position in Hamburg, but Schütz's pupil Christoph Bernhard, who received one more vote than he did, was the successful one. In the same year he was invited to play the organ at the dedication of a church in Zeitz for which Schütz composed most of the music. He married on 3 July 1665. Among his close friends he numbered not only Schütz but the poet Ernst Homburg, many of whose texts he set to music.

Fabricius has been known principally as a composer of sacred vocal music – notably simple melodies characteristic of those of the period – and as the author of a treatise on organ building. However, the rediscovery of a keyboard manuscript (in *US-Cn*) considerably broadens our view of him as both teacher and composer. The manuscript includes a copy of his printed *Manuductio zum General Bass*, mentioned by Mattheson in 1731 but for long thought to be lost. This instruction manual, according to Mattheson, 'consists entirely of examples' and provides keyboard realizations of melodies with figured bass. The manuscript proper consists of simple chorale settings and a set of short preludes notated in the new German keyboard tablature. The preludes are arranged by key in the following order: c, C, d, D, e, F, g, G, a, A, B♭, b. Although they are primarily pedagogical and too simple to continue the keyboard tradition of his teacher Scheidemann, they are nonetheless interesting for their fingerings.

His son, Johann Albert Fabricius (*b* Leipzig, 11 Nov 1668; *d* Hamburg, 30 April 1736), was a classical scholar and, from 1694, librarian to the Hamburg pastor J.F. Mayer. Several of his published treatises contain references to music among the ancient Greeks and Romans.

Fabritiis, Oliviero de. *See* DE FABRITIIS, OLIVIERO.

Fabritius [Fabricius], **Albinus** (*b* Görlitz; *d* probably at Bruck an der Mur, Styria, 19 Dec 1635). German composer resident in Austria. As a young man he spent two years in Denmark. He soon settled in Styria, becoming secretary of the Benedictine monastery of St Lambrecht. In 1597 the monastery made over to him two ironworks in the Aflenz-Tal, where he also acted as administrator on behalf of the monastery. He lived at Bruck an der Mur. Later he also became commissioner for the Counter-Reformation for Bruck and the Mürz-Tal. His *Cantiones sacrae* for six voices (Graz, 1595; five repr. RISM 1603[1]) contain not only traditional polyphonic writing but also more up-to-date homophonic and declamatory passages. The only manuscript works by him not from the 1595 print are five Latin motets for five and six parts (four in *D-Rp*, one in *D-FBo*), two German motets (*D-Rp*) and a six-part *Magnificat* (ed. in DTÖ, cxxxiii, 1981), which is based on Marenzio's six-part madrigal *Nel più fiorito aprile* (1581).

WALTER BLANKENBURG

Fabritius, Ernst (*b* Vyborg rural district, 2 July 1842; *d* Lapinjärvi, 8 Oct 1899). Finnish composer and violinist. He studied the violin with F.R. Faltin in Vyborg, and from 1857 to 1861 attended the Leipzig Conservatory where he studied the violin, piano and composition. Fabritius gave concerts in Finland and Sweden, and for

some years worked as a violinist in a theatre orchestra in Helsinki. In 1864 he gave up his promising musical career and worked first as a civil servant and later in agriculture, though he still composed and played chamber music. Fabritius's main work is his Romantic and virtuoso Violin Concerto (1878), which he performed in Helsinki in 1881. His orchestral works, which include a symphony (1878, lost) and overtures, show the influence of Schumann and Mendelssohn, and his piano pieces, the suite *Snöflingor* (1859) and the *Phantasie*, that of Chopin. He also wrote a string quartet (1860) and pieces for violin and cello.

SEIJA LAPPALAINEN

Fabritius, Petrus. *See* FABRICIUS, PETRUS.

Fabrizi, Vincenzo (*b* Naples, 1764; *d* ?after 1812). Italian composer. After starting to compose at the age of 18 or 19, within six years he had written 14 operas and gained an international reputation; he then disappeared from public notices, though Gerber, about 1812, wrote of him as still living. His first stage work, a revision of the Goldoni-Ciampi intermezzo *I tre gobbi rivali* (originally *La favola de' tre gobbi*, 1749, Venice), was produced in Carnival 1783 during a period when Neapolitan theatres were experimenting with the French fashion of presenting several short comic pieces instead of a full-length opera. This was the third of three short works commissioned by the Teatro dei Fiorentini; as the other two were written by Giacomo Tritto, Prota-Giurleo regarded Fabrizi's contribution as evidence that he was Tritto's pupil. He worked in northern Italy during 1784–5. In 1786 he was in Rome where his election to the *maestri di cappella* of the university was announced on 1 March. In the same year, his comedy *La sposa invisibile* produced loud applause both for its novelty and its expression. As a result he received a three-year appointment as musical director at the Teatro Capranica. His three-act version of the Don Giovanni story, produced in the following year, proved successful throughout Europe.

Gervasoni observed that 'in the space of a few years ... [Fabrizi] contributed greatly to the refinement of musical taste'. His extant music, which includes chamber works as well as comic operas, shows him to have been a competent composer, with ensembles distinguished by a solid structural sense and an ability to achieve desired effects with economy of means. In particular his harmony, while essentially simple and diatonic, shows skilful and judicious use of chromatic detail.

There is no evidence that he was related to the composer Paolo Fabrizi (*b* Spoleto, 1809; *d* Naples, 3 March 1869), who studied at Naples with Zingarelli and had seven operas given there, 1830–40, and two later at Spoleto.

JAMES L. JACKMAN/REBECCA GREEN

Faburden [faburdon, faburthon, fabourden, faberthon etc.]. A style of improvised polyphony particularly associated with English music of the 15th century, related to but independent of FAUXBOURDON.

1. Introduction. 2. Early faburden. 3. Faburden and fauxbourdon. 4. Later history of faburden.

1. INTRODUCTION. The term 'faburden' originally designated the lowest voice in an English technique of polyphonic vocal improvisation that enabled a group of soloists or a choir to sing at sight a three-part harmonization of plainchant, derived from the notes of the chant itself. It flourished from about 1430 or earlier until the time of the Reformation. The highly schematic formula used led to chains of what would now be called 6-3 chords, punctuated by occasional 8-5 chords (particularly at the beginnings and ends of phrases and words). The plainchant was thought of as the mean or middle voice, from which the other two parts were derived, although of course the chant was also present in the treble, which doubled it at the upper 4th while the bottom part sang 5ths or 3rds beneath it. The singers apparently declaimed the words simultaneously in the normal rhythm of plainchant. Ends of phrases were slightly ornamented, probably from quite early on, to provide satisfactory cadential suspensions; it is unlikely, at least in choral performance, that general ornamentation was introduced.

By 1462 the name 'faburden' was being used to designate the whole technique or complex of the three voices, so that one might speak of singing the *Magnificat* 'in faburthon' (see Harrison, 1962, pp.24–5). From about the same period onwards a number of traditional faburden parts, with or without their plainchants, may be traced through their use as the basis of polyphonic vocal compositions; they are also employed in 16th-century English organ pieces 'on the faburden' by Redford and others. A number of single faburden parts in mensural notation have been found, usually, like squares (*see*

SQUARE), in liturgical books; the discovery by Mary Berry of a considerable number of faburdens, notably faburdens to hymns, apparently copied in sight notation (*see* SIGHT, SIGHTING) on the same staff as their plainchants, suggests that most of the directions for the 'Sight of Faburdon' given by Wylde's Anonymous about 1430–50 (see below) still held good after 1528. The faburdens that survive in mensural notation nevertheless show that the technique was subject to variation and that different transpositions of the plainchant came to be used when faburdens were written down (this may have been one of the reasons why they needed to be written down); and the late account of the Scottish Anonymous (1558 or after) gives a very full picture of additional refinements to faburden, including arrangements for four voices. Similar developments are found in the history of FAUXBOURDON and are described, along with aspects of faburden and gymel, in the treatise of GUILIELMUS MONACHUS (*c*1480). Guilielmus, writing in Italy, may well have been English: this can be argued not merely from his knowledge of insular musical techniques, but also from his use of the English variant Sarum Sanctus no.3 as the unnamed cantus firmus of one of his musical examples (ed. in CSM, xi, ex.56, p.40; see Thannabaur, 1962, melody no.49).

2. EARLY FABURDEN. The English had used the word 'burdoun' (or bordoun, burdon or burdowne) to mean 'lowest voice' since before 1300: seven literary references in English to the term are known before about 1400, two in Anglo-Norman French, and another in Welsh (*byrdwn*). All but two refer unequivocally to singing, and in two of these the singing is choral. Six use 'burden' to mean the lowest voice of three – treble (or 'hauteyn'), mean and burden; in two jocular uses by Chaucer, both set in secular surroundings, it means the lower voice of two soloists; in the Welsh reference, a quatreble is added to make four voices. In three references the surroundings are definitely ecclesiastical, and 'monks' or 'clerks' are singing (see Flasdieck, 1956; Carter, 1961; Scott, 1971; Hoffmann-Axthelm, 1972; *Oxford English Dictionary*; Trowell, 1977; Stone, 1977–92, under 'Burdun'; Welsh reference in *Geiriadur Prifysgol Cymru,* i, Cardiff, 1950–67, under 'Byrdwn'). This tradition presumably relates at one extreme to the 'triple song' of Cistercian and Benedictine monks, attested since the 12th century (see Scott; A.A. King: *Liturgies of the Religious Orders*, London, 1955, pp.94–5); and at the other to secular 'three-men's songs', first referred to as such about 1425. It may also be connected with the three- or four-voice harmonization of chant apparently envisaged by Pseudo-Tunstede (see *CoussemakerS*, iv, 294*a*), although this was not an exclusively English technique (see J. Dyer, *MQ*, lxvi, 1980, pp.83–111). The unequivocal use of 'burden' to mean a low voice-part is unique to English during the 14th and 15th centuries. Harrison (1962) suggested that the voice-name might be rooted in instrumental practice, since shawms (*chalamis*) 'quos burdones appellamus' were played, while bells sounded, at the installation of the abbots of St Albans in the 13th century; Stone has dated this reference as perhaps as early as 1235, some 60 years before the first known uses of 'bordoun' as a voice name. This employment of wind instruments to enhance ecclesiastical dignity may have been, or have become, more general: Ulrich von Richental noted that at the Council of Constance in 1414 the English bishops processed to the sound of three trombones, and 'die pusauner pusaunoten über einannder mit dreyen stimmen, als man sunst gewonlichen singet' (J. Handschin, *SMz*, lxxiv, 1934, p.459).

The earliest use of the evidently composite term 'faburden' in the British Isles is probably to be found in the Cornish-language *Ordinalia*, a cycle of sacred plays surviving in a 15th-century copy of a 14th-century original (Fowler, 1961, esp. 125): a minor devil calls on Beelzebub and Satan to sing a great faburden ('faborden bras') as an obscene parody – presumably one takes the faburden and the other the chant – to which he will add a fine treble ('trebl fyn': see E. Norris, ed.: *The Ancient Cornish Drama*, Oxford, 1859, pp.176–9). The earliest precisely datable references come in two documents of 1430 and 1431, both connected with Durham Cathedral. The first is the earliest known indenture for an English choirmaster: John Stele is to teach the Benedictine monks and eight secular boys both to play the organs and to sing organ-song ('ad organum decantandum'), i.e. 'Pryktenote ffaburdon deschaunte et counter' (Bowers, 1975, p.A056; for later indentures etc. see ibid., p.A058, and *HarrisonMMB*, 41, 169, 174–5, 177ff, 181, 187, 192). With the addition of square-note, this form of words was to remain surprisingly constant in nearly all subsequent pre-Reformation choirmasters' indentures, in contexts which suggest that faburden was used as a simple technique appropriate not only for professional choirmen but above all for musically unskilled monks and canons carrying out the *opus Dei* in their closed choirs, to which lay singers were not normally admitted. At Durham, however, there had been a tradition of lay singers helping the monks in triple song ('in cantu qui dicitur trebill', i.e. perhaps faburden); their absence had given rise to a complaint in 1390, and Stele's appointment appears to be intended to solve a continuing problem. The second reference to faburden comes in a letter probably of 1431, formerly dated 1428–32. In 1426/7 the prior and convent of Durham had turned the parish church at Hemingbrough, Yorkshire, into a collegiate foundation with four clerks and six vicars-choral; it came into operation in 1428. Richard Cliffe, a vicar there, wrote to the prior recommending the appointment as fifth vicar of a priest then serving at the secular cathedral of Lichfield, Staffordshire; among the musical accomplishments then thought desirable in a vicar-choral he listed the ability to read and sing plainchant and 'to synge a tribull til [to] faburdun' (Trowell, 1959; Bowers, 1975, pp.4096, 5076; idem, 1981, p.14; R.B. Dobson: *Durham Cathedral Priory*, Cambridge, 1973, pp.156–62). The letter dated 21 November (the day after St Edmund KM), without year, but can hardly belong to 1432, since the vicar, William Watkinson, was installed on 27 November that year, and an interval of only six days would be insufficient. By 1431, then, faburden was known in three counties in the English north and Midlands as a technique expected of musically unsophisticated vicars-choral and unskilled monks. It is probably no accident that the first full description of faburden comes from the Augustinian abbey of the Holy Cross, Waltham.

This anonymous treatise, *The Sight of Faburdon*, was copied into *GB-Lbl* Lansdowne 763 by the precentor (more likely 'preceptor')of Waltham, John Wylde, at a date formerly thought to lie between 1430 and 1450 but now believed by Reaney (1970, p.263) to be earlier. The first mention of faburden in English musical theory

precedes this in the same manuscript in a cryptic paragraph on f.58 which compares faburden to *cantus coronatus*. Sweeney (1975) has pointed out that this paragraph, along with other surrounding material, is also found in the tract *De origine et effectu musicae* (*GB-Ob* Bodley 515, ff.89–90). In the Bodleian Library catalogue, Madan dated the latter manuscript as from the first half of the 15th century; from its appearance it is certainly earlier than Lansdowne 763 and the first archival references to faburden (*see* WYLDE, JOHN).

According to the author of *The Sight of Faburdon*, which is the last of an important and systematically arranged collection of vernacular treatises on discant, faburden was 'the leeste processe of sigtis natural and most in use' ('the lowliest of the sight techniques, natural [i.e. seemingly instinctive, innate, or possibly vocal] and commonest'). The ensuing directions show that a faburdener, like the singer of 'counter' or 'countir', was to keep beneath the plainchant throughout and to imagine or 'sight' his notes by visualizing them on the plainsong staff a 5th higher than he sang them, transposing downwards like a horn in F (*see* SIGHT, SIGHTING). Unlike the singer of counter, the faburdener is restricted to only two intervals, the 3rd and the 5th beneath the plainchant: he is to derive these by downward transposition from the sighted notes, visualized respectively as a 3rd above and a unison with the plainchant. He is to begin with the 5th below 'in voice' and thereafter is to sing 3rds, 'closing' his sight into a unison with the chant in order to sing a 5th again at the ends of words; he may sing as many 3rds as he likes, but never two consecutive 5ths. The restriction to 3rds and 5ths beneath the chant allows the foolproof addition of a third voice called a treble, who sings the same notes as the plainchant, but a 4th higher. (Wylde's author did not give directions for the singer of the 'tribull til faburdun', to use Cliffe's phrase: the pitch of the treble is known only because of the fact that when the faburdener sings a 5th or a 3rd beneath the chant he is also respectively an octave or a 6th beneath the treble.) The 4th, though a consonance, was not a concord and was not one of the permitted intervals in the treble sight of discant, though it might be made good, as Pseudo-Tunstede had observed, by the addition of a lower part (see *CoussemakerS*, iv, 279). Had Wylde wished to include a special prescription for the treble to faburden, he would have instructed him to set his sight even (i.e. in unison) with the plainchant and his voice at the 4th above. Scott's suggestion that the use of the term 'mene', here used merely as a voice name, implies transposition of the chant to the upper 5th by mean sight, though accepted by Strohm, seems implausible because unnecessary: the tract is explaining a rule-of-thumb process of improvisation, not a technique of written composition, and the singers might choose to begin at any convenient pitch.

One of the difficulties of extemporizing discant beneath the plainchant, according to Pseudo-Tunstede, had been that it prevented all but the most skilled singers from adding a third voice above it (*CoussemakerS*, iv, 294). But if the low part is restricted to 3rds and 5ths beneath the chant, a treble or quatreble discanter will always be safe if he keeps to the unison, 4th or 6th above it (or their equivalents at the upper octave). Compositions or passages built up in this way for three voices are found in English sources of the 14th century, many of them exhibiting the typical parallel movement of faburden, and some with the cantus firmus in the mean (see Trowell, 1959, p.57, and many of the English compositions in score notation published in PMFC, xiv–xvii, which include the 'Grottaferrata Gloria' (xvi, no.37) formerly advanced as an Italian example of proto-fauxbourdon). Sanders's observations on the commonness of parallel movement in free composition and the comparative rarity of its application to chant may suggest that a technique from popular music was only gradually adapted for liturgical use. On the other hand, Coussemaker's 14th-century English Anonymus 5 (*CoussemakerS*, i) describes a 'widely prevalent' (*totus generalis*) method of singing which accompanies a plainchant entirely in octaves or 6ths, beginning with either but pausing or closing on an octave, and avoiding parallel octaves. This was formerly interpreted as so-called English discant above the plainchant, a now exploded concept; since the rest of the tract is largely concerned with discanting beneath the chant, this technique may now be considered an early ancestor of faburden with the chant untransposed in the treble (though its actual pitch would be at the singers' choice), needing only the addition of an inner part a 4th below it to produce the characteristic three-voice sonorities. Although this description differs from the technique of the Lansdowne tract, the writer agrees in forbidding the singer to close downwards with an octave on to a *mi* (E or B), pitches on which the faburdener also may not cadence (see below). The Dutchman Johannes Boen (*d* 1367) in his *Musica* (1357) describes his astonishment, on arriving in Oxford as a student, at hearing a similar technique: it was, he says, universally beloved by 'laymen and clerics, young and old'; their singing was 'restricted entirely to 3rds and 6ths, ending on 5ths and octaves' (*tertiis et sextis. . .duplis et quintis postpositis, ipsas solas invocantes*; see W. Frobenius: *Johannes Boens Musica*, Stuttgart, 1971, esp. 76). Applied to chant, and adding a parallel mean, this would have been faburden in all but name. Ex.1 is a specimen from the apparently Carthusian Credo in *GB-Lbl* Sloane 1210, f.1; the notes taken from chant are marked 'x'.

In such pieces the lowest voice (perhaps a 'burden') will sometimes sing parallel 5ths below the mean, when the treble will usually sing parallel 6ths above (10ths above the bass). These are written compositions, not faburdens, but they suggest a possible ancestry for faburden: by restricting still further the succession of intervals open to the outer voices (parallel 5ths were vanishing for other reasons at this time) a method was distilled, perhaps, which allowed even unskilled musicians to harmonize plainchant in a halo of rich sonority.

One of the hitherto unexplained mysteries of faburden is that Wylde's Anonymous omitted the pitches E and B from his list of notes in the chant where the faburdener may 'close down even in sight upon the plainsong' (i.e. sing a 5th beneath it). Practical experience has now suggested a reason. The faburdener arrives at his notes by visualizing them in sight and transposing down a 5th: he can therefore never produce a B♮ but sings only B♭, since the sighted note is always the F-*fa* above on the plainchant staff. With a great many chants, especially if the faburdener observes the instructions of Wylde's Anonymous and frequently 'closes' (i.e. makes his sighted note converge with the plainchant in a unison) 'at the last end of a word', his B♭s will also involve him in E♭s.

Ex.2 makes this clear; it shows the Sarum version of the communion *Vos qui secuti estis me* (selected for comparison with Du Fay's fauxbourdon setting: *see* FAUXBOURDON, ex.1), harmonized in faburden strictly according to the instructions of Wylde's Anonymous. The top staff shows the plainsong mean and its parallel treble, which, like the faburden, has perpetual B♭s; the lower staff shows the faburden and above it, in small print, the sighted notes from which it is derived. The faburdener sings a 5th beneath the chant at the beginning and also, wherever possible, at the ends of words (marked 'o' above his part); elsewhere he sings 3rds. Every E in the plainchant, under which the faburdener may not sing a 5th, is marked '+': two of them come at the end of a word ('estis', 'iudicantes'). The faburdener's B♭s force him to sing the four E♭s marked '*', and these in turn oblige him to sing every other E as an E♭, visualized in sight as a B♭. There are many contradictions and some successive false relations between the E♮s in the mean and the E♭s in the faburden; these can be paralleled in the compositions of Leonel Power and Dunstaple. But if faburden 5ths are placed beneath the plainsong Es, particularly at the ends of words, where 5ths are otherwise recommended, quite unacceptable progressions result. This must explain the prohibition of the strong open 5ths A–E and E–B: they quarrel much more fiercely with the B♭s and frequent E♭s than do the alternatives, the 3rds C–E and G–B.

From ex.2 it is clear that with certain plainchants the faburdener is forced to swim for long periods in 'the sweetness of B-*fa*', to use a phrase of Giraldus Cambrensis. He not only produces B♭s 'in voice', but in order to sing E♭s he also has to add B♭s 'in sight' on the plainsong staff in front of him, which has none. This seems the simplest explanation of the term 'fa-burden': 'bass part characterized by the use of B-*fa*'. The term was presumably invented by a sophisticated musician, and such a person listening to a faburden, visualizing the music in notation and noting the absence of B-*mi* and the characteristic flatwards shift of tonality, might well have christened the bottom part 'fa-burden' on those grounds alone; when one finds that a chant without a B♭ in it will often be harmonized not merely with perpetual B♭s, but also with E♭s, the above explanation of the name 'faburden' gains further support. Trumble's main objection (1960, pp.28–9) to this derivation – that the singer of counter also transposes down a 5th from his sighted note and therefore never sings B-*mi*, so that his part could equally well have been called a faburden – does not take account of the general rule of discant that a 5th or octave must always be perfect. The discanter must in such cases match a *fa* with a *fa* and a *mi* with a *mi*: a counterer harmonizing a plainsong B-*mi* with the octave beneath would be forced, as common sense also suggests, to sing a B-*mi* (see Bukofzer, 1936, pp.143, 146, 149). Hoffmann-Axthelm's hypothesis (1972) that 'fa' is the Scottish and northern English dialectal form of 'foe', that 'burden' meant a bass voice bearing a cantus firmus and that a 'foe-burden' was a part in some way inimical (?counter) to the plainchant also seems unduly contrived: 'burden' did not mean a tenor part, as she suggested, and Wylde's Anonymous expressly called the plainchant a mean. Doe's hypothesis (1972) that a 'fa' burden began on F-*fa* a 5th beneath tenor C and a 'faut' (i.e. faux) burden on C-*fa ut* an octave beneath cannot hold, since both the F and the C are 'fa ut'.

FABURDEN SIGHT

FABURDEN

3. FAUXBOURDON AND FAUXBOURDON. It is not yet possible to explain the undoubted relationship between faburden and fauxbourdon. Just as the names are obviously similar and yet importantly different, so are the musical techniques. It is likely enough that Wylde's Anonymous was describing faburden as it was understood in 1427–32 by Richard Cliffe, whose protégé could read and sing plainchant and 'sing a treble to faburden'. An improvised technique used by musically unsophisticated monks would probably not change very rapidly. In any case, although Wylde's copy of the faburden treatise may be later than the Cornish and Durham references, none of the other material in his plainly retrospective collection can be shown to date from later than about 1430. Du Fay's earliest fauxbourdons belong to the courtly world of late Gothic sonority; they were apparently written for two solo voices and an instrument, with a rhythmically independent, contrapuntally conceived tenor and a refined, chanson-style ornamentation of the plainchant which is decorated in both the upper parts with many dissonant passing notes and melismas. If Du Fay invented this kind of fauxbourdon about 1427, as Besseler maintained, it is hardly conceivable that such a style could have been transmuted by 1430 into a simple rule-of-thumb technique for the chordal declamation of plainchant by a male-voice chorus of Durham monks. The presence of a simpler style of fauxbourdon alongside the refined manner of Du Fay's earliest experiments, in the contributions of Johannes de Lymburgia and Binchois (who was perhaps in English employment in the 1420s),

Ex.3

may suggest that they and Du Fay were interpreting a common experience, the new sound (for them) of English faburden, in two very different ways. Besseler (1950, p.15) had imagined Du Fay listening to the parallel movement of English discant, but Kenney (1959) showed that the latter was an invention of Bukofzer's. The simpler fauxbourdon of Binchois, which is far more akin to the sound of faburden, did not become the general rule until the 1440s, when English singers may well have gone abroad in answer to requests from King Alfonso V of Portugal (1439) and from the Emperor Frederick III (1442) (L. de Freitas Branco: *Elementos de sciencias musicais*, Lisbon, 1931, ii, 38; H. Nicolas: *Proceedings and Ordinances of the Privy Council of England*, London, 1834–5, v, 218). It must be significant that the Germanic and Iberian words for 'fauxbourdon' (*Faberdon, Faberton* etc.; *fabordão, fabordón, fabordó*) appear to derive from the English word 'faburdon', not from the French. The German poet-musician, theorist and doctor Johann von Soest tells us that in his youth (*c*1460) he studied 'Faberthon' in Bruges with 'two masters from England' (F. Stein: *Geschichte des Musikwesens in Heidelberg*, Heidelberg, 1921, esp. 14).

Faburden and fauxbourdon may have been used in very similar liturgical situations, but they were essentially designed for different kinds of performer and were transmitted in different ways. Fauxbourdon doubtless came to be extemporized *super librum* like faburden, but it has left its mark in history as sophisticated music, designed for professional performance, transmitted, even at its simplest, in learned notation in manuscripts that usually also contain the finest 'high culture' music of their time; the canonic instructions describing how to perform fauxbourdon are written in Latin, which is also the language used by musical theorists in discussing it. Faburden, though it has left its traces in polyphonic manuscripts, was essentially a means of schematic improvisation which did not normally need to be written down; it was a technique much used by unlearned monks and musically unsophisticated canons and vicars-choral, many of whom were in any case not permitted to sing elaborate polyphony. The two insular treatises on faburden are in English, not Latin. Faburdens were mainly transmitted orally, and some of them assumed traditional forms which can be traced where they were written down as a basis for composed polyphony or for more elaborate four-part improvisation based on the faburden (in which 3rds and 5ths would not be interchangeable), for organ extemporization, or simply in order to secure agreement if there were several singers to a part. Surviving single-line faburdens are almost exclusively found in liturgical plainsong books. (Only one such single-line fauxbourdon tenor is known; perhaps significantly, it is found in a source much nearer to English influence and example than the Italian manuscripts, namely *F-CA* 29, f.159, the anonymous hymn *Cultor Dei*: see facs. in Wright, 1978.) It is mainly because scholars have not been comparing like with like – on the one hand a mainly written tradition, on the other a mainly oral one – that the controversy over the origins of faburden and fauxbourdon is proving so difficult to resolve.

4. LATER HISTORY OF FABURDEN. Faburden, like fauxbourdon, offered a basis for further development in written composition. With or without their accompanying chants, faburdens might be used in plain or decorated form as a framework for vocal polyphony. Harrison (1962) has shown the process at work in a number of compositions (though not all of his examples are strict faburdens, and Paul Doe has suggested in a private communication that the pitch relationships between faburden and chant are not always correct), ranging from a hymn in the late 14th-century *GB-Lbl* Sloane 1210 to specimens from the mid-16th-century Giffard partbooks (*Lbl* Add.17802–5). The first extensive collection to show consistent use of the practice, however, is the Pepys manuscript in Cambridge (*GB-Cmc* 1236; ed. S.R. Charles, CMM, xl, 1967), which dates from about 1460. The source, like several later ones, contains monophonic faburden parts which, if realized according to the first set of precepts of Guilielmus Monachus (f.19*v*), yield a faburden setting with the chant in the upper parts. Ex.3 shows the beginning of verse 2 of the hymn *Eterne rex altissime*, realized from the faburden in *GB-Lbl* C.52.b.21, f.188*r* (manuscript addition to printed book); chant notes are marked with a cross. (It should however be noted here that Guilielmus's second discussion, on f.27*v*, says that the English manner was always in triple time and that the first note of the chant was always doubled in length to allow the bass part to move up from an octave to a 6th: these features are not to be found in surviving examples of written faburden, although his method of spacing out the cantus firmus in equal breves before decorating it is applied to the notes of the faburdens themselves when they are employed in organ pieces.) Harrison's findings, complemented in 1980 by his valuable study of organ music composed 'on the faburden', show that sophisticated musicians have used faburden, and a number of archival and literary references demonstrate this: the technique was particularly useful for processional music such as litanies and processional antiphons, psalms and hymns. Like fauxbourdon it was also widely used for *alternatim* performance in hymns, responsorial psalmody and settings of the *Magnificat*, *Nunc dimittis* and *Te Deum*. The organ settings 'on the faburden' favour the same categories, particularly hymns, although antiphons are not unknown (see edns by J. Caldwell, EECM, vi, 1965; and D. Stevens, EECM, x, 1967). Harrison (1980) has shown that they are more abstractly composed than is usual in vocal faburden: the melodies are presented in notes of uniform length, a breve or a semibreve, traceable even beneath ornamentation.

Faburdens recovered from vocal polyphony, and some of those surviving as mensural monophonies, show a variety of transpositions; many of them imply that the chant was sung at the upper octave in the treble (or at the upper 5th in the mean), as was usual in fauxbourdon. At first view this might imply that the traditions of faburden and fauxbourdon had met and mingled, or that Wylde's Anonymous was describing an aberrant form of faburden, or simply that the older manner had been largely forgotten during the second half of the 15th century. The organ pieces 'on the faburden', and the discovery by Mary Berry

of a number of faburdens copied into liturgical books of the 15th and early 16th centuries, show that this was probably not the case (H.M. Miller, 1940; Mother Thomas More [M. Berry], 1970, pp.248ff). Trowell (1977) offers a classified list of all strict faburdens then known, excluding those for the *Magnificat*, a total of 144 (not counting nos.106–15 and deleting no.44, indicating their transposition and type of notation. (The list needs correction: in no.15 3rds are dotted; no.54's title is *Lucis creator optime*; no.71 is on ff.67*v*–68.) Two recently identified mensural faburdens are: a single-voice *Aspergus* in *GB-Lbl* Lansdowne 462, f.1*v*; and, in *GB-BEV* DDHU 19/2, f.IV B*v*, the bottom part of a three-voice *[Sancta Maria vir]go* in plainchant notation (decorated faburden); in both, the chant would fit in the treble at the upper octave. The Digital Image Archive of Medieval Music has recently recovered from Worcester Fragment x (*GB-Ob* Lat.liturg.d.20), ff.1*v*–2*r*, a previously illegible faburden and mean for the communion *Beata viscera* which, in spite of its void notation, Margaret Bent thinks may be as early as 1400 and thus the earliest recorded example of the technique; the chant is transposed up a 5th, and the polyphonic portion consists of 58 breves in major prolation, unadorned save for the introduction of a passing minim at five points in the faburden (unpublished research). Further and later examples are discussed by Allenson (1989: hymn *Christe qui lux es* and six settings of the processional psalm *Laudate pueri*) and Aplin (1978, 1979: vernacular settings of *Magnificat*, *Nunc dimittis* and *Te Deum*).

In all of Berry's faburdens that the present writer has examined, and in the separate mensurally written faburdens designed to fit plainchants present in the same books – nearly 40 examples, and there are more – the faburden seems to be intended to fit in 3rds and 5ths beneath the chant. The faburdens have almost all been added on the plainchant staff over the notes of the chant itself. The pitch of the sighted notes is indicated, which the faburdener must transpose down a 5th: such an interpretation is supported by the survival of separate mensural faburden parts for three items, one of which has been duplicated in the same book in 'sight notation'. This takes various forms. First there are hymns with dots or tiny plainchant notes, or both, indicating over every note of the chant whether a third or unison is to be sighted; in some an ornamental descent to the cadence is shown by extra dots, in others by mensural notes (see illustration). There are other hymns, with dots to show only where the faburdener is to sight 3rds; the sighted unisons are left unmarked; there is no mensural notation and rarely cadential ornament – this type of notation seems to be earlier than the first described above, since the former has occasionally been copied in on top of it. Sometimes this has also happened in the case of the third, most economical procedure, where only the sighted unisons are indicated, either by means of a dot or by a stroke through the plainchant note. In addition to the hymns (of which the bulk are in the 15th-century hymnal *GB-Lbl* Harl.2951), the printed Sarum Hymnal of 1528 (Ruremund) also contains manuscript faburdens for all the *Magnificat* tones (*Lbl* C.52.b.21).

The old method of faburden continued in use, then, into the 16th century. Erasmus was astonished at the 'fauburdum' that greeted his ears wherever he went among the English Benedictines (C.A. Miller: 'Erasmus

Part of the hymn 'Salvator mundi' from a printed Sarum Hymnal (Antwerp: Ruremund, 1528); the 'sighted' pitches were added by hand, at first by means of dots in unison with, or a 3rd above, each note of the hymn, with some mensural notation at cadences (staff 3) – the dots of verse 1 were subsequently converted into plainsong note-shapes (staff 1) (GB-Lbl C.52.b.21, f.vi)

on Music', *MQ*, lii, 1966, pp.332–49, esp. 339, 341). The late treatise of the Scottish Anonymous (*GB-Lbl* Add.4911; see J. Maynard: *An Anonymous Scottish Treatise on Music*, diss., Indiana U., 1961; I. Woods, *RMARC*, no.21, 1988, pp.37–9) affords evidence that by 1558 or later faburden had sprouted a remarkable variety of different methods in Scotland, including a four-voice kind that recalls the prescriptions of GUILIELMUS MONACHUS. The writer prescribes octave transposition of the plainchant as if he were describing fauxbourdon: if Guilielmus's four-voice fauxbourdon represented English practice around 1480, treble-derived faburden must presumably have come into existence by then (it may of course always have been an alternative to Wylde's approach), for it would have been very cumbersome to build new altus and bassus contratenors around the faburden voice as understood by Wylde's Anonymous, and his plainchant mean would itself have had to vanish. Erasmus, whose visits to England began in 1499, described singers bursting out into many-voiced faburden, 'not one of them singing the pitches shown by the notes in his book' (*nullus eas sonat voces quas habent codicum notulae*). There is however one passage in Scottish Anonymous (f.98*v*) where he seems to be recalling the priorities of Wylde's mean-derived faburden: the treble and 'baritonant' are directed to vary from the 'richt way', but the counter 'standis ay ferm & invariabill from the just way of faburdoun'. By 1505 the Scottish Chapel Royal owned 'two manuscript volumes of parchment with notes *in faburdone*'; one wonders whether faburden was the 'new kind of chaunting and musick . . . wherein he was expert himself' that the Scottish King James I (1427–37) brought into the divine service: he had spent the years 1406–24 in captivity at the English court (H.G. Farmer: *A History of Music in Scotland*, 1947, pp.102, 105). In both Scotland and England, however, faburden appears to have died out as a device for liturgical music with the destruction of the Latin repertory that accompanied the Reformation. Its final manifestations have been studied by Allenson (1989) and Aplin; the latter has shown (1978, 1979) that faburdens were still employed after the collapse of the Latin liturgy, without the chant,

as the basis for settings of the Anglican rite. Morley mentioned the practice but equated it with the Italian *falsobordone*; his example, the hymn *Conditor alme siderum*, gives a faburden that presumably transposes down an octave to produce 6ths and octaves beneath the plainchant. He showed how the faburden should 'break some notes in division' at the cadence, as in many surviving examples, but did not show how the chant itself was decorated at this point; he omitted any mention of the middle voice.

It is possible that faburden gave rise to the name 'burden', meaning a refrain in a song or poem, a use not attested before the late 16th century. If faburden had to do with *cantus coronatus*, as suggested in Wylde's manuscript (f.58), then it was also used in secular music. The technique could easily have been applied, like fauxbourdon, to any *cantus prius factus*, secular as well as liturgical, and in certain 15th-century carols a monophonic phrase in what is anachronistically called the burden is immediately repeated by three voices as a kind of refrain in a manner very close to faburden (see Trowell, 1959, pp.54–5, 57ff). This may be evidence of a use of faburden refrains in popular singing which could have survived to the time of Shakespeare and Bacon.

BRIAN TROWELL

Facchetti [Facchinetti], **Giovanni Battista.** *See* FACHETTI, GIOVANNI BATTISTA.

Facchi [Facco, Facho, Faccho], **Agostino** (*d* Vicenza, Dec 1662). Italian composer and organist. He was a priest and a member of a religious order. Although he was associated with Bologna in the early part of his career, it is unlikely that he was born there. When he published some of his early music as *Concerti spirituali a 1–4 con due scielte de Littanie della Madona a 3 e 5 con il basso continuo* (Venice, 1624[4]), he was working at Bologna as organist at the church of the 'Gratie' (presumably S Maria delle Grazie). He dedicated this volume (which also

contains two works by A.M. Castellini) to the visitor to the Congregation of S Girolamo, Fiesole; he possibly had some earlier connection with this eremitical order. On 13 September 1624, after a competitive examination, he became organist of Vicenza Cathedral, a post that he occupied for most of the rest of his life. Late in 1624 or in 1625 he was enrolled, together with Monteverdi, as a visiting member of the Bolognese Accademia dei Filomusi. While working at Vicenza he lived at the nearby monastery of the Grazie and in 1630 was made its prior. His work at Vicenza Cathedral is documented up to 30 June 1633 and again from 1637, but on the title-pages of his *Motetti a 2, 3, 4 & 5 voci, con le letanie della Madona a 6, & il basso continuo, libro secondo* (Venice, 1635) and *Madrigali a 2, 3, 4 & 5 voci con il basso continuo, libro secondo* (Venice, 1636), he continued to describe himself as organist there. On 2 May 1647 he wrote to the cathedral chapter resigning his appointment on the grounds of ill-health. He returned to the post in 1650 but was again forced to leave for health reasons in July 1661.

Facchi was a skilful composer in whose music elements of the old and the new are found side by side. The solo motets of his 1624 book are rich in florid passage-work, while the three- and four-part pieces are more harmonic in conception. His serious, old-fashioned attitude towards word-painting can be seen here and in his later music – for example, in the two-part madrigals *Lusinghiera fallace* and *Son le bellezze tue, Clori* (1636), in which emotionally charged passages of chromaticism are effectively contrasted with passages in more lyrical vein.

JOHN WHENHAM

Faccio, Franco [Francesco Antonio] (*b* Verona, 8 March 1840; *d* Monza, 21 July 1891). Italian conductor and composer. Born in humble circumstances, he early manifested a propensity for music and was admitted to the Milan Conservatory in 1855, where he studied composition with Stefano Ronchetti-Montevito. There he struck up a lifelong friendship with Arrigo Boito, two years his junior. Their first collaboration was a patriotic cantata, *Il quattro giugno* (1860), inspired by the death in battle of a fellow pupil; Boito supplied the text and some of the music. The reception of this work at the conservatory, on the heels of the liberation of Lombardy, was so enthusiastic that the next year they produced a sequel, *Le sorelle d'Italia*, a panegyric to nations still under foreign domination. In the patriotic fervour of the times both Boito and Faccio, who were natives of the Veneto (then still in the hands of the Austrians), were received, despite their youth, by the upper echelons of Milanese society, including the famous salon of Countess Maffei. Their precosity, talent and determination to renew the tradition of Italian opera won them such warm support that on the completion of their studies they were awarded 2000 lire each to travel abroad.

Arriving in Paris in the spring of 1862, Faccio and Boito were received, not without irony, by Rossini. Countess Maffei had supplied them with letters of introduction to Verdi. Both were hard at work on operas – Boito on what was to become *Mefistofele*, and Faccio on the three-act *melodramma*, *I profughi fiamminghi*, to a text by Emilio Praga. Faccio was the first to return to Milan, where his work was introduced at La Scala on 11 November 1863. He sought to tap again the euphoric spirit of the times, but this opera achieved only five performances. The reception was cool and there were murmurs of that shibboleth, 'music of the future'. Faccio's friends fêted him with a banquet, however, and it was on this occasion that Boito read his ode *All'arte italiana* that so offended Verdi.

Faccio's second opera, the four-act *Amleto*, to an innovatory libretto by Boito, was first performed at the Teatro Carlo Felice, Genoa, on 30 May 1865, where its success was contested. There was some resentment of the self-congratulatory iconoclasm of the youthful collaborators, and dismay at the score's paucity of melody. The only section to win general approval was Ophelia's funeral march. In 1866 both Faccio and Boito volunteered to serve under Garibaldi. At the end of their brief duty, Faccio left Italy and for two years honed his skills as an opera conductor in Scandinavia. On the strength of this experience, he was offered a post at the Teatro Carcano on his return to Milan in the autumn of 1868. At this time he was also appointed to teach composition at the conservatory, a post he held for ten years. In 1869 he became Terziani's assistant as conductor at La Scala, succeeding to the full office in 1871.

He won Verdi's approval to conduct the Italian première of *Aida* there (8 February 1872). Henceforth, conducting was to be Faccio's principal activity, particularly after the miserable failure of his remounted *Amleto* at La Scala the year before, a fiasco that caused him to renounce the writing of operas. His tenure as principal conductor at La Scala lasted until his collapse in December 1889. The chief glory of his period there was the première of *Otello* (5 February 1887). Although Verdi's works dominated the repertory during those years, Faccio also conducted the premières of operas by a number of younger Italian composers, notably Ponchielli (*I lituani*, *La Gioconda* and *Il figliuol prodigo*), Catalani (*Dejanice* and *Edmea*) and Puccini (the two-act version of *Le villi* and *Edgar*). He also conducted important performances of *Der Freischütz* and *Lohengrin*, and presented works by Massenet and Bizet. His last task there was the preparation of the first Italian staging of *Die Meistersinger*.

Faccio was also active elsewhere. At Brescia in 1872 he conducted the revised *Forza del destino* to such effect that the survival of the work was assured. At Bologna he made a profound impression with *Don Carlos* in 1878. The following year he conducted a concert there for the local Società del Quartetto; instrumental conducting would soon become second only to his work in the opera house. He led the local premières of *Otello* in Rome, Venice and Bologna, as well as in London (5 July 1889). Shaw remembered this last occasion as one of the finest examples of opera conducting in his experience.

That there were serious problems with Faccio's health became apparent the night he insisted there was no third

act to *Die Meistersinger*. To provide him with some relief from the rigours of opera-house routine, Verdi arranged his appointment as director of the Parma Conservatory. He soon proved incapable of coping with even this amount of work, and the faithful Boito accompanied him to Kraft-Ebbing's Sanitorium at Graz. There, his condition was diagnosed as paralysis associated with tertiary syphilis and he spent the brief remainder of his life in an institution at Monza.

WORKS

published in Milan unless otherwise stated

STAGE

I profughi fiamminghi (melodramma, 3, E. Praga), Milan, La Scala, 11 Nov 1863; *I-Mr**, vs (1864)

Amleto (tragedia lirica, 4, A. Boito), Genoa, Carlo Felice, 30 May 1865; *Mr**, 9 nos., pf acc. (*c*1868–70)

VOCAL

Il quattro giugno (cant. patria, Boito), 1860, unpubd

Le sorelle d'Italia (mistero, prol, 2 pts., Boito), 1861; vs, pt.1 (Milan, *c*1861), music of pt.2 by Boito, unpubd

Cantata d'inaugurazione (E.A. Berta), vv, orch, for opening of Turin Exhibition, 1884; *Mr**, vs (n.d.)

SONGS

Gondoliere veneziano, romanza, 1862 (n.d.); Sotto il salice piangente, romanza, 1862, unpubd; L'ultima ora di Venezia (Countess Colonna-Fusinato), romanza (*c*1863); Album melodica (*c*1868); Ad un bambino, ninnerella, Il destino, ode amorosa, Mezzanotte, ballata, I re magi, cantilena; 5 canzonette veneziane (*c*1869); El dubio, Ma bada!, La nana, El tropo xe tropo, La gelosia; Vado di notte, romanza (*c*1870); Tecla, notturno, 2vv (*c*1873); Le pescatrice (H. Heine), notturno, S, A, T, B (1875)

After 1875: Rispetti toscano: Se moro ricopritemi di fiori, Colomba che nel poggio sei volata, Domenica mattina, Giovanottino da que' bei capelli, La vostra madre, Se ho a vivere nel mondo; 5 romanze (P. Ferrari): Sappi ch'io, La Margherita, Ei m'ha tradita, Un sogno, Dolor di madre; Demain; Mattino dello festo dello Statuto, canto per gli allievi delle Civiche Scuole Elementari; Noi t'imploriamo, Maria, preghiera; Sentinella perdute, duet; Ad una rondine, in *Anacreonte: odi tradotte da Andrea Maffei* (?1877)

INSTRUMENTAL

Orch: 3 syms., incl. 1 in F, arr. pf 4 hands (n.d.); Scherzo, D, arr. pf 4 hands (?1884); sym. interludes to Giacometti's Maria Antonietta (n.d.); Contemplazione, preludio (n.d.)

Chbr: Preludio, hp (*c*1863–4); Str Qt, G, 1864 (n.d.); Sul Baltico, 2 melodie, vn, pf (*c*1869–70)

WILLIAM ASHBROOK

Facco, Agostino. *See* FACCHI, AGOSTINO.

Facco, Giacomo [Jaime, Jayme, Jacometto] (*b* Marsango, nr Padua, 1676; *d* Madrid, 16 Nov 1753). Italian composer, violinist and cellist. The earliest information about him relates to his post in the service of the Marquis de los Balbases, Carlo Filippo Spinola. Cantatas by Facco now in the Naples Conservatory were probably composed when Spinola was governor of Castelnuovo, Naples, before 1707. From 1707 to 1713 Spinola served as viceroy in Sicily, where Facco had arrived by 1705, when he composed the *dialogo Il convito fatto da Giuseppe*. In Messina Facco dedicated to Spinola the serenata *Augurio di vittorie*, the *dialogo La contesa tra la pietà e l'incredulità* (both 1710) and three operas, *Le regine di Macedonia* (1710), *I rivali generosi* (1712) and *Penelope la casta* (1713), the last in collaboration with Pietro Pizzolo. Facco also dedicated to the marquis 12 concertos published in Amsterdam under the title *Pensieri adriarmonici*.

When Spinola returned to Madrid Facco was engaged as a violinist in the chapel royal and music master to the infantes Luis, Carlos and Fernando. His commissions to compose works for highly important court occasions are proof of his fame. The texts of these are by José de Cañizares, and the first of them unites the experience of Facco as an opera composer with the novelty of a Spanish text. *Amor es todo imbención: Júpiter y Amphitrión* is the oldest surviving score of an Italian-type opera in the Iberian peninsula, and the oldest opera with a Spanish text. An incomplete version was discovered by José Subirá in 1948; a more complete copy came to light in Évora in 1991, and this has made possible the opera's restoration. The *Festejo para los días de la reyna* (1722) is a courtly serenata in which the action is resolved by Paris handing the mythical apple to the Farnese queen. In 1728 the new Marquis de los Balbases, Carlo Ambrogio Spinola, travelled to Lisbon to discuss the marriage contracted between the heirs of Spain and Portugal. There he had a temporary theatre built where various musical works were put on: of these *Las Amazonas de España* was probably by Facco, and a serenata for six voices and the first act and *loa* of the opera *Amor aumenta el valor* certainly are (the other two acts have been attributed to José Nebra and Philipo Falconi).

Facco is the only musician mentioned in the lavish *Fasto de hymeneo* (1752) describing the wedding ceremonies of 1729. He had refused offers of a post at the Lisbon court of João V, when the latter was trying to surround himself with Italian musicians, similar to that accepted by Domenico Scarlatti. Facco's fortunes changed with the arrival of Farinelli in Madrid. He seems thereafter to have been inactive as a musician, and the surviving documents deal only with his requests for payment. Important as a violin teacher, his works were published in collections such as those of Michel Corrette. Six solo cantatas by him survive in Palermo, and five suites for two cellos in Venice. The presence of his music in Latin America is perhaps explained by the fact that Carlo Filippo Spinola's father-in-law had interests in mineral exploitation in the colonies. Facco was married to Angela Colonna and had at least four children, one of whom, Paolo (*b* Messina; *d* 2 Nov 1769), was a violinist at the Madrid court.

WORKS

music lost unless otherwise stated

OPERAS

Le regine di Macedonia (dramma per musica, 3, ? N. Merlino), Messina, Munizione, 1710

I rivali generosi (dramma per musica, 3, A. Zeno), Messina, Munizione, 1712

ANÍBAL E. CETRANGOLO

Facey, Hugh. *See* FACY, HUGH.

Fachetti [Facchetti, Facchinetti, Brixiensis], **Giovanni Battista** (*b* Brescia, *c*1475; *d* after 1555). Italian organ builder. He was a master organ builder by January 1515 when, writing from Ferrara and signing himself 'Johannes Baptista Brixiensis. Magister orga.', he sent to Cardinal Ippolito d'Este, archpriest of S Pietro in the Vatican, the proposal for an organ for S Maria in Vado, Ferrara. He later built the following organs: Chiesa dei Frati di S Giovanni, Brescia (1517); S Michele in Bosco, Bologna (1524; eight stops, 10′ pipe; cost 1064 lire); the Benedictine monastery of S Pietro, Modena (1524; survives); Cremona Cathedral (1542–7); Genoa Cathedral (1552); and rebuilt the organ at S Petronio, Bologna, by Lorenzo da Prato (1528–31; lowered pitch by moving the pipes and added some extra enharmonic or 'quarter' notes for the *a*♭s).

The specifications of the Ferrara and Genoa organs have fortunately survived and may be compared: the Ferrara organ had Contrabasso 21′ (at back), Tenori (tin, in front), Duodecima, Quintadecima, Decimanona, Vigesima secunda, Vigesima sexta, Vigesima nona, Flauttj. The Genoa organ had 50 notes, *F*′, *G*′, *A*′ to *a*″, omitting *g*♯″: Tenori (two ranks, tin, in case, and lead), Ottavo, XVma, Decimanona, Vigesima seconda, Vigesima sesta duplicata (two ranks), Vigesima nona duplichata (two ranks), Flauto in ottava. Both organs had spring-chests. The Tenori in 1515 are in effect the Ottavo, but by 1552 are the Principali. The Contrabasso at this time was not a Pedal stop but the manual fundamental register which, being of large scale and a heavily leaded metal, was placed at the back of the organ. The basic structure of chorus (ripieno) and a single flute (*in ottava*) survives, but the Duodecima (Twelfth) of 1515 has disappeared and fullness and power are obtained by duplicating the lowest and two highest ranks of the ripieno. As is customary in Italian organs of the period, Fachetti's did not have independent Pedal stops. Nevertheless, his larger organs (S Eufemia, Brescia, 1537; Piacenza Cathedral, 1539; S Sisto, Piacenza, 1544, and S Benedetto Po, 1552) had pedalboards with 20 pedals.

The high quality and fine tone of his organs placed him on a level with the great Antegnatis and made Brescia the most influential centre of early Italian organ design. Vincenzo Parabosco, in a letter of 16 October 1545 to the consuls of the Salò community, wrote 'Magistro Baptista does not, I believe, have the like in the world so excellent in this art [i.e. in organ building], especially in a large church'.

GUY OLDHAM/UMBERTO PINESCHI

Fachiri [née d'Arányi], **Adila** (*b* Budapest, 26 Feb 1886; *d* Florence, 15 Dec 1962). British violinist of Hungarian origin. A great-niece of Joachim and an elder sister of the violinist Jelly d'Arányi, she studied at the Budapest Conservatory with Hubay and later in Berlin with Joachim, from whom she inherited her 1715 Stradivari. She played Beethoven's Violin Concerto at her Vienna début in 1906; in 1913 she settled in England and in 1919 married the lawyer Alexandre Fachiri. Brought up on the classical repertory, she was noted for her duo performances with Jelly d'Arányi (they played the Bach Double Violin Concerto publicly for the last time in 1960); but her passionate temperament led her to explore widely and she had concertos written for her by Somervell, R.O. Morris and Holst (a Double Concerto first performed with her sister in 1930). A warm and generous player, she made up in ebullience for her sister's greater natural gifts. (J. MacLeod: *The Sisters d'Aranyi*, London, 1969)

ROBERT ANDERSON

Facho, Agostino. *See* FACCHI, AGOSTINO.

Facie [Facio], **Hugh.** *See* FACY, HUGH.

Facien, Jehan. The name of three minstrels recorded in the years 1415–40. *See* BASIN, ADRIEN.

Facilis, Jan. *See* JOSQUIN, JAN.

Facio, Anselmo di. *See* DI FAZIO, ANSELMO.

Fackeltanz (Ger.: 'torch dance'; Fr. *marche aux flambeaux*). Music for a torchlight procession – a survival from medieval tournaments – which took place at some German courts on state occasions, such as the marriage of members of the reigning family. Scored for military band, it is a processional dance, and usually has a loud first and last part, and a soft trio. Meyerbeer wrote four, including one for the marriage of the Empress Frederick of Prussia (25 January 1858). Spontini and Flotow also wrote examples. (I. Peter: *Der Salzburger Fackeltanz: zur Geschichte eines Tanzes* (Salzburg, 1979))

GEORGE GROVE/R

Facoli, Marco (*b* Venice; *fl* late 16th century). Italian keyboard composer. His *Secondo libro d'intavolatura, di balli d'arpicordo, pass'e mezzi, saltarelli, padouane et alcuni aeri* was published by Gardane in Venice in 1588 (ed. in CEKM, ii, 1963). The dance arrangements feature a heavily ornamented top voice in contrast to the generally simpler style of the 12 *aeri* (airs without text) which are among the earliest pieces to be so designated. One other dance, *Passmezo di nome anticho*, appears in a manuscript that may be a copy of the lost first book of 1586 (*GB-Lcm* 2088); the remaining ten works in this manuscript, arrangements from vocal music by Crecquillon and Palestrina, and dances and a canzona by Fiorenzo Maschera, are not, however, specifically ascribed to Facoli.

H. COLIN SLIM

Facsimile (Lat. *fac simile*: 'make similar'). Name given to a genre of book publishing based on photo-mechanical printing techniques that attempts to recreate the appearance of an original handwritten manuscript or printed edition. Facsimile reproductions employ a wide range of photographic methods and materials. The most sophisticated try to be as faithful to the original as possible by replicating its size, colours, paper, binding and, sometimes, physical condition. It is important to note that facsimile editions are not fakes or forgeries. They are produced, conceived and used as tools for study or investigation by scholars, researchers, teachers and others who might not have access to the original material, although they occasionally become collectable in their own right owing to instances of exceptional craftsmanship or rarity.

The invention of photography and the related development of photo-mechanical printing in Europe during the first half of the 19th century produced the technology that made it possible to make photo-realistic reproductions of original documents on a relatively large scale. This was the first time in the 400-year history of printing that grey-scale images could be passed to paper via the printing press. Using a camera device, an image of the original was first recorded on a photo-sensitive negative and then transferred to a glass or metal plate that had also been treated with a photo-sensitive material. The plate, 'tanned' by light and now capable of attracting greasy ink, was then mounted in a press to produce identical prints. The first facsimile copies found in printed books of that time were glued on to pages, tipped-in, or included as loose sheets. Publishing an entire facsimile manuscript was a revolutionary idea, however; it led to the emergence of a new genre in music publishing: the facsimile edition.

Facsimiles were adopted eagerly in the late 19th century by the learned societies of Europe, which published them for their members and friends. These publications were usually empirical studies aimed at interpreting original texts. Many included dissertations and modern transcriptions of the ancient musical notation. These societies tended to focus their interests on major composers such as Bach, Handel, Mozart and Brahms, or on the study of specific topics such as liturgy, medieval music or literature.

The first notable complete facsimile editions of original manuscripts were Handel's *Messiah*, produced by the Sacred Harmonic Society of London (London: Vincent Brooks, Day & Son, 1868) and Schubert's *Erlkönig*, produced by Wilhelm Müller (Berlin: Photo-Lithographisches Institut der Gebrüder Burchard, 1868). The *Messiah* facsimile was a major achievement in length (278 pages) and format (32 × 26 cm). Both editions are examples of 'line-cuts', a term applied to high-contrast images that contain no intermediate grey tones. The *Erlkönig* facsimile is the first to use a second ink colour (orange), overprinted to illustrate corrections in the original manuscript. Because of the degree of experimentation with various processes and techniques used at the time, it is sometimes difficult to determine the exact techniques employed in some of the earliest examples.

Use of a photo-lithographic process starting in the late 1800s called collotype is easier to identify. Collotypes were made with dichromated gelatine-coated glass plates that produced a screenless half-tone image characterized by a fine random grain structure and relatively high resolution. The Société St-Jean l'Evangelist & Desclée & Cie (Tournai) published a collotype facsimile edition known as *Paléographie musicale* for the monks of Solesmes. Produced under the direction of André Mocquereau, the first volume, St Gallen 339, appeared in 1889, followed shortly by Einsiedeln 121 and British Library Add. 34209. Other collotype facsimiles editions include early reproductions by the Plainsong and Mediaeval Music Society, London and the Société des Anciens Textes Français, Paris. These early collotypes appear somewhat 'wooden' owing to their still relatively narrow tonal range. Collotype plates wore out rapidly or often broke under the pressure applied to them. This technical problem, in addition to the small membership of the sponsoring societies, usually limited press-runs to fewer than 300 copies.

Traditionally, facsimiles have been published to celebrate anniversaries, musical discoveries, and other special occasions. Early examples of this practice include *Das Autograph des Oratoriums 'Jephtha'* (Hamburg: Deutsche Händel-Gesellschaft, 1885) which marked the 200th anniverary of Handel's birth, Beethoven's *As-dur Sonate Op.26* (photo-lithography by Albert Frisch, Bonn, 1895), which commemorated the rediscovery of the manuscript, and *Bachs Handschrift in zeitlich geordneten Nachbildungen* (Leipzig: Bach Gesellschaft, 1895) – an impressive anthology of 142 large-format plates from 34 different compositions spanning the composer's career.

The beginning of the 20th century up to the outbreak of World War I saw the publication of at least 20 major facsimile editions, many of them introduced by leading scholars. These works include *Antiphonale Sarisburiense* (London, 1901–), *Le roman de Fauvel* (Paris, 1907), *Cent*

motets . . . manuscrit Ed.IV.6 de Bamberg (Paris, 1908), *Mozarts Requiem* (Vienna, 1913), and Henry Bannister's *Monumenti vaticani di paleografia musica latina* (Leipzig, 1913). Advanced photographic materials with improvements in tonal range and definition made the collotype the process of choice. *Mozarts Requiem*, produced by the Gesellschaft für Graphische Industrie, was printed in two colours (the main 'text' a grey-to-black monochrome, and the 'third' foliation in red ink). It was also during this time that publishers and composers began turning to the facsimile process to publish first editions of manuscripts as a less costly alternative to traditional music-score engraving. Among the first companies to do so was Universal Edition of Vienna with publications such as Schoenberg's fair copy facsimile of his second string quartet (score and parts, 1911) and *Gurrelieder* (full score, 1912).

Following the hiatus caused by World War I, work resumed on facsimiles with such intensity that the decade 1918–28 could be called the 'golden age' of the facsimile edition and one that, more than any other, defined the genre. For the first time, publishing houses, either alone or with the aid of specialized photo-lithographic studios, developed systematic publishing schedules that laid out whole series of facsimile works by European composers. The leading publishers included Insel Verlag in Leipzig, Drei Masken Verlag in Munich, and Universal Edition and Wiener Philharmonischer Verlag in Vienna. The names of the lithographic speciality firms Albert Frisch (Berlin) and C.G. Röder (Leipzig) constantly appear in the production credits of these editions.

This period saw the creation of about 50 editions. The first major postwar facsimile, by Frisch, was *Drei Briefe Mozarts in Nachbildung*, a beautiful reproduction of three autograph letters in the folded format of the original. Five major choral works of Bach appeared; two of them show the trend towards employing multiple colours, the *Passio . . . secundum Evangelistam Matthaeum* (Leipzig, 1922), a quasi two-colour collotype executed by Frisch with red ink for the biblical text, and *Kantate 'Ach Herr, mich armen Sünder'* (Leipzig, 1926), a true two-colour collotype by Röder with a light beige ink providing the background ambience of the original manuscript. Beethoven's *Sinfonie mit Schluss-Chor über Schillers Ode* (Leipzig, 1924), also by Röder, includes a second colour as well, but here the publishing milestone is in its great format, 36 × 40 cm. Editions that are conservative monochromes but ones that stand out for their format and breadth include three complete Wagner operas – *Die Meistersinger von Nürnberg*, *Tristan und Isolde* and *Parsifal* – all created by Drei Masken Verlag of Munich between 1922 and 1925. Of the four Beethoven piano sonatas that appeared, the *Sonate appassionata* (Paris, 1927), by Edition d'Art H. Piazza, is probably the most remarkable for its craftsmanship. The facsimile incorporated a full-colour process in which each ink was first matched with the original and then meticulously printed with multiple press passes, one colour at a time, recreating the original in all its detail (the irregular grain structure of the collotype allows unlimited overprinting without creating moiré patterns). Besides duplicating the original binding and end papers, the facsimile also captured imperfections of the original, such as its waterstains and clipped first page.

Publishers began to pay homage to some composers of the time with facsimiles of their works. Among them was Strauss's *Tod und Verklärung* (Vienna, 1923), Mahler's *Zehnte Symphonie* (Berlin/Vienna, 1924), produced in the original loose fascicle format with some irregular page trimming and a collection of eight sketch pages, and Fauré's last composition, *Quatuor op.121* (Paris, 1925). In general the works of the 1920s represented the highest standard of book production, and as such, many were 'luxury' publications, used by a small and relatively élite audience. But the period also saw the launching of facsimiles of a more utilitarian and practical nature; Martin Breslauer and Bärenreiter were pioneers of lesser-known works from the 16th and 17th centuries.

The Depression and the impact of World War II severely curtailed facsimile publishing from 1930 to 1950. Surprisingly, magnificent facsimile editions were still produced, although they tended to be less extravagant, usually monochromes, and more often than not, the choice of titles was dictated by political considerations. Frisch is responsible for Beethoven's *Fünfte Symphonie* (1941), Weber's *Der Freischütz* (1942), and Schubert's *Lieder von Goethe* (1943), with the latter two containing remarkable colour process work (on coated paper) in the introductory sections. A most fascinating production were Mozart's letters, edited by Erich H. Mueller von Asow and published as *Briefe und Aufzeichnungen* by Alfred Metzner in Berlin in 1942. The facsimiles (by Frisch) of several hundred letters were produced to accompany Mueller von Asow's critical edition; they were printed on fine paper and painstakingly folded to match the originals. Röder continued to produce beautiful photo-lithography, its best example being Bach's *Inventionen und Sinfonien* published for C.F. Peters in about 1942. A series of fine but modest facsimiles inspired by Sydney Walton and known as 'Harrow Replicas' was published in England during the early 1940s, and issued by W. Heffer & Sons in Cambridge (photo-lithography by Chiswick Press, London).

A watershed for printing technique for a large format facsimile – 40 × 30 cm – is seen in a facsimile edition of Donizetti's *Lucia di Lammermoor*, brought out by Giovanni Treccani degli Alfieri in 1941 and executed in photo-lithography by Emilio Bestetti in Milan. The tone quality was achieved by a fine half-tone screen, a process where the image is represented by thousands of tiny dots. The dot pattern was used for the 'primary' ink only (grey-to-black) and positioned diagonally; a second ink – yellowish-brown in tint – provided the necessary colour nuances of the original. The printing was probably done on an offset press (a process that prints by transferring the ink from a flat plate or cylinder to a rubber blanket that deposits the ink on the surface being printed). Though it was a well established process and especially desirable for smaller format reproductions and printed text, the use of offset here, for a large deluxe facsimile, signalled a change in facsimile production. Since collotype plate making was quite tedious, time-consuming and not feasible for large printing runs, it was only a matter of time before facsimile reproductions would follow the printing shift to the photo-offset press.

After 1950, facsimile editions were printed either in collotype or photo-offset; the former was still favoured by the traditional facsimile publishers but the latter slowly gained ground by the 1970s. At the same time, a related

genre, the reprint edition, began to appear. These are more economical reproductions, usually produced as line-cuts on the more efficient photo-offset presses, in reduced format and larger editions. From the 1950s to the 1970s, postwar economic growth and the accompanying boom in educational spending fuelled an astounding proliferation of publishing activity. The main reprint firms that include Arnaldo Forni (Bologna), Editions Minkoff (Geneva), Georg Olms (Hildesheim), Gregg (London), Broude Brothers (New York) and Zentralantiquariat (Leipzig) produced thousands of inexpensive editions. The collotype process was still the basis of many deluxe facsimile editions and the choice of several of the specialist firms operating in Stuttgart during the 1950s and 60s and in the Leipzig area almost up to 1990. Outstanding among these collotype editions are Schumann's *Jugend-Album Opus 68* (Leipzig: Peters/Röder, 1956), Haydn's *Messe B-dur ('Schöpfungs-Messe')* (Munich: Henle/Schreiber, 1957), and Debussy's *Prélude à l'après-midi d'un faune* (New York: Robert Owen Lehman, 1963 – a four-colour work printed in France).

On the other hand, extremely good results were also being achieved by the 1970s with offset technology and half-tone screening; fine colour examples include Brahms's *Symphonie No.4 in E Minor* (Zürich: Eulenberg, 1974), Beethoven's *Konzert für Violine und Orchester* (Graz: Akademische Druck- & Verlagsanstalt, 1979), Richard Wagner's *Siegfried Idyll* (Zürich: Coeckelbergh, 1983), Stravinsky's *L'oiseau de feu* (Geneva: Minkoff, 1985), and Mozart's *Requiem* (Graz: Akademische Druck- & Verlagsanstalt, 1990). This new technology, plus the addition of laser scanners for colour separation, a four-colour process (yellow, magenta, cyan and black), and presses that are able to print these colours on a single pass, has been used in many of the latest generation of facsimiles. The colour nuances of the original have never been captured so completely but because many offset productions have opted for pure white 'coated' paper in order to enhance colour hues and reduce moiré patterns, the tactile experience of natural papers, so nicely achieved in many older editions, has been lost. Although the market does not require it yet, these modern offset presses, unlike their flat-plate collotype counterparts, are also capable of press runs of many thousands without sacrificing quality. It is still too early to comment on the significance of new digital technology, such as the CD-ROM and colour laser printing because the full potential of this media has not yet been realized.

STEVEN IMMEL

Facy [Facye, Facey, Facie, Facio], **Hugh** (*b* ?Exeter; *fl* *c*1620). English composer. His family name was common in and around Exeter. He was probably the son or a relative of Anthony Facy (1558–1621). Hugh Facy was a chorister and secondary at Exeter Cathedral, and received his musical instruction from Edward Gibbons and Greenwood Randall. There is an entry in the Chapter Act Book for 1 March 1618 recording that he was to be allowed 'sometimes' to play the organ for services. Two further entries refer to him: the first, dated 6 November 1619, begins 'Item they gave leave to Hugh Facye to be absent from the service of the Quire for one whole yeare next ensuing without prejudice unto him in regard of his Secondaries place in this Church and to receave his stipend due to that place in meane time'. In the second, dated 4 November 1620, the dean and chapter extended his leave of absence for another year. No further mention of him is found in the cathedral records.

Among his surviving works, all of which are in manuscript, are some lively divisions and solos for the bass viol. Richards attributes a number of anonymous pieces in the Fitzwilliam Museum at Cambridge, the Dolmetsch collection at Haslemere, and the Manchester Public Library to Facy. Two of his Latin compositions have survived. In his setting of the *Magnificat* (the source is probably holograph) the markings 'suaviter' and 'fortiter' are found. These Latin works suggest Catholic sympathies (not unknown in Exeter at that time; *see* LUGGE, JOHN) and the italianate version of his name – Facio – suggests that he may have spent some time abroad.

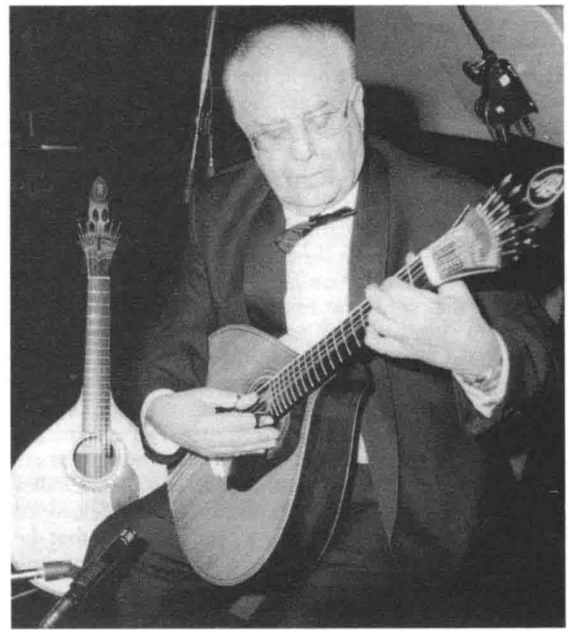
SUSI JEANS

Fado (Port.). Portuguese vocal and dance genre. *Fado* has two distinct traditions: the most widely known is from Lisbon; a separate though related tradition, also named *fado* or *canção de Coimbra* ('Coimbra song'), thrives in the central city of Coimbra.

1. Lisbon *fado*: (i) History (ii) Performance practice (iii) Repertory. 2. *Canção de Coimbra.*

1. LISBON 'FADO'.



(i) History. The origin of *fado* has been the focus of considerable debate. Most researchers agree that *fado* emerged in poor neighbourhoods of Lisbon during the second quarter of the 19th century. This was a period that immediately followed the transfer of the Portuguese court to Brazil (1808–22), an event that intensified cultural exchange between the two countries. *Fado* was probably the result of a synthesis of several musical genres and dances popular in Lisbon in the early 19th century, as well as new genres brought to Lisbon with the return of the Portuguese court from Brazil. These genres include the *lundum*, a Brazilian dance and vocal genre of African origin, the *modinha*, a genre of salon 'art' song that developed in Portugal and Brazil from the mid-18th century to the mid-19th, the *fandango*, a Portuguese dance of Spanish origin, the *fado*, a Brazilian dance that is still found in rural areas in the state of Rio de Janeiro, and the *fofa*, a dance found in Brazil and Portugal. It is also likely that *fado* was initially danced to the accompaniment of the then popular five-string guitar, an instrument that was replaced by the 'Portuguese guitar' or *guitarra*, which was popular in the bourgeois salons of

Lisbon at the time and which has accompanied *fado* ever since.

Fado researchers have divided its development into several phases. The earliest system of periodization was proposed by Pinto de Carvalho in 1903. He proposed two phases: a 'popular and spontaneous' one (1830–68/9) characterized by the close association of *fado* with prostitution and marginality in the old neighbourhoods of Lisbon, and an 'aristocratic and literary' phase (1868/9–90) characterized by the social ascent of *fado* to the salons and beach resorts of Lisbon's bourgeoisie. Joaquim Pais de Brito (1983) pointed out that it was during Carvalho's second phase that *fado* became consolidated as a musical genre. He also proposed two further phases of development. A third phase (1890–1920) is characterized by a diversification in the social contexts of the production and transmission of *fado*, including the gradual incorporation of *fado* into Portuguese vaudeville (*teatro de revista*). A fourth phase, which began in 1930, is characterized by the professionalization and 'folkloric liquidation' of *fado*, its transformation into an 'artistic expression', the elimination of improvisation and the introduction of innovations in *fado* texts and compositional style. Much of this period coincided with the totalitarian regime of the *estado novo* (1926–74), which imposed censorship on texts, required performers to obtain a licence to exercise their profession (*carteira profissional*) and set up tourist restaurants (*casa típica*) for the performance of *fado* and folkloric representations of rural traditions. This period also coincided with the use of sound recordings, radio and film for the dissemination of *fado*. During this period, some of the most prominent *fado* figures had brilliant careers, including the singers Amália Rodrigues (1920–99) and Alfredo Marceneiro (1891–1992), the *guitarra* virtuoso and composer Armandinho (1891–1946) and the *viola* player Martinho d'Assunção (1914–92). Following the revolution of 25 April 1974, *fado* saw a period of diminished activities, after which there was a resurgence. A new generation of *fado* artists has since been active, introducing innovations while at the same time preserving its distinctive features.

(ii) Performance practice. *Fado* performances involve a solo vocalist as central figure, instrumental accompanists and audiences in a communicative process using verbal, musical, facial and bodily expression. Live *fado* performances are complex events in which *fado* performers construct narratives, express ideas and emotions through the skilful interplay between words, melodies and their variation, vocal quality, gestures, facial expression and instrumental dialogue. *Fado* performances are also structured by social context, political conjuncture, performance setting, occasion, repertory, performers, audience and performance norms. *Fado* is sung solo by either a woman or a man, referred to as *fadista* or *artista*. The standard accompaniment is provided by a *guitarra* and a *viola*. A second *guitarra* and/or *viola baixo* are sometimes added.

Fado can be heard live and through the media, including radio, television and recordings (LPs, cassettes and CDs). In Lisbon, live performance settings include tourist restaurants (*casas típicas*), concerts in large auditoria, Portuguese vaudeville (*teatro de revista*) and neighbourhood associations, taverns and local restaurants regularly featuring amateur *fado* singers. Lisbon's *fado* can also be heard in similar settings in other Portuguese cities and even in the countryside, especially in the south.

Fado accompaniment by Antonio Brojo playing the guitarra, Coimbra

In all performance settings, the *fadista* is the central figure. The instrumental accompaniment, especially that provided by the *guitarra*, is regarded by performers and audiences as an indispensable part of *fado* performance. Each *fadista* imprints the *fado* with his/her style through melodic improvisation, a process designated as *estilar* ('styling'). *Fadistas* recognized for their creative melodic improvisation are referred to as *estilistas*. A few *fadistas* and *guitarristas* have also been distinguished as *fado* composers.

(iii) Repertory. Using musical and poetic structure as their main criteria, *fado* practitioners classify their repertory into two basic categories: *fado castiço* and *fado canção*, roughly 'authentic' *fado* and song-*fado*. These two categories can be seen as two ends of a continuum ranging from a minimum of fixed elements in the case of *fado castiço*, and therefore maximum opportunity for creative performance, to a maximum fixity of most elements.

The *fado castiço*, also referred to by some of its practitioners as *fado fado*, *fado clássico* or *fado tradicional*, is considered the oldest and most 'authentic' *fado*. Within the *fado castiço*, another distinction is made between three anonymous *fados* often referred to as *raízes do fado* ('roots of *fado*'), which are believed to be the oldest and most basic *fados*, and close to one hundred *fados* attributed to 19th- and 20th-century *fado* composers. The 'basic' *fados* are *fado corrido*, *fado mouraria* and *fado menor*. All three terms, and in some cases the respective accompaniment patterns, were documented in 19th- and early 20th-century publications.

All three *fados* have fixed rhythmic and harmonic schemes (I–V) and a fixed accompaniment pattern consisting of a melodic motif that is constantly repeated, at times with slight variation. Using these patterns as a basis, the melody is either composed or improvised. Texts are

usually set to one of the most common poetic structures, such as the quatrain or five-, six- and ten-verse stanzas. The accompaniment pattern, the I–V harmonic scheme and the regular 4/4 metre are the identifying elements of these *fados* and are basically fixed. All other elements are variable. *Fado corrido* and *mouraria*, in the major mode, are usually performed in a fast tempo and have similar accompaniment patterns. *Fado menor* is in the minor mode and is often performed in a slow tempo.

In addition to these three *fados*, there are over one hundred *fados* that have a fixed harmonic scheme, fixed melodies and, in a few cases, a fixed accompaniment pattern. In most cases, the accompaniment is variable and is developed by the instrumentalists using the harmonic scheme as a base. Various texts are then adapted to this basic musical structure.

The *fado canção* is characterized by an alternating stanza and refrain structure. The harmonic structures are more complex than those used in *fado castiço*. Melodies are fixed, but the accompaniment can be developed according to the instrumentalists' taste, provided that the basic harmonic pattern is respected. Vocal improvisation is more limited than in *fado castiço*.

The initial development of *fado canção* is closely related to this genre's incorporation into the *teatro de revista*, which took place beginning in the 1880s. By the 1920s and 30s, *fado* became one of the indispensable ingredients of the *revista*, and its structure was adapted to the requirements of the stage show. Another phase in the development of the *fado canção* was marked by the *fados* composed in the 1960s by Alan Oulman for Amália Rodrigues, which are characterized by the use of erudite poetry and complex harmonies.

Fado texts deal with a variety of themes, including the early contexts of *fado* performances such as houses of prostitution, Lisbon's old neighbourhoods, people connected to *fado*, specific events, feelings (e.g. nostalgia, longing, love, jealousy, revenge, hate), *fado* itself, the mother figure and political struggle (especially following the 1974 revolution).

2. 'Canção de Coimbra'. The *fado* or *canção de Coimbra* is a lyrical performance tradition integrated into the academic life of the medieval university of Coimbra, consisting of the vocal and instrumental genres: *fado*, *balada* and *guitarrada*. The performers are primarily male students, alumni and professors of Coimbra University.

The development of the *fado* of Coimbra can be traced back to the second half of the 19th century, when Lisbon's *fado* and *guitarra* were introduced to Coimbra by students from Lisbon. Since then, Coimbra has developed a distinct *fado* tradition, which is a synthesis of several elements, including traditional music brought by students from various parts of the country, the Italian bel canto style and, initially, Lisbon's *fado*. The *guitarra* (see illustration) and *viola* are central as accompanying instruments both for the *fado* and *balada* and for the performance of instrumental *guitarradas*.

The *balada* is characterized by the political engagement and literary quality of its texts, which are set to simple melodies emphasizing the words. The *viola*, often played by the singer himself, replaced the *guitarra* as the main accompanying instrument. This genre provided the springboard for the development of political song in Portugal during the 1960s and 70s (*see* Portugal, §IV, 1(i)). *Guitarradas* are solo compositions for the *guitarra*, accompanied by the *viola*, which are found in both the Lisbon and Coimbra traditions.

SALWA EL-SHAWAN CASTELO-BRANCO

Faenza. City in Emilia-Romagna, in the province of Ravenna, Italy. The courtly entertainments of the Manfredi family, which ruled the city from 1313 to 1501, included music, dancing and elaborate pageantry. Most of the early manuscripts held in the cathedral archives, the Biblioteca Comunale and the Biblioteca Cicognani were produced for the churches of Faenza; the oldest date from the early 14th century. The Faenza Codex (*c*1420 or earlier), the most important source of early instrumental music, originated elsewhere but was transferred to Faenza between 1868 and 1889. There were small *cappelle* at the Servite church, S Francesco and S Maria foris Portam by the end of the 13th century. The *cappella* of the present cathedral, S Pietro, was established in 1496 with Pietro da Firenze as *maestro*. A small positive organ was built there in 1517 and a larger one added in 1562; a choir school was established in the early 16th century. Brass instruments were added to the *cappella* from the mid-16th century, and strings from the mid-17th. Paolo Aretino was *maestro di cappella* from 1545 to 1548. Among his 17th-century successors were Gabriele Fattorini, G.C. Fattorini, Pietro di Biendrati (or Biendrà), Cristofano Piochi and Orazio Tarditi. Antonio Colonna ('Dal Corno') built an organ for S Francesco (1632) and one for the cathedral (1639). Maintenance for the city's organs was provided mostly by the Fabbri family during the 17th century and most of the 18th. The cathedral archive contains prints of works by the 16th- and 17th-century *maestri* and their contemporaries; the archive's collection of works by later local composers is now mostly lost.

During the 16th and 17th centuries the calendar of musical events, both religious and secular, was built around liturgical feasts and civic anniversaries. The spring-summer season, which included the feasts of St

Vincent Ferrer (4 April) and St Peter (29 June), was almost more important than Carnival as it was the only time of year when all roads were passable and travellers could assemble; the summer season included opera, *spettacoli* and recited drama. Secular musical activity during the 17th and 18th centuries was dominated by the Arcadian academies. Their meetings often included music composed for the occasion, and they held musical evenings in the palaces of the nobility. The Accademia degli Smarriti (founded 1596) arranged the first public performances of musical *spettacoli*; the Accademia dei Filiponi (1612) and its successor, the Accademia dei Remoti (1673), supported theatre and opera. The public Teatro dei Remoti, adapted from a salon in Palazzo dei Podestà, opened in 1723; a larger theatre (from 1903 called the Teatro Comunale Masini) was inaugurated in 1788 with the first performance of Giuseppe Giordani's *Caio Ostilio*. Gala events including opera, *maschere* and *balli* were held to entertain first Austrian and then Spanish officers during the War of the Austrian Succession (1742–5). Through the activity of Paolo Alberghi (*maestro di cappella* 1760–85) Faenza became an important centre of violin study.

Napoleon's army occupied Faenza in 1796. *Cantori* and *mansionari* were dismissed from the churches and the *cappelle* were reduced to skeletal proportions. Alberghi's pupil Antonio Bisoni (*maestro di cappella* 1797–8, 1801–27) composed prolifically for these reduced forces and also for the theatre. Operatic activity was curtailed in the Napoleonic era but began to flourish in the 1820s, the repertory reflecting prevailing Italian tastes. Among local singers who gained international reputations was the baritone Antonio Tamburini, who inaugurated the Accademia Filarmonica in 1842. With the unification of Italy in 1861 came political and economic stability and an increase in musical activity. By the 1870s each of the city's two main seasons, Carnival and the festival of St Peter, regularly included two or three opera productions. The Accademia Filarmonica organized regular concerts, but opera remained the preferred form of entertainment and operatic repertory dominated concert programmes.

The cathedral *cappella* increased in size from the withdrawal of French forces in 1815 through the rest of the century, but was reduced again, after 1925, under the fascist regime. *Maestri di cappella* in the intervening years included A.G. Pettinati, Antonio Cicognani and Lamberto Caffarelli. Many of the city's churches were extensively damaged during World War II but the cathedral emerged relatively unscathed. Restorations have been made to the Dal Corno organs in the cathedral and S Francesco and to organs in other churches. These are now frequently used for recitals of early music, and the choir of S Francesco gives regular concerts. The city's other main concert venue is the Teatro Comunale. Post-war opera performances there have been limited to concert versions of popular works. Concerts of traditional and popular music are regularly given. During the summer season, which by the 1980s had been extended into September, outdoor concerts are given in front of the theatre in the Piazza Nenni and in the central Piazza del Popolo.

Færoes. Archipelago of 18 inhabited volcanic islands in the North Sea between Iceland and Scotland with a total area of 1399 square km and a population of about 45,000. Independent linguistic and musical traditions are maintained despite a lengthy history of political domination, first by Norway and then by Denmark (the islands achieved home rule in 1948). Today old and new, indigenous and international music traditions co-exist; all indigenous traditions are vocal and are associated poetry, dance, drama and history. Musical instruments imported from European countries have been present for at least two centuries but Færoese have shown little interest until recently.

1. BALLAD-DANCING.

(i) Introduction. The Færoes are renowned for ballad-dancing, a heritage dating back to the Middle Ages. Music and language are interdependent in the Færoes, as reflected in the recitative-like ballad performance practice of *kvædi*. Philologist Jens Christian Svabo (1746–1824) documented what he assumed to be dying musical and linguistic traditions by collecting ballad-texts from singers in the Færoese countryside, using materials he gathered to compile a Færoese-Danish-Latin dictionary. Svabo's ballad collection was not published until the 20th century, by which time Færoese had replaced Danish as the official language, and the ballad tradition began to attract attention from abroad.

Færoese balladry comprises three different genres, all performed dramatically as dance-songs in the same style: dancers form rings or chains and respond to the voice and actions of a dance-leader (see Wylie and Margolin, 1981). The ballad-dance usually begins quietly with a few dancers, including the *skipari* (dance-leader) who calls others to join, often in the first stanza of the ballad. The dancers' arms are linked at shoulder height as their bodies sway rhythmically. As in Provençal *chansons de geste*, Icelandic *rímur* and other European narrative forms, each stanza consists of a short recitative-like tune and a more melodic refrain.

Ballad-dance stanzas used to be performed antiphonally, the other dancers responding to the *skipari*, today, verses and refrains tend to be intoned by the entire group;

however, the dance-leader's voice stands out clearly and authoritatively above the ensemble at the beginning of each stanza, a feature that serves a mnemonic purpose while also dictating tempo and mood. In this way the antiphonal structure of older styles, and the authority of the dance-leader is perpetuated. While care is taken to prevent musical and textual changes, dancers are expected to portray emotion through body and facial movements, increasing in intensity as participants lose themselves in their role playing. The creativity of individual actor-dancers resides in this individual dramatic portrayal of the text. Exceptional dance-leaders are renowned for their feats of memory, especially for the verbatim recitation of as many as 400 stanzas.

(ii) Kvæði. *Kvæði* are lengthy, orally transmitted Færoese-language ballads about human and super-human (usually medieval) heroes and heroines. They make up the largest category of Færoese balladry; many date from the Middle Ages (Conroy, 1978). Music generates excitement during a lengthy performance by singers dividing into two parts at points of climax ('going higher') and through lack of concordance between melodic stress and poetic metre; the stressed accents of all three elements (music, metre and dance) produce polyrhythmic structures (see Luihn, 1980, p.91). *Kvæði* are lengthier than other ballad genres due to their compound structure of chapters (called *tættir*).

Heroic Færoese ballads tell a variety of stories covering many important themes of European balladry and draw from a variety of both aural and written European sources. Most fascinating to European scholars are the ballads about the Frankish king Charlemagne, his sister Olurz and father King Pepin, as well as the Germanic hero Sigurd the Volsung (Færoese, *Sjúrður*), slayer of the serpent Fafnir. The *Sjúrðarkvæði* consists of nine *tættir* relating the Færoese version of the *Völsunga saga* ('Volsungs' saga'), a prose rendering of the Eddic verse in the *Nibelungenlied* cycle (from which Wagner drew for his *Ring*).

(iii) Tættir. The second genre of ballads also uses Færoese texts. However, these are concerned with ordinary individuals and topical subject matter. *Tættir*, satirical ballads, should not be confused with the term for *kvæði* chapters mentioned above. New *tættir* were composed throughout most of the 20th century, and the genre frequently functioned as a punitive device; traditionally, those who committed anti-social acts could be punished by being forced to participate in a ring of dancers publicizing their transgression in a lengthy ballad performance; sometimes the victims retaliated with similar musical lampoons. By far the most famous *táttur* (sing.), due to its influence on Danish-Færoese relations, is *Fuglakvæði* ('Ballad of the Birds') by the 18th-century poet, seaman and political activist Nólsoyar-Páll (1766–1809). It is a satirical treatment of corruption by unscrupulous Færoese shipping merchants who collaborated with officials of the Royal Danish Monopoly, who are depicted as birds of prey, while Páll's comrades are portrayed as small birds.

Páll composed other politically inspired *tættir*, and ballad scholars have described his thorough background in Færoese ballad-dancing when explaining the influence and perseverance of his *Battle of the Birds* (Andreassen, 1986; Galvin, 1989). Today the satirical genre has largely yielded it function to newer forms of dissemination (see E. Andreassen in *Nostalgi og sensasjoner*, ed. T. Selberg, Turku, 1995, pp.223–45).

(iv) Kempuvísa (also vísa). *Kempuvísa* means 'giant song', and these ballads, like *kvæði*, concern heroic and extra-human exploits. However, their Danish texts are transmitted through written sources committed to memory, many from known songbooks. *Kempuvísur* (pl.) are unlike contemporary Danish ballads; they are considered an important Færoese form. Musical characteristics that set *kempuvísur* apart from *kvæði* include more melodic (less chant-like) tunes and the rhythmic concordance of texts, melodies and dance-steps (unlike typical polyrhythmic structures of *kvæði*). In addition, dancers usually step on each syllable. *Kempuvísur* are not composites of sections and are therefore generally shorter in length. On the other hand, the verses are characterized by alliteration, unlike the Danish idiom, but similar to Færoese and Icelandic style (Luihn, 1980; Andreassen, 1991; Nolsøe, 1985.

2. Psalm-singing. The Færoese Lutheran state concerned itself closely with the form and style of religious music, as elsewhere in Scandinavia. Luther's strong convictions on the importance of congregational singing resulted in a strict regulation of song style and musical instruments, with the goal of full participation and strict adherence to a printed musical text; hymns from the Bishop Gradual (*Kingotoner*) were by far the most often used, and keyboard instruments, especially the organ, were introduced into church services. However, the imposition of musical order did not wipe out time-honoured improvisatory traditions of psalm-singing in homes. The Kingo hymn tunes introduced a new, un-ballad-like style that was modestly melismatic and did not proceed by scale steps. They became a challenging vehicle for microtonal embellishment and free-flowing rhythms when families gathered in homes for weekly or daily worship. The musical significance of this influence was noted by Sunleif Rasmussen, the first academically-trained Færoese composer. Rasmussen credited the ballad-dance tradition and his grandmother's improvisations on Kingo tunes as his formative influences.

3. Choral tradition. The persistence of psalmic improvisation over many years explains a relative lack of composed anthems. In 1987, a Færoese delegate to a Nordic choral music seminar held in Finland described Færoese choral music as conservative in style (Sjøen, 1987). Choral music became prominent after the turn of the 20th century with compositions by Joen Waagstein (1879–1949) and Hans Jacob Højgaard (1904–92).

Outdoor revivalist meetings are common in the Færoes and always involve singing accompanied by electronic instruments. The choirs of the Plymouth Brethren sing anthems from partbooks and gospel solos, visiting each other's churches and participating in periodic festivals.

4. Instrumental music. There is evidence that musical instruments have been available in the Færoes for over 200 years, and there is no reason to believe that seagoing Færoese were unaware of them although they seem to have displayed little interest in playing. Instruments are mentioned in their ancient ballads, e.g. the term *harpen* referring to a generic string instrument. However, until recently, instrumental playing was largely practised by immigrants such as the Dane Georg Caspar Hansen (1844–1924). Hansen was a baker who also played and

taught most symphonic instruments and founded choral and instrumental groups, including the popular brass band tradition. There were also some native-born players, such as the physician and ballad collector Napoleon Nolsøe, who became Tórshavn's first organist in 1831.

5. RECENT DEVELOPMENTS. Today's increasing interest in a variety of national and international musical idioms has been stimulated by the promotional activities and enthusiasm of another Danish immigrant-musician, who, like Hansen, settled permanently in the Færoes. Kristian Blak (*b* 1947), a jazz pianist who studied musicology in Copenhagen at the Royal Danish Conservatory, emigrated in 1974 and founded a number of institutions that promoted a variety of musical idioms: the pan-Nordic chamber group Yggdrasil, the folk music group Spælimenninir i Høydolum ('Høydolum players'), the Havnar Jazzfelag (Tórshavn jazz club), TUTL, the only Færoese record company which produces three series (jazz and rock, folk, and classical), and two international festivals, the Tórshavn Jazz, Folk and Blue Fest and Summartónar (a festival of classical and contemporary music). Among Blak's compositions, his ballet *Harra Pætur og Elinborg* dramatizes an ancient Færoese ballad theme, and had its première at Tórshavn's Nordic Cultural Centre in 1989, performed by musicians and dancers from several Nordic countries.

The native Færoese composer Sunleif Rasmussen combines acoustic and electronic instruments. In *Sum hin gylta sól* (1993) a gradual shift from acoustic to electronic sounds occurs as the composition progresses through three movements.

A recent development is the variety of musical styles played by youths, including funk, hard rock, rap, folk rock, new music and jazz. The guitarist Leivar Thomsen, also a jazz composer, performs with Plúmm, a group that has experimented with most of these idioms. Beginning in the 1960s, early rock bands such as the Faroe Boys imitated North American groups; some continue to use names evocative of American protest, such as Black Panthers and Hate Speech. Bands such as Moirae, Rock Men, Lokum, Frændur, Devon and the winner of the 1995 Prix Føroyar, Mark No Limits, have developed independent styles; some have begun to use Færoese lyrics.

PANDORA HOPKINS

Fagan, Eleanora. *See* HOLIDAY, BILLIE.

Fagan, Gideon (*b* Somerset West, 3 Nov 1904; *d* Cape Town, 21 March 1980). South African conductor and composer. He studied at the College of Music, Cape Town (1916–22), and at the Royal College of Music, London, with Boult, Sargent and Vaughan Williams (1922–6). While at the RCM he conducted *Hänsel und Gretel* at the Parry Opera Theatre and directed the leading London orchestras. After a brief return to South Africa (1926–7) he took up residence in London, conducting touring theatre companies, arranging and composing light music, and appearing as a guest conductor. He assisted Ernest Irving at the Ealing film studios (1934–9) and was conductor of the BBC Northern SO (1939–42); later he appeared with the BBC and other orchestras. Having returned to South Africa to accept the associate conductorship of the Johannesburg City Orchestra (1949–52), he remained there on the staff of the SABC, of which he became music director (1963–6). He then lectured on conducting, composition, orchestration and counterpoint at the University of Cape Town (1967–73). *Ilala* (1941), exhibiting most of the hallmarks of his style, has a strong lyrical quality, slow-moving Impressionistic harmonies and a fine sense for orchestral sonorities. In the later *Karoo Symphony* (1976–7) the harmonies are more strident and contrapuntally conceived. His brother Johannes Fagan (1898–1920) was a composer of remarkable promise.

WORKS

G.F. STEGMANN/JAMES MAY

Fage, Jean de la. *See* LA FAGE, JEAN DE.

Faggioli, Michelangelo (*b* Naples, 1666; *d* Naples, 23 Nov 1733). Italian composer. He came from a family of lawyers and in 1687 received the doctorate at the University of Naples in both canon and civil law. He composed, apparently in 1706, the music for the earliest known comic opera in Neapolitan dialect, *La Cilla* (text by F.A. Tullio), which was 'splendidly produced' on 26

December 1707 in the palace of Fabrizio Carafa, Prince of Chiusiano, to celebrate the return of Carafa's son from Spain; the libretto indicates, however, that the work had already been performed in the preceding year. Its novelty was such as to occasion comment in contemporary Neapolitan journals, and Faggioli himself, in his dedicatory letter, shows awareness of having created something new, begging forebearance and protection for it. Further performances held in Carafa's palace in January 1708 attest its success. In this prototype of dialect comic operas all the characters sing in Neapolitan. The plot is a romantic farce set in a village, with comic effects arising from the devices of mistaken identity and transvestite disguise. Some 66 short arias, duets and trios, spaced without any apparent plan, frequently interrupt the action; the exit aria is not yet a standardized feature. The music is lost, but Faggioli's style in this genre can be seen in a comic cantata with dialect text for soprano solo and continuo, *Lo Paglietta* (*I-Nc*), containing two da capo arias in a simple, tuneful melodic style with competent but unadventurous harmony. Faggioli also wrote an oratorio in 1709 (text by L. Perone; title and occasion unknown). This music too is lost, but another solo cantata, *Didone abbandonata da Enea* (*I-Nc*), attributed to him, shows that he was a capable if not brilliant composer of serious music: the pathetic text is expressively set, with demands for greater vocal agility than in the comic work and with greater harmonic elaboration. Another cantata for solo voice and basso continuo, *Su le fiorite sponde*, survives (in *I-Nc*) and his *scherzo drammatico La partenope divota e Lucifero abbatatuo* (text by L. Gianni) was performed on 13 June 1717 a the Palazzo Juvarra on the occasion of the feast of St Antony of Padua.

Fagius, Hans (*b* Norrköping, 10 April 1951). Swedish organist. Fagius studied with Alf Linder at the Royal College of Music in Stockholm (1970–75), then privately with Duruflé in Paris. He made his début in Stockholm in 1974 and has since given concerts in many parts of the world, concentrating on Baroque and Romantic repertory. In the 1980s he taught at Göteborgs Musikhögskola and Royal College of Music in Stockholm and was appointed professor at the Royal Danish Conservatory in Copenhagen in 1989. He gave complete Bach recitals in Stockholm (1983–4) and Copenhagen (1996) and has recorded organ symphonies by Widor and organ works by Saint-Saëns and Romantic Swedish composers, as well as the complete Bach organ music. In 1998 he joined the staff of the Swedish Royal Academy of Music, Stockholm.

HANS ÅSTRAND

Fagnola, Annibale (*b* Montiglio, 28 Dec 1866; *d* Turin, 16 Oct 1939). Italian violin maker. The son of a farmer, he worked in several professions and was a mechanic at the time of his move to Turin in 1894. By 1895 he had opened a shop as a violin maker. He would appear to have been self-taught but relied early upon the advice and guidance of the lawyer Orazio Roggero, a prominant collector from Saluzzo. Early in his career he may have made reproductions of violins by the classic Turinese masters G.B. Guadagnini, Guiseppe Rocca and especially G.F. Pressenda, many of which were later sold as originals. He was awarded medals at expositions in Genoa and Milan in 1906 and a gold medal for his quartet at the Turin Exposition of 1911. By 1905 his work was increasingly in demand, and a large part of it may have gone initially to England where it came to the attention of Hidalgo Moya and Towry Piper, whose comments in *Violin Tone and Violin Makers* (1916) represent the earliest 20th-century references to a contemporary Italian violin maker. Fagnola's work grew in refinement and sophistication, and after 1920 he was assisted by several apprentices, including Riccardo Genovese (*d* 1935), Stefano Vittorio Fasciolo (*d* 1944) and his nephew Anibalotto Fagnola.

Fagnola is regarded as perhaps the most important violin maker of the modern Italian tradition. His style was quite individual, the workmanship clean and precise, the wood selection generally excellent. As well as making accurate copies of the instruments of his Turinese predecessors he made instruments modelled more loosely after their patterns, although the former are more sought after. He used a varnish similar to that of the earlier Turin makers: often deep orange or red which gains transparency in polishing, and in later years a pale gold or orange which often shows a crystalline refraction, the result of too little oil and too much resin. He consistently achieved a fine tonal result, and his violins are prized by professional musicans worldwide. During and after his lifetime his violins were extensively copied all over Europe, and there are still makers in Italy today who will produce them to order.

PHILIP J. KASS

Fago. Italian family of musicians. They were active in Naples during the 18th century.

(1) (Francesco) Nicola Fago [Il Tarantino] (*b* Taranto, 26 Feb 1677; *d* Naples, 18 Feb 1745). Composer and teacher. He was the son of Cataldo Antonio Fago and Giustina Tursi of Taranto. After studying music in his home town, and from July 1693 to August 1695 at the Conservatorio di S Maria della Pietà dei Turchini in Naples, where his teacher was Francesco Provenzale, he settled in Naples, serving various churches as *maestro di cappella*. On 27 November 1701 he married Caterina Speranza Grimaldi, a younger sister of the famous soprano virtuoso Nicolo Grimaldi ('Nicolini'); of their many children only the eldest son, (2) Lorenzo Fago, became a musician. In 1704 Fago was chosen to succeed Don Angelo Durante, the uncle of Francesco, as *primo maestro* of the Conservatorio di S Onofrio, and in May 1705 he accepted in addition the same position at the Pietà dei Turchini, replacing Gennaro Ursino, Provenzale's successor. In October 1708 Nicola relinquished his post at S Onofrio, and in the following year became *maestro di*

cappella at the Tesoro di S Gennaro of Naples Cathedral, succeeding Cristoforo Caresana ('Il Veneziano').

Fago composed all of his known sacred dramas, oratorios and operas between 1705 and 1714. His first *dramma per musica*, *Il Radamisto*, was commissioned in 1707 for the wedding festivities of Antonio di Sangro, Prince of S Severo. Two years later his second *dramma*, *Astarto*, was staged at the Teatro S Bartolomeo, Naples. Between 1710 and 1711 he composed two comedies on librettos by F.A. Tullio for the Teatro dei Fiorentini. During the following year, he collaborated with his former student Michele Falco, a composer of musical comedies, to produce *Lo Masillo*, a three-act work called 'dramma per musica' on the title page of the libretto but traditionally considered to be an early *opera buffa*. After another collaboration with Falco in 1714 (*La Dafne*), Fago suddenly abandoned writing for the operatic stage and dedicated himself primarily to sacred music and teaching. In addition to his regular duties at the Pietà dei Turchini and the Tesoro di S Gennaro, he for several years also directed and/or composed the music for High Holy and Saints' Days at several Neapolitan churches. In 1731 he retired from the Tesoro di S Gennaro in favour of his 27-year-old son, Lorenzo, for reasons of age and health. Five years later, however, he accepted another post as *maestro di cappella* at S Giacomo degli Spagnoli, which he held until his death. At the Pietà dei Turchini he developed an outstanding teaching career which lasted 35 years. His *secondi maestri* assisting him there were in turn Andrea Basso (to 1734) and Giovanni Sarconi (1718–32), then Leonardo Leo (1734–7), and finally his son Lorenzo (from 1737). Among his students were Falco, Francesco Feo, Giuseppe de Majo, Leo, Giuseppe Marchitti, Niccolò Jommelli, Michelangelo Vella, Pasquale Cafaro, Nicola Sala and Antonio Corbisero. In 1740 Fago retired from teaching, and Leo succeeded him as *primo maestro*. But in December 1744, after Leo's death, the still active Fago petitioned the king to be appointed Leo's successor as *primo maestro* of the royal chapel. Fago died, however, the day before a competition for the post was announced.

Nicola Fago belongs to the generation of Francesco Mancini and Domenico Sarro. Like them, he established himself in Neapolitan musical life during the years of Alessandro Scarlatti's absence (1702–8). His comic operas place him among the first professional composers to embrace the then budding genre of the Neapolitan *commedia per musica*. However, only the scores for his oratorio *Il Faraone sommerse* (1709) and the 1713 performance of his *dramma per musica La Cassandra indovina* (1711) have survived. His works for the stage, serious or comic, seem to have made little impact, and his career as an opera composer was short-lived. It was as a teacher and composer of church music that Fago became known in Naples as 'Il virtuosissimo Tarantino'. In his masses and settings of the *Dixit*, *Te Deum* and *Magnificat*, for two five-part choruses (one of which provides the solo voices), he continued the late 17th-century polychoral tradition established in Naples by Antonio Nola, Gian Domenico Oliva and Cristoforo Caresana, but the style and scope of the choral movements and self-contained solo numbers is more in accordance with 18th-century ideals. His works exhibit the solid contrapuntal craftsmanship of the teacher-composer, and several of his smaller pieces, particularly those in *stile antico*, are obviously didactic in nature. What unites his approaches to both new and old styles is his grasp of the tonal idiom, the control of harmonic, modulatory progressions over polyphonic and homophonic textures. In his secular vocal music Fago's model was Alessandro Scarlatti, but he limited himself to the traditional form of the solo cantata with continuo accompaniment. Though Fago's fame as a composer was later overshadowed by that of his students, his influence on early 18th-century Neapolitan church music should not be underestimated. Neither Burney, Hawkins nor Gerber mentioned Fago; in 1792 J.F. Reichardt pointed out this omission of 'one of the most famous composers from the beginning of this century', with specific reference to his church music and cantatas.

WORKS

STAGE

performed in Naples, music lost, unless otherwise stated

Il Radamisto (dramma per musica, N. Giuvo), Piedimonte, 1707, lib *I-Bc*, *US-Wc*

Astarto (dramma per musica, A. Zeno and P. Pariati), S Bartolomeo, 24 Dec 1709, 3 arias *I-Nc*, lib *B-Bc*, *GB-Lbl*, *I-Bc*, *Bu* [according to Strohm possibly based on a dramma per musica by T.G. Albinoni, Venice 1708]

Le fenzejune abbendurate (commedia per musica, F.A. Tullio), Fiorentini, 1710, lib *Bu*

La Cassandra indovina (dramma per musica, 3, Giuvo), Piedimonte, 26 Oct 1711, lib *D-Dl*, *I-Bu*; Fiorentini, 1713, 1713, *GB-Lbl*

La Cianna (commedia per musica, Tullio), Fiorentini, 1711, lib *I-Bu*, *Nc*

Lo Masillo [Acts 1 and 3] (dramma per musica, 3, N. Orilia), ?Casa del Mattia di Franco, carn. 1712 [Act 2 by M. Falco], lib *D-Dl*, *I-Bc*, *Bu*, *Nc*

La Dafne (favola pastorale in stile arcadio), 1714, lib *GB-Lbl*, collab. M. Falco

Arias, lost, for pasticcio of F.B. Conti, Clotilde, London, Queen's, Haymarket, 2 March 1709, lib *GB-Lbl*, *I-Bu*, *US-LAuc*, *SM*, *Wc*

Choruses for L'Eustachio (tragedy, A. Marchese), S Bartolomeo, 28 Aug 1729, pubd in *Tragedie cristiane* (Naples, 1729)

SACRED DRAMAS AND ORATORIOS

Notte prodigiosa (dialogo orat), 1705, music lost, lib *I-PLc*

Il monte fiorito (melodramma sacro), Naples, 8 March 1707, music lost, lib *Nn*

Il Faraone sommerso (orat), 1709, *GB-Ob*, *I-Fc*

Il rifuggio de' peccatori nel patrocinio della vergine addolorato (melodramma sacro, Giuvo), Naples, 1710, music lost

Il sogno avventurato, overo Il trionfo della Providenza (melodramma sacro), Naples, 1711, music lost, lib *Nn*

Il piacere sconfitto nel'invenzione della Santissima Croce (orat, C. Doni), Naples, 15 April 1711, music lost

SERENATAS, CANTATAS AND ARIAS

3 serenatas: Le quattro monarchie, Naples, 1705: *F-Pc*; È più caro il piacer doppo le pene (?Giuvo), music lost, lib *I-Rli*; Siren sagata et togata (certamen musicum), Naples, 1715, music lost, lib *Nn*

36 cants., S, bc, unless otherwise stated [†= cant. ed. M.G. Melucci (Rome, 1995)]: †Allor ch'in dolce oblio, *D-Bsb*, *I-Nc*; Amante con poca sorte, 4 June 1715, *Nc*; ?Amore traditore, *GB-CDp*, *I-MC*; Bella a te di vezzoso, *E-Mn*; †Che vuoi mio cor, *I-Nc*; Clori vaga vezossa, *F-Pc*; †Come viver poss'io, *I-Nc*; Dalle cimmerie grotte, *F-Pc*; D'Aretusa in sul lito, *Pc*, *GB-Lbl*; †Destati omai dal sonno, A, bc, 1712, *I-Nc*; †Doppo mille martiri, *MC*; †È ben chiara ragione, *Nc*; Fra cento belle, *F-Pc*, *GB-Lbl*; Fuori di sue capanna, A, fl, bc, *T*; Il cor che vive oppresso, *F-Pc*; Ingegni curiosi, *I-Nc*; In profondo riposo, *S-L*; †Lagrime di cordoglio, *I-Nc*; †Miserabile scempio, B, bc, 1715, *Nc*; †Non credo che vi sia, Tormento, *c*1725, *GB-Lbl*, *I-Nc*; Non ha il bambino arciero, *Mc*; Oh quanto omai diverso, *D-Bsb*, *Dl*; †Qualor non veggio, *I-Nc*; Quando sazia sarai, *D-MÜs*, *F-Pc*; Quanto invidio la tua sorte, *I-Nc*; Quel ruscello chiaro e bello, *F-Pc*; †Questo poverto cor, *Pc*, *I-Nc*; †Sapesse il cor almen, 1703, *D-Bsb*, *GB-Lbl*, *Ob*, *I-Mc*, *S-L*; Se d'una stella sola, *D-Bsb*; †Se gelosia crudele, *F-Pc*, *GB-Cfm*, *Lbl*, *I-Nc*; Sopra carro di rosa, *B-Lc*; †Sopra del bel Sebeto, *GB-Lbl*, *I-Rsc*; †Stava un giorno Fileno, *Mc*; Steso tra i fiori, *F-Pc*; †Sulle sponde del mare, *I-Mc*; Trà cento belle, *F-Pc*, *GB-Lbl*; Vicino a un chiaro fonte, *F-Pc*

Arias: Lusinga di chi pena, *I-Nc*; No che il mio core, *GB-Lbl*; Perchè amarmi e poi tradirmi, *B-Bc*; Più fedele e meno bella, *GB-Lbl*; Sia con me Fillide, *Lbl*, *Ob*; Tormentata, piagata, *I-Nc*

SACRED VOCAL
with instruments, unless otherwise stated

Requiem, 10vv, c, *D-Bsb*, *MÜs*, *F-Pc*
11 Masses (Ky–Gl): C, 10vv, *F-Pc**, C, 10vv, *Pc*; a, 10vv, *I-Nf*; D, 10vv, *A-KR* [attrib. D. Bigaglia], *D-Bsb*; D, 5vv, *Dl*; D, 5vv, *Dl*, *GB-Lbl*, *Lgc*; F, 10vv, ?1701, *D-MÜs*; F, 5vv, *I-Nc*; g, 13vv, *A-KR*; g, 4vv, *I-Nc*; 5vv, lost, formerly in Prague, Loretan Cathedral
6 Cr (San, Benedictus, Ag): C, 5vv, *D-Bsb*, *GB-Lbl*, *Ob*, *I-Nc**; G, 4vv, *F-Pc*; e, 4vv, *Pc*; D, 10vv, *B-Lc*, *D-Dl*; E, 5vv, *F-Pc*, *I-Nc**; B♭, 10vv, *F-Pc*, *I-Nc* [attrib. L. Leo, 10vv], *D-Mbs* [attrib. F. Feo, 5vv], *MÜs* [attrib. L. Fago, 5vv]
4 lits: ?C, 4vv, org, *GB-Lbl*; e, 5vv, *I-Nc**; b, 5vv, *Nc**; g, 5vv, *D-MÜs*, *F-Pc*, *Nc** [with 4vv and 2 hns added later by L. Fago]
18 pss, 4 Beatus vir: a, 4vv, *GB-Lbl*, *Ob*; G, 2vv, bc, Jan 1723, *I-Nc*; D, 5vv, bc, *Nc*; d, 3vv, bc, *Nc*; 5 Confitebor tibi [C, 2vv, bc, Feb 1723, *Nc*; G, 5vv, 9 June 1734, *Nc*; G, 5vv, bc, *Nc*; G, 3vv, *Nc*; G, 2vv, *GB-Ob*]; Credidi propter quod, G, 9vv, *F-Pc**, *GB-Lbl*, *I-Mc*, *Nc*; 2 Dixit Dominus [D, 10vv, 1735, *GB-Lcm*, *Ob*; B♭, 4vv, *US-Cn*]; Laetatus sum, C, 4vv, bc, 1705, *A-Wn*, *GB-Lbl*, *Ob*, *I-Mc*, *Nc*; 2 Laudate pueri [G, 5vv, bc, *Nc*; D, 3vv, bc, *Nc*]; 2 Nisi Dominus [C, 2vv, bc, *Nc*; e, 4vv, *Nc*]; 3 frags., incl. a Dixit Dominus, a, 5vv, bc, *Nc*
2 Benedictus Dominus: G, 9vv, *F-Pc**; D, 9vv, *I-Nc*
Inno per S Michele Arcangelo, G, 2vv, bc, *Nc**

Pange lingua, D, 4vv, *F-Pc*
Resps for Holy Week, f, 4vv, org, *I-Nc*
Stabat mater, f, 4vv, *GB-Lbl*, *I-Mc*, *Nc* [arr. by V. Novello, *The Evening Service* (London, 1822), i, 129–36]
2 TeD: G, 10vv, ?1712, *I-Mc**, *Nc*; F, 10vv, *D-Dl*
20 motets and versetti: Amplius lava me, 5vv, bc, *I-Nf*; Campiameni grati flores, 2vv, *GB-Ob*; Cantemus hilares, 5vv, *CZ-Pak*; Dies ista festiva, 1v, *Pak*; Eja angelici chori, 1v, *Pak*; 2 Et egressus est [1v, bc, *GB-Lbl*, ?Leo; 1v, *I-Nf*, ?lost]; Exultet divus, 4vv, lost, formerly Prague, Loretan Cathedral; Festum diem triumphalem, 4vv, *GB-Lcm*; In aurora tam festiva, 6vv, 1709 [variant version, In hac die tam festiva, attrib. L. Leo], *CZ-Pak*; Itaque ad te clamamus, 2vv, *Pak*; Per te virgo, 5vv, *Pak*; Poli sedes relucete, 1v, *GB-Ob*; Purpura decora, 1v, *I-Af*; Quid hic statis pastores, 2vv, *Nc*; Sacrificium Deo spiritus, 5vv, org, *GB-Lbl*; Sicut erat, a, 10vv, *I-Nc**; Super coelos splendore ridentes, 9vv, *CZ-Pak*; Tantum ergo, 1v, 1736, *D-Bsb* [the Tantum ergo, 1v, attrib. Fago, *GB-Lbl*, by Leo]; Veni propera formosa, 2vv, *Ob*
Addl independent mass movts and frags., *D-MÜs*, *GB-Lbl*, *I-Nc*

INSTRUMENTAL

Partimenti, kbd, *I-Nc*; Toccata, G, hpd, *Nc*, ed. G.A. Pastore (Padua, 1959); Sinfonia, D, *c*1740, *GB-Ge*

(2) Lorenzo Fago (*b* Naples, 13 Aug 1704; *d* Naples, 30 April 1793). Teacher and composer, eldest son of (1) Nicola Fago and Caterina Grimaldi. Although born in Naples, he was called 'Il Tarantino' like his father, from whom he received his musical education. He first became organist of the *primo coro* at the chapel of the Tesoro di S Gennaro, where on 26 June 1731 he succeeded his father as *maestro di cappella*. In this capacity he served until 1766, and again between 1771 and 1781. On 26 July 1736 he married Angela (Albina) Gleinod; their eldest son, (3) Pasquale Fago, also became a composer. In 1737 Lorenzo began his career at the Conservatorio della Pietà dei Turchini, following Leo as *secondo maestro*. He assisted his father until his retirement in 1740, and then Leo, after whose death he became *primo maestro* (1 November 1744). In that position he served until his retirement in January 1793. The *secondi maestri* under him were G.G. Brunetti (1745–54), Girolamo Abos (1754–9), Pasquale Cafaro (1759–87) and his eventual successor Nicola Sala (1787–93). His activities as a teacher outweigh in importance his compositions, which include church music and cantatas but no operas. He reworked several compositions by his father, particularly their orchestration, and through performances kept some of this music alive during the second half of the 18th century.

WORKS

La sposa de' sacri cantici (componimento drammatico), Florence, 1742, ?music lost, lib *D-Hs*
2 cants., 1v, insts, *GB-Lcm*: Al fin ti partisti ingrato Tirsi; Clori tu ben sai
Confitebor tibi, G, 1v, insts, *D-MÜs*; Dixit Dominus, D, 5vv, insts, *MÜs*; Lectio prima del Venerdi Santo, d, 1v, bc, *I-Nf*; Mass (Ky–Gl), F, 5vv, insts, *D-MÜs*; Tantum ergo, D, *F-Pc* [bc only]; Tibi soli peccavi, d, 5vv, bc, *I-Nf*

(3) Pasquale Fago [Pasquale Tarantino, Tarantini] (*b* Naples, *c*1740; *d* before 10 Nov 1794). Composer, eldest son of (2) Lorenzo Fago. In 1762 he joined the chapel of the Tesoro di S Gennaro as an organist, and in 1766, when his father retired in his favour, became *maestro di cappella*. As a composer he adopted the name Pasquale Tarantino and wrote a number of fairly successful works. But he was not truly interested in a musical career and in 1771 resigned as *maestro* to devote himself to the administrative government services with which he had been occupied since 1764. In 1780 he became governor of the province of Montecorvino and in 1782 of Sarno.

WORKS

Sorgi, figlia d'Eumelo (cant.), for birthday of King Ferdinand IV, 3vv, insts, Naples, S Carlo, 12 Jan 1766, *I-Nc*
Il sogno di Lermano Cinosurio Pastore Arcade (componimento drammatico, G. Baldanzo), Palermo, Galleria del Real Palazzo, 20 Jan 1769, music lost, lib *US-AUS*, Humanities Research Library
La caffettiera di garbo (ob, P. Mililotto), Naples, Nuovo, carn. 1770, ?music lost, lib *I-Nc*
Il finto sordo (ob, Mililotto), Naples, Fiorentini, carn. 1771, music lost, lib *Nc*, *Nn*, *Vgc*
Son sventura ma pure o stelle (aria); Vado a morir (duetto): both *MC*

Fagotto (ii) (It.). *See under* ORGAN STOP (*Fagotto*).

Fah. The subdominant of a major scale, or the sixth degree of the harmonic form of a minor scale in TONIC SOL-FA.

Fahrbach, Philipp (*b* Vienna, 25 Oct 1815; *d* Vienna, 31 March 1885). Austrian composer and bandmaster. In 1825 he joined the newly formed orchestra of Johann Strauss the elder, and he worked closely with Strauss on the preparation of the latter's works. He formed his own orchestra in 1835, rivalling Strauss and Lanner and occasionally deputizing as conductor of the court balls. Fahrbach came into his own with the deaths of Lanner and Strauss, before being overshadowed again with the emergence of the younger Johann Strauss. He published some 400 dances and marches, as well as theatre and religious music, and he contributed articles on wind instruments and military music to the *Allgemeine Wiener Musikzeitung*. A large collection of his manuscripts is in *A-Wst*.

His son Philipp (*b* Vienna, 16 Dec 1843; *d* Vienna, 15 Feb 1894) was also a composer and bandmaster. He studied the violin under Jakob Dont and by 1855 was directing his father's orchestra. His appearance in Paris for the exhibition of 1878 and his subsequent foreign appearances brought him and his music wide popularity, not least in Britain. He published about 350 dances and marches.

ANDREW LAMB

Faidit, Gaucelm (*b* Uzerche, nr Limoges, ? *c*1150; *d* ? *c*1220). Troubadour. He was from the Limousin region of southern France. His *vida* tells that he received the protection of Boniface, Marquis of Montferrat. Boniface succeeded his father as marquis in 1192, was chosen as leader of the fourth crusade in 1202 and died in battle in 1207. Gaucelm dedicated a number of poems to Boniface and so was probably in his service before 1200. It would appear that Gaucelm came under the patronage of the marquis only after a period of 20 years wandering on foot without recognition; it has been suggested that the composer's travels took him as far as Italy and Spain.

The *vida* further records that Gaucelm was a middle-class son who became a *joglar* only because he lost all his property at dice. (The existence of a notice to the effect that he sold a field to the Abbey of Obazine as late as 1198 would seem to cast doubt on this, however; *vidas* of the troubadours are often more fanciful than factual.) Though known to have been a poor singer ('cantava peiz d'ome del mon') he nevertheless wrote excellent poems and melodies. It is said that he was inordinately fond of eating, with the result that he became fat 'beyond measure' ('oltra mesura', which may be taken as a musical pun on the contemporary Latin term 'ultra mensuram'). He married a prostitute named Guillelma Monja, who evidently became as fat and rude as her husband. In addition there are a number of other hints of intrigues and affairs involving Gaucelm, including his affair with Maria de Ventadorn (*d* 1222), a noble troubadour poet to whom the composer addressed a number of his poems.

No fewer than 68 poems have been attributed to Gaucelm, including 14 with music. Of these *Al semblan*, *Chant e deport*, *Cora que·m*, *Fortz causa*, *Lo rossignolet*, *No·m alegra*, *Si anc nuls hom*, *S'om pogues partir* and *Tant si sufert* are of the *oda continua* variety: generally long strophes with a melody that is either through-composed or contains only one melodic repetition. However, the repetition of smaller motives provides formal unity in many cases, creating what Rossell Mayo has termed a 'melodic structure'. Among these *oda continua* is the celebrated *planh* on the death of Richard the Lionheart in 1199, which has raised the possibility that Gaucelm was at the time in the service of Richard. This song, *Fortz causa*, is extant in 20 sources, four of them with music; it is valuable as one of the two *planhs* to have survived with music. The remaining songs employ some variety of *canso* form, with paired repetition of the first two to four lines. The melody of *Si anc nuls hom* bears a striking resemblance, at least at the beginning, to Bernart de Ventadorn's celebrated *Quan vei la lauzeta mover* (Labaree). As Falvy has noted, a distinctive feature of Gaucelm's melodies is their descending opening line: all but two begin this way.

ROBERT FALCK/JOHN D. HAINES

Faignient [Faignant], **Noë** [Noël] (*fl c*1560–1600). Flemish composer. According to Vannes he was born in Cambrai. On 23 January 1561 he became a citizen of Antwerp, where he gave music lessons and seems to have kept a shop (1575–80), at an address given as 'dans la boutique n° 53, sous l'Hôtel de ville'. In 1580 he was described as 'sangmeester van Hertock Erich van Bruynswyck' in documents of the Confraternity of Our Lady (Illustre Lieve Vrouwe Broederschap) in 's-Hertogenbosch.

Faignient's *Chansons, madrigales et motetz* contains 44 pieces, including five four-voice Dutch chansons, seven Latin motets (four to six voices), 11 five-voice Italian madrigals and 21 four- and five-voice French chansons. His music was known in England through its publication in *Musica transalpina* (RISM 1588^{29}). Walther wrote that Faignient had modelled his style on that of Lassus (with whom he may have studied in Antwerp) and that he was 'almost the equal of his master in the sweetness of his harmony'. Faignient's style is representative of its time, balancing polyphony and homophony, and incorporating madrigalisms. The preponderance of secular works in Faignient's widely published output suggests that he was better known for these than for his fewer sacred pieces.

WORKS

Chansons, madrigales et motetz, 4–6vv (Antwerp, 1568/*R*)

Sacred music in 1577^{2}, 1585^{1}, 1597^{6}, 1609^{15}

Secular songs: 1569^{11}; 1572^{11}, 3 ed. in UVNM, xxvi (1903); 1574^{3}, 2 ed. in Trésor musical, xxviii (Brussels, 1892); 1577^{3}; 1583^{14}, 2 ed. in Trésor musical, xiii (Brussels, 1877); 1583^{15}; 1588^{29}; 1589^{8}; 1590^{27}, 3 ed. R.B. Lenaerts, *Het Nederlands polifonies Lied in de 16de eeuw* (Mechelen, 1933); 1597^{10}; 1605^{9}; 1609^{15}; 1613^{7}; 1640^{6}

Masses, ?lost, according to Vannes

2 canzonette, 4vv, formerly in Liegnitz Ritter-Akademie, ?*PL-WRu*; motet, 8vv, formerly Breslau Stadtbibliothek, ?*WRu*

LAVERN J. WAGNER

Failoni, Sergio (*b* Verona, 18 Dec 1890; *d* Sopron, 25 July 1948). Italian conductor. He started his career as a cellist, studying in his home town, and in 1908 he became a composition student at the Milan Conservatory. After completing his studies he was Toscanini's assistant for two years, and made his début at Milan in 1921 conducting Rameau's *Platée*. His international career developed quickly, in London, Buenos Aires, in numerous cities of Europe and the USA and in the great Italian opera houses too, including La Scala, Milan, 1932–4. In 1928 he began his work with the Hungarian State Opera, Budapest, where he was principal conductor until his death (only during the Hungarian fascist period from 1944 to 1945 did Failoni, a militant anti-fascist, have difficulty in carrying out his job); he was made a life member of the opera house. After World War II his international career flourished again: from 1946 to 1947 he was conductor at the Chicago Civic Opera and the New York Metropolitan, and in 1946 he opened the series of postwar performances at the Verona Arena. In June 1947, during a rehearsal of Beethoven's Ninth Symphony in the Budapest Opera House, he collapsed, and although he recovered he could not conduct again. He declared Toscanini his ideal, and with his own temperament and Italian sensibility he belonged among conductors of the Toscanini school. He became the enthusiastic champion of Bartók and Kodály, but his principal merit was the extension and firm establishment of an Italian and Wagnerian repertory at the Hungarian State Opera.

WRITINGS

Hazugságok a művészetben [Lies in art] (Budapest, 1943; It. trans., 1946)

Hangfogó nélkül [Without sordino] (Budapest, 1945; It. trans., 1946)

PÉTER P. VÁRNAI

Fain [Feinberg], **Sammy** [Samuel] (*b* New York, 17 June 1902; *d* Los Angeles, 6 Dec 1989). American popular songwriter. He worked for music publishers Jack Mills as a staff pianist and in 1928 began to perform in vaudeville and on radio. Between 1927 and 1942 he wrote many popular songs with the lyricist Irving Kahal, such as *Let a smile be your umbrella*, adopting a popular jazz style. In 1931 he went to Hollywood and for the rest of his career contributed songs to films for performers including Maurice Chevalier, Dick Powell, Doris Day and Dean Martin. He achieved great success with the revue *Hellzapoppin'* (1938).

He collaborated with the lyricist Paul Francis Webster on the songs for the Doris Day film vehicle *Calamity Jane*, which gained great popularity through a score that ranged from the energetic 'The Deadwood Stage' through the atmospheric 'Black Hills of Dakota' to the romantic ballad 'Secret Love', for which he received an Academy Award. The film was revised in a stage version in 1961, and has been in both professional and amateur repertories since. Despite this, most of Fain's stage musicals proved to be failures. Many of his ballads, however, have become standards, notably 'That Old Feeling' (*Vogues of 1938*, 1937; lyrics by Lew Brown) and the evocative 'I'll be seeing you' (*Right This Way*, 1938; lyrics by Kahal). He contributed title songs to many films, winning an Academy Award for *Love is a many splendored thing* (1955) and nominations for *April Love* (1957), *A Certain Smile* (1958) and *Tender is the Night* (1961), all with lyrics by Webster.

WORKS
(*selective list*)

Stage Musicals (dates those of first New York production unless otherwise stated): Everybody's Welcome, 1931; She Had to Say 'Yes', Philadelphia, 1940; Toplitzky of Notre Dame, 1946; Flahooley, 1951, rev. as Jollyanna, San Francisco, 1952; Ankles Aweigh, 1955; Catch a Star, 1955; Christine, 1960; Calamity Jane, 1961 [after film, 1953]; Around the World in 80 Days, St Louis, 1962; Something More!, 1964

Contribs to revues, incl. Hellzapoppin', 1938 [film 1941]; Right This Way, 1938 [incl. I'll be seeing you, I can dream can't I?]; George White's Scandals, 1939 [incl. Are you havin' any fun?]

Song scores to films, incl. Alice in Wonderland, 1951 [incl. I'm late]; Peter Pan, 1953 [incl. Second Star to the Right]; Calamity Jane, 1953 [incl. Black Hills of Dakota, The Deadwood Stage, Secret Love]; Mardi Gras, 1958

Song contribs. to films (film in parentheses), incl. Mia Cara and You brought a new kind of love to me (The Big Pond, 1930); Once a gypsy told me (you were mine) (Dangerous Nan McGrew, 1930); Satan's Holiday (Follow the Leader, 1930); When I Take my Sugar to Tea (Monkey Business, 1931); By a Waterfall (Footlight Parade, 1933); Easy to Love (Easy to Love, 1933); When You were a Smile on your Mother's Lips (Dames, 1934); I didn't have you (New Faces of 1937, 1937); That Old Feeling (Vogues of 1938, 1937)

Please don't say no, say maybe (Thrill of a Romance, 1945); The Worry Song (Anchors Aweigh, 1945); Love is a many splendored thing (Love is a Many Splendored Thing, 1955); April Love (April Love, 1957); A Certain Smile (A Certain Smile, 1958); A Very Precious Love (Marjorie Morningstar, 1958); Once Upon a Dream (Sleeping Beauty, 1959) [after Tchaikovsky]; Tender is the night (Tender is the Night, 1961); Someone's waiting for you (The Rescuers, 1977)

Other popular songs, incl. I left my sugar standing in the rain, 1927; Let a smile be your umbrella, 1927; Wedding Bells (are breaking up that old gang of mine), 1929; Dear Hearts and Gentle People, 1949

Fairbanks, A(lbert) C(onant) (*b* Sterling, MA, 5 Sept 1852; *d* Watertown, MA, 10 Oct 1919). American banjo maker. Although best known today as a maker of excellently made and elaborately decorated banjos, he was a skilled craftsman and successful entrepreneur whose business interests later included bicycles and a paint manufacturing company. He moved to Boston in 1868 and in 1880 began making banjos at Court Street in partnership with William A. Cole, a well-known banjo teacher. About 1887 further premises were obtained at 178 Tremont Street, Boston, and by 1888 Fairbanks was joined by David L. Day, who was listed as manager in 1889. From about 1891 to 1893 the firm, operating only from Tremont Street, was known as A.C. Fairbanks Co. The firm moved to 27 Beach Street, Boston, in 1894, when Fairbanks sold his interest to Cummings and Dodge. It stayed at Beach Street until the move about 1901 to 786 Washington Street, Boston. After the acquisition of the firm by the Vega Co. in 1904 David L. Day became sales and general manager of the Vega Co., and from about 1922 was a partner and vice-president in the Bacon Banjo Co. of Groton, Connecticut. The Fairbanks name continued to be used on Vega instruments until the early 1920s. Vega Co. was acquired by the Martin firm in 1970.

In 1887 and 1890 Fairbanks secured two US patents (nos.360005 and 443510) for improvements in banjo construction. The 1890 patent was important as the basis for the 'Electric' style rim, which was incorporated into the still-popular 'Whyte Laydie' style after the A.C. Fairbanks Co. was acquired by the Vega Co. in 1904. The 'Electric' rim consisted of a heavy scalloped metal support for a solid metal 'tone ring' over which the head was stretched, and its commercial success was an important step in the development of the banjo. Fairbanks promoted his banjos through events such as 'Fairbanks and Coles' Fifth Annual Banjo Contest', the subject of a diatribe in his competitor S.S. Stewart's *Banjo and Guitar Journal* for April and May 1888.

JAY SCOTT ODELL

Fairbanks, J. *See* CLARKE, HENRY LELAND.

Fairchild, Blair (*b* Belmont, MA, 23 June 1877; *d* Paris, 23 April 1933). American composer. He studied music at Harvard University under J.K. Paine and Walter Spalding. After graduating he went to Italy, studying piano with Buonamici in Florence. He did not immediately embark on a professional career, however, but went into business and then served in the American embassies in Turkey and Persia (1901–3); many of his orchestral and vocal works reflect his interest in the music of the Near East. By 1905 he had settled in Paris to renew musical studies with Widor and others. He remained there until his death, though he often stayed in New York and travelled in the Orient. During World War I he represented the American Friends of Musicians in France. In 1921 his ballet-pantomime *Dame Libellule* became the first work by an American composer to be presented at the Paris Opéra. Influenced by Debussy, Ravel and Stravinsky, Fairchild's music is characterized by the attractive use of counterpoint, as in the String Quartet (1911), and a persistent fondness for the whole-tone scale, with its resultant augmented harmonies, as in *A Baghdad Lover*.

WORKS
(*selective list*)

RICHARD ALDRICH/MICHAEL MECKNA

Fairfax, Robert. *See* FAYRFAX, ROBERT.

Fairfield Hall. Arts complex including a concert hall, in Croydon, Surrey; *see* LONDON, §VII, 3.

Fairground organ [fair organ, showground organ, band organ; Dut. *draaiorgel*; Ger. *Kermisorgel*]. A mechanical organ used to provide music for merry-go-rounds and in amusement parks, circuses and skating rinks in Europe and the USA. The instrument originated in Europe as an outdoor version of the Orchestrion, voiced to sound above the hurly-burly of the fairground. Initially it was put near the entrance in order to attract attention. It was usually built in an elaborately carved and colourfully painted case which sometimes incorporated moving figures in its façade. All but the very largest instruments were designed to be portable. With the coming of bioscope

(moving picture) theatres, the organ sometimes became the front of the show-tent, its façade incorporating entry and exit doors.

The earliest fairground organs, those of the late 1870s, were of the BARREL ORGAN type. By about 1880 such instruments were being produced in sizes containing several hundred pipes and a variety of percussion effects; these large models were powered by steam or water engines and later by electric motors. Major builders of barrel-operated organs included Gavioli of Paris, Wilhelm Bruder of Waldkirch, Limonaire of Paris, and Eugene DeKleist of North Tonawanda, New York. In 1892 Gavioli developed a new mechanism for playing organs in which a series of perforated cardboard sheets were hinged together to form a continuous strip. As this was drawn across the keyframe by rubber-covered rollers, the music was read by a row of small metal keys which extended through the perforations and caused the appropriate pipe to speak via a responsive pneumatic mechanism. Other keys operated percussion effects or could turn ranks of pipes on and off. Barrel organ manufacture declined after 1900, and the cheaper and more versatile 'book music' system came to be used extensively by European builders such as Gasparini, Limonaire and Marenghi (all in Paris), Hooghuys (Geraadsbergen, Belgium), Mortier (Antwerp), Wrede (Hanover), Ruth, Bruder (both Waldkirch), Wellershaus (Mülheim an der Ruhr) and Frati (Berlin).

Shortly after 1900 the German organ-building business of Gebrüder Bruder adopted the perforated paper-roll playing action for their fairground organs. As with the player piano, the musical programme was arranged as a series of perforations in a roll of paper that was passed over a tracker bar (initially of wood but later of brass) containing a single row of openings along its length. When a hole in the tracker bar was uncovered by a perforation passing over it, air was sucked into the hole and thus triggered a pneumatic mechanism to sound a note or operate an organ function. This system was later taken up in America by the Rudolph Wurlitzer Manufacturing Co. of North Tonawanda, which was the manufacturing agent for many European musical instruments and eventually had its own factories. Most instruments made in the USA employing this system used vacuum (negative pressure) to read the rolls; European organs used positive pressure, but in Europe the paper-roll system was never widely adopted for organs, and Gebrüder Bruder remained the principle manufacturer of this system. As with book music, the choice of tunes available on rolls was unlimited; selections ranged from classical pieces to the popular songs of the day.

The pipework in fairground organs consisted of both flue and reed pipes voiced on 203 to 304 mm of water-gauge pressure. Pipes were usually made of wood, but in the earlier organs the reed pipes had polished brass resonators arranged symmetrically in the façade. Organs ranged in compass from 35 to 112 notes. The pipework was divided into bass, accompaniment, melody and counter-melody sections. On a small organ a typical distribution of notes in each section might be 5, 9, 14 and 13; on a large instrument it could be 21, 16, 21 and 38. Only in very large instruments were these sections chromatic. Certain notes of the scale were omitted in smaller organs in order to keep the physical size of the instrument to a minimum; this permitted them to be played only in certain keys, precluding the correct performance of many pieces; arrangers would often modify the music to fit a given organ scale.

Of similar design to the fairground organ was the European dance organ, designed to provide music with a strongly accentuated rhythm and a wide variety of percussion effects. Since these instruments were for indoor use in the dance-hall, they were voiced more softly and on lower wind pressure than the fairground organ; they used either books or rolls and, not needing to be portable, were produced in immense sizes. The Dutch street organ (known in Amsterdam as 'pierement'), a smaller but similar type of instrument, also used book music, but was turned by hand. It had a selection of cleverly voiced pipes which gave it a particularly sweet and lyrical tone. An important maker of these was Carl Frei of Breda.

The economic conditions of the 1930s caused the failure of most fairground organ companies, though a small number of craftsmen still build instruments and restore original organs. A rich postwar revival has resulted in the building of a number of new instruments.

For illustration *see* MECHANICAL INSTRUMENT, fig.8.

Fairlight C(omputer) M(usical) I(nstrument). A digital SYNTHESIZER with a sampling facility designed by Peter Vogel and Kim Ryrie and manufactured from 1979 by Fairlight Instruments in Sydney. Following bankruptcy in 1988, Fairlight ESP was founded in Broadway, New South Wales, in 1989. *See* ELECTRONIC INSTRUMENTS, §IV, 5(iii).

Fairport Convention. British folk-rock group. The group was formed in mid-1967 by ASHLEY HUTCHINGS (*b* 1945; bass), Judy Dyble (*b* 1949; vocals), Martin Lamble (*b* 1949; drums), RICHARD THOMPSON (*b* 1949; guitar and vocals), Simon Nicol (*b* 1950; guitar and vocals) and drummer Shaun Frater; they were joined shortly afterwards by Iain Matthews (Iain Matthews MacDonald; *b* 1946; vocals). Their first album, *Fairport Convention* (Pol., 1968), showed an interest in blending folk music with rock and was influenced by American bands such as the Byrds and Jefferson Airplane, as well as by the folk singers Bob Dylan and Joni Mitchell. SANDY DENNY (1946–78; vocals, guitar and keyboards) replaced Judy Dyble, and together with Thompson and a changing cast of musicians, the group released a series of albums that established them as the most influential practitioners of a distinctive style of British folk-rock that draws especially on English traditional lyrics and melodies. *Unhalfbricking*, their third album, and especially *Liege and Leaf* (both Isl., 1969), were both successful in the British charts and marked the group's greatest musical achievement. The departure of Denny did nothing to diminish the band's

commercial appeal, as *Full House* (Isl., 1970) was a hit in the UK charts; similarly, *Angel Delight* (Isl., 1971), released after Thompson left, was the group's only album to reach the top ten of the UK charts. Despite their popularity in England, the group had little commercial success in the USA.

With constantly changing personnel, Fairport Convention remained active until 1979, though never again enjoyed their earlier popularity or musical influence. In the early 1980s various members of the band reunited annually to perform at a festival in Cropredy, Oxfordshire – an event that has since become a fixture on the British folk scene. Since 1986, versions of the group have released albums from time to time, including *Gladys Leap* (Woodworm, 1986), *Red and Gold* (New Routs, 1989) and *Jewel in the Crown* (Woodworm, 1995).

JOHN COVACH

Fairy bells. *See under* BELL HARP.

Faisandat, Michel. *See* FEZANDAT, MICHEL.

Faisst, Immanuel (Gottlob Friedrich) (*b* Esslingen, 13 Oct 1823; *d* Stuttgart, 5 June 1894). German organist, teacher, conductor and composer. At his father's wish he trained for the ministry at Schönthal (1836–40) and Tübingen (1840–44), but then decided to make music his career. He went to Berlin, but except for a few lessons from Mendelssohn, Haupt (organ) and Dehn (theory) he was a self-taught musician. He settled in Stuttgart as an organ teacher in 1846 and soon became head of the Verein für Klassische Kirchenmusik (1847–91). In 1857 he helped found the Stuttgart Musikschule; under his directorship (from 1859) it became one of the most famous in Germany. In 1865 he was appointed organist and choirmaster of the collegiate church of the Heilige Kreuz. He directed several choral groups and was prominent throughout Germany both as an adjudicator and as an organ recitalist. Faisst's compositions, almost all vocal or choral, are forgotten, except for a recently revised Gavotte and March for timpani and orchestra. He also composed a set of *Stuttgarter Synagogengesänge* (Stuttgart, 1911) for cantor and SATB chorus with organ. His writings include 'Beiträge zur Geschichte der Claviersonate' (*Caecilia*, xxv, 1846, pp.129–58, 201–31; xxvi, 1847, pp.1–28, 73–83; repr. in *NBJb*, i, 1924, pp.7–85), for which he received the PhD from Tübingen University in 1849, and (with L. Stark) *Elementar- und Chorgesangschule für hohere Lehranstalten* (Stuttgart, 1880–82). His system of teaching theory and composition by copious use of examples was codified and widespread, particularly in the USA, in the books of his pupil Percy Goetschius, for example *The Material Used in Musical Composition* (Stuttgart, 1882, rev. 14/1913).

BRUCE CARR

Faitello, Vigilio Blasio (*b* Bolzano, 30 Jan 1710; *d* Hall am Inn, nr Innsbruck, 14 March 1768). Italian composer. His brother Candido Faitello (*d* Bolzano, 5 Oct 1761) was chaplain at the parish church at Bolzano in 1725, and is known as a composer. Vigilio may have been a choirboy at the same church; he was a tenor and violinist there from 1732 to 1747. On 18 March 1747 he moved to Hall in Tyrol as Kapellmeister to the royal nunnery there. This was one of the most famous and best-equipped musical institutions in the Tyrol, and Faitello had at his disposal better singers and instrumentalists than almost any of the other composers publishing sacred music at the time.

Faitello's music is much more Italianate in style than that of his German contemporaries, especially in the sacred arias opp.1 and 2, evidently written for the castratos at Hall. His vocal lines, full of wide leaps, long complicated melismas and chromaticisms, are much too difficult for the average singers at whom most published sacred music was aimed. The pieces are most interesting for the unusually detailed phrase markings which Faitello inserted in the voice parts.

WORKS

ELIZABETH ROCHE

Faith, Percy (*b* Toronto, 7 April 1908; *d* Los Angeles, 9 Feb 1976). Canadian conductor, arranger and composer, active in the USA. He studied music at the Canadian Academy and the Toronto Conservatory, and made his début as a pianist in Massey Music Hall in 1923. After he badly burnt his hands he began to concentrate on composition and, while continuing to accompany silent films (1920–27), formed his own string ensemble and began writing arrangements for dance bands. He was first engaged as an arranger and conductor of popular music for radio in 1927, and had his own programme, 'Music by Faith', from 1938 to 1940. From then on he worked in the USA, and he became an American citizen in 1945. He presented such radio programmes as 'The Carnation Contented Hour' (NBC, 1940–47), 'The Pause that Refreshes' (CBS, 1946–9), and 'The Woolworth Hour' (CBS, 1955–7). He recorded at least 65 albums for Columbia Records (in New York, 1950–59, and Los Angeles, 1960–76), collaborating with notable popular singers including Tony Bennett, Rosemary Clooney, and Johnny Mathis. In the mid-1950s he began to write film scores, while continuing to pursue a commercially successful career as an arranger and conductor.

As a composer Faith first wrote for the art music audience, then after the 1940s concentrated on popular songs and film scores. He was better known as a skilled arranger and orchestrator, adept at applying classical procedures to the popular repertory; he made use of the late 19th-century orchestra, typically with emphasis on strings and with the occasional addition of saxophones or chorus. He won a prize in Chicago for his operetta *The Gaudy Dancer* (1943) and enjoyed success with several film scores, such as *Love me or Leave me* (1955), *I'd Rather be Rich* (1964), *The Third Day* (1965), and *The*

Oscar (1966). His most popular recordings include *Song from Moulin Rouge* (1953), *Theme from A Summer Place* (1960), and the album *Themes for Young Lovers* (1963).

A large collection of Faith's original compositions and arrangements is held at Brigham Young University.

MICHAEL J. BUDDS

Fakaerti [Fakaerli], **George.** *See* CHAMBRAY, LOUIS FRANÇOIS.

Fakhrī, Sabāh [Sabāh Eddine Abū Qoss] (*b* Aleppo, 1933). Syrian singer. At a young age he became known for his beautiful and strong voice. He studied music in Aleppo and Damascus. In 1947 he met 'UMAR AL-BATSH, who became his teacher of MUWASHSHAḤ singing, and he began recording old traditional pieces for radio (and later television, from 1960). From the early 1950s he gave concerts in other Arab countries. He was soon invited to Europe, Australia, and North and South America, diffusing the traditional Arab heritage on an international scale.

His concerts brought a fresh approach to classical music. He composed new music for the poems, singing them in semi-free rhythm, and inserted modern sections within traditional songs. His singing influenced most other traditional singers, and he maintained his style undiminished for over 50 years.

In 1968 he appeared in the *Guinness Book of Records*, for singing continuously for ten hours in Caracas, Venezuela. In 1992 he was awarded a Certificate of Achievement by UCLA. He was chairman of the Order of Syrian Artists for several terms. In 1997 his fan club was established in Egypt. In 1998 he was elected as a member of the Syrian People's Assembly.

SAADALLA AGHA AL-KALAA

Fa-la. A term probably introduced by Thomas Morley (*A Plaine and Easie Introduction to Practicall Musicke*, 1597) as a synonym for 'ballett'. Thereafter it was used colloquially in English to refer to the fairly homophonic, syllabic dance-songs of the late 16th century and early 17th that were characterized by a refrain of nonsense syllables (e.g. Orazio Vecchi's *Cruda mia tiraniella*, properly a canzonetta, and Morley's *Now is the month of maying*).

See also BALLETTO, §2; CANZONETTA; and MADRIGAL, §IV.

Falabella (Correa), Roberto (*b* Santiago, 13 Feb 1926; *d* Santiago, 13 Dec 1958). Chilean composer. He studied privately with Letelier for harmony and Becerra for composition. Despite the brevity of his career and a disability that confined him to a wheel-chair, he produced work of marked individuality and great skill, winning first prizes at Chilean music festivals for the Symphony no.1 (1956) and for *Adivinanzas* (1958).

Falcinelli, Rolande (*b* Paris, 18 Feb 1920). French organist and composer. She entered the Paris Conservatoire in 1932, studying the organ with Marcel Dupré and composition with Henri Büsser. She was appointed organist at the Sacré-Coeur in 1946 and in 1955 became organ professor at the Conservatoire, a post she held until 1986. She also gave many recitals in Europe and the USA. Through her teaching, writings and ideas on interpretation she has perpetuated the principles of her teacher Dupré, performing all his works and recording many of them. Falcinelli has composed extensively for her own instrument and written vocal, chamber and orchestral music. Since 1970 several of her works, including *Mathnavi* for organ (1973) and *Azân* for flute and organ (1977), have shown the influence of Iranian traditional music. Among her many distinguished pupils are Xavier Darasse, Naji Hakim, André Isoir, Philippe Lefebvre, Odile Pierre, Daniel Roth and Louis Thiry. A series of conversations with Stéphane Detournay, *Souvenirs et regards*, was published in 1985 in Tournai.

FRANÇOIS SABATIER

Falck, Georg (*b* ?Rothenburg ob der Tauber, *c*1630; *d* Rothenburg ob der Tauber, 11 April 1689). German composer, organist and writer on music; he is sometimes described as 'the Elder' to distinguish him from his son of the same name (who was not a musician). He was apparently a native of the imperial city of Rothenburg ob der Tauber, where he spent his entire life. He studied the organ with Erasmus Widmann's son Georg Friedrich, for whom he began in 1652 to substitute as organist of the Jakobskirche. He was appointed organist there in 1655, when he was also made a preceptor at the Gymnasium where the church choir was trained. He was responsible for church and school music in the city for the rest of his life. He is known principally for his *Idea boni cantoris*, a manual of basic instruction in singing and in playing musical instruments. According to Walther he also planned an *Idea boni organoedi*, a thoroughbass method, and an *Idea boni melothetae*, a method for learning composition, but he seems to have written neither. *Idea boni cantoris* is a significant 17th-century German source of information, especially about the art of vocal ornamentation and diminution. Falck's detailed examination of ornaments such as *accentus*, *tremulus*, *gruppo*, *tirata*, *trillo* and *passaggi*, cadential figurations and methods of diminution is illustrated with particularly instructive examples, many drawn from the monodic antiphons (1648) of G.F. Sances. Briefer concluding sections concern

basic instrumental techniques and provide an examination of various aspects of solmization.

GEORGE J. BUELOW

Falckenhagen [Falkenhagen], **Adam** (*b* Grossdalzig, nr Leipzig, 26 April 1697; *d* Bayreuth, 6 Oct 1754). German lutenist. He was the son of Johann Christian Falckenhagen, a schoolmaster. When he was ten he went to live for eight years with his uncle Johann Gottlob Erlmann, a pastor in Knauthain near Leipzig. There he underwent training 'in literis et musicis', particularly the harpsichord and, later, the lute. He then perfected his lute playing with Johann Jacob Graf in Merseburg, where in 1715 he is mentioned as a footman and musician in the service of the young Count Carl Heinrich von Dieskau. In the winter term of 1719 he entered Leipzig University; a year later he went to Weissenfels, where he remained for seven years as a lute teacher. From about 1724 he was also employed as a chamber musician and lutenist at the court of Duke Christian, where his presence is documented for 1726, together with that of his wife, the singer Johanna Aemilia. During this time he undertook various tours and enjoyed several months' instruction from the famous lutenist Silvius Leopold Weiss in Dresden. After two years in Jena, he was in the service of Duke Ernst August of Saxony-Weimar from May 1729 to 15 August 1732. By 1734 he was employed at the Bayreuth court. In 1736 Margrave Friedrich appointed him 'Virtuosissimo on the Lute and Chamber Musician Second to the Kapellmeister Johann Pfeiffer'. About 1746 he referred to himself as 'Cammer-Secretarius Registrator' of Brandenburg-Culmbach.

Falckenhagen was one of the last important lute composers. Although some of his works are rooted in the Baroque tradition like those of his teacher, Weiss, they show a progressive tendency towards the *galant* style. His keyboard-influenced lute writing is freely contrapuntal and usually limited to two voices. His output ranges from modest pieces suitable for amateurs to others (e.g. the Sonata op.1 no.5 and the concertos) of much greater difficulty, exploiting virtuoso techniques. His *Preludio nel quale sono contenuti tutti i tuoni musicali*, lasting over 20 minutes in performance, contains labelled sections in the 24 major and minor keys. There may be a more direct connection with J.S. Bach in the strong possibility that the tablature version of the G minor Suite BWV995 (*D-LEm* III.II.3) was arranged by Falckenhagen himself (see Schulze, 1983). The ornament signs and other technical signs are the same as those used exclusively by Falckenhagen in his printed works and found in a manuscript table of signs associated with his Bayreuth period (*D-Ngm* M274).

HANS RADKE/TIM CRAWFORD

Falco [de Falco, di Falco, Farco], **Michele** (*b* Naples, ?1688; *d* after 1732). Italian composer. He studied at the Conservatorio di S Onofrio, by differing accounts either from 1700 to 1708 or from 1704 to 1712, probably with Nicola Fago. On 8 March 1712 he joined the Reale Congregazione e Monte dei Musici; on 13 June 1716 he was elected one of its governors, a position he is last listed as holding in 1732. The election decree identifies him as *maestro di cappella* and organist of S Geronimo (or S Girolamo). Librettos also name him as 'maestro di cappella di Pollena', a nearby village at the foot of Vesuvius. Prota-Giurleo suggested that by 1723 he had taken holy orders, and thenceforth felt it necessary to sign his operatic works anagramatically as 'Cola Melfiche'.

Examination of the librettos he set establishes Falco's place as one of the pioneer figures of Neapolitan *opera buffa*. Unlike most of the others (Riccio, Faggioli, Antonio Orefice and Mauro), he was a professional musician – one of the first, in fact, to turn attention to the new dramatic form, which appears to have been as much a literary experiment for the enjoyment of dilettantes as a musical one, with works written for production in private houses, seemingly for the novelty of hearing dialect poetry sung. The operas that Falco set, like those of his contemporaries, vary greatly in length, dramaturgical technique and opportunities for musical expression. His first documented work, *Lo Lollo pisciaportelle*, was apparently first performed in the house of its dedicatee (in Sartori's view it may also have been produced at the Teatro dei Fiorentini); it uses only five characters and its plot deploys a relatively simple intrigue. His second work,

Lo Masillo, a collaboration with Fago, was likewise created for private performance, for the governor of the Conservatorio di S Onofrio, but was then given at the Teatro dei Fiorentini where Falco was the impresario. By this time, however, the structure of *opera buffa* had moved more towards standardization: Orilia's libretto more closely resembles those of his contemporaries. In particular, Orilia had profited by F.A. Tullio's experiments, for this is a full-length work of three acts, with a plot involving eight characters and some 55 short musical numbers. It is uncertain from the libretto whether the arias were intended to be sung da capo; the verse structure in most cases would permit such treatment, but only a few of the numbers are exit arias, a dramaturgical device associated with the musical form in *opera seria*. The work contains an unusual number of ensemble pieces in addition to the finales, another sign of experimentation. Falco's fourth opera, *Armida abbandonata*, was performed on the birthday of Charles VI of Austria with Marianna Benti Bulgarelli in the role of Armida. Except for a few fragments, all his operatic music has disappeared.

The music of Falco's undated surviving cantata, *Verdi colli e piaggie amene*, is in a light style and commands respect. The text is a conventionally pretty pastoral poem, with two arias separated by recitative. The piece looks to have been conceived as a whole: both arias are in triple metre; the first, marked 'Amoroso', was neither written nor notated to indicate da capo treatment, and ends in the relative minor, as does the transitional recitative. The final aria, 'Spiritoso', which was to be sung da capo, opens in the tonic. Its first section deflects frequently to the sub-dominant, the second is again in the relative key. Its regular four-bar phrasing may refer to dance rhythms, and contrasts with the irregular phrasing of the opening aria. The melodic style, which in Giacomo's view belongs to the Scarlatti school, is agreeable to the ear and appropriate to the text; Falco was fond of the leap of a 6th or 7th to infuse energy into otherwise mainly conjunct lines. He relied on the sequence only where a repetitive or parallel text construction suggested it.

The popular comic singer Simone de Falco may have been related to Michele. Simone sang regularly as *secondo buffo*, usually in skirt parts, at the Teatro dei Fiorentini between 1718 and 1728, again in 1734, and at the Teatro della Pace in 1740 and 1745.

JAMES L. JACKMAN/PAOLOGIOVANNI MAIONE

Falco, Simone de. Italian singer. He may have been related to MICHELE FALCO.

Falcón, Ada [La Joyita Argentina] (*b* Buenos Aires, 17 Aug 1905). Argentine tango singer. She started singing and acting as a young girl, winning the nickname of La Joyita Argentina (the Little Argentine Jewel). After 1925 she made over 200 recordings for the RCA-Victor and Odeon labels, many with the band of Francisco Canaro. She was one the most popular of Argentine radio artists in the first half of the 1930s and also appeared in films; her legendary green eyes gave her the allure of a femme fatale. After 1935, however, she gradually distanced herself from singing, and in the early 1940s went to live at Salsipuedes (Córdoba province) as a lay sister of the Franciscan order; she later moved into a convent (1980) and then into an old people's home (1985), never breaking her strict provincial seclusion.

SIMON COLLIER

Falcon, (Marie) Cornélie (*b* Paris, 28 Jan 1814; *d* Paris, 25 Feb 1897). French soprano. She studied with Felice Pellegrini and Nourrit at the Paris Conservatoire, and in 1831 won *premiers prix* for singing and lyric declamation. She made her début at the Opéra as Alice in Meyerbeer's *Robert le diable* (20 July 1832). Her acting ability and dramatic voice greatly excited Meyerbeer, who wrote for her the part of Valentine in *Les Huguenots* (29 February 1836). Other notable creations were Rachel in Halévy's *La juive* (25 February 1835) and the title role in Louise Bertin's *Esmeralda* (14 November 1836); her repertory also included Donna Anna, Julie in Spontini's *La vestale* and Rossini's French heroines. Her success at the Opéra led to overwork followed by loss of voice. In March 1837 she broke down during a performance of Niedermeyer's *Stradella*. She resumed a busy schedule of perfomances shortly afterwards, but continued to experience vocal difficulties. She stopped singing in October and after a last appearance in *Les Huguenots* (15 January 1838), she twice visited Italy in the hope of recovering her voice. She returned to the Opéra on 14 March 1840 to sing parts of *La juive* and *Les Huguenots* at a benefit performance, but her voice had been permanently damaged. Successful concerts with Cinti-Damoreau in Russia in the winter of 1841–2 were followed by some private performances in Paris and rumours of miraculous medical cures, but Falcon never appeared on stage again.

In later years the designation 'Falcon soprano' was given to the type of roles in which she excelled, and those written expressly for her give some indication of her vocal strengths. Using little ornamentation, she specialized in long lyrical lines, large upward leaps and sustained high notes. Her voice was noted for its crystalline clarity, and

the ease with which it could rise above an orchestra, aided by a fast, narrow vibrato. Despite the strength of her top and bottom registers, Gilbert Duprez (who sang with her several times) suggested that her inability to create a smooth link between the two contributed to her vocal demise.

PHILIP ROBINSON/BENJAMIN WALTON

Falcone, Achille (*b* Cosenza, *c*1570–75; *d* Cosenza, 9 Nov 1600). Italian composer. His musical education was supervised by his father Antonio, who was also a composer. Achille became a member of the Accademia of Cosenza and from at least 1597, he was *maestro di cappella* at Caltagirone in Sicily. The most important source of biographical information concerning him is his book of five-voice madrigals posthumously published by his father. The book also includes a report on the musical dispute which took place in 1600 between Falcone and the Spanish composer Sebastián Raval, then director of the royal chapel at Palermo. Falcone's growing fame aroused the envy of Raval, who, meeting him in the spring of 1600 at Palermo, provoked him to wager a gold ring on his success in a competition of compositional skill. Falcone gave nine problems to Tommaso Giglio who sent them via Antonio Il Verso to Raval. He proposed that they should improvise fugues in canon, and ricercares in chromatic and diatonic styles and in a mixture of both, with fixed rules for the observance of the subjects and for various mensural signs and proportions. Falcone also requested that they should first hold a theoretical debate on all the compositions. But in fact, the competition was limited to the improvisation of a five-part canon, the subject for each competitor being set by the other. The Dominican Father Nicolò Toscano gave judgment on 18 April 1600 that Raval's canon at the unison showed no sign of skill or invention and that he had not defended his work with convincing theoretical argument. Falcone's composition, on the other hand, showed great skill both in the entry of the voices and in the fact that the work could be sung in eight different ways, while the commentary included with it was founded on the best authorities.

Furious at this defeat, Raval challenged Falcone to improvise compositions before the Spanish Viceroy, Bernardino di Cardines, Duke of Maqueda (Raval's patron). Falcone accepted, but on condition that problems previously set should be answered first, and that they should debate the theoretical and practical aspects of the music at length. Raval, supported by some local musicians and by the Spaniards at the Palermo court, refused, saying that knowledge of such things was not necessary to a good composer. So the return contest at the royal palace was limited to the improvised composition of a canonic motet for seven voices and madrigals for three and six voices respectively, on fugal subjects, which were to be used in all voices, chosen by the supporters of the contestants: Toscano for Falcone, and the celebrated lutenist Mario Cangelosa for Raval. The compositions were immediately sung before the viceroy. But Raval, with the complicity of the Spaniards at court, intercepted his rival's compositions before they reached the judges, and falsified them. Falcone's protests and accusations and a statement written by Toscano on 26 July 1600 were in vain. Raval promptly published an *Apologia*, in which he printed a falsified version of Falcone's works, together with his own compositions on the same subjects, rewritten 'with much time and study' (*see* RAVAL, SEBASTIÁN, ex.1). Falcone was forbidden to take part in any such competition in Sicily and proposed to renew the contest with Raval in Rome. But in Cosenza on 1 August, as he was preparing for the journey, he fell severely ill with fever, and died in November.

In 1603 Antonio Falcone published a collection of his son's madrigals *Alli signori musici di Roma: madrigali a cinque voci ... con alcune opere fatte all'improviso a competenza con Sebastiano Ravalle ... con una narratione come veramente il fatto seguisse* (RISM, 1603[11]); in addition to madrigals, the collection contains the competition pieces by both composers and other works by Falcone that proved the injustice of the judges at Palermo, the falsity of Raval's *Apologia*, and, in particular, Falcone's exceptional skill and new and inventive style. On the whole, Antonio Falcone's evaluation of the competition works and his son's other music is reliable. Falcone's five-part madrigals show the mature stage of the genre; chromaticism is used for expressive effects (e.g. in *Dolce ha madonna il viso*), and his understanding of the *seconda prattica* is evident in *Ahi dolente partita* (ed. in Bianconi, 1974), which is constructed entirely from chains of dissonances. Dissonance is again used effectively in the two four-part ricercares, and in some of the madrigals (e.g. *Bianchi cigni*). Falcone's prodigious contrapuntal skill is also exploited in the madrigals; *Allor che prima vidi* consists entirely of sections each on three or four fugal subjects, and sections such as these occur elsewhere, as in *S'avien che reticella* and *Sfidi tu forsi a baci*. Of one other madrigal, only the tenor and bass parts survive; in Pietro Maria Marsolo's *Secondo libro de madrigali a quattro voci* (Venice, 1614; ed. in MRS, iv, 1973), the piece is presented as monody for tenor and basso continuo; Marsolo reworked it for four parts.

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Falconi, Philipo [Falconieri, Phelipe; Falconieri, Felipe] (*b* Rome; *d* Madrid, 9 April 1738). Italian composer, active in Spain. In his will he stated that he was born in Rome, and his dated works place him there up to early 1724, when his opera *Ginevra Principessa di Scozia* was performed at the Teatro della Pace. In 1721 King Philip V of Spain had appointed him *maestro de capilla* at La Granja de San Ildefonso, his new palace then under

construction near Segovia. Falconi must have assumed the post shortly after 15 January 1724, when Philip V abdicated in favour of his son Luis and moved to La Granja. The chapel at San Ildefonso was, however, dissolved when Philip regained the throne on 6 September 1724, following the death of Luis on 31 August. Falconi's *Missa defunctorum* (1724) may have been composed in commemoration of Luis's death. The San Ildefonso musicians were integrated into the Real Capilla at Madrid, where Falconi became a *maestro*, substituting during the 'absences and infirmities' of the *maestro actual* José de Torres y Martinez Bravo. On 2 July 1725 he was appointed music master of the 7-year-old infanta Maria Ana Victoria. He collaborated with José Nebra and Giacomo Facco on the opera *Amor aumenta el valor*. It was performed in January 1728 at the home of the Spanish ambassador in Lisbon, the Marquis de los Balbases, in celebration of the wedding of the Spanish crown prince Ferdinand and Maria Bárbara of Braganza.

Between 1729 and 1732 Falconi travelled with the court when it resided in Badajoz, Seville, Granada and other places, and was in charge of the musical entertainment. On his return to Madrid he continued in his various capacities as *maestro de capilla* and composed sacred music for the royal chapel. Subirá (1927) claimed that Falconi was incompetent in discharging his duties, but there is no evidence to support this. Among the executors of his will, made on 10 February 1738, were the Conde de Cogorani, one of the king's chamberlains, and José de Cañizares, the most popular librettist in Madrid. The Italian composer Francesco Corselli, who on 4 July 1738 succeeded Joseph de Torres as *maestro de capilla*, later acquired Falconi's sacred works for the new musical archive of the royal chapel. By 1779 Corselli's successor, Antonio Ugena, considered them to be no longer of any use to the chapel.

WORKS

MSS in E-Mp unless otherwise stated

Ginevra Principessa di Scozia (op ser, 3, Antonio Salvi), with intermezzo Burlotto e Brunetta, Rome, della Pace, carn 1724, *B-Bc, GB-Lbl, I-Bc, Fm, Rvat*

HANNS-BERTOLD DIETZ

Falconieri, Andrea (*b* Naples, 1585/6; *d* Naples, 19 or 29 July 1656). Italian composer and lutenist. He may have had lessons with Santino Garsi at Parma, where, according to Pico, he was brought up from an early age by the duke. He was employed as a lutenist at Parma from 1604 and replaced Garsi as official court lutenist by December 1610. After banking his salary for November 1614, he absconded, possibly to Mantua: in a letter of 12 December 1615 from Florence, where he appears to have been a temporary musician at court, he told the Duke of Mantua that he was sending him some of his compositions and recommended that they be sung by 'Signora Margherita and her sister', which suggests that he was already familiar with the musical resources there; he also said he was preparing to publish some of his pieces. His first known publication, a book of villanellas, appeared in 1616, and by 1619 he had also published six books of monodies and one of motets. The dedication of the villanellas to Cardinal de' Medici suggests that he had indeed been employed at Florence, and this may have led to an appointment in Rome. About 1620–21 he appears to have married and moved to Modena as a player of the chitarrone and *chitarriglia alla spagnola*. Shortly before 24 July 1621 he departed for Spain, leaving behind his wife, one song and some copies of his (lost) book on the Spanish guitar, 'a work already dedicated in print to the King of Hungary (now emperor)'. He was later ordered to proceed to France and seems to have travelled there and in Spain for some years. In October 1628, however, he took part with Loreto Vittori in the festivities at Florence for the wedding of Princess Margherita de' Medici and Odoardo Farnese, Duke of Parma, and on 20 April 1629 he returned to Parma as a chitarrone player. Pico said he moved to Modena and Genoa after the death of Duke Ranuccio in 1635, but he was a music teacher at the convent of S Brigida, Genoa, from 1632 until at least 1637; in June 1636 he was denounced by the mother superior for distracting the nuns with his music. He was appointed lutenist in the royal chapel at Naples in 1639. In 1642 he obtained leave to visit his wife in Modena and appears also to have visited Genoa. Following the death of Trabaci in 1647, he was appointed *maestro di cappella* at Naples and held the post until his death of the plague.

Falconieri appears to have been most prolific as a songwriter but only three of his six or more books of secular vocal music are known to survive. These display a gift for melody and an interest in various musical forms. They are, for instance, among the earliest to reveal a distinction in the same song between recitative or arioso and aria; the best example of this is *Deh dolc'anima mia* (1619, ed. in Adler and Clercx), but a similar tendency can be found in *Spiega la vela nocchiero* (1616). His book of villanellas (1616) also includes an aria for soprano and bass, 'sopra la ciacona', a favoured duet combination for Falconieri.

His instrumental music survives in two large collections, one printed, the other manuscript. In the former there is little apparent difference between the works labelled

'canzona', 'sinfonia', 'fantasia' or 'capriccio': they all comprise two to four sections, all repeated, of which the last is often in triple time; some have descriptive titles, for example 'L'eroica', 'La ennamorada' and 'La murroya'. There is also a 'passacalle' (32 variations on the descending minor tetrachord) and a 'folia' setting (16 variations on the well-known eight-bar bass). The pieces are in a fresh, spirited style with much imitation between melody and bass lines. The manuscript collection was probably copied in Florence or Rome between 1620 and 1640 for Gioseppe Antonio Doni. The attribution to Falconieri is most likely reliable, given his reputation as a lutenist and chitarrone player.

WORKS

VOCAL

Libro primo di villanelle . . . con l'alfabeto per la chitarra spagnola, 1–3vv (Rome, 1616); some ed. A. Parisotti, *Arie antiche*, ii, iii (Milan and Rome, 1885–1900/*R*); A. COLIN TIMMS

Falconieri, Phelipe [Felipe]. *See* FALCONI, PHILIPO.

Falconio [Falconi], **Placido** (*b* Asola; *fl* 1549–88). Italian composer. He entered a Benedictine monastery in Brescia in 1549 and, according to the title-pages of his published works, was later a monk at the abbey of Monte Cassino. The dedication of his *Psalmodia vespertina* stated that, together with Costanzo Antegnati and Giacomo Pallavicino, Falconio had music type from Venice introduced into Brescia. The *Sacra responsoria*, composed for equal voices, also contains directions for performance with mixed voices, thus showing a concern with accessibility that is characteristic of many of his published collections. The *Voces Christi* and *Turbarum voces* of 1580, both containing simple settings for Holy Week that could have been performed by modest provincial church choirs, are similar in style; much use is made of the most unadorned homophony, particularly in setting the frequent dialogue sections. A similar approach characterized the *Responsoria hebdomadae sanctae*, another consequence of Falconio's deep interest in musical exposition of the events of the Passion. His *Introitus et Alleluia* is a very early example of a collection published together with a part for basso continuo. These works are more contrapuntal in manner; published rather grandly, in choirbook format, they are dedicated to Giulio Feltre della Rovere, Cardinal of Urbino. Martini selected one of the introits from this collection as an example of skilful counterpoint.

WORKS

published in Brescia unless otherwise stated

Introitus et Alleluia per omnes festivitates totius anni, 5vv (Venice, 1575)

Psalmodia vespertina ... tum plena tum pari voce, 4vv (1579), inc.

Magnificat octo tonorum, 4vv (Venice, 1580), lost, cited in *FétisB*

Passio Hebdomadae Sanctae, 5vv (Venice, 1580), lost, cited in *FétisB*

Sacra responsoria Hebdomadae Sanctae ... tum plena tum pari voce, 4vv (1580)

Threni Hieremiae prophetae, una cum psalmis, Benedictus et Miserere ... tum plena, tum pari voce, 4vv (1580)

Turbarum voces ... tum plena, tum pari voce, 4vv (1580)

Voces Christi, 3vv (1580)

Magnificat octo tonorum, primi versus ... cum quatuor paribus vocibus (Venice, 1588)

IAIN FENLON

Falguera, José [José de Montserrate] (*b* Tarrasa, Barcelona, 1778; *d* Belmonte, Cuenca, ?1824). Spanish organist and composer. From 1789 to 1794 he was a choirboy at the famous 'escolania' of the Benedictine monastery of Nuestra Señora de Montserrat, where he studied the organ with Narciso Casanovas and the violin with Anselm Viola (1739–98). He later became organist of the royal monastery of S Lorenzo de El Escorial. He entered the Hieronymite order on 18 November 1794 and took the vows on 22 November 1795. Among his manuscripts surviving at the monastery (*E-E*) are the *Maitines de Apóstoles* for chorus and orchestra, performed on the festival of St Simon and St Jude (27 October 1821) in the presence of Fernando VII. Also at El Escorial are a *Salve*

regina for four voices, violins, trumpet and continuo, *Letanía a Nuestra Señora* for eight voices and two organs, *Veni Creator* for six voices and two organs, and several masses. Other works are in Madrid (*E-Mp*) and at the monastery of Nuestra Señora de Guadalupe (*E-GU*).

GUY BOURLIGUEUX

Falik, Yury Aleksandrovich (*b* Odessa, 30 July 1936). Russian composer, cellist and teacher. At the age of nine he entered the Stolyarovskiy Music School in Odessa, where he studied the cello and composition. He began to compose when he was 11, producing a string quartet and some orchestral pieces. In 1955 he entered the Leningrad Conservatory to study the cello with Strimmer, made his début in 1958 and later pursued postgraduate work under Rostropovich. In the late 1950s and early 1960s he performed with success in Moscow and other cities of the USSR, and he won the gold medal in the cello competition at the Eighth World Festival of Youth and Students in Helsinki in 1962. Since then, however, he has given his attention more to composition than to performing. He was accepted into the composition department of the Leningrad Conservatory in 1959, and he graduated from Arapov's class in 1964. For some years he directed the chamber orchestra of the conservatory, where he taught the cello and orchestration. He has been a board member of the Leningrad branch of the Composers' Union. Falik runs a composition class at the conservatory, becoming a senior lecturer in 1980 and professor in 1988. He was nominated Honoured Representative of the Arts of the RSFSR in 1981.

The distinctive features of Falik's compositions are clear and logical thinking, high artistry and economy of means; the influences which formed his style include those of Stravinsky, Hindemith, Webern, Lutosławski, Prokofiev and Shostakovich. He has used serial technique and traditional modality, both freely treated and frequently in the same work. Though several of his works are concerned with ethical or emotional matters, elements of the picturesque are no less important.

Falkenhagen, Adam. *See* FALCKENHAGEN, ADAM.

Fall, Leo(pold) (*b* Olmütz [now Olomouc], 2 Feb 1873; *d* Vienna, 16 Sept 1925). Austrian composer. His father, Moritz Fall (1848–1922), was a military bandmaster and composer who from 1882 served in Lemberg (now L'viv), before settling in Berlin, where he founded a café ensemble. Leo received violin lessons from his father and, after schooling in Lemberg, entered the Vienna Conservatory where he studied the violin and piano, as well as harmony and counterpoint with the brothers J.N. and Robert Fuchs. He was briefly a member of the band of the 50th Austrian Infantry Regiment under Franz Lehár senior, playing the violin alongside the young Franz Lehár. Then he moved to Berlin, where he played in his father's orchestra, acted as piano accompanist in cabaret and played the violin in the Reichshallentheater's orchestra.In 1895 he became an operetta conductor in Hamburg, where he wrote music for various stage pieces. After a further engagement in Cologne he returned to Berlin, composing and conducting at the Zentral-Theater and Metropoltheater, the city's leading revue theatres, and composing songs for the cabaret 'Die bösen Buben'. Two attempts at opera composition were unsuccessful, as was his first operetta *Der Rebell* (1905). He gave up conducting in 1906 and settled in Vienna to concentrate on operetta composition. Three operettas, *Der fidele Bauer* (1907),

Die Dollarprinzessin (1907) and *Die geschiedene Frau* (1908), swiftly established him alongside Lehár and Oscar Straus in the forefront of the new generation of operetta composers and brought him international fame. He visited London several times for productions of his works and composed *The Eternal Waltz* (1911) for the Hippodrome. After a run of lesser successes, he regained popularity with *Die Kaiserin* (1915), *Die Rose von Stambul* (1916) and *Madame Pompadour* (1922). Since 1945 *Madame Pompadour* has entered the repertory of European opera companies, notably the Vienna Volksoper.

Though never achieving the lasting success of Lehár, Fall composed some of the most captivating operetta music of the 20th century. He seemingly pandered much less to popular taste than to his own, combining a talent for glowing melody with a particular ability for setting rhythmically irregular, conversational texts. Like Lehár, he was unusual in operetta of the time in orchestrating his own works, and could draw from the orchestra a translucent sound, texturally more like chamber music. Of his two brothers, Siegfried (*b* Olmütz [now Olomouc], 30 Nov 1877) was also a composer and Richard (*b* Gewitsch [now Jevíčko], 3 April 1882; *d* Auschwitz, 1943/4) a composer of operettas, revues and popular songs.

WORKS

ANDREW LAMB

Fall, the. English punk rock group. Its principal member, Mark E(dward) Smith (*b* Manchester, 5th March 1957), formed the group in Manchester in 1977 with guitarist Martin Bramah. Their first recording, *Bingo Master's Breakout* (Step Forward, 1978), an eerie piece which mixed fragments of local popular culture with punk rock influences from New York and London, formed the matrix of Smith's later work. Over the next two decades the Fall released almost 30 albums, of which *Live at the Witch Trials* (Step Forward, 1979), *This Nation's Saving Grace* (Beggars Banquet, 1985) and *Disintegration* (1989) were among the most outstanding. Built around Smith's fractured lyrics and ranting vocal style, the Fall has remained unaffected by trends in pop music and maintained the oppositional spirit of the early English punk movement, although the musical frame has shifted slightly since 1977, moving from indie guitar-based rock towards 1990s dance rhythms. Among Smith's musical collaborators in the group have been Brix E. Smith and Marc Riley (guitars), Gavin Friday (vocals), Nigel Kennedy (violin) and Julia Nagle (keyboards). Smith wrote a play *Hey! Luciani* which was staged in London in 1986, and composed the music for Michael Clarke's ballet, *I am Kurious Oranj*, (1988).

DAVE LAING

Falla (y Matheu), Manuel de (*b* Cádiz, 23 Nov 1876; *d* Alta Gracia, Argentina, 14 Nov 1946). Spanish composer. The central figure of 20th-century Spanish music, he addressed over the course of his career many of the salient concerns of modernist aesthetics (nationalism, neo-classicism, the role of tonality, parody and allusion) from a unique perspective. Like many Spaniards, he was attracted to French culture. His predilection for the French music of his time, especially that of Debussy, caused him to be misunderstood in his own country, where conservative-minded critics attacked his music for its oversusceptibility to foreign influences. Reaction to Falla's music by his compatriots often mirrored the convulsive political changes the country underwent before and during the Spanish Civil War (1936–9), a period of intense cultural activity whose musical manifestations nonetheless remain relatively unexplored.

1. Childhood and early career. 2. Paris. 3. The established composer. 4. Spanish neo-classicism. 5. The Republic and the Civil War. 6. Latin America.

1. CHILDHOOD AND EARLY CAREER. Falla's parents, José María Falla and María Jesús Matheu, were of Valencian and Catalan origins respectively. As a boy the future composer played elaborate games centring on Christopher Columbus, a predilection biographers have connected to *Atlántida*; his boyhood fondness for puppets has likewise been linked to the *Retablo de maese Pedro*. He began piano lessons with his mother, continued with a local teacher, and by the age of ten was attending chamber concerts in Cádiz. As his musical abilities grew, other determinants of his adult personality took hold. He began writing short stories and decided to become an author, a goal he fulfilled, after a fashion, in his articles on music, librettos for his own works, and in his carefully edited and extensive correspondence with important figures in the arts and government. His intense Catholicism and daily practice of spiritual exercises also began in adolescence.

By the mid-1890s Falla, now resolved to become a composer, had begun working with Alejandro Odero, a student of Marmontel and Enrique Broca, who taught harmony and counterpoint at the local conservatory. Falla was now performing his own music in public: such early pieces as the Nocturno and Mazurka for solo piano and the *Melodía* and *Romanza* for cello and piano are all

rooted in conventional 19th-century tonal language. He would spend long intervals in Madrid studying the piano with José Tragó, a student of Georges Mathias and affiliated with the Madrid Conservatory, where Falla eventually enrolled. There he won several honours, including the first prize in piano in 1899.

By 1900 he was living with his family in the capital; he was obliged to support them by giving piano and harmony lessons. He continued performing his music both in Cádiz and in the prestigious Madrid Athenaeum, a bastion of Spanish intellectual life. For the private Athenaeum audience of 6 May 1900 he introduced the *Serenata andaluza* and *Vals-capricho* for piano. Two years later these were to be his first published works, along with the song *Tus ojillos negros* – early efforts he later harshly disparaged.

He could not make a living by composing and performing salon music, for though he was a skilled pianist, he never achieved the virtuoso status of Granados, Albéniz or Viñes. (His *Allegro de concierto*, submitted in 1903 to a contest sponsored by the Madrid Conservatory, was beaten by Granados's brilliant composition of the same name.) Nor was writing a large orchestral work realistic, given the severe limitations of symphonic institutions throughout Spain. This left zarzuela, the musical commodity most attractive to Madrid's mass audience. Though Falla was later to confess an incompatibility with the genre, which relied on stock characters, local references and conventional musical language, between 1900 and 1904 he composed six zarzuelas, of which only *Los amores de la Inés* was staged. His collaboration with Amadeu Vives i Roig, a young Catalan then on the verge of making his name as one of Spain's primary *zarzueleros*, yielded no commercial gain.

Despite his failure with zarzuela, Falla's first Madrid period solidified his musical priorities. He was much impressed by Louis Lucas's treatise *L'acoustique nouvelle* (1854), a discussion of the natural generation of consonance and dissonance, which gave theoretical justification to his loyalty to tonal structures. In Madrid he also began his association with Felipe Pedrell, the Catalan composer, critic, teacher and musicologist who moved to the capital in 1902 from Barcelona. Like Pedrell's other students (Granados, Albéniz, Vives, Lluís Millet and Roberto Gerhard) he held Pedrell in high regard, even if he ultimately rejected Wagnerism, the primary orientation of much of Pedrell's music.

In 1905 the Real Academia de Bellas Artes de San Fernando sponsored a contest for a Spanish opera, and Falla won with *La vida breve*. This was the first of his explorations of Gypsy *cante jondo* ('deep song'), employed here alongside *verismo* elements and thematic reminiscences. As in subsequent works, he set himself the challenge of elevating traditional Gypsy music to the highest level of art while preserving its primordial essence. Though part of his prize was a public performance of *La vida breve*, no authorization from a Spanish theatre ever materialized. Frustrated with musical institutions in Spain, in 1907 he accepted an offer to tour France as an accompanist and ended up living in Paris for the next seven years.

2. Paris. There he met Ravel, Stravinsky, Florent Schmitt, Debussy, Diaghilev, Albéniz and Dukas, for the last of whom he played *La vida breve* shortly after arriving. (He later paid tribute to Dukas in the austere piano piece *Pour le tombeau de Paul Dukas*, 1935.) Despite Dukas's encouragement and Falla's best efforts, *La vida breve* was not performed for six more years. In the meantime Ricardo Viñes introduced the *Cuatro piezas españolas*, a more overtly 'Spanish' work than the hybrid *La vida breve*. The *Trois mélodies* on texts of Théophile Gautier were also heard for the first time. Falla's use here of non-functional 7th and 9th chords, whole-tone chords and remote key relationships represent a significant shift in his harmonic thinking. In dedicating the third song to Debussy's wife, Emma Bardac, he acknowledged his debt to Debussy, who helped ease his entry into musical Paris and counselled him on several of his compositions. In 1911–12 he travelled to Milan, Brussels and London both to give concerts and investigate possible venues for *La vida breve*, finally presented (in a French adaptation by Paul Milliet and with some revisions in the score) in Nice in 1913. The following year it played at the Opéra-Comique, where it earned the approbation of critics like Pierre Lalo and André Coeuroy. (The *Danse* in Act 2 remains one of Falla's most popular works, and is often performed separately.) After the opera's success, Falla, now 37, could at last look forward to a broader appreciation of his music and greater material security, having signed a contract with the publisher Max Eschig. His public image was also in place: descriptions of the diminutive ascetic dressed in black, repeated in so many biographies, date from the Paris years. He took steps to bring his family to Paris, but when World War I broke out, was forced to return to Spain.

3. The established composer. His second Madrid period proved more gratifying than the first. *La vida breve* was performed shortly after his return, and so a few months later were the *Siete canciones populares españolas*, completed in Paris. He had based the latter work on Spanish folk material, harmonizing terse melodic fragments with rich added-note chords and modal sonorities. Considerable emphasis is given to the piano, as in 'Jota', where it provides a brilliant ritornello, and 'Polo', where rapid repeated notes pound against the singer's impassioned cries. His balancing of simplicity ('Seguidilla murciana', for example, is little more than an elaborated ii–V–I cadence), metrical play and textual subtleties have made the *Siete canciones* the most performed of all Spanish-language solo songs. Numerous transcriptions, including orchestral arrangements by Berio and Ernesto Halffter, attest to their celebrity.

During 1914 and 1915 Falla travelled throughout Spain with the theatrical impresario Gregorio Martínez Sierra and his wife María Lejárraga, providing incidental music for two sentimental dramas, *Amanecer* and *La pasión*, and an adaptation of *Othello*. Though his correspondence shows considerable attention to production details, he later destroyed these theatrical scores, unconvinced of their worth. By spring 1915 he was back in Madrid. Here Martínez Sierra established a new company, the Teatro de Arte, which was probably where Falla met his future collaborator, Federico García Lorca. The composer cultivated a close working relationship with María, whose contribution to her husband's career has been clarified by Patricia O'Connor (1977) and Antonina Rodríguez (1994): she wrote nearly all of the hundreds of plays, adaptations, articles and reviews that bear Gregorio's name, including most likely the scenarios for Falla's next

two stage works, the *gitanería* ('gypsy revel') *El amor brujo* and the pantomime *El corregidor y la molinera*.

As in *La vida breve*, Falla sought in *El amor brujo* to unite art music with the spirit of traditional Gypsy music. One production feature was the singing of Pastora Imperio, a musically illiterate Gypsy who mastered Falla's music with 'the ease of a consummate solfègist', according to him. Unlike *La vida breve*, however, which marked his triumphant re-entry into Madrid, *El amor brujo* provoked a wider range of opinion. (Falla eventually made substantial revisions in the score.) Some critics believed his sense of orchestral colour and use of Impressionist devices had been put to good use, even while noting the difficulty of creating a 'serious' work from popular elements. But to others *El amor brujo* failed to evoke a truly Spanish atmosphere precisely because of the composer's absorption of 'foreign influences', and, as one critic put it, his 'obsession with the modern French school'. Similar attacks, rooted in Spain's historical tendency towards isolationism, were to greet the composer throughout his career.

He spent part of the summer of 1915 at Sitges, the Mediterranean artists' colony, completing his 'symphonic impressions' for piano and orchestra *Noches en los jardines de España*. This discursive and extravagantly orchestrated work features several manifestations of the Phrygian 2nd and, unlike most concertos, affords a seamless integration of the piano with the rest of the ensemble. The composer's correspondence makes clear his intentions to offer the work's Impressionist effects as a tribute to 'the modern French school', to which he habitually acknowledged his indebtedness.

Despite the xenophobic tendencies of many Spanish music critics, Spain was jolted into a more cosmopolitan mentality during World War I. An increasing number of foreign artists visited neutral Spain, bringing with them new ideas and stimulating dialogue between Spain and greater Europe. For his part in this sudden leap into modernity, Falla wrote several articles on new music, publishing an essay on Stravinsky just before that composer's first visit to Madrid in 1916. In April 1918 he presided over a memorial concert for Debussy, whose music, considered radical by many Spanish critics, was something of a *cause célèbre* for aesthetic progressives in Spain. (It provided the touchstone for the modernist polemic *par excellence*, José Ortega y Gasset's *La deshumanización del arte*.)

Stravinsky's visit to Madrid was in the company of Diaghilev, whose Ballets Russes earned the special interest of Alfonso XIII. In 1917 Diaghilev and his new choreographer Massine became familiar with *El corregidor y la molinera*, Falla's hugely successful pantomime based on the novel *El sombrero de tres picos* by Alarcón. María's scenario depicted Spanish folk-ways in an idealized past; Falla's score was seen as its apt complement, with several critics noting that his music seemed at last purged of 'debussismos' and 'ravelismos'. Diaghilev and Massine saw possibilities in the unpretentious little work, and urged Falla to develop it into a fully fledged ballet. This involved eliminating many of the rather prosaic mimetic devices of the second half (the musical content of the first half stayed largely intact) and expanding from a chamber orchestra to a full symphonic ensemble. For the new version, *El sombrero de tres picos*, Picasso designed sets and costumes, while Massine's choreography offered a stylized interpretation of Spanish dance. These elements, with Falla's revised score, caused a sensation in London in 1919; reaction by the Spanish public two years later, however, was mixed. While some critics resented the 'modernist' portrayal of Spanish character by a company of foreigners, others hailed Falla's 'ironic' adaptation of folk material, Massine's extravagant choreography and Picasso's 'cubist' sets as a liberating influence on Spanish art.

Yet another wartime visitor to Spain was the pianist Artur Rubinstein, who commissioned from Falla the virtuosic *Fantasia baetica*. Falla's farewell to the *cante jondo* idiom, the multi-sectional *Fantasia* contains acerbic harmonies, often on 4ths and 2nds and providing a percussive underpinning for short, abrupt motifs of narrow melodic range. The generously ornamented lines of the more expansive, metrically free central section evoke flamenco solo singing. Falla also began two theatre pieces in collaboration with María: *Fuego fatuo* ('Will-o'-the-Wisp') and *Don Juan*, drawn from the familiar Spanish tale. The former, an opera based on themes by Chopin, was neither published nor performed, and on *Don Juan* Falla vacillated for so long that María finally commissioned a score from Conrado del Campo, thus severing her association with Falla. Before abandoning *Fuego fatuo*, Falla turned down Diaghilev's offer of *Pulcinella*; had he, rather than Stravinsky, accepted it, his career might have taken an entirely different direction. Having recently lost both parents, Falla sought greater tranquillity than Madrid could afford. With his sister María del Carmen he moved to Granada in September 1920, where he was to compose his most original works.

4. Spanish neo-classicism. Once in Granada, Falla composed, taught, maintained his correspondence and

Manuel de Falla: lithograph by Pablo Picasso, 1920

received numerous visitors, including Segovia, José María Sert, the British Hispanist John B. Trend, Wanda Landowska, Ravel and Casella. In 1922 he and García Lorca, a native of Granada, collaborated on the internationally acclaimed *Cante Jondo* competition, the purpose of which was to forestall what they considered to be the decline of flamenco singing. (A projected collaboration on García Lorca's play *Lola la comedianta* never materialized.) García Lorca was also active in the 1927 tricentenary commemoration of the birth of Góngora, whose complex, allusory style was becoming increasingly attractive to a group of Spanish poets who saw 17th-century poetic models as vehicles for pure form and objective beauty. Falla's contribution to the Góngora commemoration was *Soneto a Córdoba* for voice and harp, the sparse accompaniment and declamatory vocal line of which recall the early monodists.

Even before this Falla had been attracted to neo-classical ideals. In 1919 the Princess Edmond de Polignac requested a work for her private theatre in Paris; avoiding the Andalusian idiom, Falla explored medieval and Renaissance sources to complement his own adaptation of chapters 25–6 (part 2) of Cervantes's *Don Quixote*. Throughout the *Retablo de maese Pedro* he incorporated music by Gaspar Sanz (a late 17th-century *gallarda* for solo guitar) and Salinas (a *Romance viejo*); the latter was found in Pedrell's *Cancionero musical popular español*, from which Falla borrowed additional melodic fragments. Falla's harmonic vocabulary now embraced octatonic structures, strict modality and quartal harmonies, along with diatonic writing. In contrast to the brilliant orchestration of *El sombrero de tres picos* a more astringent sonority prevails, incorporating the extreme ranges of the woodwinds, string harmonics and the ironic commentary of the harpsichord, an unfamiliar sound in the 1920s. Meanwhile, the marionettes, with their frozen expressions and mechanical gestures, enact the story of Don Quixote and Sancho Panza's visit to Maese Pedro's inn.

Of all Falla's works the *Retablo* enjoyed the most illustrious performance history during his lifetime. Intellectuals and pioneers of contemporary music at home and abroad drew attention to its 'asceticism', 'clean precision' and 'austerity'; Falla was also praised for his rigour in working within self-imposed limitations. Similar commentary greeted the Harpsichord Concerto, written for Wanda Landowska and deemed especially praiseworthy by Stravinsky. In the first movement Falla quotes fragments of a 15th-century villancico *De los álamos, vengo madre*; of greater interest is his extreme concentration of materials. Despite small forces (the harpsichord is one of six solo instruments), miniature formal proportions, fragmented themes, and an essentially monothematic second movement, Falla achieved a remarkable and often arresting range of sonorities, thanks to his careful balancing of the harpsichord's capabilities with the idiosyncratic qualities of each instrument.

Other works drawing on Spain's musical-historical past include the chamber cantata *Psyché*, set in the court of the 18th-century King Philip V and his consort Isabel Farnese; an introspective yet intense miniature, the work most clearly shows the influence of Debussy. In the spirit of Spanish neo-classicism Falla also composed incidental music for Calderón de la Barca's *auto sacramental*, *El gran teatro del mundo*. The 17th-century genre, a one-act drama often didactic or evangelical in nature and a staple of Golden Age theatre, attracted considerable interest among Spanish intellectuals. The score contains a fascinating mix of quotations ranging from the Dresden Amen to the *Cantigas*; because the composer never considered it an original work it remained unpublished during his lifetime. In the mid-1920s he become attracted to a text by the Catalan nationalist poet Jacint Verdaguer, *L'Atlàntida*, an epic treatment of Spain, Catholicism and the lost continent of Atlantis. Falla began studying Catalan in order to adapt the text for his projected 'scenic cantata' *Atlántida*, a work that occupied him until the end of his life.

If the stylistic label 'neo-classicist' implies an uncomfortably wide range of meanings, it is nonetheless the most accurate description of Falla's works of the 1920s. (Attempts to apply it to earlier works, like *El sombrero de tres picos*, are misguided in that they do not take into account the broad parameters of neo-classical style as it was practised throughout Europe between the wars.) Nor did musical neo-classicism in Spain take place in a vacuum, as can be seen from contemporaneous literary trends. Although in the 1920s Falla renounced conventionalized Spanish nationalism (Phrygian melodic turns, guitar-based sonorities, flamenco style), he never turned his back on his heritage, as is evident in the references, allusions and models, all handled with extreme sublety, cited above.

5. The Republic and the Civil War. When in April 1931 the Second Spanish Republic was installed, Falla was initially receptive to the new government's egalitarian principles. But the Republic's anti-clerical legislation deeply troubled him, as did a rash of church-burnings by radical vigilantes. He became prone to bouts of depression, a condition exacerbated by other health problems (including an inflammation of the iris) and one that greatly slowed his progress on *Atlántida*. Nonetheless he continued to teach (his students included Ernesto and Rodolfo Halffter, Joaquín Nin-Culmell, Adolfo Salazar and Rosa García Ascot), remaining a figurehead for young Spanish composers. In 1931 he became a nominal member of the Republican Junta Nacional de Música, despite having registered disapproval of the government's religious policy. (In 1932 he turned down a Republican homage from Seville as a gesture of protest.) He also served on the editorial board of *Cruz y Raya*, a journal for Catholic intellectuals, which published his 1933 article on Wagner, similar in tone to the corresponding passage in Stravinsky's *Poetics*.

In 1935 he provided music for an *auto sacramental* by Lope de Vega, and made an intense study of Golden Age polyphony by making 'expressive versions' of Victoria, whose *Tantum ergo* he had already used in *El gran teatro del mundo* and the second movement of the Harpsichord Concerto. When the Spanish Civil War broke out in 1936, Granada was among the first regions to fall under Nationalist (rightist) control. On learning that García Lorca had been apprehended, Falla intervened at considerable personal risk in a fruitless attempt to prevent the poet's execution. Throughout the war the Nationalists courted Falla, sometimes to the point of making propaganda of his religious convictions. They named him president of the newly established Instituto de España (an offer he declined, pleading poor health) and asked him to provide a national hymn (a request with which he half-heartedly complied). By the time the war ended in April

1939, Falla had accepted a conducting engagement from the Institución Cultural Española (ICE) of Buenos Aires. He and his sister travelled to Argentina, where he was to remain for the rest of his life, despite further overtures from the Franco government.

Those who would pigeonhole Falla in one political camp or another overlook, first, the extent to which personal acts, like the practice of religion, assumed political significance during the Civil War, secondly, Falla's admission in his correspondence that the Church was not blameless in its application of worldly power, and, most importantly, his fervent wish to remain apolitical, despite the impracticality of such a desire in those highly charged times. Some biographers have also wrongly described his final years in Argentina as akin to political 'exile'. Although at the war's end many had little choice but to leave Spain because of their political activities under the Republic, Falla went to Argentina to accept an engagement, not to make a political statement. Disillusioned with Spain and despairing of the direction Europe was taking in 1939, he arrived in Buenos Aires in frail health and in search of solitude.

6. Latin America. At first his health and spirits improved. The four concerts he conducted at the Teatro Colón in November 1939, which included the première of his orchestral suite *Homenajes*, were warmly received. He soon made contact with Argentine musicians, including Alberto Williams and Juan José Castro. Various cultural organizations, like the Academia Nacional de Bellas Artes, fêted him. He even came to consider the sea voyage he once dreaded as 'providential' and determined to complete *Atlántida*, now two-thirds finished.

Surely the cantata's subject matter resonated deeply with the composer: rising from the ruins of Atlantis, the Spanish nation goes forth under the banner of Christ to the New World. A classic narrative of destruction and creation, placed in the age of discovery, *Atlántida* belongs to the long tradition of colonial epics by Europeans – narratives which, like *Atlántida*, typically mix history, mythology, biblical references and individual poetic licence. Falla emphasized the text's Christian elements, treating his boyhood hero Columbus as the divine 'bearer of Christ'; indeed the ethereal 'Salve en el mar' is perhaps the score's peak moment, and the closest Falla ever came to writing original religious music.

Yet it may be that his personal stake in the work was precisely what thwarted its completion. Twice (while in Spain) he submitted the text of the 'Salve' to ecclesiastical authorities, fearing that it contained improprieties; twice it appeared his worries were exaggerated. Some of Falla's correspondence shows that he was even beginning to question the moral value of composing music in such a troubled world; these doubts, ill health and concern over friends still affected by the war all conspired to sabotage the completion of *Atlántida*. Renewed economic woes created additional obstacles, for the European war often prevented Falla's royalties from reaching Buenos Aires. (Despite this, he persisted in his habit of giving all that he could to the needy, including exiled Spanish Republicans held in French refugee camps.)

Always seeking greater silence, by the end of 1939 he had moved from Buenos Aires to the Córdoba sierra. Biographers have tended to emphasize the desolate aspect of these last years, yet when health permitted he conducted in the capital (both for live audiences and radio broadcasts), organized commemorative events for Victoria and Pedrell, maintained his correspondence and continued work on *Atlántida*. His final residence was Alta Gracia, where he died days before his 70th birthday. He left behind the last dated page of *Atlántida* (8 July 1946) and some 202 folios that constitute the autograph.

Given the sprawling nature of the work, making sense of these folios has been problematic. In 1954 Falla's heirs asked Ernesto Halffter to complete the score, and his 1961 edition was performed in both the concert and scenic versions. Later scholarship found fault with Halffter's version, which, in addition to other problems, includes scenes that Falla seems to have abandoned as early as 1931. But Falla's compositional process is by no means easily grasped from even the most thoughtful sketch study, and any attempt to complete *Atlántida* would probably have failed.

The tragedy of Falla is that ill health and political realities prevented him from composing more. Only a handful of his works brought him international renown, and two of these (*Atlántida* and the *Retablo*) involve sufficiently complex staging that their full impact is seldom appreciated. He tends to be known more for his colourful, folkloric compositions than for the works of the 1920s, so admired by connoisseurs of modern music and undeservedly overlooked in general studies of neoclassicism. As products of their historical context, his works and their reception tell us much about musical life in Spain before the Civil War. As aesthetic objects they stand as striking examples of what could still be accomplished within a tonal framework in the first half of the 20th century.

WORKS

printed works published in Madrid unless otherwise stated

STAGE

first performed in Madrid unless otherwise stated

El conde de Villamediana (op, de Rivas), *c*1891, unperf., lost, doubtful

La Juana y la Petra, o La Casa de Tócame Roque (zar, 1, J. Santero, after Ramón de la Cruz), *c*1900, unperf., lost, lib *E-GRmf*

Los amores de la Inés (zar, 1, E. Dugi), 1901–2, Cómico, 12 April 1902 (1965)

Limosna de amor (zar, J.J. Veyán), 1901–2, unperf.

El cornetín de órdenes (zar, 3), *c*1903, unperf., lost, collab. A. Vives

La cruz de Malta (zar, 1), *c*1903, unperf., lost, collab. Vives

Prisionero de guerra (zar), *c*1903–4, unperf., *GRmf* (photocopy), collab. Vives

La vida breve (lyric drama, 2, C. Fernández Shaw), *c*1904–13, Nice, Casino Municipal, 1 April 1913 (in French), vs (Paris, 1913); fs (Paris, 1982)

La pasión (incid music, G. Martínez Sierra [M. O Lejárraga]), 1914, Lara, 30 Nov 1914

Amanecer (incid music, Martínez Sierra [Lejárraga]), 1914–15, Lara, 7 April 1915, lost

El amor brujo (gitanería, 1, Martínez Sierra [Lejárraga]), 1915, Lara, 15 April 1915, *US-Wc* (London, 1924); rev. (ballet, 1), 1916–17, Paris, Trianon-Lyrique, 22 May 1925

Otelo (Tragedia de una noche de verano) (incid music, Martínez Sierra [Lejárraga]), 1915, Barcelona, Novedades, ?Oct 1915, lost

El corregidor y la molinera (pantomime, 2 scenes, Martínez Sierra [Lejárraga], after P. de Alarcón: *El sombrero de tres picos*), 1916–17, Eslava, 7 April 1917 (London, 1983); rev. as El sombrero de tres picos (ballet), 1916–19, London, Alhambra, 22 July 1919 (London, 1925)

Fuego fatuo (comic op, 3, Martínez Sierra [Lejárraga]), 1918–19, unperf., *E-GRmf** (Madrid, 1996) [based on Chopin themes]; acts 1 and 3 orchd A. Ros-Marbá, perf. Granada, 1 July 1976

El corazón ciego (incid music, Martínez Sierra [Lejárraga]), 1919, San Sebastian, Nov 1919, lost

La niña que riega la albahaca y el príncipe preguntón (incid music, F. García Lorca), 1922, Granada, home of García Lorca, 6 Jan 1923,

*GRmf** [based on Españoleta y paso medio, transcr. Pedrell: Cancionero, iii]
Misterio de los reyes magos (incid music), 1922, unpubd; Granada, home of García Lorca, 6 Jan 1923, *GRmf** [based on music from Pedrell: Cancionero, i and iii, and folksong arr. L. Romeu]
El retablo de maese Pedro (puppet op, 1, Falla, after M. de Cervantes: *Don Quixote*), 1919–23, concert perf., Seville, S Fernando, 23 March 1923; stage, Paris, home of Princess Edmond de Polignac, 25 June 1923 (London, 1924)
El gran teatro del mundo (incid music, P. Calderón de la Barca), 1927, Granada, 18 June 1927
La vuelta de Egipto (incid music, F. Lope de Vega), 1935, Granada, 9 June 1935, *GRmf**
La moza del cántaro (incid music, Lope de Vega), 1935, Granada, June 1935

CAROL A. HESS

Fallamero, Gabriele (*b* Alessandria; *fl* 1584). Italian composer and lutenist. The title-page of his only known work, *Il primo libro de intavolatura da liuto, de motetti ricercate madrigali, et canzonette alla napolitana, a tre, et quattro voci* (Venice, 1584[13]; 2 pieces ed. O. Chilesotti, *Lautenspieler des 16. Jahrhunderts*, Leipzig, 1891/*R*), describes him as 'gentilhuomo alessandrino'. The volume is dedicated to another member of the local nobility, Livia Guasca Pozza, 'Signora mia osservandissima'. The book contains 46 pieces, more than half of which are arrangements in Italian lute tablature of madrigals and motets, including works by Monte, Lassus, Rore, Marenzio, Striggio and Vinci. The central section of the volume is devoted to a mostly lighter repertory in versions for voice and lute, including anonymous *canzonette alla napolitana* and pieces by Orazio Vecchi, Giovanni Ferretti, Giovanni Jacopo de Antiquis and Gasparo Fiorino.

IAIN FENLON

Falle, Philip (*b* Jersey, 14 Feb 1656; *d* Shenley, Herts., 7 May 1742). Channel Island churchman and amateur composer. He studied under Narcissus Marsh at Oxford, graduating in 1676. Ordained priest in 1679, he held various livings, enjoying the patronage of Lord Jermyn and becoming a chaplain to the king in 1694. Later he became a prebendary of Durham Cathedral (1700) and vicar of Shenley, near Barnet (1709). He wrote a history of Jersey and made important contributions to the life of the island, including a bequest of books to establish a public library in St Helier. His music books and manuscripts he left to Durham Cathedral. He wrote 15 anthems (14, *GB-Lbl**, 1, *DRc* (inc.)), which are respectable amateur works, some with instrumental ritornellos, and a Fantasie and Passacaille for bass viol (*DRc*).

IAN SPINK

Falletta, JoAnn (Marie) (*b* Queens, NY, 27 Feb 1954). American conductor. After training at the Juilliard School, where she gained a doctorate in conducting in 1989, Falletta has served as associate conductor of the Milwaukee SO (1985–8) and as music director of the Queens (NY) PO (1978–88), Denver Chamber Orchestra (1983–92) and Bay Area Women's Philharmonic (1986–96). In 1991 she was appointed music director of the Virginia SO, and in 1989 music director of the Long Beach (CA) SO. She has appeared frequently as a guest conductor, was the first woman to conduct the orchestra of the Nationaltheater, Mannheim (1992), and has given more than 60 world premières. Falletta became music director of the Buffalo PO in 1998. Long an advocate of female and American composers, and the winner of numerous ASCAP awards for innovative programming, Falletta has made recordings with the English Chamber Orchestra, the LSO, the Virginia SO and the Women's Philharmonic.

CHARLES BARBER, JOSÉ BOWEN

Fallows, David (*b* Buxton, 20 Dec 1945). English musicologist. He studied at Jesus College, Cambridge (BA 1967), King's College, London (MMus 1968), and the University of California, Berkeley (PhD 1978). From 1968 to 1970 he was a musical assistant at the Studio der Frühen Musik, Munich, and between 1968 and 1974 performed extensively on commercial recordings of Renaissance music by Musica Reservata (London), Studio der Frühen Musik and as director of Musica Mundana (Berkeley). In 1973–4 he was lecturer at the University of Wisconsin, Madison; since 1976 he has taught at the University of Manchester (lecturer 1976–82, senior lecturer 1982–92, reader 1992–97, professor 1997). He has also taught at the University

of North Carolina, Chapel Hill (1982–3), the Ecole Normale Supérieure, Paris (1993), the University of Basle (1996) and the University of Vienna (1998).

Fallows has won the Dent Medal (1982), been appointed Chevalier de l'Ordre des Arts et des Lettres (1994) and elected Fellow of the British Academy (1997). He is vice-president of the IMS for the period 1997–2002 and chaired the programme committee for its 16th International Congress in London (1997) and a Corresponding Member of the AMS (1999). He is review editor of *Early Music* (1976–95, 1999–), was founding editor of the Royal Musical Association Monographs (1982–95) and has served on the editorial boards of Musica Britannica (from 1985), Early English Church Music (1994), *Early Music History* (1991) and the *Basler Jahrbuch für historische Musikpraxis* (1988).

Fallows is a leading scholar in the field of 15th-century music. His research has focussed on the song repertories of the 15th century, spreading to later and earlier songs, to sacred music, to documentary or biographical issues and to matters of performing practice. He pioneered new views on the lives of Ciconia, Regis and Josquin, and has made controversial contributions on the ensembles implied by the music. His writings include the standard monograph on the life and works of Du Fay (1982) and a detailed catalogue of the 15th-century polyphonic song repertory (1999). His most significant essays are collected in *Songs and Musicians in the Fifteenth Century* (1996). As a reviewer, his interests have extended over the whole field of Western music, including in particular opera and new music.

ROSEMARY WILLIAMSON

Falsa mutatio. *See* MUSICA FICTA.

False cadence [false close]. *See* INTERRUPTED CADENCE.

False relation [cross-relation, non-harmonic relation] (Ger. *Querstand*; Lat. *relatio non harmonica*). A chromatic contradiction between two notes sounded together (ex.1*a*) or in different parts of adjacent chords (ex.1*b*). For music before 1600 the term is normally also applied to the occurrence of a tritone between two notes in adjacent chords (ex.1*c*), on the grounds that such a progression contradicts the rule of *mi contra fa* (*see* MUSICA FICTA) observed in the late Middle Ages and the Renaissance.

Ex.1

(a) (b) (c)

False relations like those in exx.1*a* and *b* must be both semitonic and chromatic; the semitones of the given scale or mode are not capable of producing a false relation of this kind. It is also essential that the chromatic alteration should take place in another part, and this usually means in another octave. Thus the falseness of the relation derives from the rule, common to most systems of classical harmonic theory, that chromatic changes must be melodic, that is, that they must arise and be resolved in the same voice or part. The acuteness of this conflict of sensations undoubtedly attracted the attention of composers, especially the late 16th- and early 17th-century madrigalists, who used it for expressive text-setting. Among these composers was Carlo Gesualdo, who made the false relation perhaps the most distinctive feature of his style (ex.2).

Ex.2 Gesualdo: *Dolcissima mia vita* (Venice, 1611)

One consistent qualification makes such false relations acceptable: the falsely related voices or parts are nevertheless melodically coherent in themselves. Clashes arise normally through the simultaneous pursuit of two distinct and conflicting melodic paths. False relations may thus be regarded as outstanding examples of the evolution of harmonic values from melodic sources, an evolution that produced some exquisite examples in the maturity of the Classical and Romantic eras (e.g. Mozart's 'Dissonance' Quartet K465 and Brahms's Third Symphony, beginning of first movement of each).

GEORGE DYSON/R

Falsetto (It.; Fr. *fausset*; Ger. *Falsett*, *Fistelstimme*). The treble range produced by most adult male singers through a technique whereby the vocal cords vibrate in a length shorter than usual, known as the second mode of phonation. Usually associated exclusively with the male voice, though available and employed in the female, the phonatory mode known as 'falsetto' has been equated with 'unnatural' as opposed to 'natural', partly through misleading philological usage. The correct term, second-mode phonation, is preferred here both to 'falsetto' and to 'pure head-register'.

1. Physiological considerations. 2. Historical outline.

1. PHYSIOLOGICAL CONSIDERATIONS. Fibre-optic stroboscopic observations seem to show that, during the process of phonation, the vocal folds are in contact at one instant during each vibration or undulation caused by air from the lungs passing between them. At this brief instant, the current of escaping air is interrupted. Air pressure in the trachea rises, the folds part, and intra-tracheal pressure lowers automatically. These fold-adductions – or, more precisely, rhythmic and repetitive wavings or undulations, somewhat resembling those of the sea anemone – appear to form the basis of a primitive note of a particular pitch, facilitated by some adjustment and stretching in the folds. The undulations occur a specific number of times per second, that of the frequency of the note produced, in the path of what would otherwise be a free flow of air, turning it into pitched, though primitive, audio vibrations. Genuine vocal tone is produced as the vibrations are transformed by cavities or resonators (on which subject there is much disagreement).

The stroboscope reveals that, during fundamental phonation (i.e. first-mode, ordinary, basic or chest-register), the vocal processes of the arytenoid cartilages stay open. When second-mode phonation is employed, they take on a firm adduction, in that the mass of the folds corresponding to the inner part of the thyro-arytenoid muscle remains motionless. The vibrating length of available folds is reduced, because the arytenoid cartilages are now together and prevent the posterior third of the folds from undulating. Moreover, as with light-toned, higher-pitched first-mode, in second-mode the vocal folds of the skilled singer are seen to have assumed a thinner and more stretched character, particularly for higher notes. In the unskilled user, this is less so: the whole of the membranous vocal folds are usually separated for longer, and the glottis is more open.

So, other than in the adduction of the arytenoid cartilages, the fold action in the skilled user of second-mode resembles that of first-mode, except that the proportion and size of the glottis seems to vary slightly more, according to the pitch and character of the sung note. In the skilled second-mode singer, the glottis is smaller for higher notes than for those of medium pitch. Similarly, the vocal folds undulate more slowly for second-mode notes of medium pitch than for notes nearer the upper extreme of second-mode range. In first-mode, the vibratory masses of the folds, apparently made up of a layer of elastic and fatty tissue, covered superficially by the laryngeal mucous membrane, are supported on the deep surface by the innermost fibres of the thyro-arytenoid muscle. In second-mode, however, the very edges of the vocal folds, known as the vocal bands or *ligamenta vocalia*, appear to be the only parts in vibration, while the wave motion is more rapid; the mass corresponding to the inner part of the thyro-arytenoid muscle remains motionless.

The difference in the activity of the vocal folds between first-mode and second-mode phonation therefore appears to depend largely on the relation between the contraction of the thyro-arytenoid and posterior crico-arytenoid muscles. During second-mode phonation, particularly by the expert exponent, the vocal folds appear to increase in length slightly, possibly because of partial relaxation of the thyro-arytenoid muscle and consequent changes in the elasticity of the vocal bands. Most singers feel a sense of relief when they change from first- to second-mode for higher-pitched notes.

2. HISTORICAL OUTLINE. The use of what has become known as falsetto is ancient and practised in many cultures. There are major elements of this second mode of phonation in the instinctive natural sounds of various animals, for example the gibbon. Similarly, its use by early man seems to have been instinctive, commonplace, and adopted for a variety of reasons not necessarily connected with what is now called singing. Second-mode phonation is much used in Asian drama and music. Its natural use is seen among Indian communities in Great Britain, where the condition known as 'pubephonia' persists at an age at which white youths are all using adult first-mode phonation; some Indian youths have to be

coached in first-mode phonation to free them from what, to Western ears, may sound oddly juvenile.

The earliest uses of second-mode phonation in Western music are difficult to trace or define because of ambiguities of terminology. Possibly, when such 13th-century writers as Johannes de Garlandia and Jerome of Moravia distinguished between chest-, throat-, and head-registers (*pectoris*, *guttoris*, *capitis*), the last of these indicated second-mode phonation, later known as 'falsetto', a term common in Italy by the mid-16th century. By the time of G.B. Mancini's *Pensieri e riflessioni* (1774), 'falsetto' had come to be equated with 'voce di testa' ('head-voice').

Renaissance and early Baroque theorists, such as Maffei, Zacconi, Caccini and Vicentino, seem to contradict each other on voice-related topics, including second-mode phonation. Maffei (*Discorso della voce e del modo d'apparare di cantar di garganta*, 1562) explains that, when a natural bass sings in the soprano range, this is 'the voice called falsetto'. 'Soprano range' seems significant, coinciding with that of the sub-mode called 'upper-falsetto'. Maffei's 'guttoris', 'voice of the throat', or, better, 'pharyngeal' (Herbert-Caesari, 1951) seems to refer to a heavier tonal quality appropriate to the alto or countertenor range.

While alto parts in Italian 17th-century choral music continued to be assigned to second-mode singers, soprano parts, formerly sung by higher second-mode singers (who had begun by supplementing, then mostly supplanting, the original boys), were taken over by castratos. To avoid confusion with eunuchs, falsettists were often described as 'voci naturali'. In northern Europe, where castratos were generally a phenomenon of imported Italian opera, choirs (ecclesiastical, secular, professional or amateur) continued to make wide use of falsettists (though not always so called), sometimes alongside boy trebles, or taking the alto part, until the late 18th and early 19th centuries. The practice then grew less common in some countries as it gradually became more acceptable to admit women to choirs. Even in mixed choirs, second-mode singers survived (Toscanini once used ten in a performance of Verdi's *Requiem*). Eventually, however, musical fashion (and erroneous association with castration) ensured the near-disappearance, from mainland Europe, of second-mode singing for several decades. Domenico Mancini (*b* 1891), a falsettist pupil of the last castrato, Alessandro Moreschi (*d* 1921), was refused entry to Lorenzo Perosi's music school, because Perosi, director of the Sistine Chapel Choir, regarded him as a castrato. It is only in England that second-mode singing enjoyed an uninterrupted, widespread tradition, particularly in all-male cathedral and collegiate choirs, academia and the glee club tradition. In the late 20th century falsetto singing came to be used in some types of popular music (notably by Michael Jackson).

Falsobordone (It.: 'false bass', from Fr. *fauxbourdon*). A chordal recitation based on root position triads, with the form and often the melody of a Gregorian psalm tone. Mostly intended for the singing of vesper psalms, *falsobordoni* are in two sections, each made up of a recitation on one chord followed by a cadence. As a style, the *falsobordone* occurs in a wide variety of compositions from the 15th century to the 18th, particularly in psalms, responses, Passions, Lamentations, reproaches, litanies and settings of the *Magnificat*. It is found less often in other pieces, such as masses, villancicos, frottolas, *laude*, madrigals, operas and sacred concertos.

The 'classical' form and style of the *falsobordone*, associated with the harmonization of psalm tones, appeared in southern Europe in the 1480s. It was known in Spain as 'fabordón', a variant of the French 'fauxbourdon', but there is little apparent connection between the two beyond that of the name. Unlike the older fauxbourdon, both the Italian *falsobordone* and the Spanish *fabordón* chiefly use root position triads and have all four parts written out. The origins of the style probably do not lie, as some claim, in organum, chordal declamation, the 'formulae' of certain theorists, or fauxbourdon, but rather in the addition of late 15th-century cadences to the Gregorian psalm tones. Its close relation to these Gregorian melodies is shown by the fact that a *falsobordone* performance was sometimes called *mos gregorianus* (*more gregoriano*). There is strong evidence, too, that singers improvised *falsobordoni* in the late 15th century and certainly in the early 16th. Clarity of form, *a cappella* style, triadic writing, four-part harmony, homophonic texture (especially in the recitations) and a bass line that moves by 4ths and 5ths are striking features of these early pieces (ex.1; crosses in the tenor mark the cantus firmus). The genre is thus a perfect example of the monumental change taking place in the late 15th century from successive to simultaneous composition. The performance of *falsobordoni* may have involved full chorus, soloists, a single soloist supported by instruments, or instruments alone. Instrumentalists usually embellished the repeated

Ex.1 Tone VII, *P-Cug* M.12 (*c*1500)

Di - xit Do - mi - nus Do - mi - no me - o

se - de a dex - tris me - is

chords of the recitations, just as soloists embellished the cadences.

In the second half of the 16th century (about 1570) composers began to treat the psalm tone melody loosely and eventually abandoned it, but the style and form of the *falsobordone* remained intact. *FalsObordoni* for keyboard, such as Cabezón's *Fabordon y glosas del octavo tono* (W. Apel, *Musik aus früher Zeit für Klavier*, Mainz, 1934, ii, 18ff), were especially important examples of the genre; it is likely that such pieces, with their cantus firmus treatment and idiomatic style, were models for later Venetian intonations and toccatas. In Venice the use of *falsobordoni* alternating with Gregorian chant psalm verses also played a key role in the later development of Venetian polychoral music. *Falsobordoni* may have had an earlier influence on many keyboard preludes; some by Kleber, Kotter and Jan z Lublina, for example, are based on psalm tones. *Falsobordoni* also appeared as solo songs with accompaniment (Mudarra, Guerrero, Santa María) and as embellished pieces or *falsobordoni passaggiati* (Bovicelli).

After about 1600 *falsobordoni* were almost invariably accompanied by a *basso seguente*, and compositions for solo voices and basso continuo began to appear (Viadana, Banchieri, Victorinus). Embellished *falsobordoni* were equally in demand (Viadana), or were embellished in performance as a matter of course (see Schütz's preface to *Historia der ... Aufferstehung ... Jesu Christi*, 1623), and the style often took on an agitated spirit characteristic of the early Baroque period (Monteverdi, Conforti, Severi). Although theorists continued to mention the genre, after 1640 it existed mostly as a tradition, cultivated above all in the Cappella Sistina, but also in Spain (Lorente), southern Germany (Bernabei), and to a far lesser extent Protestant Germany (as at Leipzig, where Calvisius, Schein, Vopelius and J.S. Bach wrote or printed such pieces). At the time when the practice of *falsobordone* writing was declining on the Continent, however, it received fresh impetus in England where it came to be known as ANGLICAN CHANT. English *falsobordoni* had appeared as early as the 16th century and were cultivated throughout the following years, but publications increased dramatically after 1750. On the Continent, it was revived as part of the 19th-century Cecilian movement, and *falsobordoni* appeared in scholarly editions of early music (Proske, Pedrell). The *Motu proprio* of 1903 allowed the genre a continuing place in the Catholic liturgy, a place it still holds in parallel liturgies, such as Anglican and Lutheran.

MURRAY C. BRADSHAW

Falter & Sohn. German firm of music publishers. It was founded by Macarius (Franz de Paula) Falter (*b* Taiskirchen, 2 Jan 1762; *d* Munich, 24 Sept 1843), who first worked in Munich as a piano teacher. From 1788 he held a concession for the sale of manuscript music paper and printed music; the first piece of music under his imprint appeared in 1796. About 1813 Falter's son Joseph (1782–1846) was taken into the firm; he had in the meantime been involved in instrument dealing and music lending. On 4 April 1827 the firm was sold to Sebastian Pacher and after his death on 13 March 1834 it was carried on by his widow Thekla Pacher (1805–79). From 1861 to 1874 the business was owned by Otto Halbreiter (1827–1910), who opened another music selling business which continued until 1933. Among later owners of Falter & Sohn were Ferdinand Neustätter, his wife Helene and Friedrich Schellhass (1885). On 22 June 1888 the name of Falter & Sohn was deleted from the register of firms; all the rights were transferred to the Munich music publisher Joseph Aibl.

Besides works by Haydn, Pleyel and other well-known masters, the firm published principally (later almost exclusively) Munich composers, including Cannabich, Peter Winter, Theobald Boehm, Ett, Stuntz, K.M. Kuntz and Perfall. The plate numbers reached 200 in about

1806, 500 in 1840–41 and 700 in 1848; numerous editions appeared without numbers, many of these on commission. A series of editions bore the stamp of Falter & Sohn in conjunction with B. Schott (Mainz and Paris) and A. Schott (Antwerp).

HANS SCHMID

Faltin, Friedrich Richard (*b* Danzig [now Gdańsk], 5 Jan 1835; *d* Helsinki, 1 June 1918). Finnish conductor, organist and composer of German birth. He began his musical education at the age of seven in his native city, studying the organ with Markull, and continued his studies in Dessau with Friedrich Schneider (1852–3) and, at the Leipzig Conservatory (1853–6 and 1861–2), with Moscheles, Ferdinand David and Hauptmann. In 1856 he moved to Viipuri, Finland (now Vyborg in Russia), where he organized chamber concerts, founded a choral society and an orchestra, and taught music at the Behm School. He settled in Helsinki in 1869 and conducted the orchestra of the New Theatre; in the following year he succeeded Pacius as *Musikdirektor* of Helsinki University. In 1871 he became organist of the church of St Nicholas, a post he held for more than four decades. From 1870 he began to conduct opera, and from 1873 to 1883 conducted the orchestra of the Finnish Opera. In 1882 he co-founded the Helsinki Music Institute, where he taught organ until 1910.

Faltin introduced many important works to Finnish audiences, including Haydn's *The Seasons* (1872), Bach's *St Matthew Passion* (1875), Schumann's *Das Paradies und die Peri* (1878) and Brahms's *German Requiem* (1881). He composed an orchestral overture, a string quartet, three books of chorales, choral and organ works, in addition to numerous songs (he also published a collection of Finnish folksongs); his work was distinguished by solid craftmanship, and he wrote especially well for the voice. His most significant contribution to the developing Finnish musical life, however, was his influence as a teacher and performer.

ROBERT LAYTON/ILKKA ORAMO

Faltis, Evelyn (*b* Trautenau [now Trutnov], Bohemia, 20 Feb 1890; *d* Vienna, 19 May 1937). German composer of Bohemian origin. She was educated at the Assomption convent in Paris, then studied at the Vienna Music Academy, where her teachers included Robert Fuchs and Mandyczewski; she also studied with Draeseke and Eduard Reus at the Dresden Hochschule für Musik, where she won a prize for her *Phantastische Sinfonie* (op.2*a*), and with Sophie Menter in Munich. She was the first woman to coach solo singers at Bayreuth (1914) and became the soloists' répétiteur at the Nuremberg Stadttheater am Ring and the Darmstadt Hoftheater; from 1924 she worked for the Städtische Oper in Berlin. Her modest output of compositions includes the symphonic poem *Hamlet* (op.2*b*); a piano concerto (op.3); two string quartets (opp.13*a*, 15), a violin sonata (op.6) and other chamber works; choral works, including a Mass (op.13*b*); and about twenty songs (opp.7, 8, 10, 14, op. posth.). Many of her works were published by Ries & Erler.

BIRGITTA MARIA SCHMID

Falusi, Michele Angelo (*b* Rome; *fl* 1683–4). Italian composer. He was a Minorite and a doctor of theology. In 1683–4 he was *maestro di cappella* of the church of the SS Apostoli, Rome. He published *Responsoria Hebdomadis Sanctae*, for four voices and organ, op.1 (Rome, 1684), and a motet for four voices and continuo appears in an anthology (RISM 1683[1]).

□

Falvy, Zoltán (*b* Budapest, 28 Aug 1928). Hungarian musicologist. He studied music in Budapest at the National Conservatory and the Academy of Music, and took a doctorate at the university in 1952 with a dissertation on manuscripts containing music in Budapest libraries. While working in the music department of the National Széchényi Library (1952–61) he was head of the music section at the Hungarian Academy of Sciences (1956–61), where in 1961 he helped to establish the Bartók Archives, becoming a research assistant and then scientific secretary. In 1963 he took a *kandidátus* degree in musicology with a dissertation on the music of three Hungarian rhymed Offices, which in 1964 served as his *Habilitationsschrift* at Budapest University, where he has lectured on medieval music. After directing the music history museum at the Musicological Institute of the Hungarian Academy of Sciences (1970–73), he became assistant director and subsequently director (1980–98) of the institute. He took the DSc in musicology in 1986. He is a member of the editorial board of *Studia musicologica*. His research is chiefly concerned with the connection between Hungarian and European early music, particularly medieval music; he has studied analogies between their melodies and notation, the development of the antiphon and other early forms, the music of the Hungarian troubadours and music of the 16th to 18th centuries.

VERA LAMPERT

Familiar style. A term in general use to denote homophonic or note-against-note texture in Renaissance polyphonic music (*see* TEXTURE). Loys Bourgeois seems to have been the first to use the term; in his description of the three styles contained in the 1547 publication *Le premier livre des pseaulmes*, a style called 'familiere, ou vaudeville' was described as being a free note-against-note style that allowed for some ornamentation, either in the melody or in the accompanying voices. The term seems to have acquired its present currency from its usage by Giuseppe Baini (in Italian, 'stile familiare') in his biography of Palestrina (*Memorie storico-critiche*, ii, Rome, 1828/*R*, pp.415ff) as a synonym for 'stile semplice', in contrast to the contrapuntal style or 'stile artifizioso'.

STEPHEN R. MILLER

Famintsïn, Aleksandr Sergeyevich (*b* Kaluga, 5 Nov 1841; *d* Ligovo, nr St Petersburg, 6 July 1896). Russian music historian, critic and composer. He had well-to-do parents and studied natural sciences at St Petersburg University and music privately with M.L. Santis; from 1862 to 1864 he studied privately and at the Leipzig Conservatory with Moritz Hauptmann, E.F. Richter and Carl Riedel, and also (1864–5) studied instrumentation with Max Seifriz at Löwenberg. Returning to St Petersburg he was appointed professor of music history and aesthetics at the conservatory (1865–72); between 1869 and 1871 he edited the periodical *Muzïkal'nïy sezon* and later contributed to Bessel's *Muzïkal'nïy listok* and other journals. From 1870 to 1880 he was secretary to the directorate of the Imperial Russian Musical Society. His four-act opera *Sardanapal* was produced in 1875 and the vocal score was published by Bessel, but it had so little success that his second opera, the four-act *Uriel Acosta* (1883), was never performed (though a vocal score was published by Rahter of Hamburg).

Famintsïn devoted his later years to a series of historical monographs of some value and to a dictionary of Russian musicians which he never completed. He also translated into Russian pedagogical works by Richter (on harmony, and on counterpoint and fugue), Draeseke (on modulation) and A.B. Marx, and published two collections of folksongs, *Russkiy detskiy pesennik* ('Russian Children's Songbook') and *Bayan* (1888). But he is chiefly remembered for his critical writings in which he scathingly attacked the music of the Balakirev-Stasov circle from the point of view of the German academicism in which he was steeped; in return he was libelled by Stasov for his share in an intrigue to get Balakirev replaced as conductor of the Russian Musical Society's concerts by his own friend Seifriz, and lampooned by Musorgsky in two songs, *The Classicist* and *The Peepshow*.

WORKS

Operas: Sardanapal (Ye. Zorin and D.L. Mikhalovsky, after Byron), op.8, St Petersburg, Mariinskiy, 5 Dec 1875, vs (St Petersburg, ?1875); Uriel Acosta (Mikhalovsky, after Gutzkow), op.18, 1883, vs (Hamburg, n.d.)
Other: Shestviye Dionisiya [The Procession of Dionysus], sym. picture; Russian Rhapsody, vn, orch; Str Qnt; Str Qt, E♭, op.1 (Leipzig, 1869); Serenade, d, str qt, op.7 (Berlin, 1877); numerous pf pieces, songs

GERALD ABRAHAM

Fancelli, Giuseppe (*b* Florence, 24 Nov 1833; *d* Florence, 23 Dec 1887). Italian tenor. Of humble origins, he made his début in 1860 at La Scala, Milan as the Fisherman in *Guillaume Tell*. After engagements in Ancona, Rome and Trieste, he sang Vasco da Gama in Meyerbeer's *L'Africaine* at La Scala (1866) and in the same year made his London début as Alfredo at Covent Garden, where he later sang Edgardo, Elvino, Ernesto, Raoul (*Les Huguenots*) and Tonio (*La fille du régiment*) among other roles. His most important appearance was as Radames in the first Italian performance of *Aida*, at La Scala in 1872. At La Scala he also sang Manrico, Don Carlos and Don Alvaro (*La forza del destino*). His robust, vibrant voice, with its true intonation and particularly strong upper register, was effective in many roles, but he lacked musical education and his acting ability was severely limited. (*ES*, R. Celletti)

ELIZABETH FORBES

Fanciulli, Francesco (*b* Porto S Stefano, nr Orbetello, 29 May 1853; *d* New York, 17 July 1915). American bandmaster and composer of Italian birth. He attended the conservatory in Florence, and became a leading theatre performer, touring Italy as a cornet virtuoso; he them returned to Florence as an opera conductor and composer. In 1876 went to the USA, settled in New York, and worked as a church organist and singing teacher; he also composed and arranged several works for the famous Gilmore Band. In the 1880s he conducted concerts of the Mozart Musical Union, an amateur orchestra association, and in the early 1890s toured New England as conductor of the Lillian Durell Opera Company. In 1892 he succeeded Sousa as leader of the US Marine Band in Washington, DC. His career there came to an abrupt end in 1897 when he refused an officer's order to change the marches he had selected for a Memorial Day parade. The subsequent inquiry would have resulted in a dishonorable discharge had Theodore Roosevelt, then acting Secretary of the Navy, not interceded; nonetheless, Fanciulli's contract as director of the US Marine Band was not renewed. He returned to New York, was named leader of the 71st Regiment Band of the New York National Guard, began a popular series of concerts in Central Park and appeared at the opening of the Pan American Exposition in Buffalo in 1901. Fanciulli's compositions include five operas, band, orchestral, choral and chamber works, piano pieces and songs. His manuscripts are in the Americana Collection of the New York Public Library at Lincoln Center.

FRANK J. CIPOLLA

Fancy. *See* FANTASIA.

Fandango (Sp.). A couple-dance in triple metre and lively tempo, accompanied by a guitar and castanets or *palmas* (hand-clapping). It is considered the most widespread of Spain's traditional dances. The sung fandango is in two parts: an introduction (or *variaciónes*), which is instrumental, and a *cante*, consisting of four or five octosyllabic verses (*coplas*) or musical phrases (*tercios*), sometimes six if a verse (usually the first) is repeated. Its metre, associated with that of the bolero and *seguidilla*, was originally notated in 6/8, but later in 3/8 or 3/4.

Its origins are uncertain, but its etymology may lie in the Portuguese *fado* (from Lat. *fatum*: 'destiny'); in early 16th-century Portugal the term *esfandangado* designated a popular song. The earliest fandango melody appears in the anonymous *Libro de diferentes cifras de guitarra* (*E-Mn* M.811; 1705), while its earliest (albeit brief) description is found in a letter dated 17 March 1712 by Martín Martí, a Spanish priest. The term's first appearance in a stage work is in Francisco de Leefadeal's *entremés El novio de la aldeana* (Seville, early 1720s). By the late 18th century it had become fashionable among the aristocracy as well as an important feature in *tonadillas*, zarzuelas, ballets and other stage works.

Various suggestions have been made about the fandango's origins, including that it is related to the *soléa*, *jabera* and *petenera* (Calderón); that the Andalusian

Fandango: frontispiece from C.A. Fischer's 'Voyage en Espagne aux années 1797 et 1798' (Paris, 1801)

malagueña, *granadina*, *murciana* and *rondeña* are in fact fandangos accompanied by guitar and castanets (Ocón); that its forebears include the *canario* and *gitano* (Foz); that it is derived from the *jota aragonesa* (Larramendi, Ribera), although Ribera also proposed an earlier Arabic origin; and that the Arabic *fandûra* (guitar) may be a possible etymological source (Pottier). Yet the two prevailing theories point to either a West Indian or Latin American origin (*Diccionario de Autoridades*), although Puyana strongly suggests that the *fandango indiano* came from Mexico; (see also Osorio); or a North African origin (Moreau de Saint-Méry).

One must distinguish between the varied provincial forms that the classical fandango assumed through multi-regional Spain during the 18th and early 19th centuries, and its role in FLAMENCO, in which it approaches *cante jondo*, with its florid and non-metric performance, in contrast to the *fandanguillo* of *cante chico* (*see* CANTE HONDO).

Numerous travel accounts of the 18th and 19th centuries were highly critical of the overtly sensual fandango wherever it was performed (see Etzion). A threatened ban by the church resulted in a trial during which the pope and cardinals witnessed a performance of a fandango and saw no reason to condemn it. This event, reported in a letter by P.A. Beaumarchais dated 24 December 1764, provided the subject for late 18th-century Spanish *comedias*, and much later for Saint-Léon's ballet *Le procès du fandango* (1858). The Spanish

fandango, like the bolero and *cachuca*, enjoyed great popularity in Parisian theatres in the 19th century; Arthur Sullivan wrote a *cachuca* for the chorus 'Dance a cachucha, fandango, bolero' in the second act of *The Gondoliers* (1889).

From the 18th century fandangos have been incorporated by composers into both stage works and instrumental pieces. Notable examples include Rameau's 'Les trois mains' (*Nouvelles suites de pièces de clavecin*, *c*1729–30); Domenico Scarlatti's *Fandango portugués* (K492, 1756), 'Fandango del Sig^R Scarlate' (attribution doubtful; see Puyana) and an unedited fandango (see Alvarez Martínez); part 2 no.19 of Gluck's *Don Juan* (1761); the third-act finale of Mozart's *Le nozze di Figaro* (1786); the finale of Boccherini's String Quartet op.40 no.2 (1798); Antonio Soler's *Fandango* for keyboard (late 18th-century; attribution doubtful); Adolphe Adam's opera *Le toréador* (1849); Gottschalk's *Souvenirs d'Andalousie* op.22 (1855); Rimsky-Korsakov's *Spanish Capriccio* (1887); Albéniz's *Iberia* (1906–9); Granados's 'Fandango de Candil', *Goyescas* no.3 (1911); Falla's *El sombrero de tres picos* (1919); Ernesto Lecuona's song *Malagueña* (1928); and Ernesto Halffter's ballet *Sonating* (1928). Ravel's original choice for the title of his *Bolero* (1928) was *Fandango*. Beethoven's sketchbook of 1810 also contains a fandango theme.

Fane, John, Lord Burghersh. *See* BURGHERSH.

Fanelli, Ernest (*b* Paris, 29 June 1860; *d* Paris, 24 Nov 1917). French composer. He studied at the Paris Conservatoire (from 1876), where his teachers included Antoine-François Marmontel, Valentin Alkan, Jule Laurent, Anacharsis Duprato and Léo Delibes. Without means or patronage and unable to secure performances of his compositions, he worked as a copyist and music engraver for many years. In 1912, having abandoned composing in 1894, he applied to Pierné for work as a copyist, submitting one of his own scores as a sample of his hand. Pierné noticed that Fanelli's musical language was advanced for its day, anticipating that of Debussy by some years. His interest resulted in performances of Fanelli's symphonic poem *Thebes* (1883) and the massive *Impressions pastorales* (1890) by the Concerto Colonne under his direction. In spite of this belated success, Fanelli never returned to composition. His works feature elements, such as whole-tone harmonies, commonly associated with Debussy. Fond of wind band timbres, he included sarrusophones and saxhorns in some of his orchestral scores. Musical examples from his works were reproduced by Lenormand in his *Etude sur l'Harmonie Moderne* (Paris, 1913).

WORKS

Op: Les deux tonneaux (opera buffa, 3, Voltaire), *c*1879

Orch: St Preux à Clarens, 1881; Tableaux symphoniques, 1882–6; Thebes, sym. poem, 1883; Mascarade, 1889; Suite Rabelaisienne 1889; Au palais de l'escorial, 1890; Carnaval, 1890; Impressions pastorales, 1890; Marche héroique, 1891

WILLIAM H. ROSAR

Fanfani, Giuseppe Maria (*b* ?Florence, before 1723; *d* ?Florence, after 1757). Italian violinist and composer. Fanfani dedicated a set of sonatas to Prince Giovanni Gastone de' Medici some time between 1713 and 1723 (see M. Cole: 'A Sonata Offering for the Prince of Tuscany', *CMc*, xvi, 1973, pp.71–8). In 1726 J.J. Quantz heard him perform in Florence with members of the grand-ducal chapel. Fanfani officially succeeded Martino Bitti as principal court violinist there in 1743. His 12 surviving violin sonatas (*I-Fn*) are of inferior quality.

JOHN WALTER HILL

Fanfare (Fr. *fanfare*; Ger. *Fanfare*; It. *fanfara*). (1) A flourish of trumpets or other brass instruments, often with percussion, for ceremonial purposes. Fanfares are distinct from military signals in usage and character. In addition to its musical meaning, 'fanfare' has always had a figurative meaning. The root, *fanfa* ('vaunting'), goes back to late 15th-century Spanish. Although etymologists believe the word to be onomatopoeic, it may in fact be derived from the Arabic *anfár* ('trumpets'). The word 'fanfare' occurs for the first time in French in 1546 and in English in 1605, in both instances figuratively; it was first used to signify a trumpet flourish by Walther, although it may have been used earlier to mean a hunting signal: See (3) below.

Walther, Altenburg and an anonymous 18th-century author belonging to the Prüfende Gesellschaft in Halle all agreed that a fanfare was 'usable on all days of celebration

and state occasions' and consisted of 'a mixture of arpeggios and runs' improvised by trumpeters and kettledrummers (J.E. Altenburg, 91); a 'flourish' in the British Army during the same period was 'without any set rule'. Heyde has shown that this type of unreflective improvisation, the purpose of which was to glorify a sovereign, goes back to trumpeters' *classicum*-playing during the Middle Ages. The effect of a medieval *classicum* (a field or battle signal) or an 18th-century fanfare was due to sheer noise rather than musical merit. About 100 trumpeters and fifers produced 'such a din' at the wedding of George the Rich in 1475 'that one could hardly hear one's own words'. Walther said that a fanfare 'indeed makes enough noise and strutting, but otherwise hardly smacks of art'. And in 18th-century French music 'fanfare' denotes a short, bustling movement with many repeated notes. This genre may have been influenced by the hunting signal.

It was during the 19th century that the term came to mean a brief composition consisting of a ceremonial flourish for brass (and percussion). The flourish composed by Beethoven for a single trumpet to announce the arrival of the Governor during the last act of *Fidelio* (first produced in 1805), and incorporated in the *Leonore* overtures nos.2 and 3 (1805–6), would probably have been called a signal rather than a fanfare. As well as coronation fanfares by eminent British composers, notable examples have been written in the 20th century by Dukas (*La péri*, 1911), Jolivet (*Fanfare pour Britannicus*, 1946), Copland (*Fanfare for the Common Man*, 1942), Stravinsky (*Fanfare for a New Theatre*, 1964, a brief serial composition for two trumpets), Petrassi (an extended composition for three trumpets, 1944, rev. 1976) and Ginastera (four trumpets, 1980). Britten's *Fanfare for St Edmundsbury* (1959) for three trumpets is a polytonal work in which each trumpet is assigned the notes of a single harmonic series, on F, C and D respectively. A number of fanfares by composers such as Falla, Satie, Bliss and Milhaud were printed in *Fanfare*, a fortnightly paper on contemporary music and the arts published from October 1921 to January 1922 under the editorship of Leigh Henry.

(2) Any short prominent passage for the brass in an orchestral work.

(3) A signal given in the hunt, either on 'starting' a stag or after the kill when the hounds are given their share of the animal (this is an exclusively French usage).

(4) In 19th-century France and Italy, a military or civilian band consisting mainly or entirely of brass instruments.

(5) In German colloquial speech, a misnomer for *Fanfarentrompete*, a modern natural trumpet usually built in E♭.

See also Military calls and Signal (i).

EDWARD H. TARR

Fano, (Aronne) Guido Alberto (*b* Padua, 18 May 1875; *d* Tauriano di Spilimbergo, Friuli, 14 Aug 1961). Italian composer, pianist, conductor and teacher. He studied in Padua with Vittorio Orefice and Cesare Pollini (piano), who sent him in 1894 to Martucci at the Bologna Liceo Musicale. There he took a composition diploma (1897) and a law degree at the university (1901). Subsequently he studied in Germany, meeting Busoni, who advised and encouraged him. In 1900 he was appointed piano professor at the Bologna Liceo, and he then directed the conservatories of Parma (1905–12), Naples (1912–16) and Palermo (1916–22), ending his career as a piano teacher at the Milan Conservatory (1922–38, 1945–7). He worked intensively in each of these cities as a pianist, conductor, writer, promoter and instructor of young musicians. As a composer he followed the example of Martucci, both in his classical instrumental style and in his basically italianate melody, though he differed from his teacher in his great love for operatic music.

FABIO FANO/ROBERTA COSTA

Fano, Michel (*b* Paris, 9 Dec 1929). French composer. At the Paris Conservatoire his principal teachers were Boulanger (accompaniment, 1948–50) and Messiaen (analysis, 1950–53). His acquaintance with Boulez from 1950 led him to a fundamental rethinking of music and composition, and the few instrumental works that he has not withdrawn date from this period. The Sonata for two pianos represents one of the earliest attempts at a comprehensive serialization of durations and dynamics

(R. Toop: 'Messiaen/Goeyvaerts, Fano/Stockhausen, Boulez', *PNM*, xiii/1, 1974–5, 141–69). It was first performed at the 1952 Donaueschingen Festival by the Schmidt-Neuhaus duo, then at Boulez's Domaine Musical concerts. Also in 1952 the Etude for 15 instruments was composed for Darmstadt. Deeply impressed by *Wozzeck*, which drew his attention to the relationship between sight and sound, in 1954 he abandoned 'pure' composition to become an apprentice of the American film director Noel Burch. Since that time almost all of Fano's work, whether as director, producer, composer or sound editor, has been for the cinema.

His first film was *Chutes de pierre* (1958), which he directed and for which Hodeir provided the score. The following years saw a fruitful collaboration with Robbe-Grillet (most notably in *Trans-Europ express*) and a highly original documentary film about animals, *Le territoire des autres*, in which Fano's *musique concrète* soundtrack plays an important structural role. He rejects the customary conception of film music, regarding all of the sound elements in the film – speech, noises and music – as materials for composition and as interacting events. In the case of *Le territoire des autres*, the sound and visual parts of the film were prepared alongside each other; sophisticated editing techniques made possible a close integration of natural and artificial sounds, and a precise definition of relationships between images and soundtrack.

DOMINIQUE JAMEUX

Fanshawe, David (Arthur) (*b* Paignton, 19 April 1942). English composer and ethnomusicologist. On leaving school he worked in documentary films as an apprentice editor but in 1965 took up a scholarship at the RCM, where his teachers included John Lambert. His passion for world traditional music influenced his early composition *Salaams*, first performed at the Queen Elizabeth Hall in 1970, for which he drew on music from Bahrain. He scored a major international success with *African Sanctus*, which was inspired by expeditions to Egypt, Sudan, Uganda and Kenya (1969–72), and became the subject of a 1975 BBC TV documentary. The score combines field recordings of traditional music with a Western mass setting, including sections in a pop idiom, and the original recording achieved a gold disc; the work, which has been choreographed, was extended in 1993 by the addition of a concluding *Dona nobis pacem*. His writings include *African Sanctus: a Story of Travel and Music* (London, 1975).

Between 1978 and 1989 Fanshawe travelled extensively in the Pacific islands, collecting material for his compositional project *Pacific Odyssey*. He owns a collection of several thousand tape recordings of traditional musics, principally from Africa and the Pacific, which form part of a multi-media archive (The Fanshawe Collections), and he has produced several commercial recordings from the material it contains.

WORKS
(*selective list*)

Requiem for the Children of Aberfan, orch, 1968; Salaams, vv, pf, perc, 1970; African Sanctus, S, vv, ens, tape, 1972; Pacific Odyssey, 1978–; The Awakening, intermezzo, vc/va, pf, 1992; Dona nobis pacem: a Hymn for World Peace, S, vv, ens, tape, 1993; Celtic Lullaby, vv, 1998; Millennium Fanfare and Millennium March, orch/band, 1999

Film scores: Tarka the Otter (dir. D. Cobham), 1987; Dirty Weekend (dir. M. Winner), 1993

Incid music for TV: Softly Softly; Three Men in a Boat; When the Boat Comes In

Principal publisher: Warner/Chappell

MERVYN COOKE

Fantasia (It., Sp., Ger., Eng.; Eng., Fr., Ger. *Fantasie*; Fr., Ger. *Phantasie*; Fr. *fantaisie*, *fantasye*, *phantaisie*; Eng., Ger. *Phantasia*; Ger. *Fantasey*; Eng. fancie, fancy, fansye, fantasy, fantazia, fantazie, fantazy, phansie, phantasy, phantazia). A term adopted in the Renaissance for an instrumental composition whose form and invention spring 'solely from the fantasy and skill of the author who created it' (Luis de Milán, 1535–6). From the 16th century to the 19th the fantasia tended to retain this subjective licence, and its formal and stylistic characteristics may consequently vary widely from free, improvisatory types to strictly contrapuntal and more or less standard sectional forms.

1. To 1700: (i) Terminology (ii) Italy (iii) Spain (iv) France (v) Netherlands (vi) Germany (vii) Poland (viii) Great Britain. 2. 18th century. 3. 19th and 20th centuries.

1. To 1700.

(i) Terminology. In the general senses of 'imagination', 'product of the imagination', 'caprice', derivatives of the Greek 'phantasia' were current in the principal European languages by the late Middle Ages. The term was used as a title in German keyboard manuscripts before 1520, and in printed tablatures originating as far apart as Valencia, Milan, Nuremberg and perhaps Lyons by 1536. Its earliest appearances in a musical context focus on the imaginative musical 'idea', however, rather than on a particular compositional genre. A three-part, imitative, textless composition by Josquin is headed 'Ile fantazies de Joskin' (*I-Rc* 2856, *c*1480–85; ed. in New Josquin Edition, 27.15), but it is doubtful whether this title had generic significance; more probably it was intended to emphasize the 'freely invented' (rather than borrowed) nature of the motivic material. Similarly a letter written by the Ferrarese agent Gian to Ercole d'Este on 2 September 1502 refers to Isaac's four-part instrumental piece *La mi la sol la sol la mi* (ed. in DTÖ, xxviii, Jg.xiv/1, 1907/*R*) as 'uno moteto sopra una fantasia': here it is clearly the eight-note *soggetto ostinato* that is signified by the term 'fantasia'.

When Hermann Finck (1556) referred to 'the requirements of Master *Mensura*, Master *Taktus*, Master *Tonus* and especially Master *Bona fantasia*', he meant to stress the importance of musical imagination. The sense of 'the play of imaginative invention' underlies the word's use as a title in the 16th century, notably by lute or vihuela *improvvisatori* such as Francesco Canova da Milano and

Luis de Milán. Elsewhere it may signify actual improvisation on an instrument, as when Bermudo and Santa María wrote of the art of 'tañer fantesia'.

From the outset, the term was used interchangeably with other generic names like *recercar* and *Preambel*. With Francesco da Milano there is little or no distinction between 'fantasia' and 'recercar'; the same piece often bears different labels in different sources, and both words may even be found in combination (as when Pontus de Tyard describes Francesco sitting down with his lute 'à rechercher une fantaisie'). But 'fantasia' seems to have been the more colloquial name: Bottrigari (1594) spoke of a ricercare from Padovano's *Primo libro* as 'a certain "fantasia" (as the instrumentalists say) of his'. Classification of the fantasia as a kind of prelude occurred especially in Germany and the Netherlands, from the *Preambeln* of Neusidler and Gerle to Praetorius (who described it under a heading, 'Of Preludes in their own right'). The word was equated at different times with *tentos* (Milán), *voluntary* (Byrd sources, Mace), *automaton*, which means much the same (Phalèse), *capriccio* (Lindner, Praetorius, Froberger sources), *canzon* (Terzi, Banchieri), or *fuga* (Banchieri, Hagius, Scheidt, Froberger sources). In Spain, the technical benefit of fantasias for 'exercising the hands' was frequently emphasized.

An essential of the fantasia is its freedom from words. The musician was free 'to employ whatever inspiration comes to him, without expressing the passion of any text' (*MersenneHU*, 1636–7); where voices were used, as by the vihuelists Diego Pisador and Esteban Daza or in ensemble fantasias 'for singing and playing', it was to sol-fa. Point-of-imitation technique (a development of vocal polyphony) appeared early, however, and not only in ensemble fantasies: the illusion of the solo lutenist spinning a web of imitative counterpoint had already been created by Marco Dall'Aquila, Francesco da Milano (who fused imitation with virtuoso instrumental style; ex.1), Luys

Ex.1 Francesco da Milano (Brown 1547₂, no. 5)

de Narváez (whose fantasias approach the style of motet transcriptions) and, most completely, by Valentin Bakfark. Tomás de Santa María (1565) stressed the importance of counterpoint in 'fantasia-playing'; Zarlino (3/1573, iii, chap. 26), writing of point-of-imitation technique, remarked: 'Such a manner of composing is demanded by the practitioners in composing from fantasy' ('comporre di fantasia'). By the late 16th century in Italy the fantasia (along with the ricercare) had become a touchstone of contrapuntal skill; free from words, a series of fugal sections might be given unity by recurrence of a subject, or an entire movement be fashioned from a single subject or theme-complex; themes were modified by inversion, augmentation and rhythmic transformation. A similarly exhaustive approach to the treatment of subjects was adopted by Sweelinck and other northern European organists.

In England, emphasis was rather on diversity of material. According to Morley (1597, p.162) monothematic fantasias were seldom essayed except 'to see what may be done upon a point' or 'to shew the diversitie of sundrie mens vaines upon one subject'. He insisted, however, on unity of mode, which was often made explicit in continental sources by designations such as 'Fantasia del primer tono'. His description of the 'fantasie' (ibid., p.181), borrowed by Praetorius (*PraetoriusSM*) and echoed by Simpson (*A Compendium of Practical Musick*, 1667), characterizes this 'chiefest kind of musicke which is made without a dittie' as

> when a musician taketh a point at his pleasure, and wresteth and turneth it as he list, making either much or little of it as shall seeme best in his own conceit. In this may more art be showne then in any other musicke, because the composer is tide to nothing but that he may adde, deminish, and alter at his pleasure .... Other thinges you may use at your pleasure, as bindings with discordes, quicke motions, slow motions, proportions, and what you list. Likewise, this kind of musick is with them who practise instruments of parts in greatest use, but for voices it is but sildome used.

A widespread type of the 16th and early 17th centuries is the 'parody' fantasia. This took as its starting-point material from a polyphonic model (motet, mass, chanson, madrigal or even another fantasia), often appearing in the source with an intabulation of the model itself. Early examples are those of Francesco da Milano, Enriquez de Valderrábano and G.P. Paladino; Claudius Sebastiani (1563) taught that student instrumentalists should practise decorating the end of a song or motet with 'a fantasia gathered from the said song'. The name 'fantasia' was also occasionally given to pieces treating a sacred or secular melody in cantus-firmus or paraphrase technique (Rocco Rodio, Eustache Du Caurroy, Paul Luetkeman, Mathias Reymann, Scheidt, Steigleder), but most of the 17th-century German chorale settings now classified as 'Choralfantasien' were not so called in the sources (*see* CHORALE FANTASIA.

The following discussion of the fantasia in the 16th and 17th centuries is organized by performing medium (lute, keyboard, consort) in each of the major European centres.

(ii) Italy. The term lent itself especially aptly to the imaginative, seemingly spontaneous creations of the early 16th-century lutenists. Pontus de Tyard (1555, p.114) told of a banquet at Milan

> where, among other rare pleasures got together for the satisfaction of these select people, was Francesco di Milan, a man regarded as having attained the ultimate perfection (if such be possible) in fine lute playing. The tables being cleared, he chose one, and, as if trying his

tuning, sat down at the end of it to seek out a *fantaisie*. No sooner had he excited the air with three strokes than conversation which had started up among the guests was silenced; and, having constrained them to face where he sat, he continued with such ravishing skill that little by little, making the strings languish under his fingers with his divine touch, he transported all who were listening into so blandishing a melancholy that . . . they were left deprived of every sense apart from hearing.

The first Italian publication actually to designate compositions *fantasia* (rather than *recercar*) appeared in Milan in 1536, with examples by Dall'Aquila (GMB, 94), Francesco da Milano, Alberto da Ripa (who reappeared at the French court as Albert de Rippe) and the Milanese lutenists Albutio and Borrono. Over 40 pieces by the 'divine' Francesco are termed 'fantasia' in their primary sources (HPM, iii–iv, 1970). These integrate point-of-imitation technique with often brilliant idiomatic play (inspired by the sound and feel of the lute). They include one explicit example of a parody fantasia, which appears as a companion-piece to an intabulation of its model (Richafort's *De mon triste et desplaisir*).

The fame of Francesco da Milano's fantasias is shown by imitations such as those of the Spaniard Valderrábano, and by widespread reprints and manuscripts. In the 50 years after his death, lute fantasias were published by Borrono; Francesco da Milano's pupil Fiorentino Perino; the Paduan priest Melchiore de Barberiis, whose *Contina* (1549) includes a fantasia on Verdelot's *Se mai provasti*, fantasias calling for different tunings, another which leaves upper parts to be added, another for two lutes at the octave, and four trim, non-imitative fantasias for seven-course guitar; Giulio Abondante, who on one title-page (1548) referred to *recercari di fantasia*; the Flemish-born Ioanne Matelart, who also provided five of Francesco da Milano's fantasias with second lute parts; Antonio di Becchi; Vincenzo Galilei, whose *Fronimo* (1568) includes eight fantasias, two being parodies on madrigals of Rore and Striggio; G.C. Barbetta; and Giacomo Gorzanis. Paolo Virchi's *Tabolatura* (1574) has fantasias for cittern; Besard published fantasias by Lorenzini and Fabrizio Dentice.

At the end of the century there are the lutebooks of G.A. Terzi and Simone Molinaro. Terzi's second book (1599/*R*) contains fantasias 'in modo di Canzon Francese' by himself, Francesco Guami (a transcription of an ensemble canzona), Giovanni Gabrieli, and Gabrieli's colleague Vincenzo Bellavere; a transcription of a canzona *a 4* by Florentio Maschera called *Canzon la Vilachiara, over fantasia*; and finally a 'canzona or fantasia' by Terzi for four lutes. Molinaro's first book (1599/*R*) includes 15 fantasias by Molinaro himself, 25 by his uncle G.B. Della Gostena (*maestro di cappella* at Genoa Cathedral), and one *sopra 'Susane un jour'* by Giulio Severino, which freely recomposes Lassus's chanson as a longer instrumental piece. Several of Molinaro's fantasias are on a single subject; diminution and inversion are used. The 12th, a monothematic fantasia whose subject is finally converted to triple time, is remarkable for its complete flatward orbit of the circle of fifths.

Ricercares were prominent in printed Italian keyboard music from 1523 onwards, but fantasias were comparatively rare. Two different types of fantasia are found in Neapolitan prints of 1575–6: three of the *fantasie sopra varii canti fermi* in Rodio's *Libro di ricercate* are woven around hymn or antiphon chants, a fourth around the melody *La Spagna*; the fantasia in Antonio Valente's *Intavolatura de cimbalo* (ed. C. Jacobs, 1973), on the other hand, is freely composed in two halves, expressive dissonance complementing toccata-like brilliance. A solitary, posthumously published *Fantasia allegra* (so called after the spirited treatment of its two points) represents the Venetian master of the ricercare, Andrea Gabrieli (ed. P. Pidoux, 1952, pp.3–5), although the improvising of a fantasia ('sonar di fantasia') in four-part counterpoint on a subject taken at random from the opening of a mass or motet was one of the tests for prospective organists of S Marco. Giovanni Gabrieli's *Fantasia quarti toni* might be considered as a written example of such a piece (ed. S. Dalla Libera, 1957).

Frescobaldi's first keyboard publication, his *Fantasie a quattro* (1608, coinciding with his election to S Pietro), consists of contrapuntal studies as disciplined as any ricercare (ed. P. Pidoux, 1950); indeed, the *Ricercari* of 1615 are altogether more diverse in construction. There are three *sopra un soggetto*, followed by three each on two, three and four subjects. The first three exemplify the technique of thematic variation that Frescobaldi was to develop further in his canzonas: sections are based on successive transformations of the subject, which is distorted rhythmically, inflected melodically, reshaped in triple time, fragmented, inverted. In the polythematic fantasias, the different subjects are treated not one by one, but in combination. The 11th, for example, opens with a section in which the four subjects are heard interlocked in various contrapuntal permutations; next comes a section based on new, livelier versions of the four themes; finally, each subject in turn is presented by a different voice as a cantus firmus, while all four subjects play about it. After Frescobaldi the fantasia almost disappeared from Italian keyboard music: Banchieri's *Organo suonarino* (3/1622) includes two-part fantasias for the instruction of the 'budding organist', and by Bernardo Pasquini there is part of a monothematic fantasia in the Frescobaldi tradition (CEKM, v/1, 1964), but these are rare examples.

The term 'fantasia' was not applied only to instrumental solos in the mid-16th century. When the ricercares of *Musica nova* (RISM 1540[22]) were reprinted in France, they were called 'phantaisies'; in Italy, too, they may have been familiarly referred to as 'fantasie', just as one of Padovano's *Ricercari* (1556) was called 'fantasia' by Bottrigari. Such interchangeability of terms is confirmed by other sources; for instance, Antonio Gardane's *Fantasie recercari contrapunti* (1551) has no piece actually entitled 'fantasia'. The first printed partbooks to admit the name are the *Fantasie et recerchari a tre* (1549) of Giuliano Tiburtino and Willaert. Tiburtino's pieces are labelled with the solmization syllables of their incipits, except for one (which unlike the rest is not based on a single subject) headed 'fantasia'. Like Giovanni Bassano's *Fantasie a tre* (1585) they are 'for singing and playing on instruments of any kind'.

Any study of the fantasia's development in Italy in the 1550s and 60s needs to take into account four masterly four-part examples by 'Giaches', which have been variously attributed to Giaches de Wert (MacClintock, 1966) and Jacques Brunel. One is found in a keyboard intabulation by Antonio de Cabezón (see Pinto, 1994), so the latter attribution is perhaps the more likely. All four fantasias show a tendency to build from a small number of themes, using contrapuntal devices and thematic

variation. Sometimes a subject undergoes hexachordal inversion; one fantasia is an extended treatment of a single subject. Bassano, in his 20 fantasias (composed perhaps for Count Bevilacqua's *accademia* at Verona) generally followed a clear-cut first section with new material, working sometimes with one, sometimes two points at a time; even when inversion is used, or themes recur, lightness of touch remains paramount (seven ed. in HM, xvi, 1958).

The term 'ricercari' heads the consort collections of Andrea Gabrieli, Luzzaschi, Francesco Stivori and others, but a few 'fantasias' were printed in miscellanies. Ludovico Agostini's *Il nuovo echo* (1583) has a five-part one 'in imitation of' Alessandro Striggio's *S'ogni mio ben havete* – a rare instance of a parody fantasia for ensemble; Orazio Vecchi's *Selva di varia ricreatione* (1590) includes a four-part fantasia, a tour de force of composition *sopra un soggetto*, whose crotchet subject is inverted, augmented into minims, into semibreves, into breves, syncopated into alternate minims and crotchets, converted into triple time, and again augmented; Giovanni Cavaccio's *Musica* (1597) begins and ends with *fantasie (La Bertani, La Gastolda)*. Banchieri also left ensemble fantasias, chiefly in his *Fantasie overo canzoni alla francese* (1603). In these 21 pieces *a 4* 'for organ and other musical instruments' a new clarity of structure is evident; one, styled *fantasia in echo*, has a central, chordal echo section, followed by a repeat of the triple-time opening section and a duple-time coda. Two more fantasias form an 'adjunct' to his *Moderna armonia* (1612); in one the instruments are disposed 'a due Chori'.

Fantasias for instrumental ensembles continued occasionally to appear in Italy until the middle of the 17th century. The sacred *Concerti* of Francesco Milleville (1617) end with a *fantasia alla francesca* 'for instruments of every kind' with organ continuo; in Valerio Bona's *Litanie della Madonna* (1619) there is also one. *Fantasie* were published by Gabriello Puliti (1624) for violin or cornett and continuo; by Bartolomé de Selma y Salaverde (1638) for bass instrument and continuo; and by Andrea Falconieri (1650/*R*) for two violins, bass and continuo.

(iii) Spain. Milán's *El maestro* (1536/*R*; ed. C. Jacobs, 1971), the earliest of the printed vihuela books, includes 40 fantasias, reflecting Italian influence (as do his pavans and sonnets). The more elaborate of them combine imitation, light motivic counterpoint, plain and embellished chordal writing, runs and triple-time sections; several fall into a category that Milán called *fantasias de tentos*, designed to 'try the vihuela' and consisting of *consonancias* (chordal passages, to be played broadly) intermingled with *redobles* (running passages, to be played quickly). This is courtly music, but presented with didactic intent; Milán progressed from simple to more advanced pieces, providing notes on mode and tempo, as 'a master would with a pupil'.

A similar instructional approach is found in other Spanish fantasias. One book of Narváez's *Libros del Delphin* (1538) is devoted to 'fantasias in various modes which are not so hard to play as those of the first book' (MME, iii, 1945/*R*). As might be expected from a transcriber of Josquin and Gombert, Narváez in his fantasias made wider use of imitation than Milán, and less of chordal and scalic writing. There are points of structural interest, such as recurrence of an initial subject or repetition of a concluding passage. Mudarra, too, occasionally based a fantasia on one theme, denoted in solmization syllables; his *Tres libros* (1546) include 23 fantasias for vihuela and four for guitar (MME, vii, 1949), some being described as 'easy' or 'to exercise the hands'. Particularly interesting is a burlesque fantasia for vihuela 'which imitates the harp in the style of Ludovico' (a reference to a former harpist to King Ferdinand II of Aragon). Several fantasias in the second book are preceded by a short tiento.

Valderrábano's *Silva de Sirenas* (1547) devoted one book to fantasias, beginning with those of the 'first grade' of difficulty (MME, xxii–xxiii, 1965). Valderrábano distinguished between free ('sueltas') and parody ('acomposturadas') fantasias; about half the 33 pieces belong to the latter type. They include one 'imitating in some passages' extracts from Gombert's motet *Aspice Domine*, another 'imitating from the middle onwards' the Benedictus of Mouton's Mass *Tua est potentia*. There are also fantasias modelled upon other fantasias, such as one 'imitating another by Francesco da Milano' ('contrahecha a otra de Francisco milanes').

Pisador's *Libro de música* (1552) includes, besides two fantasias 'for beginners', 24 'fantasias in all the modes upon points of imitation, of three and four parts'. A curious feature of the first 12 is the depicting in red of notes to be sung, with solmization syllables printed underneath; Pisador suggested that this use of the voice 'will be a very agreeable thing for the person who plays and sings them'. Fantasias are prominent in Fuenllana's *Orphénica lyra* (1554; ed. C. Jacobs, 1979). In one section, transcriptions from Morales's masses are each followed by a related fantasia, designed so as to 'satisfy the ear and improve the hands' of beginners unready to master the transcriptions. In another, intabulations of motets by 'famous authors' are similarly paired with fantasias, graded as 'difficult' or 'easy' and intended to be 'of benefit for exercising the hands and playing with a good air'. The final section has fantasias for five-course vihuela and four-course guitar as well as for the six-course instrument. The last vihuela book of the century, Daza's *El Parnasso* (1576; RRMR, liv, 1982), also devotes a section to fantasias, some of which contain 'passages for exercising the hands'. Like Pisador, Daza allowed for vocal participation by the player: one part is picked out 'with little dots, so that those who wish can sing it'.

The term 'tiento' (rather than *fantasia*) was preferred by such Spanish organists as Cabezón and Pedro Vila; but Venegas de Henestrosa's *Libro de cifra nueva* (1557) includes keyboard fantasias adapted from the vihuela books of Narváez, Mudarra and Valderrábano (MME, ii, 1944). In 1565 Tomás de Santa María published his treatise entitled *Arte de tañer fantasia* ('the art of fantasia playing, on keyboard, vihuela, or any instrument'); it deals with various matters relating to instrumental improvisation, including imitative counterpoint, from which 'may be drawn great fruit and profit for the fantasia'. In *Trattado de glosas* (1553) Diego Ortiz distinguished three manners of improvising on the viol with harpsichord accompaniment:

> The first is *fantasia*; the second, upon a cantus firmus; the third, upon some composition. I cannot give an example of *fantasia*, since each plays it in his own style, but I shall say what is requisite in playing it. The *fantasia* that the harpsichord plays should be well-ordered chords, and the viol should enter with elegant passages . . .. Some points of imitation may be played, one player waiting on the other in the way that polyphony is sung.

(iv) France. The lute fantasia was transplanted to France in the second quarter of the 16th century, particularly through Alberto da Ripa (Albert de Rippe), who went from Italy to the court of François I. None of his work was printed in France during his life; but between 1552 and 1558 some 20 of his *fantasies* for lute, and two for guitar, were published in Paris (CM, *Corpus des luthistes français*, 1972). Earlier, fantasias had been published at Lyons by the Venetian Bianchini (Blanchin) and the Milanese Paladino (Paladin). Paladin's *Premier livre* (1553, 2/1560) includes ten, four being parodies upon madrigals (Arcadelt) or motets (Claudin de Sermisy, Jacotin).

The first French composers to publish fantasias were Ripa's pupil Guillaume Morlaye, in tablatures for lute and guitar (1550–58; CM, *Corpus des luthistes français*, 1980); Grégoire Brayssing, whose guitar book (1553) includes six, one being headed 'des Grues'; Julien Belin (1556); and Adrian Le Roy, in lute and guitar books of 1551. Le Roy's two lute *fantasies* (CM, *Corpus des luthistes français*, 1960) are exuberant pieces, in which passages of imitative texture give way to runs and *style brisé*. Later in the century, the fantasia was cultivated by Jakub Reys (Jacques le Polonois), lutenist to the French court, and some native composers. Antoine Francisque's *Le trésor d'Orphée* (1600) has two *fantaisies*, rather like elaborate *préludes*. J.-B. Besard's *Thesaurus harmonicus* (1603), which devotes its *liber secundus* to fantasias, includes examples by the Frenchmen Edinthon (CM, *Corpus des luthistes français*, 1974) and Bocquet, as well as by masters such as Lorenzini, Bakfark, Długoraj, Dowland and Reys; but Besard's own contributions to the genre are confined to a *Lachrimae* fantasia in pavane form (evidently inspired by Dowland) and *diminutiones* upon this and a Długoraj fantasia (CM, *Corpus des luthistes français*, 1969). The *fantaisie* for lute fell out of use in 17th-century France; there is one example in Denis Gaultier's *Livre de tablature*.

According to descriptions, Brayssingar's *Tablature d'épinette* (1536) included fantasias; and *fantasies* were listed on the title-page of another *Tabulature d'espinette* published at Lyons in 1560; both works are lost. There survives a *Fantasie sus orgue ou espinette* of Costeley (*F-Pn* fr.9152); and a four-part parody fantasia on Rore's *Ancor che col partire* by Henri III's organist Nicolas de La Grotte (*A-Wn* 10110) is probably intended for keyboard. It is clear that fantasias printed in early 17th-century partbooks might also be played at the keyboard (Guillet spoke of aiding 'those learning the organ'). The *fantaisie* of the Notre-Dame organist Racquet (ed. F. Raugel, *Les maîtres français de l'orgue*, Paris, 1951), which treats its subject sectionally in the manner of Sweelinck, and the recently discovered organ fantasias of Louis Couperin (ed. G. Oldham, forthcoming) are the chief survivors of what was evidently an ecclesiastical repertory of some splendour. Of Couperin's organ pieces 26 are entitled 'fantaisie'. A few have a soloistic bass line for *trompette* or *cromorne*, but most (such as the *Fantaisie sur la Tierce du Grand Clavier avec le Tremblant lent*) are fugues; there is also a *Duretez fantaisie* (*fantasia di durezze*) dated 1650, full of searching suspended discords.

The extant repertory for ensemble is more substantial. In *Musique de joye*, Moderne's collection for singing or 'playing on spinets, violins or flutes', the phrase 'Phantaisies Instrumentales' was given to a group of *recercari* by Willaert, Julio Segni and others, drawn mainly from *Musica nova* (RISM 1540[22]; MRM, i, 1964). The name 'fantasies' is also given to Lassus's textless two-part *Cantiones* in the Paris edition of 1578. Fantasias from the late 16th and early 17th centuries include three by Claude Le Jeune (two in four parts, and one in five that parodies Josquin's *Benedicta es*); these were printed posthumously in his second book of *Meslanges* (1612). The fantasias of Du Caurroy, another member of the *chambre du roi*, also appeared posthumously in partbook format (1610, ed. P. Pidoux, 1975); of the 42 pieces, in three to six parts, just under half are based on a freely invented subject. 15 (styled 'Fantasie sur . . . ') have a cantus firmus (generally a liturgical chant, but occasionally a French psalm or popular tune), with points of imitation derived from the given melody; those on *Coeco clauditur* and *Alloquio privatur* form a pair, and there is a suite of five *fantasies* (starting in three parts and ending in five) on *Une jeune fillette*. Seven (styled 'Fantasie à l'imitation de . . . ') treat a liturgical melody in paraphrase fashion. One derives its subject matter from the rising and falling hexachord. Also in 1610 appeared a set of 24 *Fantaisies* by Charles Guillet 'in four parts, set out according to the order of the 12 modes', each based on a principal subject (MMBel, iv, 1938); despite their didactic air, Baron de Surgères is said to have listened to them enthusiastically. Mauduit is stated by Mersenne to have written fantasias, but none survives. Evidence suggests that such fantasias as these may have been performed by viols with keyboard accompaniment.

Mersenne (*MersenneHU*) quoted a short *phantasie* for 'les Cornets' and another (more properly a pavane) for 'les Violons' by Henri Le Jeune, and a four-part *Fantaisie en faveur de la quarte* of De Cousu, as well as an English example from Alfonso Ferrabosco (ii). In general the ensemble fantasias of the mid-17th century tend to shun severity and take on the melodiousness of the court air. Etienne Moulinié's fifth book of *Airs de cour* (1639) includes three four-part *fantaisies* for viols; Nicolas Métru's 36 *Fantaisies à deux parties, pour les violles* (1642) are marked by dancing counterpoint, generally ending with a reprise of the opening strain. By Louis Couperin there survive two *fantaisies a 5* for a consort of shawms ('sur le Jeu des Haubois') dating from 1654, and two more, presumably for viols, composed in 1654–5 (G. Oldham, 1960); there are also keyboard scores for two courtly *Fantaisies pour les violes* by him (in *F-Pc* Rés. Vm[7] 674–5, ed. D. Moroney, 1985). The polyphonic fantasia was largely forgotten in France by the end of the 17th century, but the name survived to describe pieces in which 'the composer does not tie himself to a fixed scheme, or a particular kind of metre' (Brossard, 1705). Examples (including a canonic *Fantaisie en echo*) occur in Marin Marais' *Pièces à 1 & 2 violes* (1686; ed. J. Hsu, 1980).

(v) Netherlands. The contribution of Phalèse's firm at Leuven and Antwerp to the publishing of lute fantasias began in 1545 and continued with a series of anthologies that, drawing on other publications, included examples by Francesco da Milano, Narváez, Valderrábano, Ripa, Brayssing, Kargel, Bakfark and others; cittern fantasias first appeared in 1568. Phalèse also published the work of the Flemish lutenist Adriaenssen, whose *Pratum musicum* (1584) and its sequel (1592) open with fantasias; in these there is generally a fugal first section, leading to

ebullient, improvisatory lute writing (MMBel, x, 1966). An idiosyncrasy of Phalèse's title-pages is the use of the Greek word *automaton* (from *automatos*, 'spontaneous'), as in the phrase 'automata, quae Fantasiae dicuntur' (*Hortus musarum*, 1552) or 'automata quae Fantasiae, vel Praeludia nuncupantur' (*Theatrum musicum*, 1571). Fantasias are found in Joachim van den Hove's *Florida* (1601), in the Thysius Lutebook (*NL-Lt* 1666) and in Nicolas Vallet's *Le secret des muses* (1615, 1616); one of Vallet's is on a chromatic subject (*La mendiante fantasye*), another uses thematic variation (CM, *Corpus des luthistes français*, 1970).

The composition of keyboard fantasias on a principal, unifying subject was nowhere pursued with such vigour and variety as in the Netherlands. Peter Philips arrived there from England in 1588; his stylistic proximity in later work to Sweelinck is shown by a fantasia (MB, lxxv, 1999, no.13) that treats its subject in diminution and augmentation. Sweelinck's own fantasias (*Opera omnia*, i/1, 1968) belong to three main types. The first is the ostinato fantasia, in which a subject is constantly reiterated against figuration of increasing brilliancy. The second (occasionally found also under the name *ricercar*) may be illustrated by his *Fantasia chromatica*. The chromatic theme is treated fugally, with first one countersubject, then another; in the next process it is augmented, surrounded by new points of imitation and then accompanied by running semiquavers (coupled with anticipations of the theme's diminished form); in the last, it is given in diminution, first with running counterpoint, then in stretto, and finally in double diminution over a pedal. In another fantasia of this type (*Opera omnia*, i/1, no.3) a subject is presented together with its inversion, and both forms are subsequently treated in augmentation and diminution. The third type is the *Fantasia auff die Manier von ein Echo*, in which lighter, more madrigalian counterpoint is succeeded by passages of echoed phrases (exploiting contrasts of octave or manual) and toccata-like display.

Among the fantasias Bull probably composed after his flight to the Netherlands in 1613 are his *Fantasia op de fuge van 'La Guamina'*, which derives wholly from its Italian point and includes a triple-metre transformation; the fantasia on *A Leona*; another *sopra Re re re sol ut mi fa sol*, whose theme is treated first as an ostinato and then (in diminution) fugally; two parodies on Palestrina's *Vestiva i colli*; and the poignant chromatic fantasia on a theme by Sweelinck, dated two months after the latter's death (MB, xiv, 1960, 2/1967). Peeter Cornet's fantasias (CEKM, xxvi, 1969) include a powerful *Fantasia del primo tuono*, in which a series of sections introducing new points of imitation is unified by the return of the initial subject in augmentation, and by a final section combining it in diminution with other points. Both Cornet and Sweelinck wrote fantasias *sopra Ut re mi fa sol la* (like Byrd and Bull, who do not seem however to have entitled such pieces 'fantasia'), in which the rising or falling hexachord is treated in ostinato or fugal fashion. From the second half of the 17th century come six fantasias in Anthoni van Noordt's *Tabulatuur-boek van psalmen en fantasyen* (1659; UVNM, xix, 1896, 3/1976), which approach in style and structure the late Baroque fugue, and the organ fantasias of Kerckhoven (MMBel, ii, 1933).

Phalèse's *Premier livre de danseries* (1571) contains two anonymous fantasias *a 4*, 'suitable for all musical instruments'. Matthias Mercker's *Fantasiae seu cantiones gallicae* (1604) are lost. *'T Uitnement kabinet* (RISM 1646[11], ed. R.A. Rasch, 1973–8) includes eight fantasias for two violins and continuo by Borlasca, and two for solo recorder by de Vois. Another Amsterdam anthology, *XX. konincklycke fantasien* (RISM 1648[7]/*R*), is devoted to 'royal fantasias' for three viols by Daman (who went to England from the Netherlands in the 1560s), Coprario, Lupo and Gibbons.

(vi) Germany. The only item in Hans Neusidler's two-volume *Lautenbuch* (1536; DTÖ, xxvii, Jg.xviii/2, 1911/*R*) belonging explicitly to the title-page's category of *Fantaseyen* is an extended, crudely improvisatory composition which, despite its title ('a very cunning *Preambel* or *Fantasey*, in which are played many two-part and three-part double runs of various kinds, syncopations, and many choice points of imitation'), makes only sparse use of imitative technique. Italian influence dominates Hans Gerle's lutebook (1552), in which fantasias of Dall'Aquila, Francesco da Milano, Ripa, Albuzio and Borrono are reprinted in German tablature, all dubbed *Preambel*. Subsequent lutebooks including fantasias are those of Benedikt de Drusina, Wolff Heckel (both 1556), Jobin (1572), Matthäus Waissel (1573, 1592), Kargel (1574, 1586), Melchior Neusidler (1574), G.C. Barbetta (1582), Adrian Denss (1594) and Reymann (1598). The parody type is represented by Neusidler's *Fantasia super 'Anchor che col partire'*; Denss included fantasias by the Duke of Brunswick's lutenist, Huet. Particularly interesting are nine fantasias on chorale melodies such as 'Nu kom der heiden Heylandt' in Reymann's *Noctes musicae*. Kargel and Lais's *Toppel Cythar* (1575) has two fantasias for cittern. Early 17th-century collections include Johannes Rude's anthology *Flores musicae* (1600), Elias Mertel's *Hortus musicalis novus* and G.L. Fuhrmann's *Testudo gallo-germanica* (both 1615).

The earliest keyboard fantasias are found in German manuscripts. A *Fantasia in ut* by Hans Kotter (a pupil of Hofhaimer), copied probably in 1513–14 (*CH-Bu* F.IX.22), prefaces imitative treatment of a point with a short three-part introduction; its function was presumably similar to that of pieces which Kotter called *praeambulum* or *prooemium*. Leonhard Kleber's tablature (*D-Bsb* Mus.ms.40026), of about 1520, contains a *Fantasy in fa* (ed. P. Schleuning, Mw, xlii-xliii, 1971, no.1) and another in *re*, using paired imitation.

More than half a century separates these keyboard fantasias from the next examples. Jacob Paix's *Orgel Tablaturbuch* (1583) has two *phantasiae*, which have been likened to Italian polythematic *recercari*; Apel called attention to an anonymous group (*PL-GDp* 300, R [Vv 123]) in toccata or *intonazione* style; by H.L. Hassler there is an imposing *Fantasia Ut re mi fa sol la* (DTB, vii, Jg.iv/2, 1903). The fantasias of Scheidt's *Tabulatura nova* (1624; *Werke*, vi/1–2, 1953) brought together a variety of techniques. That on Palestrina's *Io son ferito* takes a subject from the madrigal's opening and combines it with three other subjects (two of them chromatic) in a 'fuga quadruplici', ending with a 'concursus et coagmentatio' of all four in the manner of Frescobaldi's fantasias. Sweelinck's influence is evident in the *Fantasia super Ut re mi fa sol la* (the hexachord is laid out as an ostinato in

two-, three- and four-part texture, then freely worked in a four-part coda), and in a fantasia from the second volume that subjects its theme to augmentation and diminution, adorning it with counterpoint that includes an 'imitatio violistica'. The magisterial fantasia on 'Ich ruf zu dir' treats each phrase of the chorale melody first as a point of imitation, then as a migrant cantus firmus; a similar plan underlies J.U. Steigleder's 'Fantasia oder Fugen manier' setting of the *Vater Unser* melody in his *Tabulatur Buch* of 1627 (CEKM, xiii/1, 1968).

Other composers of keyboard fantasias include Paul Siefert, Scheidemann, Matthias Weckmann and Froberger; J.E. Kindermann's *Harmonia organica* (1645; DTB, xxxii, Jg.xxi–xxiv, 1913–24), contains a *Fuga sive Fantasia*. Froberger is represented by eight examples, six being found in his holograph of 1649 (*A-Wn* 18706); in some sources these also appear as *capriccio* or *fuga* (DTÖ, viii, Jg.iv/1 and xxi, Jg.x/2, 1897–1903). One has fugal working of a subject (with regular counter-subject) and of a syncopated derivative of it (with new counter-subject); another treats its subject first in duple, then in triple time, and finally combines augmented and diminished forms of it; in others, both subject and counter-subject, or subject and its inversion, may undergo conversion to triple time. In a variation fantasia *sopra Ut re mi fa sol la* the theme appears ascending and descending, in long and short note values, as cantus firmus and point of imitation, with and without chromatic alterations, and in duple, triple and compound times. A contrast to such fantasias 'on a subject' was provided by Pachelbel and Johann Krieger. Two of Pachelbel's fantasias are in a sonorous, non-fugal style with toccata-like embellishment (DTB, vi, Jg.iv/1, 1903); three others are in triple time, with openings suggestive of a French chaconne (DTB, ii, Jg.ii/1, 1901). Johann Krieger even wrote a triple-time fantasia in rondeau form, with eight-bar refrain, to introduce his *Sechs musicalische Partien* (1697); and there is a similar example in his *Anmuthige Clavier-Übung* of 1699 (DTB, xxx, Jg.xviii, 1917).

German fantasias for ensemble appear in several miscellaneous collections: Thomas Mancinus (1588) included a *fantasia duarum et quatuor vocum*, Friedrich Lindner (1589) a *fantasia capriccio a 4* and Heinrich Steuccius (1604) a *phantasia a 5*. Italian bicinia were termed 'Ricercari, sive Fantasiae' by Lindner (1591) and in Gumpelzhaimer's *Compendium musicae* (2/1595), a book widely used in German schools. Paul Luetkeman included ten fantasias *a 5* and two *a 6* suitable 'for all kinds of instruments' in *Newer lateinischer und deutscher Gesenge* (1597); one of these is based on the melody 'Ich ruf zu dir, Herr Jesu Christ', another on 'Innsbruck, ich muss dich lassen'. Though dances and canzonas were the chief ensemble forms of the early 17th century, Wolfgang Getzmann (apparently emulating Guillet) published 24 four-part *Phantasiae sive cantiones mutae ad XII modos figurales* in 1613, and Johannes Schultz and Johann Staden included fantasias in their collections of 1622 and 1625.

(vii) Poland. An outstanding master of the polyphonic lute fantasia was the Hungarian Bakfark, who from 1549 to 1566 was lutenist to the Kraków court. Of his ten pieces in this genre only one is based on a vocal model, Clemens's chanson *Rossignolet*. The remaining nine, however, are notable for the way in which Bakfark combines sustained polyphonic thought with subtle understanding of lute technique and tone-colour (*Opera omnia*, i-iii, 1976–81; DTÖ, xxxvii, Jg.xviii/2, 1911/*R*). Both the fantasias *a 4* in his *Tomus primus* (1565), for example, end with impressive sections of imitative counterpoint in four real parts. Later in the century the Venetian Diomedes Cato also worked at Kraków (WDMP, xxiv, 1953, 2/1970); fantasias by him, Długoraj (WDMP, xxiii, 1953, 2/1964; GMB, 150) and Jakub Reys (WDMP, xxii, 1951) became well known through the anthologies of Besard, Fuhrmann and Robert Dowland. Composers of keyboard fantasias included Piotr Šelechowski in the mid-17th century (CEKM, x, 1965–7). The ensemble fantasia in Poland is represented by three examples in Mikołaj Zieleński's sacred *Communiones totius anni* (1611).

(viii) Great Britain. Philip van Wilder, the Franco-Flemish lutenist who enetered Henry VIII's service in the 1520s and died in London in 1553, has been identified as the likely composer of one 'Fantasie' for lute found in late 16th-century English sources (ed. in J.M. Ward: *Music for Elizabethan Lutes*, 1992, ii). The earliest such piece by an English composer is Newman's, which survives both as a keyboard 'fansye' in the Mulliner Book and as a lute piece (MB, i, 1951, 2/1954), and appears in part to be a parody of M.A. Cavazzoni's *Salve Virgo*. Occurrence in Elizabethan lutebooks of fantasias by Francesco da Milano (Ward counted 14) is confirmation of Italian influence; this was experienced at first hand between 1562 and 1578 through Alfonso Ferrabosco (i), whose interest in the genre seems to have done much to establish it in England. Though probably not himself a lutenist of the first rank, Ferrabosco composed fantasias for both lute and bandora (CMM, xcvi/9, 1988). A fresh infusion of French influence came from English editions of Adrian Le Roy's instruction books for the lute (1568 and 1574), which include an improvisatory prelude entitled *Petite fantasie dessus l'accord du Leut* ('A little fantesie for the tunyng of the Lute').

The first native Elizabethan lutenists for whom the fantasia was an important medium of expression were Antony Holborne and John Dowland. By Holborne there are four fantasies for cittern, of which the two in his *Cittharn Schoole* (1597) can also be played by three melody instruments; two for bandora, one of which (in the manner of some fantasias by Ferrabosco and Byrd) breaks into a triple-time dance, followed by a coda; and three for lute (HPM, i and v, 1967–73). The larger works have a series of points, with idiomatic embellishment. The supreme English master of the lute fantasia was John Dowland (ed. Poulton and Lam, 1974). One 'fantasie', published in Robert Dowland's *Varietie of Lute-Lessons* of 1610 (with others by Diomedes Cato, Reys, Huet, Lorenzini and Ferrabosco), exists also in an early version, which Besard included in his *Thesaurus*; it opens fugally, and ends with a paean of repeated notes in compound time. The melancholy *Forlorne Hope Fancye* is based wholly on a descending chromatic point, which in the final bars is set in diminution against running counterpoint, not unlike Sweelinck's and Bull's chromatic fantasias; this was one of two Dowland fantasias published in Mertel's *Hortus musicalis novus* (1615), though it must date from about the turn of the century. Only one lute fantasia each by Robert Johnson and Daniel Bacheler survives; Robinson's *The Schoole of Musicke* (1603) includes a 'Fantasie for two Lutes'. The tradition of

writing music of this kind for lute was kept alive in Caroline England by a few composers including Cuthbert Hely and John Wilson, whose series of fantasias or preludes for double-headed 12-course lute (*GB-Ob* Mus.b.1) covers all the major and minor keys.

Distinctively English are the fantasias in tablature for three lyra viols (mainly using the sonorous 'eights' tuning) by Alfonso Ferrabosco (ii) (MB, ix, 1955, 2/1962, no.129), Coprario (RRMBE, xli, 1982) and Coprario's pupil William Lawes (MB, xxi, 1963, 2/1971, no.7). Ferrabosco's 'Fancie', published in his *Lessons* (1609), is a transcription of one of his fantasias for four viols (MB, lxii, 1992, no.15); Coprario's and Lawes's pieces are more idiomatically conceived.

Apart from an arrangement of a viol piece, Ferrabosco the elder is credited with one apparently original fantasia for keyboard (CMM, xcvi/9, 1988, no.30; MB, lxvi, 1995, no.31). But it was Byrd, above all, who elevated the fantasia to its eminent place in the keyboard music of Elizabethan England. His exuberant approach is already fully displayed in the fantasia (MB, xxvii, 1969, 2/1976, no.13), probably an early composition, which, in the Fitzwilliam Virginal Book, is prefaced with a short praeludium; in it, fugal treatment of a series of points is succeeded by writing of a more playful character, enlivened by passages of cross-rhythm, proportional changes and fast runs. Another 'fancie' (MB, xxvii, no.25), of about 1590, passes from its imitative opening section to an alman-like passage; then comes more imitation, figurative display and (to close) a passage based on phrase-repetition, involving sequence and imitation, which is repeated in a varied form. Of Byrd's fantasias, only two maintain point-of-imitation style throughout, and one of these is a transcription of a consort work. Two fine examples in the Fitzwilliam Virginal Book (MB, xxviii, 1971, 2/1976, nos.62–3) include a section in *coranto* style immediately before the short, decorated coda.

The virginalist's love of variation shows itself in the elaborated repeat of the imitative opening of a Philips fantasia composed in 1582 (MB, lxxv, no.11); Morley's fantasia (EKM, xii–xiii, 1959, pp.12–16) also takes on variation aspects in its last section. Two examples by John Mundy are interesting (Fitzwilliam Virginal Book, nos.2–3), the one unusually agile, the other programmatic (depicting 'faire wether', 'lightning', 'thunder'). Giles Farnaby's fantasias (MB, xxiv, 1965), while comparatively artless, are not without striking or humorous touches. Among Bull's fantasias written before his flight to the Netherlands is a mainly two-part one which includes a brilliant ostinato section in triple time followed by a flamboyant closing section (MB, xiv, 1960, 2/1967, no.10). From Scotland there is an engaging *Fantassie* by William Kinloch (ed. K.J. Elliott, *Early Scottish Keyboard Music*, 1958, 2/1967).

The outstanding master of the keyboard fantasia during the Jacobean period was Orlando Gibbons. His works are in general distinguished by expressive, powerfully sustained counterpoint, in which dance sections and proportional changes are avoided and virtuosity is restrained. A *Fancy in Gamut flatt*, which at one point 'leaves the key' strikingly, represents a seamless progress from its dolorous initial subject to the later, more cheerful subjects (MB, xx, 1962, no.9). One *Fantazia of foure parts* was printed for virginals in *Parthenia* (MB, xx, no.12); another fancy is designated 'for a double Orgaine' (MB, xx, no.7). The last composer of the genre was Tomkins, who continued to compose examples when in his 70s. Three bear dates between 1646 and 1648 (MB, v, 1955, 2/1964, nos.22–3 and 25); the second of these is monothematic, the others each have a series of three points. Of special fascination is the fancy 'for two to play' (MB, v, no.32).

Antecedents of the English consort fantasia may be found in the textless 'songes' of William Cornysh and Robert Fayrfax and (later) of Tye and Tallis. The In Nomine should not be regarded as a species of fantasia, though the two genres came to be cultivated in close relationship, and Purcell loosely classified his In Nomines in *GB-Lbl* Add.30930 as 'Fantazias'. Especially interesting are the fantasia-like compositions not based on a cantus firmus that make extensive use of imitation, such as the five-part and six-part 'songes' of Parsons and Robert White (MB, xliv, 1979, nos.34–5, 37, 70). It is difficult to tell how much the emergence of the ensemble fantasia owed to Italian influence, but the presence in English sources of a four-part 'Fantazy' by Renaldo Paradiso, who was a member of Elizabeth I's flute consort from 1568 until his death in 1570, suggests that it might have been a tangible factor. This piece survives only in versions for lute or keyboard, but is presumed to have been originally for consort (MB, xlv, 1988, no.130; see also MB, lv, 1989, no.59).

An important manuscript of 'In nomines and other solfainge songes for voyces or Instrumentes' of about 1578 (*GB-Lbl* Add.31390) contains only one 'phancy', a five-part work by Edward Blancks. But one can also deduce, from imperfect sources, the significant contributions made in the early Elizabethan period by such men as Robert White, with his six fantasias *a 4* (MB, xliv, nos.6–11), and Alfonso Ferrabosco (i), with one (MB, xlv, no.27). Again Byrd stands out as a central figure. It was above all his masterly and varied essays in the genre, ranging from three parts to six, that established it as the 'chiefest kind' of chamber music in England (*Byrd Edition*, xvii, 1971). One of these is a five-part fantasy in which two of the parts are in canon throughout. The series is crowned by two big six-part works in whose highly individual structures such diverse elements as romanesca bass and galliard measure, imitative counterpoint and antiphonal homophony combine; these seem to have originated by the early 1590s and later been revised, one being published (together with a fantasia *a 4*) in *Psalmes, Songs and Sonnets* (1611). On a slighter scale, Morley published nine little fantasies in his *Canzonets to Two Voyces* (1595), imitations of pedagogic bicinia bearing Italian titles such as *La rondinella*.

During the Jacobean and early Caroline periods viol playing was widely cultivated at court, in cathedral closes and university colleges, and in the homes of many gentlemen and noblemen. Among the composers who responded to the resulting huge demand for fantasias for three, four, five or six viols were Coprario, Dering, Michael East, Alfonso Ferrabosco the younger, Thomas Ford, Gibbons, Thomas Lupo, Peerson, Thomas Tomkins, John Ward and William White, and, from the next generation, Charles Coleman, William Cranford, John Hingeston, Simon Ives, John Jenkins, William Lawes, Richard Mico and John Okeover. Few of their fantasias were printed, but collections of manuscript partbooks

were built up in many houses. Something of the pleasure taken in playing such music is conveyed in a letter of 1658 from Lord North to Henry Loosemore, in which he writes of a four-part fantasia by Ward (probably MB, ix, no.25) 'that stirs our bloud, and raises our spirits, with liveliness and activity, to satisfie both quickness of heart and hand'.

Fantasia style was profoundly influenced at the turn of the century by the enthusiasm for Italian madrigals. Nearly every one of Coprario's five- and six-part works (CMM, xcii, 1981; ed. R. Charteris, 1982) bears an Italian title, such as *In te mio novo sole*, that sounds like the beginning of a madrigal text. Although all but three are otherwise textless, they probably originated as Italian madrigals by Coprario; it was as songs without words for viols, however, that they became famous. Several five-part fantasias by Ward (MB, lxvii, 1995) and Lupo similarly carry Italian titles. Such pieces are perhaps best described as 'instrumental madrigals'. Playing madrigals on viols was not unusual in England: one set of partbooks in William Lawes's hand (*GB-Lbl* Add.40657–61) contains examples by Marenzio – even including the astonishing *Solo e pensoso* – and Monteverdi, stripped of their words, alongside fantasias by Coprario, Lupo, Ward, Alfonso Ferrabosco the younger, William White and Ives. There was also a trend towards more idiomatic string writing, however. This was partly brought about by the introduction of elements from the improvisatory tradition of 'division' playing, as can be seen in some of Lupo's six-part fantasias which contain exuberant display by the two bass viols (ed. R. Charteris, 1993, nos.9–10).

An account of the structural principles followed in consort fantasias is given by Simpson (*A Compendium of Practical Musick*, 1667, pp.141–2), who wrote:

> Of Musick design'd for Instruments . . . the chief and most excellent, for Art and Contrivance, are Fancies, of 6, 5, 4, and 3 parts, intended commonly for Viols. In this sort of Musick the Composer (being not limitted to words) doth imploy all his Art and Invention solely about the bringing in and carrying on of . . . Fuges, according to the Order and Method formerly shewed. When he has tryed all the several wayes which he thinks fit to be used therein; he takes some other point, and does the like with it: or else, for variety, introduces some *Chromatick* Notes, with Bindings and Intermixtures of Discords; or, falls into some lighter Humour like a Madrigal, or what else his own fancy shall lead him to: but still concluding with something which hath Art and excellency in it.

A four-part fantasia by Coprario (MB, ix, no.20; ed. R. Charteris, 1991, pp.105–11) may serve as a typical example: a spacious imitative opening section, leading into a second section on a livelier point, a short grave episode, the entry of another new point, and a concluding 'double fuge'. Triple-time interludes quite often occur in fantasias in a lighter vein, especially trios, but without any attempt to relate sections by thematic transformation. Gibbons, in his fantasias with a 'double basse' viol (MB, xlviii, 1982, nos.16–19 and 24–5), followed Byrd in introducing passages suggestive of dance or popular song.

A more architectonic approach to tonal and thematic organization was favoured by Ferrabosco (ii). Sometimes he gave unity to a fantasia by concentrating on a single point or bringing back an initial subject to crown a design, and he made notable use of dimunition and augmentation as structural devices. Such procedures suggest he had studied Italian instrumental music. In matters of tonal planning Ferrabosco was progressive, placing keys such as C minor and C major, or F major and F minor, in bold antithesis (MB, ix, no.78; MB, lxii, no.1), or moving far away from a key by gradually introducing more remote hexachords (MB, lxii, no.11). His tour de force in this respect is a composition consisting of a *prima pars* (*Ut re mi fa sol la*) and a *secunda pars* (*La sol fa mi re ut*) built on a cantus-firmus scheme of transposed hexachords that necessitates very rapid harmonic shifts and no less than seven enharmonic modulations (ed. D. Pinto, 1992; see also field in Ashbee and Holman, 1996). Two versions exist: Ferrabosco almost certainly composed the piece for four viols and then expanded it for five. (This view conflicts with the thesis set out by Lowinsky, 1968, that the five-part version is by Alfonso Dalla Viola and originated in mid-16th-century Ferrara, but there is compelling evidence for Ferrabosco's authorship of both versions and a date early in the 17th century.) Enharmonic modulation may also be found at about the same time in Ward's textless five-part *Dolce languir* (MB, lxvii, no.1), in one of Tomkin's fantasias *a 3* which incorporates a *canon per tonos* (MB, lix, 1991, no.12) and in Bull's *Ut re mi fa sol la* for keyboard (MB, xiv, no.17).

The outstanding masters of the viol fantasia in Caroline England were Jenkins and William Lawes. Relaxed breadth, lyrical warmth and a sense of natural growth are prevailing qualities in Jenkins's four-, five- and six-part fantasias. Roger North wrote that Jenkins had 'an unaccountable felicity in his fuges, which he did not wear to the stumps, but timely went off into more variety'. The fantasias are a culmination and synthesis of much that went before, but Ferrabosco seems to have had an especial influence on Jenkins's understanding of harmonic space, formal planning and the value of contrapuntal devices. In his examples of 'a whole fancy of one point', and also sometimes in fantasias of two large sections, Jenkins employed augmentation, diminution and inversion more tellingly than any English composer before Purcell. He also showed a fine feeling for key relationships, and three fantasias *a 4* modulate round the circle of fifths. Dating the pieces is difficult, but the majority were probably written between 1615 and 1635 (Ashbee, 1992). Lawes's fantasias 'for the Violls' (ed. D. Pinto, 1979; some also in MB, xxi), which match those of Jenkins in breadth and grandeur of conception, may be seen as an imaginative obverse to his 'clever stile and air'. They are characterized by bold, ardent gestures, adventurous textures and a fondness for rugged subjects and strong-willed lines. Concertato opposition of small groups to one another or to the full consort occurs in most of the six-part works. The part-writing is less classically polyphonic than Jenkins's: textures are filled out by ebullient figurative elaboration which at times results in clashes between the viols and the organ score. One of Lawes's last fantasias, a passionate six-part piece in C minor, written in about 1640, takes as its starting-point a contorted subject extracted from his setting of Psalm vi, *I am weary of my groaning* (*Consort Sets*, 1979, pp.132–7; MB, xxi, no.4a; see Pinto, 1995). This was music for a courtly circle around which the events that led to the English Civil War were unfolding.

Lawes was among the last composers to write for a six-part consort of two treble, two tenor and two bass viols. Even among composers expert in five- and six-part writing there had been a growing trend towards fantasias and fantasia-suites for smaller ensembles that dispensed with the tenor viol. There are fantasias for two trebles and two basses by Lupo (ed. R. Charteris and J.M. Jennings, 1983,

nos.4, 9, 10), Jenkins (MB, xxvi, nos.15, 26), Lawes, Christopher Gibbons and Locke (MB, xxxii, 1972, pp.100–03), and for one treble and two basses by Tomkins (MB, lix, nos.14–15), Mico (MB, lxv, 1994, nos.5–10) and Jenkins. Several of Lupo's three-part fantasias (ed. R. Charteris, 1987, nos.17–25) and Orlando Gibbons's *Fantazies of III parts* (*c*1621–2; MB, xlviii, nos.11–15) are for two trebles and bass. This scoring was taken up by Tomkins (MB, lix, nos.3–8), Jenkins (MB, lxx, 1997, nos.29–49) and others, and it seems reasonable to suppose that in such pieces violins increasingly replaced treble viols. Sometimes a chamber organ played an integral part, as in the fantasia-suites and bass viol duos of Coprario and the double bass fantasias of Gibbons. The custom of doubling the consort of viols with an organ, 'Evenly, Softly, and Sweetly Acchording to All' (Mace, 1676/*R*), seems to have grown up early in the century; organ reductions are found for many Jacobean and Caroline fantasias for four to six parts, including autograph parts by Lawes and Hingeston.

Coprario's fantasia-suites for violins, bass viol and organ are one example of how instrumentation may affect fantasia structure and style (*see* FANTASIA-SUITE); his fantasias for two bass viols and organ, which are as much airs as fantasias, are another (MB, ix, nos.100–01; RRMBE, xli, 1982). Jenkins's fantasias for two trebles and bass exhibit lively, violinistic points and corant-like *triplas*; those for one treble and two basses exploit the range and agility of the 'division' viol, whose virtuoso capabilities are tested to the utmost in his fantasia-suites for the same instruments and in Christopher Simpson's *Monthes* and *Seasons*. In *The Division-Viol* (2/1667), Simpson described such fancies as 'beginning commonly with some *Fuge*, and then falling into Points of *Division*; answering one another; sometimes two against one, and sometimes all engaged at once in a contest of *Division*: But (after all) ending commonly in grave and harmonious Musick'. Simpson's naming of fantasias after the months of the year may be compared with Michael East's use of emblematic Latin mottoes, or the names of the nine Muses, for his printed fantasias of 1610 (EM, xxxiA, 1962) and 1638.

Thomas Mace spoke of '*Fancies* of 3, 4, 5, and 6 *Parts* to the *Organ*' being 'Interpos'd (now and then) with some *Pavins, Allmaines, Solemn, and Sweet Delightful Ayres*'; this practice is borne out by Caroline sources. Lawes grouped together viol fantasias, In Nomines and airs in the same key, showing that he expected players to perform them as 'setts' or suites, although there is not the sort of fixed, recurring pattern of movements that is found in his fantasia-suites with violins, and there are some differences in order between the various autographs. More surprisingly, he also dignified his *Royall Consort* for two violins, two bass viols and two theorbos (ed. D. Pinto, 1995) and his suites 'for the Harpe, Violin, Basse Violl and Theorbo' (*GB-Ob* Mus.Sch.B.3 and D.238–40) by the inclusion of fantasias. It was exceptional for plucked instruments to be given such independent parts in polyphonic consort music. Jenkins, too, included two fantasias with obbligato organ in his 32 airs (MB, xxvi). Hingeston regularly paired 'fantazia' and 'almand', as did Peerson. Some mid-century fantasias, on the other hand, incorporate dance movements, such as those of John Hilton and Christopher Gibbons for two trebles and bass (*GB-Och* 744–6 and 21), and William Young's *Fansies of 3 Parts* (*GB-Lgc* G.Mus.469–71).

Fantasias are the principal movements in Matthew Locke's eloquent consort collections, the schematic organization of which sometimes involves prefixing a slow introduction to the 'fantazie' proper (MB, xxxi–xxxii, 1971–2). Among the earliest are those for two bass viols (1652). Those in the *Flatt Consort* (for various three-part groupings of viols), the 'magnifick' *Consort of Fower Parts* and the *Broken Consort* (for two trebles, assuredly violins, and bass viol, with theorbo continuo) are more complex, with exuberant fugal writing set off by passages of homophony or more grave counterpoint, and clear contrasts of tempo and 'humour' between sections.

After 1660 the English repertory of viol fantasias quickly fell into neglect 'by reason of the scarcity of Auditors that understand it' (Simpson); one of Locke's last fantasias was probably that written for an Oxford University music meeting in 1665, and even his *Broken Consort* and Jenkins's similarly scored fantasias and airs (with organ continuo) seem to have had no imitators. Surpassing tribute was, however, paid by the youthful Purcell to the tradition championed by Simpson and Locke, with three fantasias *a 3*, nine *a 4* composed in June and August 1680 (a tenth, dated 1683, is unfinished) and the five-part 'fantazia upon one note' (*Works*, xxxi, London, 1959, 2/1990). In form, instrumentation and style these are closely patterned on fantasias of Locke; but Purcell's mastery of the techniques of contrapuntal elaboration (augmentation, inversion, double and triple 'fuge') and the highly expressive use of chromaticism and dissonance in his slow sections give these last examples of the genre a unique brilliance and intensity.

2. 18TH CENTURY. The freedom inherited from its Renaissance and 17th-century forebears continued to be the primary characteristic of the 18th-century fantasia: freedom of rhythm and tempo, extending to the omission of bar-lines; unfettered exploitation of instrumental virtuosity; adventurousness in harmony and modulation. Brossard (1703) described the fantasia as a completely free genre, closely related to the capriccio; Mattheson (1739) said that order and restraint, especially as exemplified in strict fugal texture, are inappropriate to the form; Kollman (1796) considered the ideal fantasia to be entirely improvised; in his opinion it lost some of the 'true fire of imagination' when it had to be written down, as in a pedagogical work. It must be pointed out, however, that fantasias of this period are far from being 'formless', even when they sound most improvisatory. Indeed, just as in the 16th and 17th centuries, many fantasias of the 18th century readily took on the forms and styles of other contemporary genres (dance movement, prelude, capriccio, invention, variation, toccata, sonata movement, etc.).

In the 17th century the rich tradition of the fantasia had begun to decline on the keyboard side in favour of the toccata, capriccio and prelude–fugue pairing (especially in Germany), and on the instrumental ensemble side in favour of the sonata and sinfonia (especially in Italy). By 1700 the number of fantasias written for instrumental ensemble had dwindled to insignificance, but the fantasia for keyboard was to remain important in the 18th century, mainly in Germany. J.S. Bach's fantasias were intended primarily for the clavichord or harpsichord, C.P.E. Bach's primarily for the clavichord, and Mozart's primarily for

the piano. These three composers sum up the essential history of the 18th-century fantasia.

J.S. Bach composed 15 known fantasias, not counting the three-part inventions ('Sinfonie'), which were originally called fantasias. None is systematically fugal but nearly all use contrapuntal imitative procedures. The fantasia of the Fantasy and Fugue in G minor (BWV542) is a north German toccata of the Buxtehude type; that of the Chromatic Fantasy and Fugue in D minor (BWV903) combines elements of both toccata and recitative in three clearly delineated sections; that of the Fantasy and Fugue in A minor (BWV904) is like a prelude, built on the 'continuous expansion' (to use Bukofzer's term) of a long theme; the 'Fantasie über ein Rondo' systematically and exhaustively elaborates on its 12-bar theme; the Fantasy in C minor (BWV906) looks like a sonata form out of its proper era. Bach's fantasias are often flamboyant with sweeping scales and arpeggios and a rich scheme of modulation; but strict form and procedure nevertheless prevail.

The fantasias of C.P.E. Bach are among his most important and most representative works. Rhapsodic and improvisatory for the most part, they are highly subjective pieces for the clavichord, on which the composer liked to lose himself 'in a sea of modulations' (Reichardt); when he improvised for Burney he grew 'so animated and *possessed*, that he not only played but looked like one inspired'. Bach's musical models were his father's fantasias (for example the instrumental recitative in the Chromatic Fantasy) and the opera performances he heard for 27 years at Frederick the Great's opera house in Berlin; his aesthetic outlook came out of the *Empfindsamkeit* and *Sturm und Drang* movements and his specific purpose was to declaim through the medium of pure instrumental music, to approach the boundary between word and note without having recourse to words.

C.P.E. Bach's well-known chapter on improvisation in his *Versuch* is devoted entirely to the 'free' fantasia, the kind that 'is unbarred and moves through more keys than is customary in other pieces, which are composed or improvised in metre'. Of his seven most important fantasias, all composed between 1782 and 1787 (H277–8, 279, 284, 289, 291, 300), only two (H289, 291) are barred throughout. The remaining 16 were composed between 1753 and 1770; half of these are wholly or partly unbarred (including the C minor Fantasia of 1753, one of the 'Probestücke' accompanying the *Versuch*). The barred fantasias generally resemble sonata movements, solfeggios or even minuets; the wholly or partly unbarred works are, of course, considerably more daring in harmony, melody and abrupt changes of affect, making those outbursts and sudden cessations which so intoxicated their first hearers. Yet the forms of these more adventurous works are clear and disciplined: tripartite, with a barred middle section; or rondo-like, but with the main theme generally returning in different keys to be expanded in Baroque style; or, rarely (if short enough), based only on a compelling harmonic progression.

Mozart was clearly rather indifferent to the fantasia as a discrete form, though the fantasias in C minor K475 (1785) and D minor K397 (1782, ? or later) are masterpieces of the genre. In K475 (intended to be performed as an introduction to the Sonata in C minor K457) he showed no interest in C.P.E. Bach's 'free' fantasia; it is barred throughout, very much in the character of a sonata movement, with a thematic return near the end that is prepared and emphasized in a true Classical fashion. K397 is closer to the C.P.E. Bach style, containing unbarred sections. The version now generally known ends with ten bars composed anonymously after the publication of the first edition in 1804, in which the piece ends on a dominant 7th chord and is described as a 'fantaisie d'introduction ... Morceau détaché'; these features suggest that K397, too, might have been intended as an introduction to a sonata. K383*c* and K396 are both incomplete; the 'Phantasie' K394 is really a prelude (followed by a fugue), and was so named by Mozart himself; the two fantasias originally written for mechanical organ, K594 and 608, are archaic imitations of French and Italian overtures.

Other 18th-century composers were relatively less important to the fantasia. Handel (in the one fantasia the Collected Edition has made known), Mattheson and Telemann followed a *galant* homophonic style and borrowed the forms of other instrumental genres; J.B. Bach, Muffat, J.C. Kittel, J.L. Krebs and J.E. Bach showed more contrapuntal leanings, but still borrowed frequently from other forms; most of W.F. Bach's ten fantasias have clear plans resembling sonata movements and rondos, sometimes using instrumental recitative and fugato episodes, but those from near the end of his career approach incoherence. Among composers who attempted to emulate C.P.E. Bach's fantasias were G.S. Löhlein, F.W. Marpurg, C.G. Neefe and J.A.P. Schulz; Schulz's was the most successful attempt. In his only fantasia so named, Haydn's governing principles are sonata form and thematic integrity; only the comparatively unimportant episodes are fantasia-like.

3. 19TH AND 20TH CENTURIES. Characteristically, the fantasias of Beethoven both maintain and break with tradition. The Fantasia of 1809 for piano (op.77) is in a single movement and has contrasts of tempo and figuration (ex.2) that are clearly in the *empfindsamer Stil* of C.P.E. Bach. On the other hand, in the two sonatas 'quasi una fantasia' (op.27) the term is associated for the first time with the idea of large-scale unification of multi-movement works. In op.27 no.1 traditional forms are ignored to some extent, and there is some attempt to de-emphasize the boundaries between movements; in op.27 no.2 (the 'Moonlight' Sonata) an initial slow movement in sonata form takes the place of a sonata-allegro movement and a slow movement (which would be the normal sequence of movements at the beginning of a sonata), and the indication 'attacca' is used for the first time to join two 'independent' sonata movements to each other. It was in the Fantasia for piano, chorus and orchestra op.80 (1808), however, that Beethoven broke most strikingly with tradition by introducing a chorus into a form that had been instrumentally conceived for some 300 years.

For the Romantics the fantasia went beyond the idea of a keyboard piece arising essentially from improvised or improvisatory material though still having a definite formal design. To them the fantasia, like the slow introduction to a sonata-allegro movement, a variation set or a fugue, provided the means for an expansion of forms, both thematically and emotionally. The sonata itself had crystallized into a more or less rigid formal scheme, and the fantasia offered far greater freedom in the use of thematic material and virtuoso writing. As a

result the 19th-century fantasia grew in size and scope to become as musically substantial as large-scale, multi-movement works.

The four fantasias of Schubert (the *Wandererfantasie* and 'Graz' Fantasia for piano solo, the Fantasia in F minor for piano duet and the Fantasia in C for violin and piano) were the first to integrate fully the three- or four-movement form of a sonata into a single movement. The Fantasia for violin and piano is of particular importance because it anticipates the cyclical and single-movement aspects of much of the music of Schumann and Liszt; it also provides a historical link with Beethoven's 'cyclical' sonatas of 1815–16 (op.101 and especially op.102 no.1, whose opening Andante–Allegro vivace it strikingly resembles in both key sequence and character of themes), which are true progenitors of the Romantic fantasia. Schumann originally gave the title *Symphonische Phantasie* to his Symphony no.4, a work whose movements are joined together and clearly interrelated thematically, and Liszt, an early champion of the *Wandererfantasie* (which he arranged for piano and orchestra), frequently used an integrated single-movement form in his symphonic poems and original piano compositions.

Schumann's Fantasia in C op.17 (1836–8, originally designated *grosse Sonate*), on the other hand, is divided into three movements. In both outer movements, however, the initial modulation is to the subdominant, rather than the dominant, thus contradicting an important principle of sonata-movement construction. The work's 'slow-movement section', in C minor and marked 'im Legendenton', appears in the middle of the first movement, interrupting the first attempt at a recapitulation in the movement; a second attempt is delayed until after the end of this section and requires an initial expansion in E♭ major–C minor to make a smooth connection with it. The middle movement, too, uses the subdominant as its contrasting key centre, though this is entirely in line with its march-like character and its probable model, the second movement of Beethoven's op.101. The freedom of Schumann's form also enabled him to use transitional thematic materials in both outer movements that are similar to each other though by no means identical (ex.3).

To Schumann is also owed the FANTASIESTÜCK as well as, with such pieces, the creation of an instrumental equivalent of the song cycle, in whose development he also played a prominent role; the individual pieces in works such as the *Phantasiestücke* (originally called *Phantasien*) op.12 and *Kreisleriana* op.16, though coherent musical structures in themselves, are nevertheless better understood in the context of the entire work, and in this respect more so than their early 19th-century antecedents, Beethoven's sets of bagatelles opp.119 and 126, Schubert's *Moments musicaux* and impromptus and Mendelssohn's *Lieder ohne Worte*. Brahms's late sets of piano pieces, of which op.116 is entitled *Fantasien*, take Schumann's *Phantasiestücke* as their starting-point, though the cyclical element is not as strong in Brahms's pieces.

The term 'fantasia' was also applied to virtuoso pieces based on a given theme or group of themes of a popular source – usually an opera, although Bruch's *Schottische Fantasie* for violin and orchestra uses folk melodies collected on his travels in Britain. Most 19th-century virtuoso pianists wrote operatic fantasias; many who had also composed a successful opera wrote a fantasia on its most popular tunes. The form of the operatic fantasia often resembles that of a theme and variations, with a freer introductory section and an extended finale. Thalberg played an important role in its early development with such works as the fantasias based on themes from *Moïse* and *Les Huguenots*; but it is Liszt's fantasias that are the outstanding examples of the genre: those on *Don Giovanni* and *Simon Boccanegra* may be counted among his more important piano compositions. The operatic fantasia declined in popularity in the second half of the century, although the music of *Carmen* did inspire a number of works, and continued to do so well into the 20th century: Busoni's *Kammerfantasie* titled *Sonatina super Carmen* (1920) is the most noteworthy.

In the early 20th century the fantasia became something of a retrospective form, flourishing particularly in organ music based on chorales, themes by Bach or the motif B–A–C–H. Liszt's two principal organ works, the Fantasia and Fugue on the chorale *Ad nos, ad salutarem undam* and the fantasia-like Prelude and Fugue on B–A–C–H, are the antecedents of this development; the chorale fantasias and free fantasias of Reger and the Bach-inspired fantasias of Busoni (especially the *Fantasia contrappuntistica* (1910), arranged for two pianos in 1922) are its most important consequences. The outstanding example of the 20th-century fantasia on original themes is Schoenberg's Phantasy for violin with piano accompaniment op.47 (the piano part was added after the composition of the violin part and is sometimes omitted from performance). It is in one movement, with an opening Grave serving as the introduction and later reappearing between two scherzo-like sections and again before a climactic ending. Britten's Phantasy Quartet for oboe and strings is also a single-movement work, which derives its rhythmic energy from a march-like figure. Other British composers took up the fantasia on given themes as an orchestral form, including Vaughan Williams (Fantasia on *Greensleeves* and Fantasia on a Theme by Thomas Tallis) and Tippett (Fantasia concertante on a Theme of Corelli).

CHRISTOPHER D.S. FIELD (1), E. EUGENE HELM (2), WILLIAM DRABKIN/R (3)

Fantasia-suite. Term adopted by modern writers (there was no exact contemporary equivalent) to distinguish a 17th-century English genre. It originated with the 24 fantasia-suites of Coprario (MB, xlvi, 1980), distinctive features of which are the scoring for one or two violins and bass viol 'to the organ', and the three-movement plan of fantasia, almaine and galliard (ending generally in a common-time 'close'). Apparently composed in about 1622–5 for a consort formed within the household of Charles, Prince of Wales (later Charles I) known as 'Coprario's Musique', these are among the earliest English

chamber works scored specifically for violin, which is treated in a lively and eloquent manner. For suites with one violin, Coprario furnished written-out organ parts; for those with two, a score or keyboard reduction of the string parts was used, with independent strands for organ indicated where essential to the texture. Fantasias open in verse-anthem manner with organ alone; subsequently the keyboard provides a background to the strings' dialogue, but may also (particularly in those with one violin) supply solo linking passages, introduce a new point, or join in imitation. The abstract dances, of irregular phrase structure, are sometimes called simply 'aire' in the sources. The 'close' may be part of the galliard's final strain, but more often follows it (as became standard practice). Thematic connection between movements is not a feature. Movements are normally (as North remarked) 'all consistent in the same key', though examples occur of almaines in the relative minor or galliards in the tonic major.

Coprario's fantasia–almaine–galliard model was taken up and developed by William Lawes, John Jenkins, John Hingeston and Christopher Gibbons. Lawes's 16 suites (MB, lx, 1991), whose composition seems to have shortly preceded his appointment in 1635 to Charles I's private music, contain some of his boldest writing, while Jenkins's 27 (e.g. WE, i, 1950, pp.57–77), dating perhaps from about 1635–45, show a characteristic sense of melodic and contrapuntal breadth. Violins were specified by Lawes and Hingeston, though not in the manuscripts of Jenkins's suites, which were perhaps made for country houses where the viol still reigned. Lawes, in his fully-textured organ parts, doubled the violin less than Jenkins; both exploited the bass viol's division technique more than Coprario. Hingeston's fantasia-suites probably formed part of the repertory of Cromwell's private music during the Commonwealth (the violinist Davis Mell was one of its members). They include one in which a harpsichord with 'pedal' stops is specified as an alternative to the chamber organ, and two in which cornetts and sackbut replace violins and bass viol. Gibbons may have taken up this genre when organist to Sir John Danvers in the 1650s. Although he did not depart significantly from the traditional three-movement form he brought to it a harmonic and rhythmic style that is generally closer to Locke than to Coprario or Lawes, and in one suite there is a rare instance of thematically related movements.

Besides suites that keep closely to Coprario's model, Jenkins composed others of more independent profile, in which galliard is replaced by corant (without 'close') and division writing is prominent. Nine composed for a treble, two division bass viols and organ (dating from about the middle of the century) demand the highest level of viol technique, and probably provided the inspiration for Christopher Simpson's no less spectacular *Seasons* suites (facs. of latter with introduction by M. Urquhart (Geneva, 1999)). In the fantasias passages of solo display and intricate interplay are set against grave fugal sections and lively *triplas*; each dance strain is normally followed by a virtuoso variation. Seven pieces for two trebles, bass viol and organ (WE, x, 1966), each comprising a fantasia and extended air, contain similar passages of technical display, in which the organ occasionally shares. Jenkins's late style is represented by a further collection of paired fantasias and airs (e.g. WE, i, 1950, pp.78–100), eight fantasia–almaine–corant suites for two trebles, two bass viols and organ thoroughbass (MB, xxvi, 1969, nos.33–40), and ten more, now known for sure to be by Jenkins (see Charteris, 1993), for three trebles, bass viol and thoroughbass. In these virtuosity is largely laid aside: textures are subtly varied, forms lucid and concise.

Locke left no suites of the traditional pattern, but used fantasias in combination with dances to form individually planned sequences in his bass viol duos, Consort of Two Parts, *Flatt Consort*, *Broken Consort* part i, and Consort of Four Parts (MB, xxxi–xxxii, 1971–2); in these collections the device of the 'close' is extended to suites ending with a saraband or jig, and this is sometimes balanced by a slow introduction to the initial fantasia.

CHRISTOPHER D.S. FIELD

Fantasiestück [Phantasiestück] (Ger.: 'fantasy piece'). A short piece, usually for piano and generally one of a set of three to eight, in which the 'fancy' of the composer is a main factor in the form and progress of the musical movement, although the opening idea is always recapitulated at the end. It is related to the 19th-century fantasia (*see* FANTASIA, §III) but may be distinguished from it by its narrower scope. The term was used first in a literary context by E.T.A. Hoffmann; a character named Kreisler in his *Fantasiestücke in Callots Manier* (1814–15) was the inspiration for Schumann's *Kreisleriana* op.16 (1838), which is subtitled 'eight fantasias'. Hoffmann's 'pieces' may also have inspired Schumann's first set of *Phantasiestücke* op.12 (1837), whose original title *Phantasien* was changed probably to distinguish the character of these pieces from that of his three-movement Fantasia in C op.17. As well known as any of Schumann's works, they show the composer's fancy at its most lyrical and delicate. The pieces for clarinet and piano op.73 and for piano trio op.88 are also *Fantasiestücke*.

The distinction between fantasia and *Fantasiestück* was not always maintained later in the 19th century: Liszt's *Phantasiestück* on themes from *Rienzi* (1859) is a fantasia on operatic themes, while Brahms's *Fantasien* op.116 (1892), comprising three capriccios and four intermezzos,

are close in spirit to Schumann's op.12 and as a group not really different from his other sets of piano pieces (op.76 and opp.117–19). With later composers the form did not prove durable, although there are examples by Busoni (*Fantasia in modo antico* op.33*b* no.4, 1896) and Balakirev (*Phantasiestück* in D♭, 1903), and George Crumb gave the designation 'fantasy-pieces' to his *Makrokosmos* for amplified piano (1972–3).

MAURICE J.E. BROWN

Fantasy (i). *See* FANTASIA.

Fantasy (ii). American record company. It was established in 1949 in Berkeley, California, initially to release records that Dave Brubeck had recorded for the Coronet label; Brubeck was at that point a part-owner. The label is best known for recordings of folk revival sessions by Odetta and Joan Baez and for albums by Creedence Clearwater Revival (late 1960s to early 1970s). It has also been significant in jazz, through its acquisition and formation of other labels and for its reissues. In 1955 the company leased the Debut catalogue, and in 1964 it established a subsidiary label, Galaxy, which offered important new recordings by Art Pepper in the 1970s. It acquired several company catalogues including Prestige (1971), Riverside (1972), Milestone (1973) and Stax (1977). In the early 1980s Fantasy acquired Lester Koenig's labels, Contemporary and Good Time Jazz. By this time it had become one of the world's largest distributors of jazz recordings, and its catalogues expanded further when it acquired the labels Volt (about 1985) and Pablo (1987). The subsidiary label Original Jazz Classics was established in 1983, offering reproductions of albums from Contemporary, Debut, Fantasy, Jazz Workshop, Prestige, Riverside and Pablo; by 1987 a companion series, Original Blues Classics, was active.

BARRY KERNFELD

Fantinella [fantina] (It.). A musical scheme for songs and dances during the 16th and early 17th centuries in Italy. The version in ex.1 for the five-course guitar shows the basic harmonic framework, which is related to that of the ROMANESCA. At the end are two standard *riprese* or ritornellos (*see* RIPRESA, ex.1*b*), which, like the main scheme itself, suggest a hemiola alternation between 3/2 and 6/4.

Ex.1 *Fantinella* for guitar, *I-PEc*, 586 (H72) (upper- and lower-case Roman numerals indicate major and minor triads; the stems show the direction in which the hand strums the chords)

The earliest extant example, the keyboard *Fantina gagliarda* from the *Intabolatura nova* (1551; CEKM, viii, 1965), shows each of the two phrases of the opening section (corresponding to bars 1–4 and 5–8 of ex.1) with the progression III–VI–VII–III and the opening half of the second section (bars 9–12) sustaining a VII chord instead of moving on to III. The Fugger Lutebook (1562) contains a piece called *La fantina* (DTÖ, xxxvii, Jg.xviii/2, 1911, p.115), which presents the main framework of ex.1 without the *riprese*. Antonio di Becchi's *Fantinella aria da cantar* (1568) for lute (printed in G. Lefkoff, *Five Sixteenth Century Venetian Lute Books*, Washington DC, 1960, p.142) uses slower note values for the main music, which would actually accompany a singer, and faster values for the *riprese* between stanzas. Other chordal guitar accompaniments similar to ex.1 appear in printed sources by Milanuzzi (1625) and Millioni (1627) and in certain manuscripts (*I-Fn* Magl.XIX 143, *Fr* 2951 and *Rsc* A 247).

RICHARD HUDSON

Fantini, Girolamo (*b* Spoleto, bap. 11 Feb 1600; *d* Florence, after 6 May 1675). Italian trumpeter and writer on the trumpet. After service with Cardinal Scipio Borghese in Rome between February 1626 and October 1630, he entered the employ of the Grand Duke of Tuscany, Ferdinando II, in April 1631 as chief court trumpeter. In Rome in the summer of 1634 he took part in the first known soloistic trumpet performance accompanied by a keyboard instrument, played by Frescobaldi on Cardinal Borghese's house organ. In 1638 he published an important trumpet method: *Modo per imparare a sonare di tromba*, printed in Florence although the title-page says Frankfurt (facs., Milan, 1934, and Nashville, TN, 1972; Eng. trans., 1976). It is of historical importance for its inclusion of the first known pieces for trumpet and continuo, among them eight sonatas specifically for trumpet and organ. Fantini furthermore extended the high register from the *g″* and *a″* known to Bendinelli and Monteverdi to *c‴* (and once to *d‴*). He was celebrated for his solo performances and must have been highly gifted, particularly in the art of 'lipping' so as to be able to play notes not in the harmonic series, to which the natural trumpet of his day was confined.

EDWARD H. TARR

Fārābī, al- (*b* Wasij, district of Farab, Turkestan; *d* Syria, 950). Islamic philosopher and theorist. He lived for some time in Baghdad, and spent his last years mainly in Aleppo, having accepted an invitation from the Ḥamdānid ruler Sayf al-Dawla. He was one of the greatest of Islamic philosophers and was regarded as 'the second teacher'

(Aristotle being the first). He was pre-eminent as a theorist of music, and the surviving part of his *Kitāb al-mūsīqī al-kabīr* ('Great book on music') remains the most imposing of all Arabic works on music. The general approach is more analytical than descriptive, foregrounding schematic or mathematical codifications of possible structures, whether of scale, rhythm or melody. It is especially important for its elaborate treatment of theory, largely based on Greek concepts, but it also reflects aspects of contemporary practice, principally in the sections on instruments and rhythm.

The *Kitāb al-mūsīqī al-kabīr* consists of an introduction and three books, each in two sections. The extensive introduction is of particular interest for its methodology. It proposes an evolutionary view of music, developing from an initial instinctive use of the voice to express emotion towards a present state of perfection. The first book begins with the physics of sound and goes on to discuss intervals, intervallic relationships and species of tetrachord. The second section of the first book deals with octave divisions in the context of the Greater Perfect System, and then, starting with the concept of the *chronos prōtos*, surveys various possible rhythmic structures.

The second book is concerned with instruments. The first section is devoted to the fingerboard of the *'ūd* (short-necked lute), with an elaborate discussion of possible frettings. This is followed by a presentation of different (and for the most part purely notional) tunings. The second section covers two kinds of *ṭunbūr* (long-necked lute), aerophones, the *rabāb* (the earliest explicit reference to a bowed instrument) and instruments with unstopped strings, such as the harp. The emphasis throughout is on the various scales that are or can be produced on these instruments, and there is a general absence of physical description.

The third book contains a further section on the rhythmic cycles, but is concerned principally with song structure and composition, the latter viewed mainly in terms of an abstract survey of note combinations and schematic melodic patterns.

The discussion of rhythm in the *Kitāb al-mūsīqī al-kabīr* is rather complex, and al-Fārābī returned to the subject in two slighter works, the *Kitāb al-īqā'āt* ('Book of rhythms') and the *Kitāb iḥṣā' al-īqā'āt* ('Book of the comprehension of rhythms'). These provide a rather clearer picture of the structure of cycles used by contemporary musicians and the subtle and sometimes complex processes of variation to which they could be subjected.

Unlike al-Fārābī's purely musical works, his *Kitāb iḥṣā' al-'ulūm* (*De scientiis*), which contains a brief section on music, became known in the West, and was translated in the 12th century by both Gerard of Cremona and John of Seville. The section on music, dealing with general definitions and describing the scope of musical theory, is incorporated (under the title *De divisione musicae secundum Alpharabium*) in the *De musica* of Hieronymus de Moravia (13th century), and borrowings from it are also to be found in the Pseudo-Aristotelian treatise *De musica* (13th century) and in the *Quatuor principalia musice*, often ascribed to Simon Tunstede (*d* 1369).

OWEN WRIGHT

Farandole (Fr.; Provençal *farandonlo*; Old Fr. *barandello*). A chain dance of southern France, particularly of Provence, of the region around Arles and of Tarascon. It is usually performed on major holidays (especially the Feast of Corpus Christi) by a line of men and women in alternation, who either hold hands or are linked by holding handkerchiefs or ribbons between them. The chain follows a leader in a winding path, moving in long and rapid steps and passing beneath arches formed by the raised arms of a couple in the chain. Music for the folkdance is usually in a moderate 6/8, played by a flute and drum. Tradition holds that the *farandole* was introduced to the region around Marseilles by the Phoenicians, who in turn had learnt it from the Greeks; Sachs suggested that the winding path of the dance symbolized Theseus's escape from the labyrinth (supporting his idea with iconographical evidence of Ariadne dancing the *farandole*). Evocations of the *farandole*, sometimes in simple duple or quadruple metre (2/4 or 4/4), have been used to suggest Provençal 'local colour' by 19th- and 20th-century French composers, including D'Indy, Bizet (a brief *farandole* for the end of Act 3 scene i of Daudet's *L'Arlésienne*), Milhaud and Gounod (opening of Act 2 of *Mireille*).

Farberman, Harold (*b* New York, 2 Nov 1929). American composer and conductor. A graduate of the Juilliard School and New England Conservatory, he performed as a percussionist and timpanist with the Boston SO from 1951 to 1963. He was the founder (in 1975) and the first president of the American Conductors' Guild, and in 1981 established its School of Conducting at the University of West Virginia. He was professor of conducting at the Hartt School of Music from 1990 and the conductor of the Oakland SO from 1971 to 1979; in 1994 he was the director of the Stokowski Conducting Competition.

He has made many international appearances as a guest conductor, and has recorded, among other works, the symphonies of Mahler with the LSO and symphonies by Michael Haydn with the Bournemouth Sinfonietta. In 1972 he received a grant from the National Institute of Arts and Letters in recognition of his research into and recordings of the music of Ives.

Farberman's compositions range from percussion works to expressionist opera (*Medea*), mixed-media works and music for film. His style often incorporates elements of jazz, as in the Double Concerto for Single Trumpet. *The Losers*, first performed in 1971, was the first opera commissioned by the American Opera Center of the Juilliard School after its move to Lincoln Center. He has received numerous awards and commissions from organizations such as the NEA, Colorado and New York state arts councils, the Denver SO, the Stuttgart Chamber Ensemble and the Lenox String Quartet. Farberman is the author of *The Art of Conducting Technique: a New Perspective* (Miami, FL, 1997).

JEFFREY LEVINE

Farblichtmusik (Ger.: 'colour-light music'). Narrowly defined, this term refers to a category in the arts defined by Alexander László in which painting and music are linked to each other and are equally important. In a broader sense, this term is applied to all attempts at visualising music. Lászlós point of departure was his synaesthetic faculty (*see* SYNAESTHESIA). While music is performed, a changing abstract play of colours and forms is cast on a screen by a multiple-transparency projector, controlled from a mixing desk.

László coined the term 'Farblichtmusik' in an article by that title published on 8 March 1925 in the *Münchner Neueste Nachrichten*. The first performance of Farblichtmusik was on 16 June 1925 during the 55th Deutsches Tonkünstlerfest in Kiel. There were three varieties of the genre: (1) 'Lichtornamentik', in which music and an unchanging ornamental light effect, cast on the ceiling and resembling a kaleidoscope image, were linked by a common atmosphere (music by Chopin or Schumann); (2) 'Russische Farbenmusik', when the entire room was bathed in light of a single colour, the aim being to heighten the effect of the music, with music still in the foreground (music by Skryabin or Rachmaninoff); (3) 'Farblichtmusik' proper, in which a new work of art was to be created by the synthesis of two arts (music by László, images by Matthias Holl, and sometimes also abstract experimental films by Oskar Fischinger).

László's Farblichtmusik was a typical avant-garde experiment of its time (*see also* COLOUR AND MUSIC). Although very popular in the years 1925–7, it was much criticized for the fact that both László's compositions and the colour projections relied too much on special effects and had too little to say; that the play of colour was subjective and could not be reconstructed afterwards, while the critics' own associations of colour with music did not coincide with those chosen by László; and that the intended synthesis of two arts did not actually occur because the music and the coloured light merely ran side by side, and the projected images were interchangable.

Farcitura. *See* FARSE.

Farco, Michele. *See* FALCO, MICHELE.

Farding, Thomas. *See* FARTHING, THOMAS.

Farewell. English term in use from the 16th century to the early 18th. Occasionally it simply denoted the last item in a collection of music (as in Antony Holborne's *The Cittharn Schoole*, 1597), but more frequently it was used for a valedictory piece expressing sorrow or grief upon the departure or death of some person. The farewells or verses written by condemned men before their execution may be the source of the title.

A number of farewells for consorts have survived, not all in their entirety. These include Edward Blankes's *Mr Blankes his Farewell* and two pieces using the In Nomine form by Christopher Tye – *My Farewell* and *Farewell my good l*[ady] *for ever*. A farewell for the Earl of Sandwich (*d* 1672) is found in *Musick's Recreation on the Viol, Lyra-Way* (RISM 1682[9]), and two such pieces for keyboard commemorating respectively Lord George Digby (*d* 1677) and the royalist soldier George Holles (*d* 1675) are included in the 1678 edition of John Playford's *The First Part of Musick's Hand-Maide* (1678[6]). *Sefauchi's* [Siface's] *Farwell* by Purcell appeared in the second part of this book, and *The Queen's Dolour*, also attributed to him, is described as a farewell in an early 18th-century manuscript (*GB-Lbl* Add.22099), the index to which shows clearly that the genre was regarded as constituting a distinct musical category.

In the second half of the 17th century the farewell took the place of the commemorative pavan which previously had often been employed in a similar way as a lament. Although Gottfried Finger's ode *Weep, all ye Muses* (1696) was referred to as 'Mr Purcel's Farewel', in general

the term was applied to instrumental compositions consisting of a single short movement of no prescribed form. Paisible's *The Queen's Farewell*, for the death of Queen Mary in 1695, is a binary piece for a four-part consort of oboes, tenor oboe and bassoon, to which kettledrums may have been added in performance. 'Mr Purcell's Farewell', from the *Music on Henry Purcell's Death* by Jeremiah Clarke (i), imaginatively employs repeated drumstrokes on a tonic pedal with sustained harmonies in trumpets and recorders against which the strings reiterate a dolorous ostinato figure. Finger's ode required 'sharp' and 'flat' (i.e. natural and slide) trumpets; these examples suggest that in farewells written for an ensemble the expressive use of instrumental colour was an important factor.

MICHAEL TILMOUTH

Farey, John (*b* Woburn, Beds., 24 Sept 1766; *d* London, 6 Jan 1826). English geologist and writer on music. He was a tenor in the Surrey Chapel Society which met weekly in Southwark to practise sacred music. In 1791, when that society became part of the Choral Fund, Farey served as secretary and librarian and became acquainted 'with numbers of the most eminent' practitioners of music. The next year he returned to Woburn as the Duke of Bedford's land steward and warden of Woburn parish church; from 1802 he lived in London.

Farey found the study of systems of musical temperament 'a favourite source of amusement, while relaxing from … professional studies and practice'. His thoughts on music appeared mainly in numerous articles in the *Philosophical Magazine* and reappeared in contributions to David Brewster's *Edinburgh Encyclopaedia* and to Abraham Rees's *Cyclopaedia*: indeed Rees named only Charles Burney and Farey as 'co-adjutors' of the musical articles in the *Cyclopaedia*. One of Farey's principal interests was the promotion of a notation in which any interval likely to be used in a temperament may be expressed in terms of three very small intervals that in effect are postulated to be atomic. With the assistance of C.J. Smyth, he published tabulations of various proposed temperaments in the new notation, which had occurred to him after study of Marmaduke Overend's manuscripts. Farey hoped that musicians and theorists would find the notation easier to use than ratios (of string lengths) or their logarithms, and demonstrated several elementary theorems about the notation to facilitate its use. He heartily endorsed the realization of musical instruments (notably Henry Liston's 'euharmonic organ') on which alternative temperaments could be produced and compared, and often professed failure to understand why many musicians were ignorant of, or indifferent to, this aspect of musical science, which he regarded as both important and fundamental.

An incomplete list of Farey's signed scientific articles, including 21 on music, is given in *Catalogue of Scientific Papers (1800–1863) Compiled by the Royal Society of London*, ii (London, 1868), 561–3; Farey's letter to Benjamin Silliman, published as 'On Different Modes of Expressing the Magnitudes and Relations of Musical Intervals' (*American Journal of Science*, ii, 1820, 65–81), summarizes and provides a key to many of Farey's writings on music.

MICHAEL KASSLER

Farfaro, Nicolò [Mazzaferro, Giorgio] (*b* late 16th century; *d* before 1647). Italian humanist and writer on music. In 1640, under the pseudonym of Giorgio Mazzaferro, he wrote a *Discorso sopra la musica antica, e moderna* (in *I-Rli*). In the wake of the Florentine Camerata he here proclaimed the superiority of ancient music, in which poetry and music were one, over modern music, where such unity had been lost: in the former, 'the poetry was sung simply, in a way consistent with its nature, so that everyone could understand and appreciate the words, rhythm and metre of the poetry', whereas in the latter, vocal music had been 'crippled' by the introduction of imitation, canons, 'strained passages' and 'repetitions'. One of the many 'imperfections' of modern music was that it had become more than ever 'soft and lascivious'. Ancient music 'had its rules, which no-one might violate, so that its propriety and fitting processes might be preserved'. From such a moralistic posture he deplored the spread of the new monodic style to liturgical, or at least church, music: a most serious defect was that there was no difference between 'a song serenading a lady and one serving to honour God in church, a despicable abuse unworthy of Christian virtue'. Pietro della Valle, to whom the *Discorso* was cryptically addressed, replied to Farfaro's criticisms with *Note … nel Discorso sopra la musica antica e moderna* (in *I-Vnm*) and Farfaro replied in turn with *Risposta alle Note … nel Discorso della musica antica e moderna*, which is lost.

AGOSTINO ZIINO/R

Faria, Luiz Calixto da Costa e. *See* COSTA (i), (5).

Farina, Carlo (*b* Mantua, *c*1604; *d* Vienna, 1639). Italian violinist and composer. His Mantuan origins are referred to on the title pages of his five published books. Nothing is known of his musical education, but if he was the son of Luigi Farina of Casalmaggiore, Cremona, a 'sonatore di viola' who was known to have been in Mantua, in the service of the Gonzagas, at the beginning of the 17th century and to have married there in 1603 and taken Mantuan citizenship in 1606, he probably received his early musical training from his father. Mantua at that time was a particularly productive and stimulating environment for a young violinist, what with the presence of the virtuoso violinist Salamone Rossi and the important musical legacy of Claudio Monteverdi. Farina soon

became very well known as a violinist, and in 1625 he was appointed Konzertmeister of the court of the Elector of Saxony, Johann Georg I, in Dresden, working directly under Heinrich Schütz. From 1625 to 1628 his name appears in connection with the most important activities at the Saxon court, including the festivities for the wedding of the elector's daughter Sophia Eleonora and the Landgrave Georg II of Henssen-Darmstadt (Torgau, spring 1627). Farina played a leading role both in the music for the wedding banquet and in the performance of Schütz's *Dafne*, composed for the occasion. A brief reference to these events can be found in the eighth galliard of *Il terzo libro delle pavane* . . . (1627), which the composer recalls as having been played and sung on that occasion to a eulogistic text, in all likelihood now lost. The straitened circumstances of the Dresden court, resulting from the Thirty Years War, meant that Farina's work there was interrupted in 1628; the following year he was replaced by the Mantuan violinist Francesco Castelli. After returning to Italy, Farina was engaged in the autumn of 1631 as a violinist in the chapel of Madonna della Steccata, Parma, but he did not remain there after 1632. In September 1635 he took part in the musical celebrations for the feast of S Croce in Lucca, probably as first violin, and at the end of that year he left Italy permanently. He moved again to northern Europe, first to Danzig, where he played in the municipal orchestra between 1636 and 1637, and then, from 1638, to Vienna, where he was in the service of the Empress Eleonora I. He remained there until his death in 1639, probably at the end of July.

All of Farina's music, almost entirely for instruments of the violin family, was published in Dresden during his years there. It consists of five printed volumes made up mostly of three- and four-part dance pieces and, to a much lesser extent, of two- and three-part sonatas, conzonas and sinfonias, as well as the famous *Capriccio stravagante*. The melodic and harmonic treatment of the parts in the dance pieces is related to the consort music which developed in northern and central Germany in the first three decades of the 17th century under the influence of English musicians such as John Dowland, Daniel Norcombe, Thomas Simpson and William Brade. However, Farina's writing is more complex and the virtuoso upper parts are clearly in a violin style.

In the ten sonatas which conclude the first, fourth and fifth books, Farina's Italian background is more apparent, even though the use of variation and large-scale designs are a reminder of the environment in which they were conceived. The three-part sonatas, often characterized throughout by specific rhythmic figures, demonstrate little interest in contrapuntal development, favouring greater motivic variation and dialogue between the two violins, generally articulated through the rapid exchange of a given melodic fragment, alternated note for note between the upper voices (see *La polaca*, *La capriola* and *La cingara*). It is in the sonatas for violin and continuo that Farina displays his talents as a virtuoso violinist: rapid passages of demisemiquavers, double stopping (especially in ternary sections), quick, repeated notes, broken chords and the frequent use of upper registers (up to third position) make these sonatas the summit of violin technique of the day. In the sonatas *La franzosina* and *La desperata* he exploits the timbre of the G string to the full.

Farina's sophisticated musical imagination is revealed in the four-part *Capriccio stravagante* (*Ander Theil*, 1627), which consists of a group of descriptive pieces linked by short dance-style sections. The pieces imitate the sounds of instruments and animals (cat, dog, hen, lyre, clarino, military drum, Spanish guitar, and so on), exploiting the violin's potential in an innovative way by using expressive techniques such as glissando, pizzicato, tremolo and double stopping, and particular effects like *col legno* and *sul ponticello*. These are explained in detail in a table. Farina's influence on German violinist-composers was immense and long-lasting. Before he moved to Dresden there were no notable German violinists, yet within a few years several virtuosos appeared. David Cramer, the elder Johann Schop and Johann Vierdanck were among the first to show his influence, which can still be seen in the works of J.J. Walther, J.P. Westhoff and Heinrich Biber at the end of the 17th century.

NONA PYRON/AURELIO BIANCO

Farina, Francesco (*d* ?1575). Italian composer. Giani described him as a Servite priest and provided the date of his death. Although only the final gathering (including the *tavola*) has survived from the canto partbook of his *Madrigali a sei voci libro primo* the melodic style of these pieces suggests, in their repetition, the influence of the lighter idioms. The gathering itself is misbound as the third of a Vincenti edition of a Marenzio publication (in *GB-Ob*); comparison of the typography of the two shows that the Farina book was also printed by Vincenti and suggests that the error in assembling the book arose from the simultaneous productions of the two publications. Since posthumous publication of music by minor composers is rare in this period, the accuracy of Giani's death-date is called into question. A book of four-voice madrigals, of which no copies are now known, was recorded in Gardano's *Indici* of 1591 (*MischiatiI* I:163) and in an early 17th-century manuscript inventory of the ducal library at Innsbruck. It was presumably from this publication that Peter Philips selected *Morirò cor mio* for inclusion in Phalèse's *Melodia olympica* (RISM 1591[10]). This piece also appears among six four-voice madrigals by Farina in a set of early 17th-century English manuscript

partbooks (in *GB-Lcm*) which once belonged to William Firmage, suggesting that the other five madrigals also were copied from the lost publication.

IAIN FENLON

Fariñas (Canteros), Carlos (*b* Cienfuegos, province of Las Villas, 28 Sept 1934). Cuban composer and teacher. He studied at the Conservatory in Havana under Harold Gramatages and José Ardévol, and in 1956 completed his compositional studies with Copland in the USA. He taught from 1960 onwards, and from 1967 to 1977 was in charge of the music department of the National Library of Cuba. He founded the chair of Management of Sound and the Study of Electroacoustic and Computer Music at the Instituto Superior de Arte (1988), of which he is also the director and the professor of composition.

There are three compositional stages in his career: national-neoclassical (1953–64), avant garde (1964–75, and with elements of nationalism, 1975–84), and post-modern (1984–). His works have been performed in Cuba, Europe and the USA. His compositional language is responsive to the most advanced techniques of contemporary music and is expressed through a great diversity of forms, from the most traditional to the most experimental structures.

MARINA RODRÍGUEZ LÓPEZ

Farinel [Farinelli]. French family of musicians of the 17th and 18th centuries, most of them resident in Italy. In addition to the three discussed separately below, there was a Robert Farinel, called 'the elder', and Agostino, Stefano and Domenico Farinelli, the first three of whom were violinists at the court of Savoy in Turin, where Domenico is described simply as 'instrumentalist'.

(1) **François Farinel** (*b* Billom; *d* Turin, April 1672). Instrumentalist and composer. He was the younger brother of Robert Farinel and father of Agostino and Stefano Farinelli. He was a *maître joueur d'instruments* and worked at the Savoy court from 1620 until his death. He composed the ballet *La primavera trionfante nell'inverno* in 1657.

(2) **Michel Farinel** (*b* Grenoble, bap. 23 May 1649; *d* La Tronche, nr Grenoble, 18 June 1726). Violinist and composer. He was the eldest son of Robert Farinel. He was a pupil of Carissimi in Rome, and he also visited Portugal and England (1675–9). He was in France in 1672. He married the harpsichordist Marie-Anne Cambert (*b* Paris, *c*1647; *d* La Tronche, nr Grenoble, 30 April 1724), the daughter of Robert Cambert. He went with her to Madrid in 1679 as a member of a group of performers led by Henry Guichard and became superintendent of music and ballets to the Spanish queen (Marie-Louise, daughter of the Duke of Orléans). On his return to France he bought a position as violinist at the court of Louis XIV at Versailles in 1688, but in 1689 he retired to Grenoble, where he became *maître de chapelle* to the nuns at the convent at Montfleury, and directed concerts at the abbey of Ste Cécile. On 14 August 1692 he was installed as *contrôleur alternatif du payeur des gages des officiers du Parlement du Dauphiné*, a post which he sold on 9 May 1726. In 1696 he set to music a *Recueil de vers spirituels* by Henry Guichard. Both the words and the music (which is lost) were written for the nuns of Montfleury; each piece was to be illustrated by a dance. He also wrote a set of variations for violin and continuo on the folia, which was known in England as *Farinel's Ground*; it was published by John Playford in *The Division Violin* (London, 1685[10]), and the ground is the basis of several pieces published in England about this time. Farinel also wrote his autobiography, which is now lost.

(3) **Jean-Baptiste Farinel** [Giovanni Battista Farinelli] (*b* Grenoble, 15 Jan 1655; *d* Venice, *c*1725). Violinist and composer, second son of Robert Farinel. He was Konzertmeister at the court at Hanover in 1680 and at the court at Osnabrück from 1691 to 1695. He later returned to Hanover and was ennobled by the elector, who, on becoming King George I of England in 1714, appointed him resident in Venice. Between 1722 and 1724 he made several visits to Grenoble to collect debts from his brother Michel. At this time he described himself as *commissaire du roi d'Angleterre*.

MARCELLE BENOIT (with ÉRIK KOCEVAR)

Farinelli [Broschi, Carlo; Farinello] (*b* Andria, Apulia, 24 Jan 1705; *d* Bologna, 16/17 Sept 1782). Italian soprano castrato, the most admired of all the castrato singers.

1. Life. 2. Achievements.

1. Life. In 1740, Farinelli wrote of his birth to Count Pepoli, 'I do not claim I was born from the third rib of Venus, nor that my father was Neptune. I am Neapolitan and the Duke of Andria held me at the baptismal font, which is enough to say that I am a son of a good citizen and of a gentleman'. Farinelli's father, Salvatore Broschi, was a petty official in Andria and later in Barletta. There is evidence that the family moved from Barletta to Naples

in 1711, but none for the often-repeated assertion that Farinelli's father was a musician. He may have received some musical training from his brother RICCARDO BROSCHI, seven years his elder. In 1717, the year of his father's death, he began private study in Naples with Nicola Porpora, the teacher of many fine singers. As Giovenale Sacchi, his first biographer, and Padre Martini, who often met him during the years of his retirement, attest, the stage name of Farinelli came from a Neapolitan magistrate, Farina, whose three sons had sung with the Broschi brothers and who later patronized the young singer.

Farinelli made his public début in 1720 in Porpora's *Angelica e Medoro*, based on the first printed libretto of Pietro Metastasio. This marked the beginning of a lifelong friendship between singer and librettist, who always referred to each other as 'dear twin' ('caro gemello') in reference to their operatic 'twin birth' in this opera, in which Farinelli, aged only 15, sang the small role of the shepherd Tirsi. Two years later his performing career began in earnest. In 1722–4 he sang in Rome and Naples in operas by Porpora, Pollaroli and Vinci, among others, and was quickly promoted into leading roles; at this time he often sang the part of the prima donna, such as the title role in Porpora's *Adelaide* (1723, Rome). His earliest surviving image, a caricature by Pierleone Ghezzi (1724), 'Farinello Napolitano famoso cantore di Soprano', shows him costumed as a woman.

From 1724 to 1734 Farinelli achieved extraordinary success in many northern Italian cities, including Venice, Milan and Florence. His appearance at Parma in 1726 at the celebrations on the marriage of the duke, Antonio Farnese, marks his first association with the Farnese family, who played a critical role in his later life through Elisabetta Farnese, niece of the duke and wife of Philip V of Spain. From 1727 to 1734 he lived in Bologna, where both he and his brother were enlisted in the Accademia Filarmonica in 1730. In 1732 he was granted rights of citizenship and purchased a country estate outside the city, where he retired in 1761. In Bologna he met Count Sicinio Pepoli, with whom he began to correspond in 1731; his 67 letters to Pepoli, recently discovered, provide rich new detail of the singer and the period (Vitali, 1992; Vitali and Boris, 2000). In Turin, he met the English ambassador, Lord Essex, who in 1734 played a critical role in negotiating for his performances in London (Taylor, 1991), and may have been responsible for commissioning the formal portrait of 1734 by Bartolomeo Nazari, the first of many imposing depictions that serve to transform Farinelli's image from the caricatures of Ghezzi, Marco Ricci and Antonio Maria Zanetti (all before 1730).

Attempts had been made to lure Farinelli to London since 1729. Handel failed to secure him for his company, but Farinelli signed a contract in 1734 with the competing company, where Porpora was the leading composer. From 1734 to 1737 he performed in operas by Porpora, J.A. Hasse and his brother, and his singing took the city by storm. The extensive commentary, public and private, is rarely less than ecstatic. When, in 1737, he decided to break his contract and go to Madrid at the command of 'Their Catholic Majesties' (as described by Benjamin Keene, British ambassador to Spain), the resentment was equally strong. *The Daily Post* reported on 7 July 1737 (Lindgren, 1991):

> Farinello, what with his Salary, his Benefit Night, and the Presents made him by some of the wise People of this Nation, gets at least 5000 l. a Year in England, and yet he is not asham'd to run about like a Stroller from Kingdom to Kingdom, as if we did not give him sufficient Encouragement, which we hope the Noble Lords of the Haymarket will look upon as a great Affront done to them and their Country.

Farinelli had been called to Madrid by the queen in the hope that his singing would help cure the debilitating depression of Philip V. It became his responsibility to serenade the king every night (the exact number of arias differs in reports between three and nine), an obligation he apparently maintained until the king's death in 1746. Appointed 'royal servant' to the king in a royal patent of 1737, his remuneration was 1500 guineas in 'English money', as well as a coach with two mules for city travel, a team of six mules for trips between cities, 'as also the necessary Carriages for his Servants and Equipage, and a decent and suitable Lodging for his person and family as well in all my Royal Seats as in any other place where he may be ordered to attend on my Person' (McGeary, 1998).

That Farinelli's activities encompassed more than singing the same arias every night to the ailing king is especially well documented in the period after Philip V's death and the accession of Ferdinand VI (1746–59). In 1747 he was appointed artistic director of the theatres at Buen Retiro (Madrid) and Aranjuez, marking the beginning of a decade of extraordinary productions and extravaganzas in which he collaborated extensively with Metastasio. Only Metastasio's side of this correspondence survives: the 166 letters, beginning on 26 August 1747, detail many of Farinelli's projects, from the importation of Hungarian horses (with which Metastasio was engaged from Vienna for a year and a half) to the redirection of

Farinelli: portrait by Bartolomeo Nazari, 1734 (Royal College of Music, London)

the River Tagus in Aranjuez to enable elaborate 'water music' or *embarcadero* for the royal family. 17 of the 23 operas and serenatas produced under Farinelli's direction between 1747 and 1756 had texts by Metastasio, many of them revised for the Spanish performances. Metastasio's letters preserve one side of an engaging conversation about all aspects of performance. His new serenata *L'isola disabitata* was set by Giuseppe Bonno and performed in 1754, the year the Aranjuez theatre was inaugurated; Metastasio wrote to Farinelli after hearing about the production: 'I have been present at Aranjuez all the time I was reading your letter . . . I have seen the theatre, the ships, the embarkation, the enchanted palace; I have heard the trills of my incomparable Gemello; and have venerated the royal aspect of your divinities'. Farinelli's 'royal aspect' was also captured by the painter and set designer Jacopo Amigoni in two large canvases of 1750–52; in one, the singer is depicted at the centre of a seated group flanked by Metastasio, the soprano Teresa Castellini and a self-portrait of the painter, and in the other he is seated alone in the countryside of Aranjuez with the 'fleet' of ships he created for the embarkations on the Tagus behind him. In both, Farinelli wears the cross of the Order of Calatrava with which he was knighted in 1750. The most imposing portrait, however, is the last, painted about 1755 by Corrado Giaquinto, showing him full length in his chivalric robes with Ferdinand VI and Queen Maria Barbara revealed in an oval behind him by flying putti.

The Giaquinto portrait marks the apogee of Farinelli's career. Metastasio's *Nitteti*, set by Nicola Conforto, had its première in 1756. After Ferdinand VI's death in 1759, he was asked to leave Spain, and retired to his villa in Bologna where he installed his extensive collections of art, music and musical instruments. He nurtured hopes of returning to Spain or of attaining a position of similar authority elsewhere, but they proved to be vain. He lived out his years corresponding with Metastasio (who died in April 1782) and receiving the homage of musicians and nobility, including Martini, Burney, Gluck, Mozart, the Electress of Saxony and Emperor Joseph II, and died shortly after his 'twin'.

2. ACHIEVEMENTS. Farinelli's voice was by all accounts remarkable. J.J. Quantz, who first heard him in Naples in 1725 and then again at Parma and Milan in 1726, published a description:

> Farinelli had a penetrating, full, rich, bright and well-modulated soprano voice, whose range extended at that time from *a* to *d‴*. A few years afterwards it had extended lower by a few notes, but without the loss of any high notes, so that in many operas one aria (usually an adagio) was written for him in the normal tessitura of a contralto, while his others were of soprano range [Farinelli's later repertory indicates that his lower range ultimately extended to *c*]. His intonation was pure, his trill beautiful, his breath control extraordinary and his throat very agile, so that he performed even the widest intervals quickly and with the greatest ease and certainty. Passage-work and all varieties of melismas were of no difficulty whatever for him. In the invention of free ornamentation in adagio he was very fertile (Marpurg, 1754).

The *messa di voce* was the cornerstone of 18th-century vocal pedagogy and Farinelli's was legendary. In a letter to Pepoli from Vienna in March 1732, the singer described his audience before the Habsburg emperor Charles VI: 'I presented him with three *messe di voce* and other artful effects, which his generosity allowed him to admire'. The emperor also advised Farinelli, as the singer reported to Burney: 'Those gigantic strides [leaps], those never-ending notes and passages . . . only surprise, and it is now time for you to please; . . . if you wish to reach the heart, you must take a more plain and simple road'. Earlier, Quantz had criticized his acting. Burney states how much Farinelli learnt from these early critiques, so that he 'delighted as well as astonished every hearer', but both criticisms followed Farinelli throughout his career. In London, after the initial wild enthusiasm, some dissatisfaction began to be voiced, and in May and June 1737 Farinelli cancelled several performances, excusing himself on grounds of 'indisposition'. On 11 June, he sang a farewell aria of his own, expressing his gratitude to Britain. Given this sequence of events, it may be that his decision not to return was taken even before he left for Paris and well before he received the invitation from Spain. After leaving the public stage for the Spanish court, Farinelli wrote to Pepoli (16 February 1738) from Madrid, 'I am now able to say with true peace – *haec est requies mea*'. However, it is clear that he continued to sing not just in chamber but also in private Spanish court opera.

Farinelli's prodigious vocal abilities, about which there can be no doubt, were coupled with deep musicianship. He composed and he played the keyboard and the viola d'amore. In addition to his London farewell, for which he wrote both text and music, he composed an aria for Ferdinand VI (1756), and he sent 'flotillas' of manuscripts to Metastasio. One packet, received after Metastasio's death in 1782 by the composer Marianne von Martínez, elicited an enthusiastic response; she wrote: 'I have received much applause from many musical experts for the great naturalness and fancy that exists generally [in your keyboard works] and particularly in the first sonata in F and in the second in D, with the graceful rondo well constructed and then ornamented with pleasing variations'. Farinelli and Metastasio earlier exchanged settings of the aria 'Son pastorello amante'; on receipt of Farinelli's version, Metastasio wrote (13 June 1750): 'Your music to my canzonet is expressive, graceful, and the legitimate offspring of one arrived at supremacy in the art' (Heartz, 1984).

Farinelli took pains to document his achievements. In 1753 he sent a manuscript to the Habsburg court in Vienna containing six arias, four of which are attributed to him. In the two others, 'Quell'usignolo che innamorato' from Giacomelli's *Merope* (1734) and 'Son qual nave che agitata' written by Riccardo Broschi in 1734 for insertion in Hasse's *Artaserse*, Farinelli marked in red his *passaggi* and *cadenze*; this is an important source for Farinelli's improvisatory skill (Haböck, 1923). Farinelli also documented his work in Spain as an artistic director with an illustrated manuscript of 1758 that details the concerts, operas and royal embarkations, with lists of all musicians and descriptions of the sets, fireworks and other preparations, as well as anecdotes of the court and autobiographical notes (Morales Borrero, 1972).

Farinelli's will and the inventory of his household goods (both excerpted in Cappelletto, 1995) provide further autobiographical details and extensive information on Farinelli's extraordinary collections of paintings, music and musical instruments. Queen Maria Barbara bequeathed him all her music books and manuscripts and three of her harpsichords. These include her 15 volumes of Domenico Scarlatti's sonatas, bound in red morocco

with the combined arms of Spain and Portugal (Kirkpatrick, 1953). Scarlatti and Farinelli, both from Naples, had met in Rome in 1724–5 and were close collaborators in Spain; the Joseph Flipart engraving of 1752 of the Spanish court after an unfinished Amigoni painting seems to depict them standing together. Farinelli's reminiscences of Scarlatti to Burney in (1770) provide 'most of the direct information about Scarlatti that has transmitted itself to our day' (Kirkpatrick, 1953). Farinelli's instruments included a fortepiano made in Florence (1730), a Spanish harpsichord (from the queen's collection) with 'more tone than any of the others' (Burney), a transposing harpsichord with a movable keyboard (particularly useful for singers), a viola d'amore by Granatino, violins by Amati and Stradivarius, and a guitar inlaid with mother of pearl.

Farinelli was a legend even during his life. Fictionalized accounts began to appear in the 1740s in England (including in 1744 a comic opera by J.F. Lampe), flourished in the 19th century (Scribe wrote three fictionalized accounts in 1816, 1839 and 1843, the last set to music by Auber) and continue to this day (in the past 30 years three new novels have appeared: L. Goldman: *The Castrato*, New York, 1973; M. David: *Farinelli: mémoires d'un castrat*, Paris, 1994; F. Messmer: *Der Venusmann*, Berne, 1997), often rich in imagined political and sexual intrigue (as in the 1994 film *Farinelli*). Despite the mythologizing, all contemporary evidence points to Farinelli as a person of noble sentiment and character. As Burney wrote:

> Of almost all other great singers, we hear of their intoxication by praise and prosperity, and of their caprice, insolence, and absurdities, at some time or other; but of *Farinelli*, superior to them all in talents, fame, and fortune, the records of folly among the *spoilt children* of Apollo, furnish not one disgraceful anecdote.

WORKS

Arias: Son pastorello amante, for *Orfeo*, London, 1736 [frag., in portrait by C. Giaquinto], ed. in Heartz, 1990; Ossequioso ringraziamento per le cortesissime Grazie ricevute nella Britannica Gloriosa Nazione (Regal Britannia . . . Ah! che non sono le parole (Farinelli)), 1737, *GB-Lbl*, ed. in Haböck, 1923; La Partenza (canzonet, Metastasio), 1746 [depicted in portrait by J. Amigoni], ed. in Heartz, 1984; 4 arias, *A-Wn*: Invan ti chiamo . . . Al dolor che vo sfogando, 1737, Io sperai del porto in seno, Vuoi per sempre abbandonarmi, 1752, Ogni dì più molesto dunque . . . Non sperar, non lusingarti, 1751, ed. in Haböck, 1923; Che chiedi? Che brami? (Metastasio), 'Aria per la Maestà di Ferdinando VI Re cattolico', 1756, *I-Bc*, ed. in Haböck, 1923; other works alluded to in correspondence with Metastasio, Algarotti and Martinez (see Cappelletto, 1995)

ELLEN T. HARRIS

Farinelli, Giuseppe [Finco, Giuseppe Francesco] (*b* Este, nr Padua, 7 May 1769; *d* Trieste, 12 Dec 1836). Italian composer. He took the professional name of the castrato Farinelli as a sign of gratitude towards the singer, whose help and protection he received during his studies. After studies in Este with the local *maestro di cappella*, Lionelli, and in Venice with Antonio Martinelli, he entered the Conservatorio della Pietà dei Turchini in Naples in 1785. Among his teachers were Barbiello (singing), Fago (harmony), Sala (counterpoint) and Tritto (composition). In 1792 his first opera, *Il dottorato di Pulcinella*, was performed at the conservatory with great success, revealing his aptitude for comedy. His first work for the public theatres was *L'uomo indolente*, performed at the Teatro Nuovo in 1795.

Farinelli lived in Turin from 1810 to 1817 and, from 1817 until his death, in Trieste, where he was *maestro al cembalo* at the Teatro Nuovo and, after 1819, *maestro di cappella* and organist of the Cathedral of S Giusto.

Among the minor masters of *opera buffa* who bridged the 18th and 19th centuries, Farinelli stands out for his rich and facile invention, which very quickly made his success rival that of his older contemporary Cimarosa, whose successor and cleverest imitator he was generally considered to be. (His duet 'No, non credo a quel che dite', inserted into *Il matrimonio segreto*, was long thought to be by Cimarosa.) Nearly two-thirds of his theatrical output was written during the decade 1800–10, the period of his greatest success, before Rossini threw his generation into the shade and probably contributed to the total cessation of Farinelli's operatic composition after 1817. A typical practitioner of the Neapolitan opera style of the end of the 18th century, he remained largely untouched by Rossini's influence. His greatest successes include *I riti d'Efeso* (1803, Venice), *La contadina bizzarra* (1810, Milan) and *Ginevra degli Almieri* (1812, Venice).

WORKS

STAGE

GIOVANNI CARLI BALLOLA

Farkas, Ferenc (*b* Nagykanizsa, 15 Dec 1905). Hungarian composer and teacher. After starting his career as a pianist, he went on to study composition with Weiner and Siklós at the Budapest Academy of Music (1921–7). From 1927 to 1929 he was co-répétiteur for the chorus at the Városi Színház (Municipal Theatre), Budapest; he left

to study composition in Rome with Respighi (until 1931). Between 1932 and 1936 he earned his living as a composer and conductor of film music in Budapest, Vienna and Copenhagen (he composed film music regularly until 1973). He taught composition in Budapest at the municipal high school (1935–41), and from 1941 to 1943 at the conservatory in Kolozsvár (now Cluj-Napoca, Romania), where he became director in 1943. At the same time (from 1941) he was chorus master at the opera in Kolozsvár, then in 1945 at the Budapest Opera. From 1946 to 1948 he was director of the music school in Székesfehérvár, and from 1949 to 1975 professor of composition at the Budapest Academy of Music, where, among many others, he taught Ligeti, Kurtág, Petrovics, Szokolay, Bozay and Durkó. His awards include the Franz Joseph Prize (1934), the Kossuth Prize (1950) and the Erkel Prize (1960).

Whereas most of his contemporaries were more or less influenced by Bartók and Kodály, Farkas, because of his time spent in Rome with Respighi, had a wider horizon. The indirect influence of Respighi's own teacher, Rimsky-Korsakov, coupled with the direct influence of Stravinsky, is evident in the virtuosity of Farkas's instrumental writing and the richness of his orchestral palette. Rome also aroused his interest in the culture of the past, the visual arts and literature, and this became the basis of his broader perspective. There he first encountered, and gradually assimilated, fluency of expression and graceful, well-balanced structure. Back in Hungary for a short time in 1934, he participated in the collection of folksongs, which revealed to him another musical tradition and resulted in several folksong arrangements.

Farkas has benefited greatly from his practical experience as a teacher, co-répétiteur and chorus master, and from his involvement with theatre, radio and film music. He refined his craft through practice and this, beyond the knowledge of the possibilities of instruments or the human voice, can be heard in his enormous musical output: not only do ideas first used in his film music appear in later works, but most of his compositions exist in several (sometimes in more than five) versions. One of the most important characteristics of Farkas is his interest in both new and old genres. His works include operas and operettas, ballets and Singspiels, pastoral and marionette music, as well as musicals and a scenic play. In addition, he has composed numerous instrumental, vocal and orchestral works, both sacred and secular. His inspiration comes from a wide variety of sources; Gesualdo, old Hungarian folk ballads, Stravinsky and 12-note music have all influenced his creative style, though ultimately he has forged his own – a uniform, individual, national and international idiom that draws on Italian neo-classicism, Hungarian folk music and a softened, Latin version of dodecaphony. He is a true experimenter, but his imagination, his technical competence and his taste have ensured that his experimentation has not led to incoherence. He is not an extreme reformer, preferring to explore new possibilities of synthesis.

WORKS
(*selective list*)

DRAMATIC

A bûvös szekrény [The magic cupboard] (op, 2, G. Kunszery), 1938–42; Furfangos diákok [The sly students] (ballet, 1, G. Oláh, after M. Jókai), 1949, rev. 1956 [suite, 1950]; Csínom Palkó (radio play, A. Dékány), 1949, rev. as oc, 3, 1950, 1960; Vidróczki (radio ballad, E. Innocent-Vincze), 1959, rev. as 3-act op, 1963–4; Panegyricus (scenic play, 3, J. Pannonius, L. de Medici and M. Gyárfás), 1971–2; Egy úr Velencéből [A man from Venedig] (op, 2, S. Márai), 1979–80; incid music for *c*40 stage and radio plays; over 70 film scores

ORCHESTRAL

Divertimento, small orch, 1930; Finnish Folk Dances, str, 1935; Hp Concertino, 1937, rev. 1956, arr. hp, str, 1994; Prelude and Fugue, 1944–7; Musica pentatonica, str, 1945; Concertino, pf, orch, 1947, arr. hpd, str ens/qnt/qt, 1949; Sym. Ov., 1952; Choreae hungaricae, 15 dances, chbr orch, 1961; Piccola musica di concerto, str orch/qt, 1961; Conc. all'antica, bar/va/vc, str, 1962–4; Trittico concertato, vc, str, 1964; Planctus et consolationes, 1965; Sérénade concertante, fl, str, 1967; Festive Ov. 'Commemoratio Agriae', 1968–9; Funérailles (Liszt), 1974; Philharmonische Ov., 1977–8; Concertino no.4, ob, str, 1983; Concertino no.5, tpt, str, 1984

VOCAL

Cants.: Cantata lirica (J. Dsida), chorus, orch, 1945; Cantus Pannonicus (Pannonius), S, chorus, orch, 1959; Laudatio Szigetiana (orat, K. Vargha), nar, 6 solo vv, chorus, children's chorus, orch, 1966; Tavaszvárás [Waiting for the spring] (G. Juhász), Bar, chorus, children's chorus ad lib, orch, 1966–7; Bontott zászlók [Unfurled flags] (L. Kassák), S, Bar, male chorus, orch, 1972–3; Aspirationes principis (K. Mikes, P. Ráday, F. Rákóczi), T, Bar, orch, 1974–5; Omaggio a Pessoa (F. Pessoa), T, chorus, orch, 1985; Kölcsey szózata (F. Kölcsey), T, chorus, orch, 1992–3

Masses: In honorem Sti Andreae, chorus, org, 1962, orchd 1968; In honorem Sti Margaritae, chorus, org/str, 1964–8, arr. female chorus, org/str, 1992; Missa hungarica, chorus, org, 1968; Requiem pro memoria M., chorus, orch, 1992; Missa brevis, male chorus, org/str orch, 1994–5

Songs: Pastorali (A. Keleti), 1v, pf/chbr orch, 1931, rev. 1968; Fagyöngy [Mistletoe] (L. Szabó), 5 lieder, 1932, orchd; Gyümölcskosár [Fruit basket] (S. Weöres), 12 mélodies, 1v, (cl, pf trio)/pf, 1946–7, arr. 1v, cl, va, pf, 1972, 1v, wind qnt, 1980; Kalender (M. Radnóti), 12 miniatures, S, T, pf, 1955, arr. S, T, chbr ens, 1956; A vándor dalai [The wanderer's songs] (M. Füst), 3 songs, 1v, (fl, va, vc)/pf, 1956; Hommage à Alpbach (P. von Preradovic), 3 lieder, 1968; Autumnalia (D. Kosztolányi, Juhász, Z. Jékely, J. Pilinszky, G. Illyés), 1969–74; L'art d'etre grand-pere (V. Hugo), 4 mélodies, 1985; Orpheus respiciens (S. Csoóri, Petrarch, C.P. Baudelaire, L. de Camoes, R.M. Rilke, A. Machado, O. Wilde, G. de Nerval), 1993; many other songs, over 200 folksong, spiritual, historical and popular song arrs.

Over 200 works for children's/female/male/mixed vv

CHAMBER AND SOLO INSTRUMENTAL

2 or more insts: 2 Sonatinas, vn, pf, 1930, 1931; Serenade, wind qnt, 1951; Antiche danze ungheresi del 17. secolo, wind qnt, 1959, arr. 4 cl, 1976, fl, pf, 1987 [other versions]; Sonatina no.3, vn, pf, 1959, arr. fl, pf, 1970; Sonata, va, vc, 1961; Ballade, vc, pf, 1963; 4 pezzi, db/vc, pf, 1965, arr. db, wind qnt, 1966; Str Qt, 1970–72; Sonate romantique, bn, pf, 1982; La cour du roi Mathias, suite, cl, bn, hn, str qnt, 1977; Musica per ottoni, 3 tpt, 2 trbn, tuba, 1982; Maschere, 5 pieces, ob, cl, bn, 1983; 3 Sätze, fl, vc, hpd, 1983; Trigon, fl/cl, vn, pf, 1988; 3 Bagatelles, fl, cl, bn, 1992

Solo inst: Quaderno romano, 6 pieces, pf, 1931; Canephorae, 5 pieces, org, 1931; Sonata, vc, 1932; Ballade, pf, 1955; Correspondances, 8 pieces, pf, 1957; Hybrides, 10 pieces, pf, 1957; Holiday Excursions, 6 pieces, pf, 1975; 6 pieces breves, gui, 1970; Sonata, gui, 1979; Exercitium, 24 preludes, gui, 1982; Omaggio a Scarlatti, hpd, 1984; Naplójegyzetek 1986 [Journal 1986], pf, 1986; Naplójegyzetek 1987 [Journal 1987], pf, 1987; Sonata no.2, pf, 1987; Sonata, vn, 1987

Principal publishers: Ascolta, Berben, Boosey & Hawkes, Editio Musica, Universal

LÁSZLÓ GOMBOS

Farkas, Ödön (*b* Jászmonostor, 1851; *d* Kolozsvár, Transylvania [now Cluj-Napoca, Romania], 11 Sept 1912).

Hungarian composer, conductor and educationist. Having entered the University of Budapest in 1870 as an engineering student, he transferred in 1875 to the newly founded National Hungarian Royal Academy of Music, where he studied with Ábrányi, Volkmann and Ferenc Erkel. A distinguished student, he was awarded three prizes for composition and wrote an opera (*Bajadér*) and an operetta (*Radó es Ilonka*) while still at the academy. In 1879 he was appointed director of the Kolozsvár Conservatory and began a long period of involvement in the musical life of the city, where he was to remain for the rest of his life. He organized groups for the performance of vocal and chamber music, supervised the activities of the Philharmonic Society and conducted most of its concerts, was intermittently engaged as conductor at the National Theatre, and also achieved some success as a singing teacher. Besides enhancing the musical importance of Kolozsvár he created a national school of music devoted to fostering Hungarian art. His reforms in the conservatory resulted in the study of the latest Hungarian music as part of the curriculum, the teaching of correct Magyar pronunciation as part of vocal training, and the encouragement to compose in a national idiom, unhampered by academic formalism. He publicized his ideas on music and its teaching in many articles contributed to various periodicals; he also founded a periodical of his own, *Erdélyi zenevilág* ('Transylvanian musical world'). His compositions naturally reveal strong Hungarian characteristics and show the influence of Liszt and Erkel; he endeavoured to develop a specifically Hungarian style by following the metrical peculiarities of the Magyar language and its melodies. His festival overture, *Ünnepi nyitány*, won the Commemoration Prize at the 50th anniversary of the Budapest National Conservatory in 1890.

WORKS

Stage (operas unless otherwise stated): Radó és Ilonka [Conrad and Helen] (operetta), 1875; Bajadér (L. Farkas, after J.W. von Goethe), Buda, 23 Aug 1876; Vezeklők (The Penitents] (J. Dávid and G. Gál), 1884, Kolozsvár, 1893; Tündérforrás [Fairy Fountain] (Gál), Kolozsvár, 1893; Balassa Bálint (J. Hamvas), Budapest, 16 Jan 1896; Tetemrehívás [Ordeal of the Bier] (G. Versényi), Budapest, 5 Oct 1900; Kurucvilág [The World of the Kurucs] (S. Endrődi), Budapest, 26 Oct 1906; Ideiglenes házasság [Temporary Marriage], unperf., lost

Vocal: 3 masses; Dies irae, chorus, orch; 2 nocturnes, chorus, orch; 12 collections of songs, incl. Száll az ének [Soaring Songs], Valahol kél a nap [Sunrise]; other works for female vv, vocal duets

Orch: Sym., 1898; Rákóczy Sym. (Hangok a kurucvilágból) (?Budapest, 1903); Suite, perf. 1903; Serenade, str (?Budapest, 1904); Vn Conc., perf. 1903; further sym. poems and ovs.; 5 ballads (Arany, Gál), 1v, orch

Chbr: Holdas éjben [On a Moonlit Night], 8vv, str qnt; Sextet; Qnt, str, pf, 1891; 5 str qts; Pf Trio, 1900; Ballade, vn, pf; pf pieces

JOHN S. WEISSMANN/R

Farkas, Philip (Francis) (*b* Chicago, 5 March 1914; *d* Bloomington, IN, 21 Dec 1992). American horn player. After studying with Louis Dufrasne of the Chicago Opera Company, he played first horn in the Kansas City PO (1933–6), Chicago SO (1936–41 and 1947–60), Cleveland Orchestra (1941–5 and 1946–7) and Boston SO (1945–6). He retired from orchestral playing in 1960 to take up a professorship at Indiana University, shortly after which he founded a publishing company, Wind Music Inc., in Bloomington. Farkas was the teacher of many professional horn players in major orchestras. He was also a designer of horns and horn mouthpieces. He wrote *The Art of French Horn Playing* (Chicago, 1956), *The Art of Brass Playing* (Bloomington, IN, 1962) and *A Photographic Study of 40 Virtuoso Horn Players' Embouchures* (Bloomington, IN, 1970).

EDWARD H. TARR

Farmelo, Francis (bap. ?Exeter, ? 3 Dec 1601; *fl* 1635–50). English musician and composer. He is probably the Francis Farmeloe, son of John, baptized at Exeter Cathedral on 3 December 1601. He seems to have lived and worked in London. Farmelo and Daniel Johnson are the only persons not working at court cited in the charter dated 15 July 1636 whereby Charles I constituted a corporation of musicians in Westminster (*AshbeeR*, v). He composed a humorous three-part 'Song made on the Downfall … of Charing Cross, An. Dom. 1642', published in Playford's *The Second Book of the Pleasant Musical Companion* (London, 1686). A Caroline tax list shows him as lodger in the house of Henry Watson, 'Barber Surgeon', in Limestreet Ward. Playford also included him in his list of London teachers 'For the Organ or Virginall' prefacing his *A Musicall Banquet* (London, 1651). Farmelo probably died before the Restoration, as the minutes of the Westminster musicians' corporation (1661–79) make no mention of him. His extant compositions include a set of divisions on a ground for bass viol (*GB-Ob* Mus. Sch.C.71) and an incomplete instrumental bass part (*Och* 21).

ANDREW ASHBEE

Farmer, Henry George (*b* Birr, Ireland, 17 Jan 1882; *d* Law, Scotland, 30 Dec 1965). British musicologist, orientalist and conductor. He studied the violin, the clarinet, the piano and harmony, the last two with Vincent Sykes, organist of St Brendan's Church, Birr, where Farmer was a chorister. In London he studied with H.C. Tonking, Mark Andrews and F.A. Borsdorf and in 1895, while on holiday there with his father, he heard the Royal Artillery Orchestra conducted by Ladislao Zavertal; impressed by its performance, he joined as a violinist and clarinettist and after years of private study he served as its principal horn player, 1902–10. Forced by ill-health to abandon the horn, he began a conducting career at the Broadway Theatre, London (1910–13), while teaching music at various county council schools; he also founded the Irish Orchestra in London, which performed at the National Sunday League Concerts under his direction (1911–12). He moved to Glasgow in 1914 and was musical director of the Coliseum Theatre from January

until August, after which he was appointed conductor of the Empire Theatre Orchestra, a post he held until 1947. As President of the Glasgow branch of the Amalgamated Musicians' Union, he founded both the Scottish Musicians' Benevolent Fund (1918) and the Glasgow Symphony Orchestra (1919), whose Sunday park concerts he conducted until the 1940s; he also founded the Scottish Music Society in 1936.

Farmer's interest in oriental music and culture may have been influenced by his father, who served with the Army in India and the Middle East and was fluent in both Hindustani and Arabic. In 1913, the London publisher William Reeves commissioned Farmer to translate F.S. Daniel's *La musique arabe* (1863). Relying for help on the available European literature on Arabic music, Farmer soon realized that he had to study Arabic to resolve the many unclear and conflicting views of such scholars as La Borde, Villoteau, Kiesewetter, Fétis, Riemann and Collangettes. So in 1918 he enrolled as an external student at Glasgow University, studying Arabic with T.H. Wier, and from this period began his lifelong friendship with the noted orientalist James Robson. He completed the MA in 1924 and the PhD in 1926, winning prizes in Arabic and history; he also continued his musical activities, as a member of the BBC's Scottish Advisory Committee on Music (1928–39) and as editor of the *Musician's Journal* (1929–33).

Farmer was awarded a Carnegie Research Fellowship (1930–31, 1931–2) and a Leverhulme Research Fellowship (1933–5), which enabled him to travel to European libraries in search of Arabic manuscripts. He was the only British representative at the Cairo Conference of Arabic Music (1932), at which he was elected president of the Commission of Manuscripts and History. He delivered the Cramb Music Lectures at Glasgow University (1934) and in 1946 was offered the chair of music at the University of Cairo, which he declined. He was a vice-president of the Glasgow University Oriental Society, 1947–65, and served on the board of directors of the Royal Scottish Academy of Music, 1950–62. He was awarded the honorary DLitt by Glasgow University in 1934 and the honorary DMus by Edinburgh University in 1949.

Although Farmer was noted primarily for his contributions to the field of Arabic music, he also wrote important works on the history of Scottish and military music. It was his early publications, primarily 'Clues for the Arabian Influence on European Musical Theory' (1925), 'Arabic Musical Manuscripts in the Bodleian Library' (1925), *A History of Arabic Music to the XIIIth Century* (1929) and *Historical Facts for the Arabian Musical Influence* (1930), that established his reputation. Certain aspects of his early views were severely challenged by European musicologists, by Kathleen Schlesinger in particular, yet Farmer stood his ground in subsequent publications. He was primarily interested in theory, instruments, treatises and other manuscript works dealing with music, and never engaged in active fieldwork; nor was he interested in contemporary folk or classical traditions.

ISRAEL J. KATZ

Farmer, John (i) (*b c*1570; *fl* 1591–1601). English composer. The approximate date of Farmer's birth is deduced from a prefatory poem to his published collection of canons, which makes it clear that he was at that time (1591) still 'in youth'. This publication, like Farmer's later madrigal volume (1599), was dedicated to Edward de Vere, Earl of Oxford, whose patronage he enjoyed. Farmer was, with George Kirbye, the most liberally represented contributor to East's psalter (RISM 1592[7]). On 16 February 1595 he was appointed Organist and Master of the Children at Christ Church Cathedral, Dublin, and on 10 August 1596 he became a vicar-choral there. In 1597 he was threatened with dismissal for unauthorized absence, and he returned, remaining there until 1599, in which year he is known to have been living in Broad Street, London. He contributed to *The Triumphes of Oriana* (1601[16]).

Farmer's *Divers and Sundry Waies of Two Parts in One* (1591) is a demonstration of technical expertise in 40 two-part canons, each in combination with the same 'playnsong' cantus firmus. East was evidently impressed by Farmer's skill, and employed him in the following year for his psalter, not only to set seven of the standard psalm tunes, but also to harmonize the 13 introductory items (canticles, Lord's Prayer, etc.). In his four-voice madrigals (1599) Farmer followed in the line of the light madrigal naturalized into English music by Morley, though there are already hints of an added seriousness which relates them to the new trends appearing in the work of Weelkes and Wilbye. The rising chromatic opening of *The flattring words*, for example, is modelled on the conclusion of Weelkes's *Cease sorrowes now*, published two years earlier. There is also a general affinity with Weelkes's massive sonorities in Farmer's eight-voice *You blessed bowers*, which concludes the volume; this contrasts sharply with the finer textures typical of most other pieces in the book. The unbroken liveliness and precise musical characterization of textual details of *Faire Phyllis I saw sitting all alone* have made it one of the most popular English madrigals. In most of his madrigals Farmer mixes passages of gentle pathos or melancholy with facile canzonet-like counterpoint. The one clear exception to this style is *Take time*, a cantus-firmus piece composed on repetitions of an ascending and descending hexachord in the tenor; this appears to be an instrumental work to which words of a markedly pre-madrigalian moralizing character have been added. Farmer's first-rate Oriana madrigal, *Faire nymphs I heard one telling* (in 1601[16]), confirms his position as one of the better minor English madrigalists.

DAVID BROWN

Farmer, John (ii) (*b* Nottingham, 16 Aug 1836; *d* Oxford, 17 July 1901). English educationist and composer. Brought up in Nottingham, where his uncle led the town's amateur musical life, he received his professional training at the Leipzig Conservatory and under Andreas Späth at Coburg before spending several years as a music teacher in Zurich. He is remembered for bringing music to life at Harrow School, where he taught between 1862 and 1885; but the circumstances of his joining the school are obscure, and for some years he was not formally a member of staff. Resisting an academic approach, he showed the boys that

massed singing was enjoyable, writing many songs for them that celebrated events in school life, introducing light-hearted songs, glees and partsongs, and instituting house singing. In 1885 he was appointed organist at Balliol College, Oxford, where he instituted evening concerts and a music society in the college. He published *Harrow School Songs* (Harrow, 1881), *Harrow School Marches* (Harrow, 1881), the *Harrow Songs and Glees* (London, *c*1890), *Gaudeamus* (London, 1890) and various ephemeral works including an oratorio *The Coming of Christ* (performed 1899), a children's oratorio *Christ and his Soldiers* (Harrow, 1878), and two operas, *Cinderella* (London, *c*1883), produced at Harrow in 1883 and in London the next year, and *The Pied Piper* (London, n.d.). His instrumental works include two septets for piano, flute and strings and a piano quintet.

BERNARR RAINBOW

Farmer, Thomas (bur. London, 5 Dec 1688). English composer and violinist. Anthony Wood stated that he was one of the Waits of London, but he may have confused him with Richard Farmer, a wait from 1685 to 1688. Thomas Farmer seems to have served as an 'extraordinary' violinist at court between May 1671 and 4 September 1675, when he received the place in the Twenty-Four Violins held by John Strong, who had died the month before. In November 1679 he and Robert King shared the late John Banister's £110-a-year post as violinist in the Private Music. He was one of those accompanying James, Duke of York, to Scotland who survived the wreck of the frigate *Gloucester* off the Norfolk coast on 6 May 1682, and he received the Cambridge BMus in 1684. He was made a member of the newly reorganized Private Music at James II's accession in 1685, and served as instrumentalist in the king's Catholic chapel, which opened on Christmas Day 1686. Farmer's death was commemorated by Henry Purcell's elegy *Young Thyrsis' fate ye hills and groves deplore*. The reference to 'Young Thyrsis' suggests that he was not the musician named Thomas Farmer born in November 1615 who lived in the parish of St Andrew's, Holborn, and became a freeman of the Draper's Company in 1650. The style of his music is compatible with someone born around 1650.

Farmer was one of the house composers of the Duke's theatre company at Dorset Garden, contributing songs to Edward Ravenscroft's *The Citizen Turned Gentleman* (July, 1672), Thomas Otway's *The Cheats of Scapin* (?Dec 1676), Aphra Behn's *Sir Patient Fancy* (Jan 1678), Nahum Tate's *Brutus of Alba* (?June 1678), John Dryden's *Troilus and Cressida* (April 1679), Nathaniel Lee's *Caesar Borgia* (?May 1679), Thomas D'Urfey's *The Virtuous Wife* (Sept 1679), Otway's *The Soldier's Fortune* (?June 1680), Lee's *The Princess of Cleve* (?Sept 1680), Behn's *The Second Part of the Rover* (? Jan 1681), and (for the United Company at Drury Lane) Lee's *Constantine the Great* (Nov 1683). He also probably wrote a good deal of incidental music in the theatre. His *Consort of Musick in Four Parts* (London, 1686) consists of suites of the sort used in plays, and a number of similar works exist in manuscript; however, only one, the suite for Lee's *The Princess of Cleve* (*GB-Lbl* Add.29283–5, *US-NYp* Drexel 3849), can be identified for certain with a particular play. The unique copy of the 1686 collection in the British Library consists of only three parts, two violins and bass (as does a manuscript copy in *GB-Lbl* Add.29283–5 dated 9 June 1691), but four-part versions of some of the pieces (*Lcm* 1172) show that there is a viola part missing. A sequel, *A Second Consort of Musick*, advertised posthumously on 28 October 1689, is lost, though some of its contents may survive in manuscript. The Sonata in A for violin and continuo may be the earliest of its type by an Englishman. Farmer's music tends to be competent but unenterprising, and Purcell's fulsome tribute to him was presumably concerned more with his abilities as a performer than a composer.

PETER HOLMAN

Farnaby, Giles (*b* *c*1563; *d* London, bur. 25 Nov 1640). English composer. Like his father Thomas, Giles was a 'Cittizen and Joyner of London'. His mother, 'Janakin alias Jane', perhaps of Huguenot descent, was buried at Waltham St Lawrence, Berkshire, in 1605. She bequeathed £40 to the Dutch Reformed and French Protestant congregations in London and 'to poore maides marriages'; her nuncupative will (PCC 36 Stafforde) strangely ignores Giles's existence. According to Anthony Wood, Giles was 'of the family of Farnaby of Truro in Cornwall, and near of kin to Tho. Farnaby, the famous schoolmaster of Kent'. Wood is at times an unreliable authority, however, and so far no evidence corroborates his statement.

The registers of St Helen Bishopsgate record Farnaby's marriage to Katharine Roane on 28 May 1587; the 1589 'parsons tythe' shows that he was taxed only 2s. 9d., and was then residing in the parish. In 1590 he was listed as a feoffee of the Joiners' Company. His cousin Nicholas, parish clerk of St Olave Jewry, was a professional joiner and 'virginall maker', and Giles may have been connected with a similar business. Neither could have been lucrative, since St Olave's granted Nicholas a £2 annuity in 1596 on the grounds that he was 'overcharged with children and his trade decayed'. Giles still owed his father £9 'suertye' money at the latter's death in 1595.

Farnaby graduated with the BMus at Oxford on 7 July 1592. In that year Thomas East issued his best-selling *Whole Booke of Psalmes*, for which Farnaby – one of ten 'expert' contributors – provided nine settings; Barley and Ravenscroft subsequently adopted several of these harmonizations in their respective psalters. Farnaby's own *Canzonets to Fowre Voyces* appeared in 1598. Dedicated to the influential courtier Ferdinando Heyborne, 'groome of Her Majesties privie chamber' and himself a composer, the collection includes commendatory verses by Anthony Holborne, John Dowland, Richard Alison and the recusant poet Hugh Holland.

Surprisingly, only a few years later Farnaby was living in the rural setting of Aisthorpe, a village 10 km north of Lincoln. The 1602 Bishop's Transcripts for St Peter's church, principally compiled by 'Egidius Farnaby' himself, churchwarden, record the baptism of a second daughter named Philadelphia, the first of this name (*b* 1591) presumably having died.

More revealing is an indenture of lease dated 1608 between Sir Nicholas Saunderson of Fillingham (a neighbouring village) and 'Giles Farnabie ... gent'. In return for musical tuition for Sir Nicholas's children, and for his son Richard's services as apprentice for seven years' instructing of the children 'in skill of musick and plaieinge uppon instruments', Saunderson agreed to lease Farnaby some nearby properties at £16 a year for 20 years. The indenture is endorsed *vacat consensu*. Arrears in 1611 suggest the family may already have left the district. In any case, Richard married Elizabeth Sendye at St Peter Westcheap in London in 1614, a year before his apprenticeship was due to end.

At some time between 1625 and 1639 Farnaby dedicated to Dr Henry King, 'cheife prebend' of St Paul's Cathedral, a metrical psalter harmonized in 'fower parts, for viols and voyce', doubtless hoping the prelate would sponsor its publication; only the autograph cantus partbook survives. In 1634 the registers for St Giles Cripplegate mention 'the house of Gyles Farnaby in Grub Street', an area noted in a 1638 survey for its 'extreme poverty'; the same registers record the burial of 'Gyles Farnaby musitian' on 25 November 1640. The style 'musitian', not 'joiner', is noteworthy.

Of Farnaby's five traceable children, at least two were musical: RICHARD FARNABY, the composer, was born *c*1594; 'Joyus [Joy] Farnaby s[on of] Gylles' was baptized on 18 March 1599 at St Mary-le-Bow, Cheapside. He was referred to as 'musitian' in 1636. Another son, Edward, was baptized at Aisthorpe in 1604.

A joiner by training, Farnaby occupies a peculiar position among Elizabethan and Jacobean composers. Belated or intermittent musical instruction may help to explain the uneven quality of his work. He cannot match Byrd's breadth or discipline, Morley's fluency, Bull's virtuosic sweep (though he could well have been a disciple), or Gibbons's polish and intensity. Yet he was an instinctive composer with original ideas and sufficient conviction to put them across effectively. His music is correspondingly vital and telling; at its best it has a spontaneity and charm few of his contemporaries can rival.

The 11 keyboard fantasias – none plainchant-based, one a canzonet transcription, two others apparently modelled on vocal pieces – contain some imaginative, highly idiomatic writing. Technically and temperamentally, however, Farnaby was less well suited to polyphonic genres than to variations, where his weakness in generating expansive paragraphs mattered little and his resourcefulness in presenting rich figurative detail and unusual textures counted for much. The many dances – several are arrangements – music from masques and folktune settings provide, with their sectional structure and reprises, ample evidence of this. The Alman *For Two Virginals* deserves mention, as does the group of fancifully titled 'character sketches', including *Giles Farnaby's Dream* and *His Rest*. *His Humour* cleverly encapsulates several compositional techniques in four short strains. Such attractive miniatures – a further handful includes the haunting *Tower Hill* – rank among the more memorable in the entire keyboard repertory. Farnaby's works seem to have circulated little; the Fitzwilliam Virginal Book (*GB-Cfm* 32.g.29) has unique texts of 51 of the 53 ascribed pieces. Only *Bonny Sweet Robin* – often attributed to Bull or even Byrd – appears in several sources outside his circle of composers.

The harmonizations in East's Psalter, where the tenor, as customary, has the psalm tune, are rhythmically enlivened by free use of passing and dotted notes. Several settings incorporate distinctly melodious cantus parts. These straightforward harmonizations stand apart from the more elaborate workings in his own 'double' Psalter – whose pairing of text and tune mirrors Ravenscroft's plan; here the cantus 'lines out' the melody, intervening rests suggesting imitative accompaniment. Nearly all 97 tunes have alternative settings.

Farnaby's secular vocal music, though influenced by Morley, retains a distinctive flavour. The canzonets adhere mostly to the conventional style and structure: the predominantly lighthearted texts are set to tuneful yet terse points of imitation interspersed with chordal stretches. The music gathers rhythmic momentum, frequently over a pedal point, when approaching the final cadence of the repeated second section. The collection contains some notable works, including the tautly constructed 'instrumental' setting in cantus-firmus fashion of the well-known 'Susanna' theme; the adventurously chromatic, sombrely madrigalian *Construe my meaning*; and the sonorous *Witness ye heavens* – a rare example of eight-part writing.

WORKS

54 pieces, kbd (1 doubtful); ed. in MB, xxiv (1965, 2/1974)

[20] Canzonets to Fowre Voyces with a Song of Eight Parts (London, 1598); ed. in EM, xx (2/1963)

Come Caron come, 3vv, *GB-Lcm* [contrafactum of Ay me poore heart, in 1598 vol.]; O my sonne Absolon, *Lbl* (inc.)

9 psalms, 1592[7]

The Psalmes of David, to fower parts, for Viols and Voyce; the first booke Doricke Mottoes; the second, Divine Canzonets ... with a prelud, before the Psalmes, Cromaticke, 4vv (only cantus extant), *US-PHu*

RICHARD MARLOW/ORHAN MEMED

Farnaby, Richard (*b* London, *c*1594). English composer, son of GILES FARNABY. The family moved to Aisthorpe, near Lincoln, around 1600. An indenture dated 1608 notes that he was to be apprenticed to Sir Nicholas Saunderson of Fillingham, near Lincoln, to instruct Sir Nicholas's children 'in skill of musick and plaieinge uppon instruments', but he may have left the district in 1611, and was married in London in 1614. The Fitzwilliam Virginal Book (*GB-Cfm* 32.g.29) includes four pieces attributed to Richard. Giles evidently taught his son to compose, for Richard's pieces faithfully reflect his father's characteristic style. *Nobody's Jigg, or Fleet Street* is his most successful work, resembling the best of Giles's folktune settings in its sensitive and imaginative treatment of the keyboard. His other extant works include *Duo, Fain would I wed* and *Hanskin* (all for keyboard; all his works ed. in MB, xxiv, 1965, 2/1974).

For bibliography *see* FARNABY, GILES.

RICHARD MARLOW

Farnam, W(alter) Lynnwood (*b* Sutton, PQ, 13 Jan 1885; *d* New York, 23 Nov 1930). Canadian organist. He studied at home in Canada and then at the RCM in London (1900–04). After returning to Canada, he held posts in Montreal (1904–13), successively at the Methodist church of St James, St James the Apostle and Christ Church Cathedral. From 1913 to 1918 he was at Emmanuel Church, Boston, and, after a year in the Canadian Army, moved to New York, where he was organist of Fifth Avenue Presbyterian Church (1919–20) and of the Church of the Holy Communion (1920 until his death). From 1927 he also taught in New York and at the Curtis Institute in Philadelphia; among his pupils were Harold Gleason, Clarence Mader, Carl Weinrich, Robert Noehren, Hugh Porter, Ernest White and Alexander McCurdy. Farnam was a solo player of exceptional ability, who anticipated some of the characteristics of the Baroque revival, and made a conspicuous reputation as a recitalist in the USA, Canada, England and France. He recorded a number of player-organ rolls, which were later transferred to discs. (*EMC*2, H.W. Hawke)

GODFREY RIDOUT/R

Farncombe, Charles (Frederick) (*b* London, 29 July 1919). English conductor. He first studied engineering, and then music at the Royal School of Church Music and the RAM (1949–51). In 1955, with the assistance of Edward J. Dent, he founded the Handel Opera Society, and was its musical director for 30 years. He conducted many modern British premières, including *Rinaldo*, *Alcina* and *Deidamia*, and directed staged performances of Handel oratorios and works by Cavalieri, Rameau, J.C. Smith, Arne, Haydn and Mozart. Productions by the society have been taken to festivals at Göttingen, Halle, Liège and Drottningholm.

Farncombe has conducted on tours in the USA and in Sweden, where he was music director of the Drottningholm court theatre, 1970–79, and appeared at the Royal Opera in Stockholm. He also conducted works by Handel at the Badisches Staatstheater, Karlsruhe. His conducting is careful over matters of detail, often spirited, and sensitive over choice of tempo. Farncombe has edited (and in some cases translated into English) works that he conducted with the Handel Opera Society. He was made a CBE in 1977.

STANLEY SADIE

Farnon, Robert (Joseph) (*b* Toronto, ON, 24 July 1917). Canadian arranger, composer and conductor. He began his career as a trumpet player in dance bands, and then for Percy Faith's CBC Orchestra. By 1942 he had composed two symphonies and in 1944 he came to Britain as conductor of the Canadian Band of the Allied Expeditionary Force, alongside Glenn Miller and George Melachrino fronting the US and British bands. He took his army discharge in Britain, and Decca contracted him to work with their leading singers such as Vera Lynn and Gracie Fields; the BBC gave him a radio series with his own orchestra. He began composing for the cinema, and early successes out of some 40 scores included *Spring in Park Lane*, *Maytime in Mayfair* and *Captain Horatio Hornblower R.N.*. The arrival of LPs gave orchestra leaders such as Farnon the opportunity to develop their arranging and composing talents more fully, and his Decca albums from the 1950s have become highly prized by admirers, especially fellow musicians in the USA. Many have acknowledged his influence, including John Williams, Henry Mancini, Quincy Jones and Johnny Mandel. Farnon's light orchestral cameos are among the finest to have been written since World War II, notably *Journey into Melody* (1946), *State Occasion* (1946), *Jumping Bean* (1947), *Portrait of a Flirt* (1947), *A Star is Born* (1947), *Peanut Polka* (1950), *The Westminster Waltz* (1955) and the *Colditz March* (1972). His tone poems *Lake of the Woods* (1951) and *À la claire fontaine* (1955) have been compared favourably with Debussy and Ravel. Farnon's orchestral style is influenced by the exciting North American rhythms of his youth, yet respects the traditions of light music he encountered in Britain. His scores are remarkable for the delicate, decorative touches he introduces for so many instruments in support of the main melodies.

Farnon has written hundreds of works for the London publishers Chappell, many familiar worldwide as signature tunes. The BBC commissioned his Rhapsody for violin and orchestra in 1958, but his later career has concentrated on arranging and conducting for international stars such as Tony Bennett, Bing Crosby, Lena Horne, George Shearing, Eileen Farrell, Joe Williams and Sarah Vaughan. His skill as an arranger was recognized with the award of a Grammy in 1996 for a track on an album with trombonist J.J. Johnson; in Britain he has received four Ivor Novello Awards, including one for outstanding services to British music (1991). In 1998 he was awarded the Order of Canada. (*EMC*2, M. Miller)

DAVID ADES

Faroes. *See* FæROES.

Farquhar, David (Andress) (*b* Cambridge, North Island, 5 April 1928). New Zealand composer. He graduated in music at Victoria University, Wellington, studying composition with Lilburn, and then studied at Cambridge University and the GSM, London, where he was one of a talented group of young New Zealand composers who studied with Frankel. He returned to New Zealand and became lecturer (1953) and, in 1976, professor at Victoria University. The wit and spontaneity he brings to theatre music first emerged in his Dance Suite (1953) for Christopher Fry's adaptation of Jean Anouilh's *Ring Round the Moon*, and qualities of spare and stylish craftsmanship won him first prize for his Partita for piano in the Australasian Performing Rights Association's composers' competition (1957). A Symphony (1959) and a rhythmically exuberant Piano Concertino (1960) were followed by the first New Zealand opera since those of Alfred Hill, *A Unicorn for Christmas* (1962), to a libretto by Ngaio Marsh. This was followed by two more operas: *Shadow* (1970), in one act, for four singers, based on a Hans Christian Andersen tale and adapted by the composer and Edward Hill, and *Enchanted Island* (1997), in three acts, based on Shakespeare's *The Tempest*. He has written over 100 other works, including an Elegy and Serenade for strings, two Anniversary Suites for orchestra and several choral and chamber works, notably *Bells in their Seasons* for double chorus and orchestra (1974). He has a continuing interest in song cycles and writing for the piano. His Symphony no.2 (1982) was first performed by the New Zealand SO the following year; the first of his two works for string quartet (1989) has often been performed by the New Zealand String Quartet. A committed advocate of New Zealand music, he was founder-president of the Composers' Association of New Zealand (1974) and in 1984 was awarded their Citation for Services to New Zealand Music. A formidable supporter of composers' rights, he has a distinguished place in the country's musical life. His writings include 'A Song and Dance', *Massey University Composer Address* (Palmerston North, 1997), 3–12.

J.M. THOMSON

Farr, Gareth (*b* Wellington, 29 Feb 1968). New Zealand composer and percussionist. After dividing his time between Victoria University of Wellington and Auckland University (BMus, performance diploma 1991), he undertook postgraduate studies at the Eastman School of Music. In 1993 he became Chamber Music New Zealand's youngest ever composer-in-residence. From that time, his music has been widely performed and broadcast, both in New Zealand and abroad. In 1996 he was the subject of a major Television New Zealand documentary and in 1997 a collection of his works was issued on recording. Most of his compositions result from commissions.

Farr acknowledges the music of Pacific Rim cultures, Shostakovich's orchestral writing, the work of percussion ensembles such as the New Zealand group From Scratch, and the energy and rhythmic excitement of Balinese gamelan and Cook Island drumming as major influences on his style. His belief that composers should communicate personally with their audience has led him to balance his compositional activity with a performing career as a percussionist. He has also appeared regularly in cabaret, assuming the flamboyant alternate persona of the drag queen Lilith, a character he sees as increasingly central to his work.

ADRIENNE SIMPSON

Farrant [Farunt], **Daniel** (*b c*1575; bur. Greenwich, 24 July 1651). English composer, string player and instrument maker. He may have been the son of Richard Farrant, Master of the Choristers at St George's Chapel, Windsor and Master of the Children of the Chapel Royal. A birthdate of about 1575 would make Daniel Farrant a contemporary of John Coprario and Alfonso Ferrabosco II, who John Playford mentioned with Farrant in 1661 as 'The First Authors of Inventing and Setting Lessons' for lyra viol. On 23 November 1607 Farrant was given a place in the royal violin band at the court of James I. He is listed as a player of the viol in several documents of 1624 and 1625.

Farrant was an instrument maker as well as a player. On 27 February 1626 he was paid £109 for six 'Artificiall Instruments' 'made and finished' for royal service. Playford wrote that he was 'a person of such ingenuity for his several rare inventions of instruments, as the Poliphant and the Stump, which were strung with wire' and 'a lyra viol, to be strung with lute strings and wire strings, the one above the other'. This cannot be taken at face value since Farrant would have been too young to have invented the poliphant or poliphon, which (Playford claimed elsewhere) Queen Elizabeth played, and at least three other individuals are connected with the invention of the lyra viol with sympathetic metal strings – the ancestor of the baryton. Nevertheless, it is likely that Farrant was involved in some way with the development of novel types of stringed instruments in Jacobean England.

Farrant served at court, still apparently in the dual role of viol player and violinist, until 1642. He made his will on 20 March 1643 and died in 1651; he was buried at St Alfege, Greenwich on 24 July. Only three pieces survive; a pavan for lute (*GB-Cu* Dd.5.78.3, ed. in suppl. to *Lute News*, March 1998) and a pavan and a toy for solo lyra viol. A five-part pavan based on a four-note ostinato (ed. in MB, ix 1955, 2/1962) as well as two further lyra viol pieces are also probably by him (see *DoddI*).

PETER HOLMAN

Farrant, John. There were at least two and possibly three or more English church musicians of this name working in the late 16th century and early 17th, one or more of whom may have been related to Richard Farrant. Two John Farrants – probably father and son – were connected for a considerable time with Salisbury Cathedral. By early October 1571 John Farrant (i) was acting as master of the Salisbury choristers, although it was only towards the end of that month that he was formally admitted as a lay clerk, on a year's probation. He was appointed organist in 1587. He may possibly have been the John Farrant who was appointed organist at Ely Cathedral in 1567, or the John Farrant at Bristol Cathedral from 1570 to 1571 – or perhaps the three posts were held by the same man. The year after his admission as a lay clerk at Salisbury, he married a niece of Dr John Bridges, subsequently Dean of Salisbury. Farrant was evidently a man of rough temper, and this ultimately led to his dismissal in 1592, after an episode in which he physically threatened Dr Bridges, who had been vainly attempting to intervene in a domestic dispute. From Salisbury, John apparently moved to Hereford, and within a year was in serious trouble there for 'rayling and contumelious speeches' against the warden of the college of vicars-choral. He resigned in December 1593, and his subsequent movements are not known. He may have moved to London as organist of Christ Church, Newgate.

John Farrant (ii) was born in Salisbury on 28 September 1575, the second of four children. By 1585 he was a chorister in the cathedral choir and from 1598 was being paid as cathedral organist, although he was not formally admitted as a vicar-choral and organist until 1600, and then only on condition that 'he be junior to his brethren, the Vicars Choral, and not otherwise'. He was buried on 30 September 1618 and was succeeded by Edward Tucker.

Two full anthems and a Short Service ascribed to John Farrant have survived; they may be by either the elder or the younger Farrant. Some music is ascribed simply to 'Farrant' and may be by RICHARD FARRANT.

PETER LE HURAY/JOHN MOREHEN

Farrant, Richard (*b* ?*c*1525–30; *d* London, 30 Nov 1580). English cathedral musician and composer. His name first appears in a list of Gentlemen of the Chapel Royal (*GB–Lbl* Stowe 571, f.36) in the summer of 1552. It seems that he had only recently joined the choir, for he was placed 31st in the list of 32 fully stipendiary Gentlemen. He continued to sing in the choir during the reign of Mary Tudor, resigning his post in 1564 to take up duties as Master of the Choristers and as one of the organists at St George's Chapel, Windsor. Before this he had been a close colleague of Richard Bower, Master of the Chapel Royal choristers; he married Bower's daughter Anne, and acted as his legal representative after his death in June 1561. Among the ceremonial events in which Farrant took part were the funeral of Edward VI, the coronation of Mary I and her funeral, and the coronation of Elizabeth I. In November 1569 Farrant became Master of the Chapel Royal choristers in succession to William Hunnis and he retained this appointment, as well as that at Windsor, until his death. He left a widow, a son (also Richard) and nine other children whose names are not known.

Richard Farrant is an important figure in the history of English church music, and his practical interest in drama undoubtedly did much, if only indirectly, to foster the new 'verse' style of liturgical composition. On moving to Windsor in 1564 he organized the choristers into a dramatic company similar to those of St Paul's and the Chapel Royal. In February 1567 he presented the Windsor boys at court for the first time, and from then on he produced a play for the Queen every winter, using at first the Windsor boys, and then in 1577 a combined Windsor–Chapel Royal company. Documents relating to the last three productions, in 1578 and 1579, refer only to the Chapel Royal company, although it is quite possible that the Windsor–Chapel Royal association continued. On moving back to London in 1576 Farrant took a lease of 'six upper chambers, loftes, lodgynges or Romes lyinge together within the precinct of the late dissolved house or priory of the Black ffryers' at a yearly rent of £14 for the purpose of 'rehearsing' the boys for their courtly entertainments. Subsequent litigation makes it clear, however, that the rehearsals were open to the public and that Farrant was in fact using the premises as a public theatre.

None of Farrant's plays has survived, though the titles of those that are known – *Ajax and Ulysses*, *Quintus Fabius* and *King Xerxes* – suggest that the author preferred to develop serious and even tragic themes. Only two of his stage songs are known: 'O Jove, from stately throne', from *King Xerxes*, and 'Ah, alas ye salt sea Gods', from an unidentified play dealing with the story of Panthea and Abradatas, in which Panthea sings a lament over the body of her dead husband as she is about to take her own life; the song is also attributed to Robert Parsons, a Chapel Royal colleague of Farrant. These represent the more elaborate genre of Elizabethan consort song. The solo voice is in each case a boy's (one treble, the other a meane) and the accompaniment is presumably for viols. The instrumental textures are highly polyphonic, while the vocal lines stand out for their comparative simplicity, the word-setting being basically syllabic.

Farrant does not appear to have written much liturgical music, but his three main works – the full anthems *Call to remembrance* and *Hide not thou thy face* and the 'High Service' – survive in an unusually large number of pre-Restoration manuscripts. They reveal a sensitive, if restrained, feeling for word accentuation and mood. Farrant was one of the first composers to develop the 'verse' style of writing. His one extant verse anthem, *When as we sat in Babylon*, shows the influence of both the metrical psalm and the consort song. The words come from the Sternhold and Hopkins version of Psalm cxxxvii. Each verse is sung by a solo meane, the last line being repeated simply by the SATB choir. The setting is strophic apart from the last verse. Although its musical and literary qualities are slight, the anthem is of unusual historical importance being, with William Mundy's *Ah, helpless wretch*, one of the very earliest of its kind.

PETER LE HURAY/JOHN MOREHEN

Farrar, Ernest Bristow (*b* Lewisham, London, 7 July 1885; *d* Epéhy Roussoy, France, 18 Sept 1918). English composer and organist. He was educated at Leeds Grammar School and in 1905 was awarded an open scholarship at the RCM, where he became friendly with Bridge (who dedicated his Piano Sonata to Farrar's memory), studied composition with Stanford and the organ with Parratt; he won the Arthur Sullivan Prize in 1906 and the Grove Scholarship in 1907. After six months as organist of the English church at Dresden (1909) he returned to England; he was organist of St Hilda, South Shields, from 1910 and of Christ Church, Harrogate, from 1912. It was in Harrogate that he taught Finzi during the war; later he joined the army and was killed in action. His music shows many of the characteristic traits of the English pre-war era: folksong enthusiasm in *English Pastoral Impressions*, muscular setting of Whitman in *Out of Doors*, and intimate lyrical feeling, occasionally foreshadowing Finzi, in the exquisite *Margaritae sorori*.

WORKS

INSTRUMENTAL

Orch: Rhapsody no.1 'The Open Road', op.9, after W. Whitman, perf. 1909; Rhapsody no.2 'Lavengro', op.15, after G. Borrow, perf. 1913 [lost]; The Forsaken Merman, sym. poem, op.20, after M. Arnold, perf. 1914; Variations on an Old British Sea Song, op.25, pf, orch, perf. 1915; English Pastoral Impressions, op.26 (1921); Prelude on the Angelus, op.27, str; 3 Spiritual Studies, op.33, str (1925); Heroic Elegy, op.36, perf. 1918

STEPHEN BANFIELD

Farrar, Geraldine (*b* Melrose, MA, 28 Feb 1882; *d* Ridgefield, CT, 11 March 1967). American soprano. She studied in Boston, New York and Paris; soon after her début at the Königliches Opernhaus, Berlin (*Faust*, 15 October 1901), she became a pupil of Lilli Lehmann, to whose Donna Anna she was later to sing Zerlina at Salzburg. After five years in Berlin, Farrar joined the Metropolitan Opera in New York, where she first appeared as Gounod's Juliet in 1906, and quickly became one of the leading stars of the company. She remained at the Metropolitan until 1922, when she made her farewell as Leoncavallo's Zazà on 22 April. With her personal beauty, clear tone and shapely phrasing she excelled in such lyrical parts as Zerlina and Cherubino, Manon and Mignon, as well as in several Puccini roles, among them the heroine in the 1918 première of *Suor Angelica*. She was also the first Goose Girl in Humperdinck's *Königskinder* (1910), and the first Louise in Charpentier's unsuccessful sequel, *Julien* (1914). Farrar's seductive and strongly personal timbre is well captured on a long series of Victor records, which have been successfully transferred to CD. They offer, among other worthwhile performances, a substantial souvenir of her Butterfly and her Carmen, two of her most popular roles.

DESMOND SHAWE-TAYLOR/R

Farrell, Eibhlis (*b* Rostrevor, Co. Down, 27 July 1953). Irish composer. She studied at Queen's University, Belfast (BMus) and Bristol University (MMus), where her composition teachers included Raymond Warren. In 1983 she was appointed deputy principal of the Dublin College of Music. Sabbatical leave and a fellowship (1988–90) enabled her to pursue doctoral studies in composition at Rutgers University, New Jersey (PhD 1991), where she studied with Wuorinen and Moevs, among others. Her honours include a fellowship of the Royal Society of Arts and membership in Aosdána (1996), Ireland's academy of creative artists.

Farrell's style is characterized by a concentration on texture and timbre within an atonal idiom. She has been particularly influenced by the music of the medieval and Baroque periods; her employment of neo-Baroque techniques, such as polyrhythm, fugato and the juxtaposition of instrumental groupings, is particularly evident in the Concerto grosso (1988). *Exaudi voces* (1991) represented Ireland at the International Rostrum of Composers in Paris in 1993. Many of the texts set in her vocal music are taken from Latin and old Irish sources, or from the work of Dublin writer, Anne Hartigan.

GARETH COX

Farrell, Eileen (*b* Willimantic, CT, 13 Feb 1920). American soprano. She studied with Merle Alcock and Eleanor McLellan, and concentrated on concert singing until her belated operatic début in 1956 as Santuzza in Tampa, Florida. That year she sang Leonora (*Il trovatore*) in San Francisco, returning in 1958 as Cherubini's Medea; Chicago appearances followed, and, in 1960, her much delayed Metropolitan début as Gluck's Alcestis. Her relationship with the Metropolitan management was not easy and she sang there sporadically for only five seasons. Although her voice, temperament and histrionic gifts would have suited the great Wagnerian roles admirably, she sang Brünnhilde and Isolde only in concert performances, notably with the New York PO under Bernstein. She was equally celebrated for her singing of Bach (with the Bach Aria Group) and the blues (at the 1959 Spoleto Festival and on subsequent recordings). She was an intelligent actress; her voice was huge, warm, vibrant and, apart from difficulties at the extreme top in later years, remarkably well controlled. Her recordings, especially of Verdi and Wagner, demonstrate the imposing strength and vitality of her singing.

MARTIN BERNHEIMER/R

Farrenc. French family of musicians.

(1) **(Jacques Hippolyte) Aristide Farrenc** (*b* Marseilles, 9 April 1794; *d* Paris, 31 Jan 1865). Music publisher, flautist, bibliophile and scholar. Determined on a career in music despite his family's tradition in commerce, he arrived in Paris in 1815; soon an appointment as second flautist at the Théâtre Italien propelled him directly into Parisian musical life. When the Conservatoire was reorganized in the following year, he undertook further studies on the flute and began to learn the oboe. By the early 1820s he had established himself as a teacher and begun to compose flute music, some of which – a book of sonatas and a concerto, among other works – he issued from his own newly formed publishing concern. In 1821 he married Louise Dumont (see §(2) below). He remained active as a publisher during the 1830s, specializing in

editions of Hummel and Beethoven. His firm also brought out his wife's first piano works.

Stimulated by the revelations of Fétis's *concerts historiques* (1832–5), Farrenc became an ardent advocate of and researcher into early music. He dissolved his business enterprise about 1840 and devoted his last 25 years to scholarship, concentrating on older music and treatises but also studying the musical thought of the recent past and of his contemporaries. His unusual library, acquired in the course of this research, was sold after his death; the sale catalogue lists 1622 items including rare editions of Dante and other literary monuments as well as an impressive collection of musical memorabilia.

Apart from critical writings and a number of music history articles in French periodicals (notably *La France musicale* during the 1850s), Farrenc's significance rests on his contributions to two works: the second edition of Fétis's *Biographie universelle* (1860–65), for which he helped in the editing and revision of the initial entries, using the results of his own research, and *Le trésor des pianistes*, a comprehensive anthology of harpsichord and piano music from a repertory encompassing 300 years. Issued between 1861 and 1874, this 23-volume collection originated as a joint undertaking with Louise Farrenc. When Farrenc died in 1865 only eight volumes had appeared but his wife continued the project alone, completing it a year before her death.

(2) (Jeanne-)Louise Farrenc [née Dumont] (*b* Paris, 31 May 1804; *d* Paris, 15 Sept 1875). Composer, pianist, teacher and scholar, wife of (1) Aristide Farrenc. A descendant of a long line of royal artists (including several women painters) and a sister of the laureate sculptor Auguste Dumont, she showed artistic and musical talent of a high order at a very early age. By mid-adolescence she had developed into a pianist of professional calibre as well as an exceptional theory student and promising composer. At 15 she began training in composition and orchestration with Reicha at the Paris Conservatoire; her marriage in 1821 and subsequent travels interrupted her studies, but she resumed intensive work with Reicha a few years later.

Farrenc's earliest published compositions for piano appeared intermittently between 1825 and 1839; all were issued by her husband and several were published in London and Bonn. Of special note are the *Air russe varié*, reviewed appreciatively in 1836 by Schumann in the *Neue Zeitschrift für Musik* ('so sure in outline, so logical in development ... that one must fall under their [the variations'] charm, especially since a subtle aroma of romanticism hovers over them'), and the 30 Etudes in all the major and minor keys, extolled by the critic Maurice Bourges (*La revue et gazette musicale*, 1840), who prophesied that the collection would become a piano classic, 'not only to develop technique but also to mould taste'. The ensuing years substantiated Bourges' prediction: in 1845 the Conservatoire adopted the Etudes as required study for all piano classes, and the collection was reissued in 1886.

Farrenc's orchestral compositions comprise two overtures (1834) and three symphonies completed in the 1840s – all unpublished, although each work had more than one Paris performance, and there were single performances in Copenhagen, Brussels and Geneva. Her most notable contribution is the chamber music, uniformly fine in craftsmanship and exceedingly tasteful and attractive, if a shade unadventurous. Two piano quintets (1839 and 1840) established her reputation among critics and cognoscenti; both works were performed by the composer many times in the following years at musical soirées and matinées. In 1844 Farrenc completed two piano trios, also frequently performed and received with generous critical praise. Her productions of 1848–58 include two violin sonatas, a cello sonata, two more trios and two works for unusual combinations – a nonet for wind and strings, and a sextet for piano and wind. Despite the limited audience for instrumental music in opera-dominated Paris, the nonet catapulted its composer to near-celebrity, the more so because the young (but already legendary) violinist Joachim took part in the 1850 première. The Institut de France honoured Farrenc in 1861 and 1869 by awarding her the Chartier Prize for her contributions to chamber music.

In 1842 Auber, the director of the Conservatoire, appointed Louise Farrenc professor of piano, a post she retained until her retirement on 1 January 1873. The only woman musician at the Conservatoire in the 19th century to hold a permanent chair of this rank and importance, she distinguished herself by the excellence of her teaching, demonstrated by the high proportion of her pupils who won competitions and went on to professional careers. Outstanding among them was the Farrencs' daughter (3) Victorine Louise.

After Victorine's death in 1859 Louise Farrenc immersed herself in the task of compiling and editing *Le trésor des pianistes*, initially in collaboration with her husband and, after his death, as sole editor. She shared his ideal of reviving earlier keyboard music and helped to make it a reality through a number of *séances historiques*, in which she and her pupils performed selections from the 17th- and 18th-century repertory. From her own research and experimentation she had gained a remarkable comprehension of the essential problems of early music performance style, and her extended introduction to the first volume of *Le trésor*, 'Des signes d'agrément', was issued as a separate manual entitled *Traité des abréviations* (1895).

Farrenc's role in music history carries significance beyond that ordinarily accorded to competent minor composers. Having worked in a society whose women musicians attained prominence mainly as performers, and in a cultural environment which valued only theatre and salon music, she merits recognition as a pioneering scholar and a forerunner of the French musical renaissance of the 1870s.

WORKS

Edition: *Louise Farrenc: Kritische Ausgabe Orchester- und Kammermusik sowie ausgewählte Klavierwerke*, ed. F. Hoffmann (Wilhelmshaven, 1998–) [H]

printed works published in Paris

PIANO

Variations brillantes sur un theme d'Aristide Farrenc, op.2 (1825); Grandes variations sur ... Le premier pas, op.4 (1825); Variations sur un air de la Cenerentola [Rossini], op.5 (?1829–30); Variations sur ... O ma tendre musette, op.6 (1828); Air suisse varié, op.7 (1832); 3 rondos faciles, op.8 (1828); Rondo brillant sur un theme du Pirate [Bellini], op.9 (1833); Variations brillantes sur un thème du Colporteur [Onslow], op.10 (1828); Rondo brillant sur des thèmes d'Eurianthe [Weber], op.11 (1833)

Variations sur une galopade favorite, op.12 (1833); Rondo brillant sur une cavatine de Zelmire [Rossini], op.13 (1833); Les italiennes: 3 cavatines ... variées [Bellini, Carafa], op.14 (1835); Variations brillantes sur la cavatina d'Anna Bolena de Donizetti 'Nel veder la tua costanza', op.15 (?1835); Les allemandes: 2 mélodies ...

variées, op.16 (?1835–6); Air russe varié, op.17 (?1835–6); La sylphide, rondo valse sur un motif de Masini, op.18 (*c*1836); Souvenir des Huguenots, fantaisie et variations, op.19 (*c*1837)
Les jours heureux: 4 rondinos, op.21 (*c*1837); Variations sur un thème du Comte Gallenberg, op.25 (*c*1838), also arr. pf, str qt/orch; 30 études, op.26 (*c*1839); Hymne russe varié, op.27 (*c*1839); Variations sur un thème allemand, op.28 (*c*1839); Variations sur un thème des Capuleti [Bellini], 4 hands, op.29 (*c*1839)
12 études brillantes, op.41 (1858); 20 études de moyenne difficulté, op.42 (1855); Mélodie, op.43 (1858); Scherzo, op.47 (1858); Valse brillante, op.48 (?1859–63); Nocturne, op.49 (?1859–63); 25 études faciles, op.50 (?1859–63); 2e valse brillante, op.51 (1864)

Vocal: few works, most unpubd

EDITIONS

Le trésor des pianistes (Paris, 1861–74) [xxiii vols.; vols.i–viii with A. Farrenc]; introduction pubd separately as *Traité des abréviations* (Paris, 1895)

(3) Victorine Louise Farrenc (*b* Paris, 23 Feb 1826; *d* Paris, 3 Jan 1859). Pianist, daughter of (1) Aristide Farrenc and (2) Louise Farrenc. She studied the piano with her mother, entered the Paris Conservatoire in 1843, won the *premier prix* for piano the following year and performed the 'Emperor' Concerto at the Brussels and Paris concerts which introduced Louise Farrenc's First Symphony in 1845. Her promise was denied fulfilment by a disabling illness that led to her early death.

BEA FRIEDLAND

Farrés, Aurelio Capmany i. *See* CAPMANY I FARRÈS, AURELI.

Farsa (It.: 'farcé). A type of opera, generally in one act, popular in Italy in the late 18th and early 19th centuries. A typical evening comprised two such pieces and two ballets (one of them sometimes replaced by an instrumental work). The centre of production and dissemination was Venice, in particular the Teatro S Moisè, with 106 of the 191 productions documented through printed librettos. The beginnings of the *farsa* repertory may be placed in the early 1790s, and production peaked in 1800. The principal librettists were Giulio Artusi, G.M. Foppa (76 texts) and Gaetano Rossi (the last, above all, in the context of the *farsa sentimentale*, which itself became progressively more common against a basic diet of comic subjects); significant contributions to the musical repertory were made by, among others, Giuseppe Farinelli, Gardi, Generali, Simon Mayr, Giuseppe Mosca, Portogallo, Pucitta, Rossini and Trento.

The internal structure of the *farsa* frequently takes as its model the two-act *dramma giocoso per musica*, with a reduction in the number and length of the recitatives and the number of closed-form pieces: typical, halfway through the *farsa*, is the appearance of a concertato piece whose function is largely similar to the ensemble finale in Act 1 of a *dramma giocoso*. Other *farse* are set 'in the manner of the French ... with unsung recitative in prose' (F. Bartoli, *Notizie istoriche de' comici italiani*, Padua, 1782), thus embracing the characteristic structure of the French *comédie mêlée d'ariettes*; a few, at their dramatic climax, adopt an openly 'melodramatic' style in which spoken recitative is accompanied by tremolos and other side effects in the orchestra. The apparent inconsistency in dramatic and musical structure is partly due, perhaps, to the openly derivative nature of the vast majority of *farsa* texts: original librettos are few in comparison with the many derived from earlier *drammi giocosi per musica*, novels, French musical and non-musical theatre and, in particular, Italian theatrical comedies.

Characteristics of the *farsa* include the almost total lack of choruses, markedly fewer scene changes than in the contemporary *dramma giocoso* (with a clear preference for single scenes) and the relative absence of stage effects. These features suggest the importance of production economy (economical factors are also apparent in the unprecedented scale on which successful works from previous seasons were restaged). A further characteristic is 'speed, naturalness, propriety, moderate action', resulting in a greater rapport between actors and audience than in other forms of contemporary musical theatre and more attention to detail, realistic gesture and action.

DAVID BRYANT

Farse [farcitura, farsa, farsia, farsitura] (Lat., from *farcire*: 'to stuff'). An insertion into set texts, especially liturgical texts, of phrases or words not originally part of those texts. It would appear that the term is virtually synonymous with trope (*see* TROPE (i)); this is shown by a text quoted by Du Cange ('Qualiter debeant cantare Kyrie eleyson cum Farsa'), but as a rule the term 'trope' was

used for interpolations into the Mass and Office chants, while 'farsa' was used for interpolations into the lessons, even though farses were usually copied within the trope and *versus* collections such as *F-Pn* 1139 and *E-Mn* 288. The terminological distinction is found also in sources that merely refer to the practice, such as ordinals and ceremonials. Farsing seems to have been largely a French tradition that spread to Spain and Norman Sicily and its sources range from the 12th to the 15th century, with the majority falling in the 13th and 14th centuries.

Unlike tropes, which were almost universally written in Latin, a certain number of lesson farses, particularly for the Epistles, were in French, but farses should be distinguished from macaronic verse or from the simple alternation of stanzas in different languages. Their function, like that of the tropes, was to elucidate and comment upon the liturgical text. A farsed antiphon of the Virgin with interpolations in French is shown in ex.1.

Ex.1

De chan-ter m'est pris en - vi - e De re - gi - na coe - lo - rum,

Qui por-ta le fru-it de vi - e Ci - ba - ri - a ju - sto - rum.

Pa - nis laus an - ge - lo - rum Qui sur tous a sei - gno - ri - e

In au - la be - a - to - rum.

The most widespread examples of farse come from the 12th and 13th centuries and were especially applied to the Epistle of the major feasts of the Christmas cycle: Christmas, St Stephen's Day (26 December), St John the Evangelist (27 December), the Holy Innocents (28 December), St Thomas of Canterbury (29 December), the Circumcision (1 January) and the Epiphany (6 January); Easter, Pentecost, feasts of the Blessed Virgin, and St Nicholas also received farsed epistles. Epistles farsed in Latin appear to have preceded any of the French farsings. (See Dreve, Blume and Bannister for farsed epistles in Latin for a wide variety of feasts.) The farses could be in verse with assonance or in prose; a fair number of them survive with melodies, some of which can be quite elaborate (Stäblein; Arlt).

MICHEL HUGLO/ALEJANDRO E. PLANCHART

Farthing [Farding, Ferdyng], **Thomas** (*d* ? between Dec 1520 and April 1521). English singer and composer. He began his career as a chorister at King's College, Cambridge, and by 1504 he was almost certainly a member of the household chapel at Collyweston, Northamptonshire, maintained by Lady Margaret Beaufort, mother of Henry VII. In 1506 he became a member of the City Fraternity of St Nicholas, otherwise known as the Guild of Parish Clerks, in London. Farthing was a Gentleman of the Chapel Royal by 1511, and was granted an annuity of 10 marks out of the issues of the manors of Makesey and Torpull, Northamptonshire, 'in consideration of his services' to Lady Margaret Beaufort. He also held a corrody in the Benedictine monastery of Ramsey, Huntingdonshire, which he surrendered on 9 May 1513. Farthing was among the musicians who accompanied Henry VIII to the Field of the Cloth of Gold during summer 1520 and it may have been for this service that he and his heirs were granted, in perpetuity, a house with garden in East Greenwich. He may have died in December the same year: his will is dated 23 November 1520, and he was certainly dead by April 1521. Morley included 'Farding' among the 'Authors whose authorities be either cited or used' in his *Plaine and Easie Introduction to Practicall Musicke* (1597).

Seven three-voice pieces by Farthing are in *GB-Lbl* Add.31922 (ed. in MB, xviii, 1962), a source closely associated with the court during the first years of Henry VIII's reign. They are three rounds: *Above all thing now let us sing* (perhaps composed in honour of the prince born in 1511), *Hey now now* and *In May, that lusty season*, undoubtedly composed for a courtly 'Maying'; three partsongs, *The thoughts within my breast, With sorrowful sighs* and *I love truly without feigning*, all of which alternate syllabic note-against-note writing with melismatic phrase-endings; and a textless piece, the most ambitious of the seven, probably written for instruments. He may also have composed the music for *As I lay slepynge*, a partsong of which only the text survives.

JOHN M. WARD/FIONA KISBY

Farunt, Daniel. *See* FARRANT, DANIEL.

Farwell, Arthur (*b* St Paul, 23 April 1872; *d* New York, 20 Jan 1952). American composer, critic, editor and proponent of community music. As a boy he took violin lessons but had no thought of devoting himself to music. He prepared for a career in electrical engineering at the Massachusetts Institute of Technology, from which he graduated in 1893. Meanwhile the experience of hearing

the Boston SO and the influence of Rudolph Gott, an eccentric musician, convinced him that music should be his career. He studied with Norris and Chadwick in Boston, and was encouraged by MacDowell. He then went to Germany for further study with Humperdinck and Pfitzner (1897–9); he also studied briefly with Guilmant in Paris. Returning to the USA he accepted a lectureship at Cornell University (1899–1901), but his ambition was to be free of academic obligations. His failure to find a publisher for his *American Indian Melodies*, and the knowledge that many of his colleagues were in a similar predicament, led to his founding of the Wa-Wan Press (1901–12) for the publication of music by contemporary American composers. Subscribers were offered two volumes of music (vocal and instrumental) each quarter. The press published the work of 37 composers in volumes beautifully designed and printed, often with introductions by Farwell. A related enterprise was the National Wa-Wan Society of America, founded in 1907 for 'the advancement of the work of American composers, and the interests of the musical life of the American people'.

From 1909 to 1914 Farwell was chief critic for *Musical America* in New York, where he was also supervisor of municipal concerts. His interest in community music now became an important aspect of his work. He wrote music for pageants, masques and open-air performances with audience participation. After a period at the University of California, Berkeley (1918–19), he taught at Michigan State College from 1927 to 1939.

Farwell was an eclectic and prolific composer, with an extraordinary variety of musical interests. His music covers a very wide spectrum, from community choruses to tiny songs on poems by Emily Dickinson, from masques and pageants to polytonal studies for piano. But the diversity of his interests and his breadth of vision led him to some unprofitable explorations. His songs before 1900, for example, are virtually parlour music, and their occasional chromaticism and peculiar turns of melody seem contrived. Although he soon learnt that such music was not his forte, his concern with popular and traditional art and his desire to communicate with the average American remained with him throughout his life. He collected and arranged the music of Amerindians, Spanish-American communities of the Southwest, cowboys, black Americans and Anglo-American folksingers. Fascinated by certain tunes, he used them repeatedly in his work much as Ives did.

Farwell is perhaps best known as an arranger and an 'Indianist'. His first arrangements – of Amerindian tunes, made between 1900 and 1904 – are simple and do not realize any of the radical implications of the material. Like others at the time, he harmonized the melodies as if they had come out of a European, specifically Germanic, tradition. As he matured, however, and as his sense of harmony became more adventurous, he produced strikingly original versions of such tunes. In 1905 he published a set entitled *Folk Songs of the West and South*; it opens with two spirituals, about which Farwell said: 'the editor has, on principle, derived the harmony from a consideration of the dramatic or poetic content, and not from the harmony book'. This is an accurate assessment of his method. The *Bird Song Dance* which concludes the set is his first radical Amerindian setting. The text consists of nonsense syllables used by the Cahuilla tribe to imitate various birds; Farwell's harmonization is full of whimsical touches and ends with an unresolved dissonance.

Other fine Amerindian arrangements are the set of piano pieces entitled *Impressions of the Wa-Wan Ceremony of the Omahas* op.21 (1905) and, from the set *From Mesa and Plain*, the eerie *Pawnee Horses* (also 1905), the *Three Indian Songs* op.32 (1908) and the *Four Indian Songs* for unaccompanied chorus op.102 (1937). These pieces share the utmost delicacy of harmonic treatment: chromaticism, whole-tone chords, and other nondiatonic effects do not interfere with the essential simplicity of the material. Sometimes Farwell simplified his harmonic style almost to the point of minimalism, as in his choral setting of the *Navajo War Dance* op.102 no.1; in this and in *Inketunga's Thunder Song* op.32 no.2 he experimented with unusual vocal techniques. He based his string quartet 'The Hako' (op.65, 1922) on Amerindian materials, and there is an orchestral Indian Suite op.110 (1944). Amerindians make a final appearance in *Cartoon, or, Once Upon a Time Recently*, 'an Operatic Fantasy of Music in America' (1948).

Farwell's first large song, *A Ruined Garden* op.14 (1902), relies on completely different aesthetic principles from his early pieces based on Indian tunes. Despite an overlay of French harmony, the spirits of Wagner and Tchaikovsky hover over *A Ruined Garden* as they do over the later and even more ambitious song *The Farewell* op.33 (1910); perhaps the most successful of his works in the Wagnerian manner is the piano piece *Flame Voiced Night* op.45 no.2 (*c*1915), in which the writing is florid and original.

Farwell gradually abandoned late Romantic harmonic practice for a more idiosyncratic style, and by the 1930s was producing works of great harmonic originality. A turning point in this development was *Vale of Enitharmon* op.91 (1930) for piano, inspired by the mother of Urizen in the prophetic works of Blake. Although tonal in most sections, the work is chromatic in the extreme, and includes two monophonic passages, heavily pedalled to create chords which are virtually without a key centre. The middle section is as unpredictable as any music composed primarily of triads can be.

In 1940 Farwell began a series of polytonal piano studies that were intended to systematize his harmonic ideas; working from complicated charts, he projected 46 pieces, of which 23 were composed (as op.109, 1940–52). Although uneven in quality, all deserve attention, and the finest are among his most original and beautiful works. The abstract compositional process frequently results in surprisingly poetic music, and the piano writing is idiomatic and often brilliant. The polytonal studies clearly served as a harmonic source for Farwell's last piano piece, the Piano Sonata op.113 (1949), which is probably his masterpiece. Based on a small collection of motifs that are subjected to the most tortuous manipulation, the sonata has a technical ruthlessness surprising in a composer known chiefly as an arranger of Amerindian melodies. The one-movement work lasts only 13 minutes; there is none of the sprawling quality of many of the earlier pieces. The harmonic idiom is unlike that of any other composer, and the sonata's emotional intensity and dramatic impact are rare in American composers of Farwell's generation.

As an orchestral composer Farwell seems to have been less successful. The enormous *Rudolph Gott Symphony*

op.95 (1932–4) is full of interesting moments but seems diffuse and overlong. The earlier suite from *The Gods of the Mountain* (1917, orchestrated 1928) is, however, very effectively orchestrated, and Farwell was proud of his orchestration of the Symbolistic Study no.3 op.18, after Walt Whitman's 'Once I passed through a populous city'.

Farwell was a composer of unusual literary sensitivity. In addition to the Blake and Whitman works mentioned above and the *Two Poems* op.45 for piano (*c*1915), inspired by poetry of Rabindranath Tagore, he wrote community pageants and other stage works on texts by writers ranging from Shakespeare to personal friends. His 39 brief and enigmatic, but occasionally panoramic and even violent settings of Dickinson poems (1908–49) are among the finest American art songs. Farwell was a prolific writer himself, important particularly as a spokesman for a 'national' musical expression of America's diversity. His most significant writings are the introductions and essays that he wrote for the Wa-Wan Press music editions and the *Wa-Wan Press Monthly* (all are included in the 1970 reprint edition), and *Music in America* (with W. Dermot Darby, 1915). In addition he published almost 100 articles in *Musical America* and elsewhere, most of them on contemporary composers and current musical issues and events, and *A Letter to American Composers* (1903).

Farwell also had an interest in the visual arts rare for a composer. He liked to draw, and illustrated himself his unpublished *Intuition in the World-making* (1933–48), in which he attempted to systematize the process of artistic inspiration on the basis of personal visions dating back to 1905. He designed covers for the sheet music published by the Wa-Wan Press, taking pride in their abstract design, which was deliberately different from the usual pictorial sheet-music covers of the time. The four prints which he hand-produced on his own lithographic press in East Lansing are beautiful and unusually well crafted.

Taken as a whole Farwell's work seems of its time, and perhaps he was justified in referring to himself as a Romantic composer. He did not like many of the musical innovations of the first half of the 20th century, although he was considered a radical as a young man; in his opera *Cartoon* he satirized Stravinsky and Schoenberg. He did not think of himself as an experimental composer, yet in many ways he was one. Many details of his music, and the compositional preoccupations of his last and best work, show him pointing to the future in some surprising ways. He was the only major American composer of his time to attempt community music, anticipating by two generations the work of composers in the 1970s. He produced the first light-show in the USA, in Central Park in New York City in 1916. He used a number of extended vocal techniques (borrowed from Amerindians). He composed using charts. He wrote some technical tours de force of a most abstract kind, including the piano piece *What's in an Octave?* op.84 (1930), which uses only the pitches between *f* and *f*′, is eight minutes long, and contains a four-voice fughetta. Farwell was the first American composer to write folksong arrangements that were original yet faithful to the spirit of their models. He experimented with harmonic vocabulary throughout his career. Above all, the cross-fertilization of music, literature and the visual arts that characterizes much of his work anticipates a whole school of composers influenced by Cage. Farwell was both within the mainstream and an exemplar of American musical experimentalism; in this he can be compared only with Ives.

WORKS

(*selective list*)

for complete list see B. Farwell

ORCHESTRAL

The Death of Virginia, sym. poem, op.4, 1894; Academic Ov. 'Cornell', op.9, 1900; Dawn, fantasy on Amerindian themes, pf, small orch, 1904 [from pf piece]; Symbolistic Study no.2 'Perhelion', pf, orch, 1904, inc.; Symbolistic Study no.3, after W. Whitman: *Once I passed through a populous city*, op.18, 1905, reorchd 1921; Symbolistic Study no.4, 1906, inc.; Symbolistic Study no.5, 1906, inc.; The Domain of Hurakan, op.15, 1910 [from pf piece]; Sym. Poem on March! March!, op.49, chorus ad lib, 1921

The Gods of the Mountain, suite, op.52, 1928 [from incid music, 1917]; Prelude to a Spiritual Drama, op.76, 1935 [based on themes from music to the Pilgrimage Play]; Rudolf Gott Sym., op.95, 1932–4 [based on themes and opening by Gott]; Symbolistic Study no.6 'Mountain Vision', op.37, 2 pf, small orch, 1938 [from pf piece]; Indian Suite, op.110, 1944; The Heroic Breed, op.115, 1946 [in memoriam General Patton]; 2 other works

CHAMBER AND SOLO INSTRUMENTAL

Ballade, op.1, vn, pf, 1898; Owasco Memories, op.8, pf trio, 1901 [from pf work]; To Morfydd, ob, pf, 1903; Prairie Miniature, op.20, wind qnt, n.d. [from no.2 of From Mesa and Plain, pf]; Around the Lodge: Wa-Wan Ceremony of the Omahas, op.21, vn, pf, *c*1905 [from pf piece]; Fugue Fantasy, op.44, str qt, 1914; The Gods of the Mountain (incid music, Dunaway), op.52, vn, vc, hp/pf, 1917, orchd suite, 1928

Song-Flight, vn, pf, op.61, 1922; Str Qt 'The Hako', A, op.65, 1922; Sonata, op.80, vn, pf, 1927, rev. 1935; Melody, e, op.77, vn, pf, 1928; Land of Luthany, op.87, 1931; Eothen, op.92, vn, pf, 1931; Sonata, g, op.96, vn, 1934; Pf Qnt, e, op.103, 1937; Suite, op.114, fl, pf, 1949; Sonata, op.116, vc, pf, 1950

PIANO

Tone Pictures after Pastels in Prose, op.7, 1896; Owasco Memories, op.8, 1899, arr. pf trio, 1901; American Indian Melodies, op.11, 1900; Dawn, fantasy on 2 Indian themes, op.12, 1901, arr. pf, small orch, 1904; Symbolistic Study no.1 'Toward the Dream', op.16, 1901; The Domain of Hurakan, op.15, 1902, orchd 1910; From Mesa and Plain, op.20, 1905, no.1, Navajo War Dance, arr. orch and incl. in Indian Suite, 1944, no.2 arr. wind qnt as Prairie Miniature; Impressions of the Wa-Wan Ceremony of the Omahas, op.21, 1905 [1 piece, Around the Lodge, arr. vn, pf, *c*1905]; Symbolistic Study no.6 'Mountain Vision', 1912, arr. 2 pf, small orch, op.37, 1938; Laughing Piece, 1914, rev. 1940

2 Poems: Treasured Deeps, Flame Voiced Night, op.45, *c*1915; Modal Invention, Dorian, op.68, 1923; Americana, op.78, 1927; What's in an Octave?, op.84, 1930; In the Tetons, op.86, 1930; Vale of Enitharmon, op.91, 1930; Prelude and Fugue, op.94, 1931–6; 2 Compositions: Emanation, Fire Principle, op.93, 1932; Meditations, op.97, 1934; 2 Tone-Pictures: Pastel, Marine, op.104, 1936; Polytonal Studies, op.109, 1940–52; Melody, d, 1948; Pf Sonata, op.113, 1949; other works

SONGS

for 1 voice and piano unless otherwise stated

A Ruined Garden, op.14, 1902; Drake's Drum, op.22, 1905; Folk Songs of the West and South, op.19, 1905; 3 Indian Songs, op.32, 1908; The Farewell, op.33, 1910; Sea Vision (G. Sterling), op.36, 1912; 3 Poems by Shelley, op.43, 1914; Soldier, Soldier!, op.53, Bar, orch, 1919; 3 Songs: Love's Cathedral, The Wild Flower's Song, Cold on the Plantation, op.54, 1919; Spanish Songs of Old California, op.59, 1923; Sonnet to a City, op.64, 1922; 3 Songs: The Ravens are Singing, A Dawn Song, Dark her Lodge Door, op.69, 1924; 2 Shelley Songs: Song of Proserpine, To Night, op.72, 1926, no.1 arr. 1v, orch

2 Blake Songs: The Lamb, A Cradle Song, op.88, 1930, no.1 arr. S, A, T, B, SATB, 1930; Invocation to the Sun God, op.89, 1930; The Tyger (W. Blake), op.98, 1934; The Hound of Heaven (F. Thompson), op.100, 1935, arr. 1v, orch; 4 Emily Dickinson Songs: Saviour, unto me, As if the Sea, Good Morning, Midnight, op.101, 1936; 12 Emily Dickinson Songs, op.107, 1941–4; 10 Emily

Dickinson Songs, op.112, 1949; I had no Time to Hate (E. Dickinson), 1949; over 70 other songs

CHORUSES

Build thee More Stately Mansions, op.10, 4vv, 1901; Wanderer's Night Song (J.W. Goethe), op.27, male 4vv, 1907; Keramos (H.W. Longfellow), op.28, male 4vv, 1907; O Captain, my Captain (W. Whitman), op.34, 1918; Hymn to Liberty (Farwell), op.35, chorus, orch, 1910; The Christ Child's Christmas Tree, op.41, 1913; Sym. Song on 'Old Black Joe' (S. Foster), op.67, audience, orch, 1923; The Lamb, S, A, T, B, SATB, 1930 [from no.1 of 2 Blake Songs, op.88]; 4 Indian Songs, op.102, 1937; 2 Choruses: Navajo War Dance, Indian Scene, op.111, 8vv, 1946; 8 other works

PAGEANTS, MASQUES, COMMUNITY MUSIC

Joseph and his Brethren (L.N. Parker), incid music, op.38, 1912; Caliban (P. MacKaye, after W. Shakespeare), incid music for tercentenary masque, op.47, 1915 [songs pubd as 3 Songs from Caliban, op.47a, 1916, arr. 1v, orch]; The Evergreen Tree (MacKaye), Christmas masque, op.50, 1917; The Pilgrimage Play (C.W. Stevenson), incid music, op.58, 1920–21; Grail Song, masque, op.70, 1925; Mountain Song, sym. song ceremony, op.90, chorus, orch, 1931; Cartoon, or, Once Upon a Time Recently (E.K. Wallace, Farwell), operatic fantasy, 1948; *c*21 other works, incl. 6 inc. ones

MSS in *US-NYp*, *PHf*; Evelyn Davis Collection, Oral Roberts U., Tulsa; archives with B. Farwell, Morgan Hill, CA

GILBERT CHASE/NEELY BRUCE/R

Fasano, Renato (*b* Naples, 21 Aug 1902; *d* Rome, 3 Aug 1979). Italian conductor, composer, teacher and pianist. He studied at the Naples Conservatory, and subsequently divided his career equally between the Italian scholastic system and performing organizations. He was director of the Cagliari Conservatory (1931–9), succeeded Malipiero as director of the Venice Conservatory (1952; for one year he also directed the Trieste Conservatory) and was director of the Rome Conservatory (1960–72). As president of the Accademia di S Cecilia, Rome (1972–6), where he had been artistic director (1944–7), Fasano developed a system of postgraduate and professional instruction unique to Rome. In 1941 he founded and became director of the Collegium Musicum Italicum, which later split into two connected organizations, the Virtuosi di Roma (1952) and the Teatro dell'Opera da Camera (1956). Through their tours at home and abroad, Fasano contributed greatly to popular knowledge of the 18th-century Italian repertory, particularly of Vivaldi and of Venetian and Neapolitan opera; similar groups have followed in the wake of those founded by him. Fasano edited the series Antica Musica Strumentale Italiana, which began in 1957, and from 1972 supervised the Universal edition of Vivaldi's sacred works. His publications include *Storia degli abellimenti dal canto gregoriano a Verdi* (Rome, 1949), and among his compositions are *Cordova* for strings (1927), a symphonic poem *Isola eroica* (1942), and orchestral and chamber works.

CLAUDIO CASINI

Fasce (It.). *See* BOUTS.

Fasch, Carl [Karl] **Friedrich Christian** (*b* Zerbst, 18 Nov 1736; *d* Berlin, 3 Aug 1800). German conductor and composer. He was baptized Christian Friedrich Carl; the above order of names is the one commonly preferred. He was the son of the Kapellmeister Johann Friedrich Fasch, from whom he had his first keyboard and theory instruction. Later he studied the violin with Carl Höckh, leader of the Zerbst court orchestra, and when he was 14 his father sent him to study for a year with Johann Wilhelm Hertel, leader of the orchestra at the Mecklenburg court in Strelitz. While in Strelitz, he had the opportunity to accompany the Berlin violinist Franz Benda, who was so impressed with the boy's playing that in 1756 he recommended Fasch for the position of second harpsichordist at the court of Frederick the Great. There he shared with C.P.E. Bach the responsibility for accompanying the king's flute playing. Shortly after his arrival in Berlin, however, the Seven Years War began, allowing the king little time for music. Since the musicians' salaries during this period were worth so much less, Fasch turned to teaching and composing to supplement his income. In 1767 Bach left Berlin to replace Telemann in Hamburg, and Fasch was promoted to first accompanist at the Prussian court. In 1774, after the death of J.F. Agricola, he was given the responsibility for conducting the royal opera; he held this position until the spring of 1776, soon after J.F. Reichardt was appointed Kapellmeister.

After the Bavarian War of Succession in 1779 the king rarely saw his musicians, and after he died in 1786 Fasch was retained even though the new king was not particularly fond of music. He continued to teach and compose, but devoted most of his energy in his later years to the study, composition and conducting of choral music. In 1789 he gathered his pupils at the home of Councillor Milow (whose stepdaughter Charlotte Dietrich was one of the pupils), where they presented a programme of choral music. The group continued to meet and their number greatly increased. In 1791 they moved to the home of the widow of the surgeon-general Voitus, and when this spacious house became too small for their needs (in 1793), they were given a large room in the Marstall, which also housed the academies of arts and science. The choral organization soon became known as the Sing-Akademie because of its association with the two academies already housed in the Marstall. In 1796 Beethoven visited the Sing-Akademie twice and improvised on melodies by Fasch for an audience of singers and their guests. Carl Zelter, one of Fasch's last pupils, became the assistant conductor of the academy, and as Fasch grew ill, Zelter took more responsibility and finally became the conductor when Fasch died. According to a stipulation in Fasch's will, the Sing-Akademie (which by then boasted nearly 150 members) performed Mozart's

Requiem at his memorial concert in October 1800; this was the first performance of the work in Berlin.

Fasch is probably most important for stimulating the revival of choral singing in Germany. His Sing-Akademie led to the establishment of many similar organizations throughout Europe during the 19th century. He also presented numerous choral works of J.S. Bach with the Sing-Akademie (beginning with the motet *Komm, Jesu, komm!* in 1794); this contributed to the Bach revival, which culminated in 1829 with the performance in Leipzig of the *St Matthew Passion* under the direction of Mendelssohn.

Fasch's importance as a composer is difficult to assess, for he regularly burnt compositions that he deemed unworthy of saving. Even on his deathbed he ordered Zelter to burn most of the contents of his cabinet, including many of the works that he had written before 1783, some letters and a few works by Frederick the Great. Most of his extant works are sacred and many are quite contrapuntal, including a 25-part canon in his mass for four choirs (16 vocal parts) and instruments. That mass was inspired when Reichardt took him a copy of a 16-part mass by Orazio Benevoli in 1783, a work which Fasch, who was intrigued by it, copied out completely. He also composed hundreds of teaching pieces for his pupils, compiled an index of operas during the reign of Frederick the Great and wrote several essays on acoustics. Zelter published a biography of Fasch in 1801, and in 1839 the Sing-Akademie printed six volumes of Fasch's music, with a seventh volume added shortly thereafter from manuscripts in Zelter's private collection.

WORKS

RAYMOND A. BARR

Fasch, Johann Friedrich (*b* Buttelstädt, nr Weimar, 15 April 1688; *d* Zerbst, 5 Dec 1758). German composer and Kapellmeister. He was one of the most significant German contemporaries of Bach, and his orchestral works are characteristic of the transition from the late Baroque style to the Classicism of Haydn and Mozart.

Fasch was descended from a line of Lutheran Kantors and theologians. His earliest musical studies were as a boy soprano in Suhl and Weissenfels, and at 13 he was enlisted by J.P. Kuhnau for the Leipzig Thomasschule; his first compositions followed the style of his friend Telemann. While a student at the University of Leipzig he founded a collegium musicum which rivalled the eminence of the Thomasschule in the city's musical life. In this cosmopolitan city he encountered the concertos of Vivaldi, which greatly influenced his whole generation. Although he had no regular instruction in composition, he soon became so well known as a composer that his sovereign Duke Moritz Wilhelm of Saxe-Zeitz commissioned him to write operas for the Naumburg Peter-Paul festivals in 1711 and 1712.

For purposes of study Fasch undertook a long journey through several courts and cities, eventually arriving at Darmstadt, where he studied composition with Graupner and Grünewald. He then held several positions, including those of violinist in Bayreuth (1714), court secretary and organist in Greiz (until 1721) and Kapellmeister to the Bohemian Count Wenzel Morzin in Prague, whose accomplished chapel orchestra earned Vivaldi's praise. In 1722 Fasch reluctantly accepted the position of court Kapellmeister in Zerbst. In the same year he was twice invited to apply for the position of Thomaskantor in Leipzig, but withdrew from the competition shortly after Telemann did so, deciding that it was too soon to leave Zerbst. In 1727 Fasch spent some time at the Saxon court

in Dresden, where his friends Pisendel and Heinichen were in charge of orchestral music and the Catholic chapel respectively. Heinichen's death in 1729 is a *terminus ante quem* for several of Fasch's surviving liturgical pieces, which were performed by the chapel choir under Heinichen, who noted the duration of pieces on the manuscripts (as well as rewriting sections, which Pfeiffer has taken as an indication that the Dresden experience was another learning venture).

Surviving correspondence, particularly with Nikolaus Ludwig, Reichsgraf von Zinzendorf, head of the Pietist Brotherhood in Herrnhut, reveals Fasch's unhappiness in strictly Lutheran Zerbst. Only one further application for a formal position is recorded (Freiberg, 1755), but it was unsuccessful, and Fasch remained at Zerbst for the rest of his life. During his 36 years there Fasch was primarily occupied with the composition of church cantatas and festival music for the count. His fame as a composer spread far beyond Saxony: his works were familiar to numerous courts and city churches, from Hamburg (where in 1733 Telemann performed a cycle of his church cantatas) to as far afield as Prague and Vienna. He enjoyed especially close relations with the famed Hofkapelle in Dresden, at which the Kapellmeister Pisendel performed many of his concertos (to some extent in arrangements), and likewise with the court at Cöthen, which attracted him by its Pietist leanings. Through his son C.F.C. Fasch, harpsichordist at the court of Frederick the Great in Berlin from 1756, he was connected with C.P.E. Bach.

None of Fasch's compositions was published during his lifetime. The extensive body of his manuscripts is widely distributed and difficult to assess; but it appears that most of his vocal works (including 9 complete cantata cycles, at least 14 masses and four operas) are lost, while the instrumental works are mostly extant. There are four principal sources: the remains of the court music library at Zerbst are divided between the Landesarchiv-Historisches Staatsarchiv, Oranienbaum, and the Institut für Musikwissenschaft der Martin-Luther-Universität, Halle an der Saale; and music that was passed between Fasch and the courts at Dresden and Darmstadt is now at the Sächsische Landesbibliothek, Dresden, and the Hessische Landes- und Hochschulbibliothek, Darmstadt, respectively. Fasch appears to have sent music to and received music from these courts throughout his life, and thus may have formed part of a wider network for the exchange of new music. Important documents at the Landesarchiv-Historisches Staatsarchiv, Oranienbaum, which reveal precisely what music was performed in the Schlosskirche in Zerbst during Fasch's employment there, have enabled the dating of the remnants of a cantata cycle in the Staatsbibliothek zu Berlin, Preussischer Kulturbesitz, to 1735.

During the 19th century Fasch was so much overshadowed by Bach that he was neglected by music historians. In about 1900 Hugo Riemann, from his acquaintance with several overtures, recognized Fasch as one of the most important innovators in the transitional period between Bach and Haydn, who 'set instrumental music entirely on its feet and displaced fugal writing with modern "thematic" style'. Later research has largely confirmed this assessment; in fact the transitional nature of Fasch's work, the synthesis of Baroque and Classical styles with a gradual increase in the 'modern' elements, is its most striking aspect. Fasch developed the vocabulary of the new musical language within the framework of traditional forms, and in some of his late works anticipated to a remarkable degree the idioms, though not the formal structures, used by Gluck, Haydn and Mozart.

Fasch's cantatas correspond roughly with those of J.P. Krieger, Telemann and Stölzel in their sequence of da capo arias, recitatives and chorales. The music of the masses is considerably richer; here the choir and the orchestra, with a large complement of wind instruments, have equal roles in the thematic development, and there is some expressive melodic writing in the solo movements.

The concertos, of which 64 are extant, show the development from Baroque to the early Classical style particularly clearly. Most are of the three-movement type created by Vivaldi, with the fast outer movements built around the ritornello structure of the Italian concerto. However Fasch, in one of his boldest experiments, often interrupted the thematic statement of the ritornello with motivically and sometimes thematically contrasting episodes for wind instruments. In both ritornello and solo sections articulation and periodicity within a theme are achieved by motivic, rhythmic and textural contrasts. In some cases there is a functional dualism of thematic material that anticipates the Classical sonata principle.

Fasch's unusual treatment of orchestral instruments, in particular the wind, attracted special attention even from his contemporaries. Besides employing unusual combinations of instruments, in many of his concertos he used the wind in pairs (flutes, oboes, bassoons and horns) as solo instruments, often with a solo violin. Unlike Bach and Handel, he did not use wind instruments in a truly solo manner as part of the concertino but rather as components of episodes of reduced texture within solo and ritornello sections. He also used 'wind exclamations' between phrases, and used wind alone for echoing repeated (or, occasionally, consequent) phrases. Fasch rarely contrasted sustained wind harmonies with active lines in the strings (an important principle of Classical orchestration); but in the concertos and the symphonies he sometimes simplified a doubled string part by 'eliminating repeated notes, or taking just the main notes of an arpeggiated passage' (Sheldon, 1972) in the wind: Fasch's most important step away from Baroque *colla parte* writing.

The orchestral suites (overtures) are based on the traditional form of the French overture followed by a series of dance movements. The fugues in the overtures are frequently interrupted by homophonic episodes for wind instruments; sometimes they are entirely replaced by free symphonic movements. The airs and free Allegro or Andante movements, interspersed between the dances, are of an equally striking 'modern' nature, being derived from the lyrical or rhythmical alternation of wind and string groups. In the symphonies and sonatas the tendency towards the Classical form is present in the double-bar repeat structure, like Classical sonata form, of most of the Allegro movements. However, the presence of fugal movements and the inclination to solid, skilled counterpoint show Fasch's conservative tendencies.

Fasch's works are important primarily for their originality, for the creation of a musical vocabulary strikingly similar to the coming Classical idiom of Haydn and Mozart.

Fascie (It.). *See* RIBS.

Fashek(e), Majek(odunmi) (*b* Lagos). Nigerian reggae musician. After a series of television appearances in Nigeria in the early 1980s he began a solo career in 1987. Jah Stix was his first band and in 1988 his album *Prisoner of Conscience* made an international impact. Influences on Majek include musicians such as Bob Marley, Fela Anikulapo-Kuti and Jimi Hendrix; his late musical style (for example as shown in *Rainmaker*) draws on several sources, including rock, *juju*, afrobeat and Ghanaian *kpanlogo*. His song texts often draw on political, moral and religious themes. *Spirit of Love* (Interscope, 1992), *The Best of Majek Fashek* (Flame Tree, 1994) and *I & I Experience* (CBS, 1989) are among his well-known recordings.

DANIEL AVORGBEDOR

Fasıl. Term used in Turkish art music denoting a cycle of pieces. Also a modern term for Turkish night-club music. A related term is *faṣl* (Arabic), also denoting cyclical form.

Fasola. A traditional method of solmization long popular in England and North America, and later known as 'English', 'Lancashire' or 'four-note' sol-fa. In effect an abbreviated form of the ancient gamut (*see* SOLMIZATION), this basically tetrachordal system gave to the rising major scale the note names *fa*, *sol*, *la*, *fa*, *sol*, *la*, *mi*, *fa*. The mutations of this sequence can be traced readily through the gamut itself, as shown in Table 1. The term is also used for the American shape-note system based on four syllables (*see* SHAPE-NOTE HYMNODY).

The popular English instruction books of the 17th century – Charles Butler's *The Principles of Musik* (1636), John Playford's *Introduction to the Skill of Musick* (1655) and Christopher Simpson's *A Compendium of Practical Musick* (1667) – all employed the fasola system. The appearance of those texts at that time has led to a belief that fasola first appeared in England during the 17th century, but the method is of greater antiquity than such a conclusion suggests. It was employed to explain the text of Thomas Campion's *New Way of making Fowre Parts in Counter-point* (?1613–14); further, Morley's *Plaine and Easie Introduction to Practicall Musicke* (1597) states that although contemporary practice required a beginner to learn the whole gamut, once that feat had been

TABLE 1

c	– FA	– ut						
B	– mi							
A	– re							
γ	– ut							

achieved, the syllables *ut* and *re* were employed only in the lowest octave of each voice. This is confirmed by musical examples in the book which use only the four syllables of fasola.

Still earlier, the same system was employed in Day's edition of the *Whole Booke of Psalmes* (1570), in which sol-fa initials were printed alongside the notes of tunes. Ex.1shows a version of the tune of Psalm cxxi from Day's book, transcribed into modern notation but retaining the original sol-fa note names. Its publication in 1570 demonstrates that fasola, with its characteristic use of *mi* on the seventh degree, was well established in England at least by the second half of the 16th century. Moreover, the existence of the medieval tag, 'Mi contra fa: diabolus in musica', which unambiguously describes the tritone from B to F and not the alternative interval from E to F, suggests that the fasola system may have been in everyday use well before the 16th century.

Ex.1

During the 18th century the use of fasola became yet more widespread at the hands of itinerant teachers of psalmody who taught choristers to sing from notes. The system owed much of its popularity then to the ease with which the syllables could be related to the wider range of keys coming into use. The secret lay in placing the syllable *mi*, which occurs only once in the octave, on the seventh degree of the major scale. To assist the beginner to do this, psalmody teachers invented doggerel rules such as the following:

Learn this, and learn it well by rote, That Mi is aye the last sharped note.

The importance of *mi* – the 'master note' – in this connection led to the use of the phrase '*Mi* is in E', or '*Mi* is in C', instead of 'key of F' or 'key of D' etc, among psalmodists. The minor scale was taught as *la*, *mi*, *fa*, *sol*, *la*, *fa*, *sol*, *la*, any chromatic alteration of the sixth or seventh degree being treated as *fa♯* or *sol♯*. Simple modulation called for a special rule: 'When *fa* by sharps is raised a semitone, call it *mi*; when *mi* is made a semitone lower by flats, call it *fa*'.

In some parts of England this indigenous system survived the introduction of other, more sophisticated methods during the 19th century. As late as 1879, James Greenwood published a new account of it in *The Sol-fa System, as Used in Lancashire and Yorkshire*, reprinted in 1907.

BERNARR RAINBOW

Fasoli, Fiorenzo de'. *See* FLORENTIUS DE FAXOLIS.

Fasoli, Francesco (*b* Zelo Bon Persico, nr Lodi; *d* Turin, 18 March 1712). Italian composer. He is first heard of in 1688, when he was living in Milan and was appointed *maestro di cappella* of Turin Cathedral in succession to Giovanni Carisio, with an annual salary of 1586 lire. He also directed the cathedral choir school (where G.A. Giay was among his pupils), and supervised the administration of the Collegio degli Innocenti and the teaching of music there. His numerous extant sacred works show that he was well-versed in polyphony, had a remarkable sense of rhythm and could achieve a degree of nobility.

MARIE-THÉRÈSE BOUQUET-BOYER

Fasolo, Giovanni Battista (*b* Asti, nr Turin, *c*1598; *d* Sicily, after 1664). Italian composer and organist. Until recently his music has been attributed to two or three different composers of the same name, but it is now known that there was only one composer. Most of the biographical information on him is found in the titles and dedications of his works. A Franciscan friar, he moved to the south of Italy as a young man. He may have been in Rome between 1627 and 1629; his two collections of arias were published there during this period. After possibly spending some time in Naples he was back in Rome in 1647, when he was named among the *pulsatores organorum* who accompanied the work of the General Chapter. In 1648 and 1649 he was *magister musices* of the convent of Santi Apostoli there, but between 1649 and 1652 he had moved to Sicily, where he held the post of *maestro di cappella* to the Archbishop of Monreale, near Palermo, from 1659 until 1664. However, he must have been in Sicily before this period as he dedicated his *Annuale* of 1645 to the Prince of Paternò in eastern Sicily.

Both sacred and secular music by Fasolo survives. Of his sacred music, the *Annuale*, widely known in Italy and Europe, was designed to provide a parish organist with enough responses and independent organ pieces to carry him through the ecclesiastical year. It contains versicles for the *Te Deum*, 19 hymns, three masses, a *Salve regina*, and eight settings of the *Magnificat* as well as eight ricercares (called *ricercate*), eight canzonas and four fugues. The cyclical presentation of instrumental works based on cantus firmi was then unusual in Italy, although annuals of sacred vocal music had been in fashion earlier in the century. Fasolo's long preface provides useful information on current trends in organ performing practice. Fasolo set his own texts in his *Arie spirituali*, which are in the widely current concertato style. This collection mentions religious dramas set to music by Fasolo and performed in Palermo, but the music has been lost.
